The Family Farmer and the Farsighted Labor Leader Both Have an Enormous Stake — Often Unrecognized — in the Well-Being of the Small Businessman

EXTENSION OF REMARKS
OF

HON. HARRIS B. McDOWELL, JR.
OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. McDOWELL. Mr. Speaker, the article by University of Michigan Prof. George S. Odiorne, in Harper's magazine, April 1960, entitled "How Small Business Cuts Its Throat," holds out little hope for the continued existence of small business in the American economy. To Professor Odiorne, and perhaps to a few big businessmen, the Nation's 4½ million small business concerns are "this overpopulated and wrongly oriented segment of the economic community."

The learned professor does point out that "economic power and property are today concentrated in the hands of some 200 corporations, and the trend shows no sign of abating."

Unless significant steps are taken by the Federal Government in concert with State and local governments to help small business, the trend toward monopoly and concentration of economic power will continue, and at an accelerated rate.

The family farmer and the farsighted labor leader both have an enormous, but often unrecognized, stake in the well-being of the small businessman. Since this is so manifestly true, steps should be taken at this time by leaders of these three great groups to actively seek out those areas of cooperation and planning which will help to halt and reverse the present drift toward unlimited monopoly and concentration.

I have discussed this subject many times with George J. Burger, vice president, National Federation of Independent Business, who agrees with me that such a step is long overdue.

There is no more eloquent and dedicated spokesman of small business in our country today than George Burger, nor one who is more highly respected by Members of the Congress of both political parties.

This fine organization of more than 155,000 small business and professional men, with members in each of the 50 States, which George Burger represents—the National Federation of Independent Business—could serve a great national purpose by seeking out those areas where small family farmers and the leaders of American labor could work together to advance our national welfare.

I have often thought that a joint planning conference of leaders from our farm areas, from labor, and from small business would be a very healthy development, and it could very properly be called by the National Federation of Independent Business. I hope definite steps toward such a conference will be taken at once.

In any event, the article by Professor Odiorne deserves much more attention than it received for it shows that such a far-reaching step as I have suggested to strengthen the democratic small business segment of the American economy is long overdue.

I include herewith a cogent reply by George J. Burger to the Harper's magazine article of Professor Odiorne:

WASHINGTON, D.C., *April 8, 1960.*

EDITOR, HARPER'S MAGAZINE,
New York, N.Y.

DEAR MR. EDITOR: I have reviewed with considerable interest the April issue of Harper's and have particularly noted the article therein: "How Small Business Cuts Its Throat" edited by Mr. George S. Odiorne.

In view of the nationwide distribution of Harper's and the widespread havoc which could accrue to small business generally from the many gross misinterpretations in Mr. Odiorne's article, we, as an accredited spokesman for small business nationwide are directing this communication to you in rebuttal to the article: "How Small Business Cuts Its Throat."

To substantiate our claim that we act as accredited spokesman for small business of this Nation it will be important for you to note that the National Federation of Independent Business has now been in existence approximately 16 years, and our membership now totals in excess of 150,000, all independent business and professional men (no groups) which membership reaches into all 50 States of the Union.

No officer or group of officers is permitted to set the policy for the Federation on any legislative or economic problem, such policy being determined only after a complete nationwide poll of our entire membership, and their vote for or against then determines the stand officially taken by the Federation.

We consider as our most valuable asset the confidence Members of Congress from both sides of the aisle, and in fact the heads of Government agencies themselves, have in our sincerity to do a job for the people we represent, small and independent business of this Nation.

Needless to say, we can only view with alarm such an article as "How Small Business Cuts Its Throat" written by one whose background would, to say the least, tend to indicate a more or less middle-of-the-road policy in behalf of small business.

From practical business experience confined exclusively to small business, gained through owning and operating an independent business for better than a quarter of a century, we find that in the majority of cases small business as a class is negligent in failing to avail themselves of the laws in our National Government that would protect the free enterprise system. We find in almost 99 out of 100 cases the usual answer of small business as to the reason for their failure to act is: "The Government won't do anything" or "The laws will never be enforced."

In the first part of Mr. Odiorne's article, with reference to the young businessman who was recognized by the junior chamber of commerce, whose profits, it was stated, were helped through an accelerated writeoff of his equipment for tax purposes, surely all with vision and foresight in our Nation's economy will recognize that small business to be successful must step forward with the times, and understand, Mr. Editor, in this instance that young man was shrewd enough to take advantage of the help offered him under the law. In most instances, when it comes to accelerated tax writeoffs you will find a very interesting background as to the real beneficiaries on this for the many years—giant corporations, and believe me, some writeoffs.

The article further states: "The small businessman, it would seem, is acquiring a privileged position in Washington comparable to the farmer's." I know that small business nationwide would be most interested in this statement and I am sure they would welcome the day that they got the same consideration from the Federal Government as farmers, big business and big labor get. Note the attached copy of an excerpt from the CONGRESSIONAL RECORD. Extension of remarks of Hon. HARRIS B. MCDOWELL, JR. It might be that the only time small business finds themselves in a favorable position—or at least recognized to some degree—is around the time of congressional or presidential elections, as "They love us in November and forget about us in May."

Further in the article it states: "In most instances the small businessman is shored up with tax money." Mr. Editor, I would like to answer that statement by presentation of a factual case pending with the Congress for 19 years on a very major tax matter. Three hundred thousand or more independent businesses in that industry carry the tax burden in advance, hoping to recapture the advance from the ultimate buyer where, on the other hand, three giant corporations each doing an annual business of around a billion dollars, whose retail outlets number about 2,000 and which retail outlets are in active daily competition with the independent retailers, have been exempt from that tax levy running into many millions of dollars until their stocks are sold to the ultimate consumer. Who is being shored up here? Not small business.

The article further states: "Dun & Bradstreet, the master scorekeeper of business failures, has found that more than 9 out of 10 small business failures were caused by lack of experience or incompetence." We would not want to go into checking the overall finding of the above, but we do know that this seems to be the usual indictment against small business, and it generally is the alibi originating with management of giant corporations when they are caught redhanded attempting to defeat small business.

We have heard that charge made repeatedly and in most instances it is unfounded. The truth of the matter is that in the majority of cases the failure of small business is not due to management or experience, but can be laid to the door of the Federal Government and many of the States in their failure to enforce the antitrust laws that were placed on the statute books to protect

GPO

the free enterprise system in which small business plays no minor part.

It's easy for us to make this charge but it's far better to have it coming from Government spokesmen when as late as February 1947, the then Assistant Attorney General told a Senate committee that for 35 years the administration had merely given "lip service" to the enforcement of the antitrust laws. There is your main contributing cause for the failure of small business.

In this respect we are more than pleased to state that for the first time in these many years we have seen real vigorous enforcement of the antitrust laws taking place, and we are referring to the action of the Antitrust Division of the Department of Justice these past 6 years.

Check the records of antitrust violations and you will be startled to note the number of giant corporations who have been consistent in their action in violation of the antitrust laws—all actions tending to reduce the position of small business both at the production and distribution level.

Further in the article it states: "Nobody, for instance, has much prospect of outsmarting Sears or Macy's or IBM." We have no complaint with the shrewdness of Sears in their ability to buy right providing the buying arrangements from their suppliers are in conformity with Federal statute, and it might be interesting for you to review Federal Trade Commission Docket No. 2116, dated March 5, 1936, in the matter of Goodyear Tire & Rubber Co.—Sears' supplier. It may be found that this was one of the first "cost plus" contracts entered into by giant industry. In fact it may be found that the present-day success of Sears operations to a degree may be due to this most advantageous contract.

Through that contract relationship cancers were developed in the rubber tire industry which have never been corrected up to this present time. Hundreds of small tire producers indirectly were ruined through that contract relationship and the business of many thousands of competent independent tire dealer merchants was destroyed. There was no bad business management on the part of the small businesses but they could not compete because, in reality Sears was able to offer their private brand, of equal quality to the manufacturers' advertised brand, to the consumer at a price equal to or lower than the small businesses had to pay to the manufacturer, and as one member of the Senate remarked some years later on—referring to that contract relationship: "It wasn't competition—it was just suicide for small business to attempt to compete." In other words, the findings in that Government order disclosed a $41 million preferential during the life of that contract over all other Goodyear customers.

That's the pattern that has been set, and to a degree is being followed in many major industries today.

We had hoped, after the findings in that contract, and the enactment of the Robinson-Patman Act, that the Magna Carta for small business had actually arrived. We found to our amazement, some 34 years later that it was a hollow victory for us.

We say this because in 1939 in one of the first major actions instituted under the Robinson-Patman Act by the Federal Trade Commission, the FTC had ruled the action was a violation of the Federal statute and the Commission had so notified the Temporary National Economic Committee, which report appears in the Senate Small Business Committee print of 1942. Now we find that in similar action started by the same agency, covering the same proposition with other large factors, that on November 18, 1959, an examiner of the FTC validated the action as keeping within the framework of the law.

Small business in this industry, both at the production and distribution level, is the victim, and if failures continue in small business through that arrangement can it be charged to lack of experience and management?

Mr. Odiorne states: "With the advent of the model T (referring to the Ford) my mother joyfully waved farewell to his exorbitant prices and drove off to buy her groceries at the A. & P. 10 miles away." Efficient small business, both at the production and distribution level welcome fair competition. If they do not recognize this—then they shouldn't be in business, but the record will show—largely due to the findings of the Congress as it related to monopolistic actions of certain large grocery chains and other large factors was the principal reason for bringing into existence the Robinson-Patman Act, and it might be interesting to review that major case that took place in Danville, Ill., some few years ago as to the Court's findings and judgment as it applied to the operations of A. & P. in the Midwestern part of our Nation—certain stores deliberately run at a loss until small business in that area was eliminated. There were some other serious charges made also by the Government in that major case.

At the present time the membership of the national federation is supporting legislation titled the "Equal Pricing Bill" introduced by the Honorable ALVIN BENTLEY, Republican, of Michigan. The bill, in simple words, provides that if there is to be a race then it should be an equal race, and not a price-fixing arrangement where a manufacturer is selling to independent retailers and at the same time the manufacturer owning and operating retail stores. The bill would provide that such manufacturer give an equal buying price to both establishments and that he would be prohibited from going direct to the ultimate large commercial buyer and giving a lower price than he extends to the independent retailer or his own retail stores.

This type of operation by certain large producers is extending into more and more industries in our overall economy—all tending to destroy the life of efficient independent business, both at the production and distribution level. Whether the Congress will act on this major piece of legislation—your guess is as good as ours.

If small business is to remain an important part of our economy then something must be done by the Congress to strengthen the antitrust laws. The present fine penalties ordered by the courts are meaningless as a deterrent to continual violations of the antitrust laws. However there was one most encouraging action of the Antitrust Division which recently took place in the city of Philadelphia where the Government Department refused to accept the pleas of those under indictment for violation of the antitrust laws—to use the "nolo contendere" plea. The Government now wants them to plead guilty or not guilty.

Legislation has been introduced which the Federation members are supporting by their registered vote, amending the antitrust laws, providing for removal of officers and of course plus the fines that would be levied by the courts. If top executive positions are at stake for deliberate violations of the antitrust laws it can result in a "stop, look and listen" policy before such action is authorized by giant corporations.

We are not attempting to go to the defense of inefficient small business institutions but we are trying to present a true, factual picture of the situation facing small business nationwide, and we have no other objective in directing this communication to you.

Sincerely yours,

GEORGE J. BURGER,
Vice President, National Federation of Independent Business.

New Constitution of American Samoa

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Wednesday, June 1, 1960

Mr. LONG of Hawaii. Mr. President, on April 27 of this year a new constitution was approved by the constitutional convention of the people of American Samoa. At the same time, the Secretary of the Interior, acting under authority granted by Executive Order 10264, dated June 29, 1951, of President Truman, ratified and approved the constitution. It becomes effective on October 17, 1960.

This document offers convincing evidence of the political growth of American Samoa. It marks a significant step toward self-government, one which gives material encouragement to our hopes, and the hopes of the people of American Samoa, that they will soon enjoy a still wider range of home rule. The example of neighboring Western Samoa, scheduled in 1961 to enjoy complete self-government under the protection of New Zealand, offers a powerful stimulus for this development in American Samoa.

The new Samoan constitution looks familiar to American eyes. It begins with a traditional bill of rights, which might as well be part of the constitutions of Virginia, New Hampshire, Kansas, or Hawaii. The basic elements of the American political system are set forth—free speech; separation of church and government; prohibitions against slavery, confiscation of property, imprisonment for debt; habeas corpus; protection against unreasonable searches and seizures; due process.

However, the Bill of Rights also contains a provision special for Samoa and its problems. Section 3 of article I states that:

> It shall be the policy of the government of American Samoa to protect persons of Samoan ancestry against alienation of their lands and the destruction of the Samoan way of life and language, contrary to their best interests.

This provision expresses an underlying principle of the new constitution, to provide for political democracy within the traditional framework of Samoan life. An important element in this framework is the Matai system—the hierarchy of chiefs who have authority over the families and villages of Samoa. The position of the Matai is maintained by requiring that members of the Samoan Senate "be the registered head of a Samoan family, who maintains his monotaga; that is, who fulfills his obligation as required by Samoan custom in the county from which he is elected." However, any U.S. national, resident of American Samoa for 5 or more years, can serve in the House of Representatives. Senators are to be elected by the county councils "in accordance with Samoan custom," while Representatives are to be chosen by secret ballot by the electorate.

In the executive branch, no qualifications are set for the offices of Governor or Secretary of American Samoa, other than that they shall be appointed in accordance with the laws of the United States.

However, the Secretary of Samoan Affairs—constitutionally head of the department of local government and also supervisor of ceremonial functions—must be appointed by the Governor from among the leading chiefs. Furthermore, before appointing a district governor, county chief, or a pulen'u—that is, village mayor—the Governor must request the recommendations of the appropriate district or county council.

I am especially interested to see in the Samoan constitution provisions similar to those adopted by Hawaii in its constitution. As in Hawaii, the voting age is set at 20. Samoa's constitution also makes it possible to get at pocket vetoes by giving the legislature an opportunity to override postsession vetoes by a two-thirds majority. If he still disapproves of a bill, enacted over his veto, the Governor must send it to the Secretary of Interior for final decision. As in the State of Hawaii, the Governor will enjoy the item veto.

The new constitution gives the Samoan Legislature substantially more power than it formerly possessed. For the first time the legislature, either house, can propose legislation. The Governor can also. If he designates a measure as "urgent," and the legislature fails to act on it to his satisfaction, the Governor can, with the approval of the Secretary of the Interior, promulgate the proposed legislation as law. However, he cannot use this power to amend the laws respecting the courts of Samoa, their jurisdiction, organization, or operation, without legislative approval. Furthermore, changes in the basic land laws must be approved by two-thirds vote of two successive legislatures, as well as by the Governor.

It is apparent that the new Samoan constitution provides a legal basis for a changing society—one which is trying to adapt the best practices of American democracy to its Polynesian tradition, a tradition in which it takes justifiable pride. Progress should be stimulated by the constitutional requirement for compulsory free, public education for children between 7 and 16. Local tradition is protected in its roots, the system of landholding, through the requirement of multiple passage of amending legislation, just described.

In the wider American tradition, this constitution is kept open for change to meet changing social conditions. Under article V, section 4, the Governor must appoint a new constitutional committee 5 years after the constitution becomes effective—that is, 5 years after October 17, 1960. The committee is empowered to draft amendments, or a revised constitution, as it deems necessary. The amendments or draft would then be submitted to a popularly elected constitutional convention for approval or amendment. Finally, constitutional language approved by the convention would go to the electorate for approval—to become effective when approved, in turn, by the Secretary of the Interior. It cannot be denied that opportunity for review of constitutional amendments is amply provided.

I know that the other Members of the Senate join me in congratulating the people of American Samoa on their new constitution and in the hope that they will find it a source of strength in their continuing political and economic growth.

I am informed by the Public Printer that this printing will make four pages of the RECORD at an estimated cost of $324. That the new constitution of American Samoa may be available to all the Members of Congress, and to other interested persons, I ask unanimous consent that it be printed in the Appendix, notwithstanding the cost of $324.

There being no objection, the constitution was ordered to be printed in the RECORD, as follows:

CONSTITUTION OF AMERICAN SAMOA

Whereas the Congress of the United States, in its act of February 20, 1929, provided that until the Congress shall provide for the Government of the islands of American Samoa, all civil, judicial and military powers shall be vested in such person or persons and exercised in such manner as the President of the United States shall direct;

Whereas by Executive Order No. 10264 the President of the United States directed that the Secretary of the Interior should take such action as may be necessary and appropriate, and in harmony with applicable law, for the administration of civil government in American Samoa;

Whereas it is appropriate that, in the process of developing self-government, the people of American Samoa should enjoy certain rights and responsibilities inherent in the representative form of government; and

Whereas it is desirable that these rights and responsibilities be clearly set forth in a constitution, and the adoption of a constitution is in harmony with applicable law:

Now, therefore, this constitution, having been ratified and approved by the Secretary of the Interior and having been approved by the constitutional convention of the people of American Samoa, is established to further advance government of the people, by the people, and for the people of American Samoa.

ARTICLE I

Bill of rights

SECTION 1. Freedom of religion, speech, press, rights of assembly and petition: There shall be separation of church and government, and no law shall be enacted respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press, or the right of the people peaceably to assemble, and to petition the Government for a fedress of grievances.

SEC. 2. No deprivation of life, liberty, or property without due process: No person shall be deprived of life, liberty, or property, without due process of law, nor shall private property be taken for public use without just compensation.

SEC. 3. Policy protective legislation: It shall be the policy of the Government of American Samoa to protect persons of Samoan ancestry against alienation of their lands and the destruction of the Samoan way of life and language, contrary to their best interests. Such legislation as may be necessary may be enacted to protect the lands, customs, culture, and traditional Samoan family organization of persons of Samoan ancestry, and to encourage business enterprises by such persons. No change in the law respecting the alienation or transfer of land or any interest therein, shall be effective unless the same be approved by two successive legislatures by a two-thirds vote of the entire membership of each house and by the Governor.

SEC. 4. Dignity of the individual: The dignity of the individual shall be respected and every person is entitled to protection of the law against malicious and unjustifiable public attacks on the name, reputation, or honor of himself or of his family.

SEC. 5. Protection against unreasonable searches and seizures: The right of the people to be secure in their persons, houses, papers and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized. Evidence obtained in violation of this section shall not be admitted in any court.

SEC. 6. Rights of an accused: No person shall be subject for the same offense to be twice put in jeopardy of life or liberty; nor shall he be compelled in any criminal case to be a witness against himself; and the failure of the accused to testify shall not be commented upon nor taken against him. In all criminal prosecutions, the accused shall have the right to a speedy and public trial, to be informed of the nature and cause of the accusation and to have a copy thereof; to be confronted with the witness against him, to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense. Every man is presumed innocent until he is pronounced guilty by law, and no act of severity which is not reasonably necessary to secure the arrest of an accused person shall be permitted. All persons shall be bailable by sufficient sureties except for capital offenses and rape, where proof is evident or the presumption great. Excessive bail shall not be required, nor excessive fines imposed nor cruel or unusual punishments inflicted.

SEC. 7. Habeas corpus: The writ of habeas corpus shall be granted without delay and free of costs. The privilege of the writ of habeas corpus shall not be suspended except by the Governor and then only when the public safety requires it in case of war, rebellion, insurrection or invasion.

SEC. 8. Quartering of militia: No soldier or member of the militia shall, in time of peace, be quartered in any house without the consent of the owner or the lawful occupant, nor in time of war, except in a manner prescribed by law. The military authority shall always be subordinate to the civil authority in time of peace.

SEC. 9. Imprisonment for debt: There shall be no imprisonment for debt except in cases of fraud.

SEC. 10. Slavery prohibited: Neither slavery, nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted shall exist in American Samoa.

SEC. 11. Treason: Treason against the Government of American Samoa shall consist only in levying war against it, adhering to its enemies, or giving them aid and comfort. No person shall be convicted of treason except on the testimony of two witnesses to the same overt act, or a confession in open court.

SEC. 12. Subversives ineligible to public office: No person who advocates, or who aids or belongs to any party, organization, or association which advocates, the overthrow by force or violence of the Government of American Samoa or of the United States shall be qualified to hold any public office of trust or profit under the Government of American Samoa.

SEC. 13. Retroactive laws: No bill of attainder, ex post facto law, nor any law

impairing the obligation of contracts shall be passed.

SEC. 14. Special or exclusive privileges not to be granted: The power of the Government to act for the general welfare of the people of American Samoa shall never be impaired by the making of any irrevocable grant of special or exclusive privileges or immunities. Special acts conferring corporate powers shall not be enacted. Corporations may be created under general laws, but all such laws may be amended or repealed.

SEC. 15. Health, safety, morals, and general welfare: Laws may be enacted for the protection of the health, safety, morals, and general welfare, of the people of American Samoa.

SEC. 16. Education: The government shall operate a system of free and nonsectarian public education. There shall be compulsory education for all children between the ages of 7 and 16 years. The Government will encourage qualified persons of good character to acquire further education, locally and abroad, both general and technical, and thereafter to return to American Samoa to the end that the people thereof may be benefited.

SEC. 17. Child labor: The employment of children under the age of 16 years in any occupation injurious to health or morals, or hazardous to life or limb is hereby prohibited.

SEC. 18. Unspecified rights and privileges and immunities: The enumeration of certain rights in this constitution shall not be construed to impair or deny other rights retained by the people. No law shall be made or enforced which shall abridge the privileges or immunities of the citizens of American Samoa.

ARTICLE II

The legislature

SECTION 1. Legislature: There shall be a legislature which shall consist of a senate and house of representatives.

The legislature shall have authority to pass legislation with respect to subjects of local application, except that:

(a) No such legislation may be inconsistent with this Constitution or the laws of the United States applicable in American Samoa;

(b) No such legislation may conflict with treaties or international agreements of the United States;

(c) The annual budget shall be as presented to the Congress of the United States subject to such allocations among departments and activities as may be made by the Governor as a result of increases or decreases in the amount of grant funds approved by the Congress, and the Governor shall inform the legislature of his actions in this regard at its next regular session.

(d) Legislation involving the expenditure of funds other than as budgeted shall include revenue measures to provide the needed funds.

The authority conferred upon the legislature by this section shall not be construed as a limitation upon the legislative power vested in the Governor by section 9 of this article.

SEC. 2. Membership: The Senate shall consist of one member from each county, provided that there shall be an additional senator from the western district. The first such additional senator shall be elected in and from Lealataua (Fofo) County in the election held in 1960; his successor in and from Leasina (Aitulagi) County; his successor in and from Tualauta County; and his successor in and from Tualatai County, and thereafter in rotation from such four counties in the order named. Such additional senator shall serve a term of 2 years.

The house of representatives shall consist of members elected on the basis of population in such ratio as may be provided by law; provided that each county shall always have at least one representative regardless of population; and provided further that the total number of members shall never exceed 24. The first house of representatives to be elected following the adoption of this constitution shall be composed of one representative from each county, except that Lealataua (Fofō) County shall have two representatives and Ma'uputasi County shall have three representatives. Representation shall be reapportioned by law at intervals of not less than 10 years.

The adult permanent residents of Swains Island may elect at an open meeting a delegate to the house of representatives who shall have all of the privileges of a member of the house except the right to vote.

SEC. 3. Qualification of members:

A senator shall—

(a) be a U.S. national;

(b) be at least 30 years of age at the time of his election;

(c) have lived in American Samoa for a total of at least 5 years and have been a bona fide resident thereof for at least 1 year next preceding his election; and

(d) be the registered head of a Samoan family, who maintains his monotaga, that is, who fulfills his obligations as required by Samoan custom in the county from which he is elected.

A representative shall—

(a) be a U.S. national;

(b) be at least 25 years of age at the time of his election; and

(c) have lived in American Samoa for a total of at least 5 years and have been a bona fide resident of the county from which he is elected for at least 1 year next preceding his election.

A delegate from Swains Island shall have the qualifications of a representative except that in lieu of residence in a county he shall have been a bona fide resident of Swains Island for at least 1 year next preceding his election.

No person who shall have been expelled from the legislature for giving or receiving a bribe or being an accessory thereto, and no person who shall have been convicted of a felony, shall sit in the legislature, unless the person so convicted shall have been pardoned and have had restored to him his civil rights.

No person holding any other public office shall be eligible during his continuance in such office for membership in the legislature.

SEC. 4. Manner of Election: A senator shall be elected in accordance with Samoan custom by the county council of the county he is to represent.

Representatives shall be chosen by secret ballot of the qualified electors of their respective counties; provided that in case a county has more than one representative such county shall be divided by law into as many divisions as it shall have representatives and one representative shall be elected from each such division by the electors thereof.

SEC. 5. Elections: Elections shall be held biennially in each even-numbered year beginning on the first Tuesday following the first Monday in November and ending not later than 3 weeks thereafter.

SEC. 6. Term of office: Each senator except the additional senator from the western district shall hold office for a term of 4 years. Representatives including any delegate from Swains Island shall each hold office for a term of 2 years. The terms of all members of the legislature including any delegate from Swains Island shall commence at noon on the third day of January following their election, except as otherwise provided.

SEC. 7. Qualifications of electors: Every person of the age of 20 years or upwards, belonging to either of the following classes, who shall have lived in American Samoa for a total of at least 2 years and have been a bona fide resident of the county or division where he offers to vote for at least 1 year next preceding the election and who meets such registration requirements as may be prescribed by law shall be deemed a qualified elector at such election:

(1) U.S. nationals;

(2) Other persons of at least one-half Samoan blood who owe no allegiance to any foreign sovereign state.

No person under guardianship, non compos mentis, or insane shall be qualified to vote at any election; nor shall any person who has been convicted of a felony be qualified to vote at any election unless he has had his civil rights previously restored to him or unless he has maintained good behavior for 7 years following the date of his conviction or his release from prison, whichever is the later.

SEC. 8. Legislative sessions: There shall be a regular session of the legislature held in each year beginning on the second Monday in March and continuing for not to exceed 30 consecutive calendar days. The legislature may meet in special session at the call of the Governor, but the aggregate of such special sessions during any calendar year shall not exceed 15 calendar days.

No legislation may be considered in a special session other than that specified by the Governor in the call for the special session or in a special message to the legislature while in session. The Governor shall address a joint meeting of the senate and house at the opening of each session.

SEC. 9. Enactment of laws; vetoes: The enacting clause of all bills shall be: *"Be it enacted by the Legislature of American Samoa,"* and no law shall be enacted except by bill. Bills may originate in either House, and may be amended or altered or rejected by the other. The Governor may submit proposed legislation to the legislature for consideration by it. He may designate any such proposed legislation as urgent, if he so considers it.

Every bill, having passed both houses, shall be signed by the president of the senate and the speaker of the house, and shall, before it becomes a law, be presented to the Governor for his approval. If he approves it, he shall sign it and it shall become a law, and he shall deposit it in the office of the secretary of American Samoa. But if it be not approved by him, he shall return it with his objections to the house in which it originated, which shall enter the same in their journal. Any bill not returned by the Governor within 20 days, after having been presented to him, shall become a law, whether signed by him or not, unless the legislature by adjournment prevent such return, in which case it shall not become a law unless the Governor, within 45 days after adjournment shall sign it, in which case it shall become a law in like manner as if it had been signed by him before adjournment; and the Governor shall deposit it in the office of the secretary of American Samoa.

Not later than 14 months after a bill has been vetoed by the Governor, it may be passed over his veto by a two-thirds majority of the entire membership of each house but may not be so re-passed at the same session at which originally passed.

A bill so repassed shall be re-presented to the Governor for his approval. If he does not approve it within 20 days, he shall send it together with his comment thereon to the Secretary of the Interior. If the Secretary of the Interior approves it within 90 days after its receipt by him, it shall become a law; otherwise it shall not.

In the event that the Governor has submitted to the legislature proposed legislation which he has designated as urgent, and the legislature has failed to pass the same in its original form or an amended form acceptable to the Governor at the session in

which it was submitted, the Governor may himself, with the approval of the Secretary of the Interior, promulgate such proposed legislation as a law.

If any bill presented to the Governor should contain several items of appropriation of money, he may object to one or more of such items, or any part or parts thereof, portion or portions thereof, while approving the other items, parts, or portions of the bill. In such a case he shall append to the bill, at the time of signing it, a statement of the items, or parts or portions thereof, to which he objects, and the items, or parts or portions thereof, so objected to shall not take effect.

Notwithstanding the provisions in this section with respect to a bill becoming a law upon approval by the Governor or upon its approval by the secretary of the interior after its veto by the Governor or the provision permitting the Governor himself to promulgate laws under certain circumstances, changes in the laws referred to in section 3 of article III, whether by amendment, repeal, or by new statutory provision, shall not be effective unless the same shall have been enacted by the legislature and approved by the Governor and the secretary of the interior. Furthermore, nothing in this section shall be deemed to permit any change in the law respecting the alienation or transfer of land or any interest therein to be effective unless such change shall have been approved by two successive legislatures by a two-thirds vote of the entire membership of each house and by the Governor as provided in section 3 of article I.

SEC. 10. Passage of bills: A majority of all the members of each house, voting in the affirmative, shall be necessary to pass any bill or joint resolution.

SEC. 11. Powers of each house: Each house shall keep a journal of its proceedings and publish the same, determine its rules of procedure, punish members for disorderly behavior, and, with the consent of two-thirds of its entire membership, may expel a member, but not a second time for the same offense. Each house shall sit upon its own adjournments, but neither house shall, without the concurrence of the other, adjourn for more than 3 days, nor to any other place than that in which it may be sitting.

SEC. 12. Freedom from arrest: Senators and representatives and any delegate from Swains Island in all cases except treason, felony, or breach of the peace, shall be privileged from arrest during a session of the legislature, and in going to and returning from the same. No member of the legislature shall be held to answer before any tribunal other than the legislature itself for any speech or debate in the legislature.

SEC. 13. Vacancies: When vacancies occur in either house, the Governor, or the person exercising the functions of Governor, shall issue writs of election to fill such vacancies except if such vacancy occur within 3 months of the next regular election, no special election shall be held and the Governor may fill such vacancy by appointment of the person recommended by the county chief of the county from which the vacancy arose. A person elected to fill a vacancy or appointed by the Governor to fill a vacancy shall take office upon his taking the oath of office and shall hold office during the remainder of the term of his predecessor.

SEC. 14. Public sessions: The business of each house, and of the committee of the whole, shall be transacted openly and not in secret session.

SEC. 15. Reading—passage of bills: No bill shall be passed until copies of the same with amendments thereto shall have been made available for the use of the members; nor shall a bill become a law unless the same shall have been read on two separate days in each house previous to the final vote thereon. On final passage of all bills, they shall be read at length, section by section, and the votes shall be by yeas and nays upon each bill separately, and shall be entered upon the journal. The provisions in this section respecting the reading of bills shall be subject to the exception that a bill providing for a general revision of the statutes or code of American Samoa shall be read in such manner as the legislature may prescribe.

SEC. 16. Title: Every legislative act shall embrace but one subject and matters properly connected therewith, which subject shall be expressed in the title; but if any subject shall be embraced in an act which shall not be expressed in the title, such an act shall be void only as to so much thereof as shall not be embraced in the title.

SEC. 17. Amendment and revisions by reference: No law shall be amended or revised by reference to its title only; but in such case the act, as revised, or section or subsection as amended, shall be reenacted and published at full length.

SEC. 18. Appointment to new offices: No member of the legislature shall during the term for which he was elected and for 1 year thereafter be appointed to any office which shall have been created during such term.

SEC. 19. Effective date of laws: An act of the legislature required to be approved and approved by the Governor only shall take effect no sooner than 60 days from the end of the session at which the same shall have been passed, while an act required to be approved by both the Governor and the Secretary of the Interior or by the Secretary of the Interior only after its veto by the Governor and so approved shall take effect no sooner than 40 days after its return to the Governor by the Secretary of the Interior. The foregoing is subject to the exception that in the case of an emergency the act may take effect at an earlier date stated in the act, provided that the emergency be declared in the preamble and in the body of the act. A law promulgated by the Governor with the approval of the Secretary of the Interior shall become effective at the time specified therein.

SEC. 20. Legislative counsel: A legislative counsel shall be appointed by the Governor to assist and advise the legislature and to perform such other and further duties as may be prescribed by law.

SEC. 21. Quorum: A majority of each house shall constitute a quorum for the transaction of business, but a smaller number may adjourn from day to day and may compel the attendance of absent members in such manner as each house may provide.

SEC. 22. Qualifications and officers: Each house of the legislature shall be the judge of the qualifications of its members and shall choose its own officers.

SEC. 23. Adjourning legislature: In case of disagreement between the two houses with respect to the time of adjournment, the Governor shall have power to adjourn the legislature to such time as he may think proper; but no such adjournment shall be beyond the time fixed for the next general session of the legislature.

SEC. 24. Compensation of legislature: The members of the legislature including any delegate from Swains Island shall each receive for his services an annual salary of $300, payable at such times as may be provided by law; provided that the salary of any such member or delegate in office on the effective date of this constitution for the part of the year 1960 unexpired on such date shall bear the same relation to $300 as such unexpired part shall bear to 1 year, such salary for such unexpired part of 1960 to be paid on December 23, 1960.

Each member of the legislature from Tutuila including Aun'u shall be issued a pass by the Government of American Samoa good for daily round trip public transportation between his village (if no public transportation to his village then between the point nearest his village to which public transportation is available) and Fagatogo during regular and special sessions of the legislature. For his use in attending a session, whether regular or special, each member from Manu'a shall receive a pass from the Government of American Samoa good for one round trip by ship between Manu'a and Tutuila. Any delegate from Swains Island shall be paid $25 by the Government of American Samoa to cover the expense of his travel to attend a session, either regular or special. Members of the legislature including any delegate from Swains Island shall receive no compensation, perquisite, or allowance whatsoever other than that specifically provided for by this section.

SEC. 25. Limitation on compensation of employees: No employee of the legislature or of either house thereof shall be paid either directly or indirectly for a total of more than 50 days of service in connection with a regular session of the legislature or for a total of more than 30 days of service in connection with special sessions in any one calendar year. For the purposes of this section, every employee of the legislature or of either House thereof shall be deemed to be employed for service in connection with a legislative session.

ARTICLE III

Judicial branch

SECTION 1. Judicial power: The judicial power shall be vested in the high court, the district courts, and such other courts as may from time to time be created by law.

SEC. 2. Independence of the courts: The judicial branch of the government of American Samoa shall be independent of the executive and legislative branches.

SEC. 3. Continuance of laws: The laws of American Samoa respecting the courts, including their jurisdiction, organization and operation, the judicial system, and the judiciary shall continue in force until otherwise provided by law. No change in any such laws, whether by amendment, repeal, or by new statutory provision shall be effective unless the same shall have been enacted by the legislature and approved by the Governor and by the Secretary of the Interior.

SEC. 4. Appointment: The chief justice of American Samoa shall be appointed as provided in the laws of the United States.

ARTICLE IV

Executive branch

SECTION 1. Appointments: The Governor of American Samoa and the Secretary of American Samoa shall be appointed as provided in the laws of the United States.

SEC. 2. Governor: The executive power shall be vested in the Governor of American Samoa, who shall take care that the laws be faithfully executed. He shall perform his duties under the general supervision of the Secretary of the Interior.

SEC. 3. Secretary: The secretary of American Samoa shall have all the powers and duties of the Governor in the case of a vacancy in the office of Governor or the disability or temporary absence of the Governor. He shall record and preserve the laws and executive orders, and transmit copies thereof to the Secretary of the Interior. He shall have and perform such other duties as may be prescribed by law or assigned to him by the Governor.

SEC. 4. Secretary of Samoan affairs: There shall be a secretary of Samoan affairs appointed by the Governor from among the leading chiefs. He shall hold office during the pleasure of the Governor. The secretary of Samoan affairs shall be the head of the department of local government and be responsible for the proper administration of the district, county, and village affairs as provided by law, and shall supervise all ceremonial functions as may be provided by law.

SEC. 5. Militia and posse comitatus: The Governor may summon the posse comitatus or call out the militia to prevent or suppress violence, invasion, insurrection, or rebellion.

SEC. 6. Executive regulations: The Governor or his designated representatives shall have the power to issue executive regulations not in conflict with this constitution or any applicable law.

SEC. 7. Supervision and control by Governor, organization of executive branch: The Governor shall have supervision and control of all executive agencies and instrumentalities of the government of American Samoa. There shall be no more than eight executive departments in the Government of American Samoa. No other instrumentality shall be created, organized, or established by the Governor or the legislature, without the prior approval of the secretary of the interior, unless required by Federal law for participation in Federal programs.

SEC. 8. Annual report: The Governor shall annually make an official report of the transactions of the government of American Samoa to the secretary of the interior.

SEC. 9. Pardoning power: The Governor shall have the power to remit fines and forfeitures, commute sentences, and grant reprieves and pardons after conviction for offenses against the laws of American Samoa.

SEC. 10. Recommendation of laws: The Governor shall give the legislature information on the state of the Government and recommend for its consideration such measures as he may deem necessary and expedient. He may attend or may depute another person to represent him at the meetings of the legislature, and may give expression to his views on any matter before such body.

SEC. 11. Appointment of officials: With the exception of elective officials, those appointed by the Secretary of the Interior, and those whose appointments are otherwise provided for, the officials of the government of American Samoa including district, county, and village officials shall be appointed by the Governor. Prior to appointing a district governor, a county chief, or a pulen'u, the Governor shall request the recommendation of the appropriate district council as to who shall be appointed, in the case of a district governor; of the appropriate county council and district governor, in the case of a county chief; and of the appropriate village council, district governor, and county chief in the case of a pulenuu.

SEC. 12. Removal of officers: powers and duties of officers: The Governor may appoint or remove any officer whose appointment is not otherwise provided for. All officers shall have such powers and duties as may be conferred or imposed on them by law or by executive regulation of the Governor not inconsistent with any law.

ARTICLE V

Miscellaneous

SECTION 1. Existing officers: For the public convenience and to insure continuity in the operation of the government and regardless of any other provision or provisions in this constitution, all officers of American Samoa, including district, county, and village officers in office on the effective date of this constitution, shall, subject to the right of resignation and removal as may be provided by law, continue to hold their respective offices until the expiration of the time for which they were respectively elected or appointed.

SEC. 2. Existing laws: In addition to the continuance of certain laws as provided for by section 3 of article III of this constitution, all other laws of American Samoa not inconsistent with this constitution shall continue in force until they expire by their own limitation or are altered or repealed by competent authority.

SEC. 3. Amendments: Any amendment to this constitution may be proposed in either house of the legislature, and if the same be agreed to by three-fifths of all members of each house, voting separately, such proposed amendment shall be entered on the journals, with the yeas and nays taken thereon. Such proposed amendment shall be referred to the next succeeding legislature, and if the same be agreed to by three-fifths of all members of each house, voting separately, the Governor shall be so advised by the legislature. The Governor shall then submit such proposed amendments to the voters eligible to vote for members of the house of representatives at the next general election. If a majority of such voters voting approve such amendment, the Governor shall, within 30 days after such approval shall have been officially determined, submit the same to the secretary of the interior for approval or disapproval within 4 months after its receipt.

SEC. 4. Revision of the constitution: In view of changing conditions in American Samoa, the Governor shall appoint a new constitutional committee 5 years after the effective date of this constitution to prepare amendments or a revised draft constitution to be submitted to the Governor who shall call a constitutional convention to consider the same. The delegates to the convention shall be selected by the respective county councils. The number of delegates from each county shall be the number obtained by dividing the population of the county, as shown by the last preceding Federal census, by 400, any fraction in the quotient obtained to be disregarded if such fraction be less than one-half and if such fraction shall be one-half or more it shall be considered to be one unit, provided that each county shall have at least one delegate, and provided further that Swains Island shall have one delegate selected by the adult permanent residents of the island in open meeting. If the convention approves such amendments or draft constitution either with changes made therein by the convention or without changes, the same as approved shall be submitted by the Governor to the voters eligible to vote for members of the house of representatives at the next general election; and if a majority of the voters voting approve the amendments or proposed revised constitution, the Governor shall submit the same to the secretary of the interior for his approval, and if he approves the same, then the amendments shall become part of this constitution or the proposed revised constitution shall replace this constitution, as the case may be.

SEC. 5. Local or special laws: The legislature shall pass no local or special act if a general act can be made applicable.

SEC. 6. Existing rights and liabilities: Except as otherwise provided in this constitution all existing actions, writs, suits, proceedings, civil or criminal liabilities, prosecutions, judgments, decrees, sentences, orders, appeals, causes of action, contracts, claims, demands, titles, and rights shall continue unaffected notwithstanding the taking effect of this constitution.

SEC. 7. Oaths: All officers of American Samoa including district, county, and village officers, shall, before they enter upon the duties of their respective offices, take and subscribe the following oath:

"I, _____, of _____, do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter, and that I will well and faithfully uphold the laws of the United States applicable in American Samoa, and the constitution and laws of American Samoa. So help me God."

SEC. 8. General power: The enumeration in this constitution of specified powers shall not be construed as limitations upon the power of the Government of American Samoa to provide for the general welfare of the people.

SEC. 9. Construction: In this constitution titles shall not be used for the purposes of construction and wherever any personal pronoun appears it shall be construed to mean either sex; also in this constitution a special or particular provision shall control a general provision should there be inconsistency between a special or particular provision and a general provision.

SEC. 10. Provisions self-executing: The provisions of this constitution shall be self-executing to the fullest extent that their respective natures permit.

SEC. 11. Seat of government: The seat of government shall be at Fagatogo.

SEC. 12. Effective date: This constitution, ratified and approved on April 27, 1960, by the secretary of the interior, acting pursuant to authority vested in him by Executive Order No. 10264, dated June 29, 1951, of the President of the United States, and approved by the constitutional convention of the people of America Samoa in its meeting in Fagatogo, American Samoa, on April 27, 1960, shall become effective on October 17, 1960.

The Difference Between Republicans and Democrats

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. SMITH of Kansas. Mr. Speaker, probably one of the questions many of us have been asked in the past and still are being asked is this: "What is the basic difference between the Republican and Democratic Parties as regards their fundamental beliefs?" In trying to answer this question when asked of me, I many times felt the party asking the question was not satisfied with the answer. We can't always find the difference between the parties when we look at RECORD rollcall votes in the Congress.

Recently I was handed a treatise on this subject by Harold Lydick, a most promising young lawyer of Dallas, Tex. He, in conjunction with others, had attempted to answer this question. I commend it to my colleagues as a fresh approach to the question asked—the difference between Republicans and Democrats.

Here is the article:

THE DIFFERENCE BETWEEN REPUBLICANS AND DEMOCRATS

There has been a lot of talk lately about how much alike the Republicans and Democrats have become. To a certain extent, this is true. It is true in the sense that both parties are willing to accept more intervention in the affairs of the individual by the General Government (as the early leaders of this Republic referred to what is today popularly called the Federal Government) than either would have been willing to accept a century ago and that both parties are,

today, committed to more meddling in international affairs than many important Republican leaders would have accepted 40, or 50, or even 20 years ago. But this is not to say that there is not still a real difference between the parties in both their philosophy and the specific proposals which they set forth to meet current problems.

The purpose of this pamphlet is to illuminate those areas where there is a real difference between the two parties. We will start with their differing philosophies and then move onto specifics to show how a difference in basic attitudes is reflected in the solutions which each party would apply to concrete problems.

THE PHILOSOPHY OF THE REPUBLICAN PARTY

In 1959 the Texas Young Republicans adopted the following statement of principles. Because it states the basic philosophy of the Republican Party both concisely and well, I am using it to illustrate the Republican philosophic position.

STATEMENT OF PRINCIPLES

We of the Republican Party may be readily distinguished from others of different political beliefs because of our adherence to the following principles as the basis of governmental action.

1. We believe that the American people are capable of providing for their basic needs. We consider that Government should do for the people only those things which are beyond the capacity of the individual or of the community to perform for themselves. Government should refrain, in fact should be prohibited, from performing functions which lie within the capacity of the people to achieve if they so desire.

2. We recognize that the basic reason for the growth of this Nation has been self-reliance and initiative of our people. Continued Government encroachment will destroy such self-reliance and initiative and eventually the freedom of our citizens. We therefore repudiate the philosophy of cradle-to-grave security as an obligation or responsibility of Government. This Nation was established, not to guarantee security, but to insure opportunity and freedom for all its citizens.

3. We believe in private capitalism under the system called free enterprise.

4. We believe that the cost of Government should be shared by all citizens according to their means. We are opposed to any inequities in the tax system which place a disproportionate burden on certain segments of our society, and which have the effect of discouraging initiative and retarding economic progress.

5. We recognize that this Union is a Federal compact between sovereign States, and that the legitimate powers of the Federal Government are only those powers specifically granted to it by the Constitution of the United States. We will resist any further attempt by the Federal Government to encroach on the rights of the sovereign States. We will continue to demand a restoration to the States of those powers which have been improperly assumed by the Federal Government during the last several decades.

6. We recognize that for our republican form of government to remain strong the State government should return to the cities and counties the many duties of a strictly local nature which it has assumed during the last quarter century. If we are to remain strong and free our local governments must remain strong as they are the roots of a free government.

7. We believe that it is not only proper, but essential, for those persons charged with the conduct of foreign affairs to consider the best interests of the United States in arriving at their policy decisions.

We live by these principles because, as Republicans, we are aware that under this basic philosophy there has been reared upon this continent a nation under God providing more spiritual and material blessings to our people than any civilization recorded in the annals of history.

THE PHILOSOPHY OF THE DEMOCRATIC PARTY

I do not know of any official group within the Democratic Party which has adopted a statement of principles which would set forth the philosophic position of their party. Consequently, to find their basic attitudes we will have to study the public statements of the leaders of the Democratic Party and examine the official documents of the Democratic Party.

In studying the items listed above we find that the principal base of the Democratic political philosophy is still that of the New Deal-Fair Deal. As such, it is a philosophy which was profoundly influenced by a school of political thought which swept across England and Europe following World War I (though its European origins go back further than 1918). Among the elements of this philosophy are the following:

1. A belief in the necessity of centralized power to cope with the exigencies of the modern world and a corresponding lack of confidence in the ability of any State, provincial, or local government to deal adequately with present day problems.

2. A deep conviction that the Executive of the central authority must be dominant in order to get results. As a consequence, they are willing to subordinate the legislative and judicial branches of Government—all in the name of "efficiency."

3. A belief that private enterprise must be viewed with suspicion and should be permitted to operate only under close Government regulation and supervision.

4. A belief that adequate employment cannot come from private investment or "business." This makes it necessary for the Government to systematically spend money in order to stimulate employment. From this feeling comes the belief that the Central Government must "create a new economic order" and, with it a willingness to accept a "certain amount" of inflation, indeed calling this inflation "good" rather than "bad." Should the "good" inflation get out of hand, they believe that price, wage, and materials control is the proper and necessary counteragent.

5. A belief that labor is always at a disadvantage when dealing with management and must, therefore, have the weight of government on its side in any dispute with management. This is coupled with a tacit acceptance, in some degree, of the idea of the class struggle.

6. A deep conviction that the best solution for nearly every human problem is found through a collective or a governmental remedy and the rejection of the idea that these same problems could be solved by relying on individual and, in the case of economics, private activities.

SPECIFIC PROBLEMS

In examining specific problems I will compare the platform adopted by the Young Republican National Convention at Denver, Colo., on June 21, 1959, and the platform adopted by the Young Democratic Clubs of America at Toledo, Ohio, on November 20, 1959. I am using the platforms adopted by the Young Republicans and the Young Democrats because they are designed as a tool with which to influence their respective party leaders and to recruit new party workers. Consequently, the real attitude on problems is brought out much more sharply than in the platforms of the two parties adopted each presidential year. These platforms, in an effort to attract all segments of the public, have become exercises in "togetherness" and are, in my opinion, the primary cause of the belief that the Republican and Democratic Parties are exactly alike.

In order to keep this pamphlet as short as possible, I will make no effort to specifically cover those elements in the YDCA platform which reflect their bias in favor of an all powerful Central Government. That would double the length of this pamphlet. Also, since our purpose is to illuminate the difference between the parties, I will quote only those sentences and paragraphs which show a difference. No attempt will be made to quote, in full, the stand taken by either party on a general subject such as agriculture, fiscal policy, foreign policy, etc.

To conserve space the following abbreviations will be used:

1. YRNFP—the Young Republican National Federation platform;

2. YDCAP—the Young Democratic Clubs of America platform.

AGRICULTURE

At no place is the difference between the parties brought out more sharply than in their statements on agriculture, the Republicans relying on the individual for a solution while the Democrats look to Washington for it.

YRNFP: "Recognizing that our agricultural industry must remain strong, we are constantly seeking the best means to that end. Just as the Romans, 2,000 years ago learned, we have found governmental controls have not satisfactorily solved our problems.

"We favor the reduction and elimination of governmental subsidies to inefficiencies in agriculture, and the subsequent reduction of rigid governmental controls thereon. The encouragement of free and independent farmers who can combat rising production costs with greater per capita productivity, lower unit cost, and greater individual income."

YDCAP: "Because we believe that the continued independence of the family farmer is a cornerstone of the American way of life, we advocate a Brannan-type farm program with 100 percent parity of income for the family farm production of all agricultural commodities through production payments direct to farmers." And they favor the "adoption and use of workable combinations of farm commodity income improvement methods such as: loans, purchase agreements, market surplus diversion purchases, parity income deficiency payments direct to farmers, stabilization operations by farmers and by governments, market agreements, and other farmer bargaining."

In considering the difference between the two statements, it would be well to remember that President Eisenhower has been able to effect only a slight change in the Federal laws on agriculture as enacted by Democratic Congresses under Presidents F. D. Roosevelt and H. S. Truman. It is under these laws that the U.S. Supreme Court has ruled that the U.S. Department of Agriculture can forbid a man to grow food for his own animals.

FISCAL POLICY

The Young Democrats would probably agree with the following statement in the YRNF platform: "All Government expenditures must meet the test of a true contribution either to national security or national economic progress—not to special interests." But, the two parties seen to differ as to what is a "special interest."

YRNFP: "We must improve our tax system to provide more incentives for economic progress to make it fairer and widen acceptance by taxpayers. We, therefore, believe in a thoroughgoing reform of the entire individual and corporate taxation system especially in the following areas: (1) We believe that dividend credit should be raised; (2) those provisions, promulgated

by the discredited New Deal, of our graduated income tax, which are only punative and makes it hard for individuals to accumulate enough capital to start new business and create new jobs and provide little revenue."

YDCAP: We favor elimination of favoritism to corporations and big business by: (a) Restricting the use of accelerated or rapid depreciation schedules for capital investment; (b) Repeal special tax depletion allowances for the oil, gas and allied industries, replacing present schedules with standard depreciation requirements."

The YDCA platform also advocates changing the present $600 personal tax exemption to $800.

As you would expect, the YRNF platform favors a balanced budget. But, it goes further than that, advocating a budget surplus on the basis that this is essential if we are to stop the "corrosion of inflation."

The YDCA platform ignores the relation between inflation and deficit financing. It contains two statements as regards a balanced budget, one in the statement on Labor and one in the statement on Economic Policy. They are, respecively, as follows: "We believe that the material welfare of human beings is a greater need than the balancing of the Federal budget every single year whatever the economic condition of the country"; and "A balanced Federal budget in a time of national prosperity is a fine ideal, however, it must not become a shibboleth to be followed blindly nor an idol to be worshipped to the exclusion of greater national needs." These statements take on real meaning when you remember that the only balanced budgets the Federal Government has had during the past 30 years have been when you have had either a Republican Congress or a Republican President.

FOREIGN POLICY

The principal difference between the foreign policy planks in each platform is the attitude toward Red China.

The YRNF advocated that we continue to refuse to recognize the Red Chinese Government and oppose its entry into the United Nations.

YDCAP: "We believe that the only civilized way to solve international disputes is by negotiation through regularized diplomatic channels. Because of the policies of the present administration such channels are not now available for use with China. We, therefore, call for the opening of diplomatic negotiations with China for the purpose of seeking solutions to the outstanding differences existing between our two nations, including the settlement of the status of Formosa."

The YDCA statement sounds reasonable enough until you recall that the liberal wing of the Democratic Party, whose views the YDCAP reflects, that was telling us in 1947 and 1948 and 1949 that the Chinese Communists were nothing but harmless agrarian reformers." Apparently not even the Korean war was able to come between the friendship of the liberal Democrats with the Communists of China.

SOCIALIZED MEDICINE

YRNFP: "We support the free-enterprise system in health because of its ability to achieve its objectives. We oppose all efforts to impose government control over the medical profession and other healing arts through compulsory health insurance or other proposals that seek that end—and commend the efforts of voluntary health insurance groups together with the medical profession in finding adequate methods of providing care for our aged population and lower income families without Federal intervention and control."

YDCAP: "We urge the adoption of a program of hospital and medical benefits for our senior citizens on social security covering all illnesses including mental illness with the cost to be met by Federal funds."

FEDERAL AID TO EDUCATION

YRNFP: "Mindful of the inevitable connection between subsidization and control, we are opposed to Federal financial aid for general public education and school construction."

YDCAP: "We recommend Federal aid to supplement local and State funds to carry out such programs in all parts of the Nation which follow the law of the land."

In the very statement where YDCAP advocates Federal aid to education, the Young Democrats are trying to control the local school. The last half of the sentence obviously refers to the U.S. Supreme Court decision on school racial segregation. Their platform statement is a repudiation of those persons within their own ranks who have vigorously insisted that Federal aid to education would exist without an attempt by the Federal Government to control the local school. It illuminates the soundness of the Republican position that Federal control of the local school will follow Federal money.

LABOR

In view of the disclosures of the McClellan committee, the YRNF recommended: "A thorough investigation of the feasible application of antitrust laws to the big, industrywide union organizations"; "Rigid enforcement of the ban on political contributions by labor unions"; and "Protection of union members from involuntary political assessment by their officers."

The YDCA take a different view. They reject "as absurd and inhumane the notion that antitrust laws should be extended to labor unions." Further, they "affirm the right of union members to contribute time, energy, and money to political activity, and we encourage them to do so." The last clause is to be expected since the major union political effort has been for the Democratic Party—but frequently with money collected from Republican union members by the use of involuntary assessments. Again, the Young Democrats have sided with the Government or collective and against the individual.

POWER DEVELOPMENT

The YRNF favored the gradual return of public power projects to private enterprise wherever that is feasible. Furthermore, they favored the restriction of public power projects and the maximum participation of individuals, local agencies, and local government in the development of water projects. They wanted Federal participation in these things only in cooperation with State and local interests. Their whole attitude is best expressed by the statement that: "We believe that private enterprise is capable of providing for our basic needs. The Government should do for the people only those things which are beyond the resources and capabilities of private enterprise to perform."

Insofar as "power" refers to water power, the YDCA six-paragraph statement could be reduced to the following: "We favor bigger and better TVA's." The mere fact that the TVA electrical production system operates at a loss, so that the other 48 States subsidize the cost of electricity in Kentucky and Tennessee through the Federal budget, doesn't seem to bother the young Democrats one bit. The young Democrats bias in favor of Government control is further shown by the statement that they favor the establishment of a federally owned national and regional grid system for the transmission of electric energy.

The young Democrats fear and hatred of private enterprise is shown even more clearly in their statement on atomic energy. "* * * Therefore, we support the following: Public ownership of all atomic power generation plants."

NATIONAL SECURITY

YRNFP: "We favor an aggressive assault on all forms of subversion, both from criminal acts and ideological warfare, to be carried on by the Un-American Activities Committee, the FBI, and arms of both State and Federal Governments."

The Young Democrats, reflecting the strange blindness to communism and Communist causes shown by most of the "liberal" leaders of the Democratic Party during the past 25 years, attacked the security regulations imposed by President Eisenhower. Also, they want the House Un-American Activities Committee to either define its purpose or be dissolved. With this attitude, we should not be surprised that they are also against the non-Communist affidavit required of all students receiving scholarships under the National Defense Education Act of 1958. If they want to get rid of the House Un-American Activities Committee, which has exposed Communist spying on U.S. military secrets, we really cannot expect them to favor retention of the non-Communist affidavit. After all, these scholarships involve not the military security of the Nation, as do the activities of the Un-American Activities Committee, but merely your tax money and mine.

The foregoing quotations are examples of the views of the Republican and Democratic Parties on concrete problems. Which view is desirable is a matter of opinion. But don't ever let anyone tell you again that there is "no difference" between the Republican and Democratic Parties.

Alaska Defenses

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 1, 1960

Mr. BARTLETT. Mr. President, much concern is being expressed in the Pacific Northwest about the recent decision of the Air Force to withdraw from Alaska one of the two fighter squadrons stationed there. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial concerning this situation which recently appeared in the Portland Oregonian.

The Oregon Journal, also published in Portland, likewise had an editorial on this subject. I also ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Portland Oregonian]

Word from Washington that almost half the fighter planes assigned to Alaskan air bases will be removed this summer has alarmed and angered residents of the new State.

"And well it may disturb residents of the other 49 States, too. To weaken the defense strength of an area hitherto regarded as a keystone of the Nation's military structure would be difficult to understand at any time. But at this time, in the wake of the U–2 incident and the collapse of summit talks, it is simply incredible.

Gen. Curtis Lemay, the cigar-chomping Deputy Chief of Staff of the U.S. Air Force,

told members of the Alaska congressional delegation the Pentagon doesn't regard their State as strategically important any more. He believes Alaska will be sufficiently defended by the 33 interceptors of the 317th Squadron at Elmendorf AFB, Anchorage, after the disbanding of the 449th Squadron with its 25 aircraft based at Ladd AFB, 225 miles away at Fairbanks.

Furthermore, General LeMay said he doubts the Russians would choose the Alaskan route for any bombing raid on the North American continent because the DEW line radar stations would rob them of the element of surprise. And in any case, the general concluded, long-range fighters based on the Pacific coast could knock down the intruders as well as the Alaska planes.

This appraisal of the Alaskan defense situation is a slap in the face for Lt. Gen. Frank A. Armstrong, the Alaska defense commander who last year urged the location of more offensive and defensive missile bases in that State to prevent its use as an invasion route by the Reds.

"General LeMay's views most certainly are not shared, either, by the Chief of the North American Air Defense Command, Gen. Laurence S. Kuter, whose job it is to beat off airborne intruders with the tools the Pentagon gives him. General Kuter is firmly on record against the degradation of his defenses against manned bombers, holding that these will continue to be dangerous adversaries for many years to come despite the increasing emphasis on missiles.

"What can civilians do when generals disagree on military questions? We can only follow our instincts, and ours tell us the assumption that the Reds are going out of the bomber business is overly optimistic. According to intelligence estimates the Soviet Union now has about 1,200 firstline, long-range jet bombers. Even if we can believe Nikita Khrushchev when he says he's not going to build any more bombers, our fliers figure that by cannibalizing spare parts from grounded planes and allowing a 5 percent attrition rate per year, Russia still could put into the air as late as 1975 a fleet of 700 bombers able to hit us with 1,000 megatons of nuclear weapons if unopposed. So we had best be prepared for another decade to oppose them.

"We'll make a prediction that by the time the Pentagon gets through making the agonizing postsummit reappraisal of our military situation, General LeMay will be obliged to put down his cigar and eat his words. The 449th, we'll further wager, will stay at Fairbanks. And we won't be surprised either, if there is a change of heart about the Bomarc B cutback and work is resumed on Oregon's half-finished Bomarc base."

[From the Oregon Journal]

ALASKA DEFENSE PERILOUSLY REDUCED

Alaskans are understandably concerned and confused by the recent U.S. Air Force announcement of a major cutback at the Ladd base adjoining Fairbanks. So are we.

The cutback, announced by Gen. Curtis LeMay, Air Force vice chief of staff, indicates a decision to remove the entire 449th Fighter Interceptor Group from Ladd, starting next August and completing the operation next January.

Removal of this closest-to-Russia jet fighter group will mean removal of some 500 officers and men plus civilian employees.

And while it was indicated the Army will take over the use of Ladd, there was no word to the effect that ground forces would be increased.

There was no announced immediate change in the status of Elmendorf air base to the south, and of Eielson, Alaska's retaliatory SAC bomber base. But members of the Alaska congressional delegation and the editor of the Daily News-Miner at Fairbanks were quick to point out that stripping of the Ladd base appears to presage drastic changes in Alaska's historic position of the Nation's first line of defense and relegation of Alaska defenses generally to secondary importance.

The only explanation General LeMay gave U.S. Senators BARTLETT and GRUENING, U.S. Representative RIVERS and Governor Egan of Alaska is his belief that Russian bombers probably wouldn't attack the United States by way of Alaska anyway.

But the Alaska delegation and Gen. Frank A. Armstrong, commander of Alaska defenses, countered by pointing out that Russia has 27 missile bases in nearby Siberia and the United States not only has no major missile base plans for Alaska but soon will have only the 33 fighters at Elieson to defend the new State and the Pacific Northwest.

Still unexplained is the fact that an additional construction appropriation for Ladd Air Force Base ($779,000) was approved the other day by the House Appropriations Committee. Apparently the Air Force hadn't taken the trouble to notify the Congress of its plans to strip Alaska's Ladd Base of its defensive interceptors.

Governor Egan calls this decision "almost unbelievable."

The News-Miner says it indicates that the Air Force considers the new Alaskan State "expendable." Senator GRUENING lashed out at what he called an obvious economy move which threatens the security of Alaska and the Nation.

In light of the recent threats of Khrushchev and the historically strategic importance of Alaska as one of the Nation's firstlines of defense, we can only add that to strip Alaska of half of its fighter-interceptors, without replacing them with missiles, and our virtual announcement to Russia that we're writing Alaska off, strategically speaking, makes no sense at all. The decision should be reversed by the President and Defense Department.

Prices Charged by Hospitals for Drugs Administered to Patients

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. DULSKI. Mr. Speaker, since medical plans for the aged have been advanced, many problems have come to light. A study made 2 years ago revealed that 40 percent of our retired people have some form of health insurance. Even this is often inadequate, and it is expensive in view of the limited resources of the greater majority of our senior citizens. In the meantime, medical costs continue to rise.

I return to my district every weekend and meet with many constituents, some of whom have had the misfortune of illnesses that have run into exorbitant costs.

In recent months public attention has been glaringly focused upon the high drug prices in our country, and emphasis has been properly placed on the wide disparity between the manufacturing cost of certain drugs and their retail selling price. I have followed the hearings conducted by the Senate Antitrust and Monopoly Subcommittee, of which Senator ESTES KEFAUVER is chairman, and I have noted one aspect of this problem which has not yet been explored. This is the price charged by hospitals for drugs administered to patients. Since the patient in a hospital is a captive customer with respect to the drugs that are administered to him, I feel that this should also be an area for investigation by the subcommittee.

In reviewing the many complaints that I have received from constituents, I find that many of the statements rendered by hospitals, for the drugs administered to the patient, are not itemized. Also, in every case, it was felt that the charge for drugs was excessive.

I shall include a copy of a bill which one of my constituents received from a hospital, covering 1 week's expenses last October for one of his relatives. I was astounded when I saw the charge for drugs—$676.25. This was over half the cost of the entire hospital bill:

The following is a duplicate of this bill:

Board and room (7 days, at $21.50)	$150.50
Cardiogram	15.00
X-ray	20.00
Oxygen	78.00
Glucose	11.00
Laboratory examinations	207.00
Surgical dressings	9.08
Special medicines	676.25
Total	1,166.83

Under "Special medicines," or drugs, we find the following items:

Aqueous penicillin (190,000,000 units)	$380.00
Molar NA Lactate I.V.	21.00
Chymar	5.00
Cediland I.V.	4.00
Hydrocortisone	24.00
Solu Cortel	15.00
Vitamin B_{12}	10.00
Digalon	2.00
Streptomycin	8.00
Saline	.75
ASA suppositories	7.50
Chloromycitin	102.00
Levaphed	3.00
Sulfadiazene	12.00
Glucose	75.00
Rontine	7.00
Total	676.25

It is my earnest hope that the Senate Antitrust and Monopoly Subcommittee will delve into this aspect of drug prices since it is evident that a great quantity of drugs is dispensed through the medium of our hospitals. In view of the lack of competition in this area, corrective legislation may be necessary as determined by the facts after careful exploration by this subcommittee.

New York State's Six-Pronged Public Health Program

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, June 1, 1960

Mr. KEATING. Mr. President, I want today to invite attention to an

excellent speech by Gov. Nelson A. Rockefeller at the opening session of the 56th Annual New York State Public Health Conference at Manhattan Center. In this address, Governor Rockefeller summarizes the various New York public health programs to conquer man's most feared diseases and to provide for the health needs of the people of our State.

I do not intend today to devote attention individually to the six major prongs of New York's overall public health program. However, I certainly hope that the Members will read this very valuable address, for I am greatly impressed by the work it describes.

Mr. President, the coordination and intensification of New York's annual health research efforts, a goal which underlies the program outlined by the Governor, will not benefit New York alone. New York's research efforts will, I am certain, contribute significantly to the great battle against disease which is being waged by all of our Nation's 50 States and, in fact, by all of the major countries of the world.

I commend Governor Rockefeller and the officials of the New York State Health Department for the intensive and very worthwhile research and therapeutic work which they are doing. I know that their efforts will prove to be of great and far-reaching importance.

Mr. President, I ask unanimous consent that the above referred to speech by Governor Rockefeller be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEW YORK, May 24.—Governor Rockefeller today reported substantial progress on six fronts in the quest for better health in New York State including "a promising clue" in the search for the causes of cancer.

The Governor addressed public health workers from New York and neighboring States at the opening general session this morning of the 56th annual New York State Public Health Conference at Manhattan Center.

Major steps reported in the Governor's talk were:

1. Mobilization of resources to attack the problem of chronic diseases including research to learn the early warning signs of heart disease.

2. A three-front assault on the problems of mental disability embracing early detection, more rapid treatment, postinstitutional care, modernized admission procedures, and broadening research including the fields of mental retardation and narcotics addiction.

3. A statewide effort to achieve a more effective deployment and use of all medical resources.

4. Development of research plans for a rehabilitation field laboratory with the goal of reaching and helping every disabled person in the State "who can be restored to employment or made more self-sufficient."

5. Providing aid in the search for equitable solutions to the pressing economic problem of payment for medical care.

6. Developing a vigorous network of environmental health services, emphasizing in particular the abatement of air and water polution and protection against the hazards of ionizing radiation.

Following are excerpts from the Governor's remarks:

"We who are present at this 56th annual health conference share a common mission—better health for the people of the Empire State.

"We are here to assess what we have done and to find out what we must do next. This will demand of us that we think in hard and disciplined terms about the kind of health services our people need, not just today, but next year and in the next decade. Any other caliber of health planning is not planning at all. It is chaos.

"There can be no real doubt about what our problems are. Chronic illnesses—chiefly, heart diseases, cancer and the acute and chronic phases of mental illness are the overwhelming health menaces of our time. All of them strike, and strike viciously, at people in their most productive years of life, as well as our growing proportion of persons over 65 years of age. They leave in their wake financial disaster, ruined hopes, and personal tragedy.

"We have been called upon, you and I and others, to think through the answers to these problems. Inevitably, we must determine which among the multitude of possible approaches are the true, the significant, the effective. This is the question to which we have addressed ourselves this past year—the executive staffs of the departments of health, mental hygiene, education, and social welfare, the planning offices of the budget division, my executive staff, committees of the legislature, citizen groups and myself.

"Today I would like to report to you some results of our joint effort. In sum, I consider them to be a well-constructed framwork for effective, long-range action to improve the physical health and mental well-being of our people. I shall discuss this program in six major phases.

I

"First, the State health department has mobilized its resources to help physicians, hospitals, and private agencies to meet the medical needs of the chronically ill.

"A new division of chronic disease services has been established in the department—and tuberculosis, an old and familiar enemy, will be among the ailments attacked with the resources of this division, because it has many characteristics of a chonic disease.

"But the two priority targets are heart disease and cancer, the big killers and disablers. Our cardiovascular health center in Albany is periodically examining 1,700 male employees of the State in a continuing effort to learn the early warning signs of coronary heart disease. Eventually, we hope through this research to be able to conduct mass screening examinations in communities, find persons with the early signs of heart disease, and refer them to their physicians. The objective would be to prevent or ameliorate the all too familiar and frequently sudden tragedies of heart attacks.

"Intensive research into the causes and treatment of cancer is being pursued at our world renowned cancer research center in Buffalo, the Roswell Park Memorial Institute. Not long ago, one of our brilliant young investigators there was able to produce malignant growths in mice with an implant of virus-like material from human tumors. This is a promising clue in the colossal search for the causes of cancer. The conviction is also growing that cancer will one day become a controllable disease if ways can be found to detect it sooner in all its forms and to treat it more effectively. Every conceivable combination of diagnostic technique and of drugs, radiation, and surgery is being developed and tried to insure the fulfillment of that goal.

II

"Second, we are attacking mental disability on three fronts—in the community, in State institutions, and in research laboratories.

"The majority of the population of the State is participating in community mental health programs. These community programs have been patterned after the county boards of health which have proved so effective in the control of communicable diseases. Both programs receive State aid on a fund-matching basis. The community services established by these boards have been doing outstanding work in the early detection of mental disability, and in helping those discharged from State hospitals to maintain the gains they have achieved.

"About one-third of our entire State purposes budget goes for the care of some 113,000 people in New York State mental hospitals—and it is estimated that at least twice that number in the State outside of institutions have some mental or emotional disorder. The department of mental hygiene, which concerned itself in the past with the institutional care of the mentally sick and retarded, is now concerned more and more with the community aspects of mental illness. While the problem is therefore of major dimensions, so is the approach to its solution.

"Our department of mental hygiene began conducting large-scale experimentation with new tranquilizing drugs in 1954. The results were so encouraging that full-scale use of the drugs began in our State institutions in 1955, about a year before they went into general use throughout the country. The department of mental hygiene has followed this up with other pioneering advances including intensive treatment of newly admitted patients. Our new therapeutic approach involves all types of hospital personnel in the treatment process. As a result, the stay of patients in New York mental hospitals has been dramatically shortened. The net population of the State's mental hospitals has also been reduced even though there is a marked increase in patients admitted. Most important of all, thousands of human beings have been given an opportunity to live happy and constructive lives.

"We have also modernized our admission procedures, recognizing mental illness for what it is—a medical problem, not a legal one. Only last month, I signed into law a bill to permit admission of patients to mental hospitals on certification of two physicians, one a psychiatrist, rather than through a court order. This enables prompter treatment—while the protection of subsequent court review of such admissions is provided.

"Our ability to pull ahead in the battle against mental illness will depend upon a sound and well-integrated program of psychiatric research. We have taken steps to ensure that with the creation of a mental health research council. This council will help to focus the overall research aims of the department of mental hygiene, stimulate the exchange of scientists engaged in various research areas, and seek ways to ensure the widest possible use of the knowledge gained by investigations.

"Further, we are preparing to establish a permanent research institute on mental retardation. The preparations take a little time because I would like to have here a first-class institution exclusively devoted to this purpose. I was shocked when I learned that about 3 of every 100 newborn children are mentally retarded. A substantial part of the increase in our mental health budget this year has been allocated to schools for the retarded.

"Additional funds have also been made available for research in narcotics addiction. I am also approving the future organization of clinical facilities in one or two of the State institutions. Joint plans have been

worked out with New York City to utilize some of the great medical centers in the metropolitan area for studying narcotics addiction among adolescents.

"All these efforts represent only a beginning, but they are a sound beginning because they are geared for the long haul. The real breakthrough against mental illness lies ahead of us, but when it comes we will all know we had a hand in hastening the day.

III

"Third, we are marshaling a statewide effort to achieve a more effective deployment and use of all our medical resources.

"An adequate network of hospitals and other medical care facilities is indispensable to the health of our people. With this in mind, I asked a special cabinet committee to study this area, and the committee's subsequent report showed a clear need for a systematic region-by-region organization, centrally directed, to plan the orderly development of medical care facilities in the State. The existing regional hospital councils have done an excellent job of advising us on the Hill-Burton program, which as you know is limited to hospital planning and construction. During the past year, however, a larger need has become apparent to me.

"I therefore took two steps recently to enlarge the scope of State activities in this area: obtaining legislative approval to transfer the existing joint hospital survey and planning commission to the State health department, and creation of State and regional hospital review and planning councils with broader functions.

"This new council will consist of 25 members representing public health, private medicine, hospital groups, industry, labor, medical educational institutions, and private citizens. With the help of regional councils, this new group will gather facts and make recommendations on the construction, services, usage, and suitability of hospitals, nursing homes, and related facilities.

IV

"Fourth, we are developing research plans for a rehabilitation field laboratory.

"This will have two goals: To see how well the needs of the disabled are actually met in a community, and to develop methods for bringing rehabilitation to more people earlier in the course of their illness.

"Early rehabilitation care achieves the most effective results There are now an estimated 200,000 disabled persons in this State. Large numbers are being added to this total each year. Our goal is to reach and help every person who can be restored to employment or made more self-sufficient. We can do no less.

V

"Fifth, we are providing aid in the search for equitable solutions to the pressing economic problem of payment for medical care.

"One of the functions of the new State hospital review and planning council which I mentioned a moment ago will be to study and recommend standards for prepayment health insurance plans as deemed necessary for the public health. And during the recent session of the legislature, an administration bill was passed to require conversion of group health insurance policies to individual policies at fair rates upon retirement—an important advance toward assuring adequate medical care for the elderly.

VI

"Sixth, we are developing a vigorous network of environmental health services, emphasizing in particular the abatement of air and water pollution and protection against the hazards of ionizing radiation.

"The air we breathe, the water we drink, the food we eat and our physical surroundings are becoming more contaminated as our technology advances and our population increases in metropolitan areas. Our people are also being exposed to greater amounts of ionizing radiation. Our year-long study of health needs made us realize that environmental health services have assumed more importance than ever in public health. Accordingly, the reorganization of the State Health Department provides for the establishment of a new division, the Division of Environmental Health Services. This division will be concerned with air pollution, radiological health, water resources and general sanitary engineering services.

"In air pollution control work, we have allocated funds for the department of labor to intensify its investigations of potentially harmful pollutants resulting from new industrial and commercial processes. Meanwhile, the air pollution control board attached to the State health department has divided the State into nine areas for study purposes. Air pollution exists in each. An intensive inventory of air pollution has already been made in the Elmira area, and another is under way in the Niagara frontier area. We have set up a radiological surveillance network to monitor the amounts of radioactive elements that get into air, water, milk, and food. Were we to permit any serious breach in our monitoring, we would be abdicating our clear responsibility to generations of children yet unborn in our State. I have, therefore, specifically earmarked funds for improving our monitoring network and for the development of new methods of detecting ionizing radiation in our surroundings.

"This is where we stand in our approaches to better health. We have accomplished much, but much more remains to be done. Let us not be deluded that these will be the only problems facing us in the years ahead.

"Others are already taking shape:

"While our hospitals have alleviated their shortage of beds, many metropolitan hospitals face expensive modernization problems. Most hospitals still refuse admission to persons suffering from alcoholism, an affliction affecting hundreds of thousands of New York citizens;

"While we have recognized the plight of our chronically ill aged, we have yet to overcome the serious deficiency that still exists in the provision of high quality nursing home care;

"While our researchers uncover new knowledge about the causes and treatment of diseases, a significant gap still exists between such knowledge and its widest use;

"While we have begun a systematic statewide effort to help hospitals achieve good care at economic cost, expensive new methods for the diagnosis and treatment of diseases continue to create steady upward pressure upon medical care costs.

"All these gathering forces make it clearer than ever that preventive medicine—the great deterrent—is our best hope of keeping ahead of the chronic diseases and disabilities. This makes it vital that we continue to press every development that gives promise of preventing and forestalling disease, achieving early detection and employing prompt, effective restoration of the afflicted.

"We must, in short, find ways of controlling our environment and the chronic illnesses in it before our environment and chronic illness control us. To this we dedicate our energies, our skills, our imaginations and our best combined efforts in the years ahead."

A Great Newspaperman Retires

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. PUCINSKI. Mr. Speaker, in a few weeks, one of Chicago's really great journalists, George Wright, is going to begin a well-earned rest by retiring from the staff of the Chicago Tribune.

I have asked for permission today to pay my personal tribute to Mr. Wright, whom I have known for many years as a journalist and with whom I worked very closely while covering the criminal courts building in Chicago.

As Sunday's Tribune appropriately pointed out, George Wright is one of the last of the fabled greats of Chicago's "front page" reporters' era. I know few men in the journalism profession who have earned the unanimous respect of all of those with whom they came in contact to the extent that George Wright has won this respect. His career as a newspaperman has been an inspiration to all of his colleagues. The unequivocal respect that he has enjoyed during his entire 51 years of active service as a journalist can be a criterion to which every American journalist should aspire.

George Wright earned this respect from people in all walks of life because he never violated a confidence, never treated his assignment unfairly, never engaged in reckless and unfounded criticism; but instead, through the diligent pursuit of facts, presented to his readers a fair and detailed analysis of the story he was reporting.

While not a lawyer himself, but because of his penetrating understanding of the law, some of Chicago's most famous judges and attorneys—both those serving in the capacity of defense counsel and those serving as prosecutor—frequently sought George Wright's advice.

In retiring as the dean of the press corps in Chicago's criminal courts, George Wright can today look back confident in the knowledge that he has indeed made an indelible impression on raising the standards of our judicial process in Cook County.

I am particularly gratified to be able to add my own personal tribute to Mr. Wright for his impressive contribution to American journalism, not only as his former colleague, but also, today, as his Congressman. I am proud of the fact that I can list Mr. Wright as a constituent of the 11th Congressional District on Chicago's Northwest Side.

Mr. Speaker, it gives me great pleasure to include in today's RECORD the story about Mr. Wright's retirement which appeared in Sunday's Chicago Tribune. I hope that the young men and women entering the journalism profession will read the story of George Wright and find in his stellar contribution a course of inspiration for their own conduct in this field. I doubt that today's journalists could find a greater reporter to emulate.

The Chicago Tribune article follows:

[From the Chicago Sunday Tribune, May 29, 1960]

GEORGE WRIGHT, A NEWSPAPER GREAT, RETIRES; SCORED SCOOPS BY THE DOZENS—CRIMINAL COURTS BEAT SEWED UP IN HIS POCKET

(By Wayne Thomis)

The Tribune's George Wright—one of the last of the fabled greats of Chicago's "Front Page" reporters' era—is retiring. On Monday he leaves the Criminal courts beat which has been his in a very special way

for more than 40 years. Formal retirement comes July 1.

There will be no replacing of George Wright for Tribune readers and, above all, for his colleagues in the Tribune's city room.

It must be said, in all deference to judges, prosecutors, investigators, and other employees in the court system at 26th Street and California Avenue, that Wright "had his beat in his pocket."

A HISTORY OF SCOOPS

Over the years he produced more complete scoops than any reporter in Tribune history—and his editors believe more than any active newspaperman. A scoop means delivery of a fully covered news account that the opposition misses entirely.

George Wright repeatedly got full, complete, accurate, colorful stories of crimes, confessions, grand jury actions, and grand jury testimony when other reporters drew blanks.

George Wright's special talents and abilities gave readers the only verbatim report of the Loeb-Leopold confessions in the 1924 murder of Bobby Franks. Police and State's attorney's agents had kept the story bottled up until Wright printed it all one morning in late August 1924.

During the trial of the murderers he helped the court stenographer decipher the confessions which had been taken in shorthand. His transcript was more readable than the stenographer's.

SCORES SCOOP ON HEIRENS

Probably his most remarkable scoop was printed August 2, 1946 in some 24 columns of questions and answers. This was the confession of William George Heirens, a sexual psychopath, in the murder of 6-year-old Suzanne Degnan, the slaying of two adult women, and a long series of assaults and burglaries.

The Tribune ran it all, with related stories. No other newspaper or wire service had either a confirmation or denial from the Cook County authorities for the next 3 weeks. Such was the universal respect for Wright's accuracy and the Tribune's integrity that Wright's report was picked up and repeated nationally.

"One of the things I was proudest of—and did more work on—was when Col. Robert R. McCormick, then Tribune editor and publisher, ordered me to clean up the criminal courts docket which was jammed with thousands of untried cases," Wright said.

This happened after a prisoner on trial for murder got a pistol and shot his way out of Criminal Court Judge Charles E. Molthrop's courtroom on July 25, 1933. The prisoner, John Scheck, 20, killed Policeman John Sevick and was wounded critically. Scheck later was electrocuted.

TOLD TO CLEAR DOCKET

"We found that the cause of the whole thing was that Scheck—and hundreds of others—were being held for months and months without trial," Wright recalled. "That's what got Scheck riled. Afterward the colonel felt it was a scandal and told me: 'Go out there and clean up that docket.'

"I told him I wasn't sure it could be done. He said: 'With the Tribune behind you and the campaign basically right anything can be done.' We did it."

Wright went to see the late John Prystalski, then chief justice of the criminal courts, and outlined the problem.

"The judge told me, 'All right my friend—you are the chief justice. Tell me what you want to do. If it is reasonable and practical we'll do it,'" Wright said.

DOCKET REDUCED

Fourteen judges were called to the criminal courts, and made it a policy to force a reluctant State's attorney's staff to trials. They took the "worst cases first", Wright recalls, and finally reduced the docket.

"By the end of the year there were fewer than 100 cases left untried," Wright remembers. "There had been at least 2,700 untried the year before."

Wright chuckles in recollection over the hours he worked. A normal day was 15, he says. Colonel McCormick and the late Edward S. Beck, Tribune managing editor, granted him almost unlimited space, and he wrote column after column, covering every case that came to trial. Finally, all the judges were vying to do "good efficient court work and to require the State's attorney's people to do the same."

Thomas E. Courtney was State's attorney. He is now a circuit court judge.

HE GETS THE NEWS

All grand jury testimony is secret, as are deliberations and actions other than those which result in true bills. This did not prevent Wright from getting his stories for the Tribune, and it has long been a mystery how he obtained them. This is how:

"I got the Loeb-Leopold confession and all the grand jury stories by agility and the use of a doctor's stethoscope," said Wright. "It started because another newspaper was being favored by a chief justice in the old criminal courts building on Dearborn Street at what is now the Chicago board of health headquarters at 54 West Hubbard Street.

"One day I was throwing my keys in the press room. They hit the ceiling and there was a hollow sound. I thought 'Maybe that ceiling is false. Maybe I could get in there.'

"The building maintenance chief said: 'Sure, George, there is a 5-foot opening above every ceiling in the building. It's like an attic. You can get into it at any floor through the airshaft."

CRAWLS ACROSS PLANK

Wright said: "I couldn't do it now—but every day for years I crawled a 20-foot plank across the buildings' airshaft with six or seven stories below. At first I was scared stiff but later got accustomed to this balancing act.

"I sat right over the grand jury room. The ceiling was plaster and I was afraid I'd fall or step through. So I got some planks and laid them out to sit on. Of course when the jurors were there or somebody was testifying I had to be quiet for hours.

"Later I drilled a very small hole in the ceiling and put a doctor's stethoscope over it to amplify what was said. I was getting stuff in the paper about the grand juries that even the chief justices weren't able to get. I drove them wild. At least one of them wanted to do something to me because of the stories, but they never learned how I got them.

"All this changed when the existing criminal courts building was erected and we moved," Wright said. "We had to get our information from people involved in these cases, or from someone close to them."

WENT TO WORK AT 15

Wright was born March 9, 1894, on Chicago's northwest side. He got his first job at the old City News bureau at Clark and Randolph Streets when he was 15. He came to the Tribune in 1925.

He only attended the college of hard knocks. Nobody ever told him about "reporting in depth" or the need for "color" in his stories. He knew these things instinctively. He learned to write at the City News bureau where he started as copy boy, became switchboard operator and obituary writer, night rewriter, and criminal courts reporter.

When he has hired at the Tribune by the late Robert M. Lee, city editor, he turned down offers from the American and the Herald-Examiner.

GAINED AN INSIGHT

Wright's knowledge of judges, lawyers, politicians, bondsmen, policemen, hangers-on, and others in the criminal courts has given him unequaled insight into law enforcement and politics.

"Strange as it may seem, judges in the criminal courts are subject to very little political or other pressure," he said.

"Even when the alcohol mobs were running wide open, there was little effort made to fix cases through the judges. Once in a while a judge may be asked by his precinct captain to do something for a prisoner. But even if a judge wants to give somebody a break he's watched constantly by the press and by the crime commission.

"As for the crime syndicate—there's little of its affairs in the criminal courts. When the syndicate murders someone the law doesn't get any of the killers to prosecute."

A VIGOROUS THINKER

At 66, Wright is vigorous and trenchant in his speech and thought.

"I wouldn't think of moving from Chicago," he said, "I have some projects to carry out around my house at 6907 Owen Avenue. Then Therese—my wife—and I will do some traveling.

"I don't mind a little inclement weather either," he said. "If it's really bad, we'll stay indoors. Our interests are right here with our daughter, Mrs. Mary Barrett, who lives in Morton Grove, and the seven grandchildren."

Relations With Mexico

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Wednesday, June 1, 1960

Mr. YARBOROUGH. Mr. President, we read and hear a great deal these days about the need to improve our relations with our neighbors below the border.

Neville G. Penrose, well-known businessman of Fort Worth, who is a former chairman of the Texas Good Neighbor Commission's outstanding pan-American student forum, has had a unique role in helping promote better understanding among Texans and the people of Mexico. He lived for years in Mexico, and knows well and loves the Mexican people. I commend Mr. Penrose for his interest, and share with him his desire to expand and strengthen our good-neighbor policy.

I ask unanimous consent to have printed in the Appendix of the RECORD a recent speech by Mr. Penrose to Rotary International at Midland, Tex., in which he told of this important phase of the good-neighbor program.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY NEVILLE G. PENROSE TO ROTARY INTERNATIONAL, MIDLAND, TEX., MARCH 10, 1960

I like Mexico—I like Mexicans, they can help us—we can help them. In fact, an entire new climate of understanding is unfolding in these parts. I am glad to say that the Mexicans like Texans more than they ever have in the past and as time goes on our friendship will be strengthened. Why?

Because for 15 or 20 years now Texans, particularly young people, have been taught Mexican history, culture, folklore, traditions, and above all the Spanish language. Many vehicles have been used in this project, but the most important and successful is the Pan American Student Forum, sponsored for many years by the Texas Good Neighbor Commission. Its membership consists of high school students, thousands of them all over Texas. The Pan American Student Forum holds its annual meeting in Austin March 18 and 19 and at least 1,000 delegates will attend. In a few short years these youngsters will be out of school and in time they will be running our State. When they visit Mexico they will know Mexico and they will be able to converse. In the neighborhood of two and a quarter million Texans speak Spanish. I point out again—this program has been in existence for years and its effect is being felt. Mexican youth, particularly in the larger cities of Mexico, are rapidly mastering the English language. In time the language barrier for us will largely disappear and we will be drawn more closely together, economically and socially.

Although Texas is a favorite target for critics, the cold facts are—no other State can compare with what we have done in curing a grievous racial problem. Two centuries ago this area was settled by Mexicans, Catholics, mostly sheep and goat raisers, proud, opposed to slavery with little knowledge or desire for local government. They were peaceful, contented and nonaggressive. Gradually settlers arrived from Tennessee, Kentucky, and Arkansas. A robust self-assertive people, they brought their cattle and slaves, had little time for sheepmen or Catholics and espoused States rights and local rule—add to this the language difficulties and you have a potent mixture of discord and dissension.

Then followed the Texas revolt—the Texas Republic—statehood—the Mexican War—the Civil War—border clashes—the abuse and slaughter of ex-Confederate soldiers who migrated to Mexico—the abuse and killing of Mexicans in Texas, which was so common our Governor was warned by Washington—Pancho Villa—Veracruz—the Pershing Expedition—and the opening of our border to hundreds of thousands of helpless Mexican refugees during the years of the bloody revolution in Mexico—our roundup which dumped thousands of them destitute back across the border during the depression. The seizure by Mexico of railroads—oil fields—ranches, farms and other properties owned by American citizens helped create a most unhealthy atmosphere, and no one recognized and used it to a greater advantage than Adolph Hitler, the master of propaganda, who seized the story, blew it up, distorted and colored it and spread it far and wide in all the Spanish speaking countries of the world.

World War II. Nelson Rockefeller was named director of Inter-American Affairs. Consecrated, tireless, he most ably filled a very hard job—almost immediately he was deluged with alarming reports from all over Latin America that Mexicans were abused in Texas. Mexicans could not be served in Texas restaurants—Mexican children were segregated in schools—Mexicans, even of high rank, were insulted—Mexican laborers were discriminated against—paid starvation wages—worked under terrible conditions. Hitler's agents had indeed done a good job and to add fuel to the fire Mexico placed a ban on the movement of agricultural workers to Texas. Rockefeller was on a spot—we needed agricultural workers desperately—we needed a great deal of raw material from Latin America—we needed most of all their friendship and cooperation. On the other hand Texas was a sovereign State and a rather impulsive one at that. For over a century Texas had been feuding with Mexico and had a great deal to say about depredations, raids, killings, and insults inflicted on its citizens by Mexicans. So, the present New York Governor, showing great leadership, arranged for a money grant to the University of Texas for the purpose of studying these accusations and making recommendations. Out of all this, in time, came what is now known as the Texas Good Neighbor Commission.

With the finest and constant help and cooperation from Mexico and Washington and an awakening of the Texas people to the responsibility of sharing 1,000 miles of border with another nation—we have been able in 20 years to eradicate, if not completely, at least to a large extent, hate, contempt, malice, suspicion and enmity which had been fermenting for nearly 2 centuries. Unfortunately no Hitler has spread this story all over Latin America, or for that matter, Mexico or the United States—what a pity, this is a great story.

"Texans," said Ambassador Antonio Carillo Flores in Lubbock recently, "are our best friends." Raymond Moley in Newsweek said, "Texas has shown the Nation a most sane and workable plan for improving race relations." Henry F. Holland, ex-Assistant Secretary of State, said "The commission has always had the support of the Department of State and Texas is to be congratulated on its valuable work."

Much remains to be done by the citizens of both countries, as individuals and groups. The most important neglected project—the most vital and lasting remains for educators, scholars and historians of both countries to agree on and write a history to be used by the children of both nations. If educated experienced adults cannot do this how can we expect succeeding generations to be free of suspicion and resentment?

As time passed—towns and cities all over the State formed their local good neighbor committees, solving their problems in their own way. Later on the International Good Neighbor Conference was born and is very successful. Its next meeting will be in Corpus Christi in April. The International was organized with a membership of Texas and its four sister states, Tamaulipas, Nuevo Leon, Coahuila and Chihuahua and was called the Five State Conference. Almost immediately other Mexican States asked to join and it has become a very effective, well organized body.

Ten years ago the Good Neighbor Foundation, a nonprofit corporation, was formed to supplement the funds appropriated by the State, thereby, making many projects feasible which would have been impossible without its patriotic individuals and corporations contributing to the foundation, which hopes to become large enough and strong enough to perpetuate some of the worthwhile projects developed through the years by the Texas Good Neighbor Commission.

The U.S. Chamber of Commerce Report on the Communist Economic Offensive

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. FASCELL. Mr. Speaker, events of every day tell us in boldface type how imperative it is to our survival to understand communism, and to keep well informed on its activities.

Recently, the international relations department of the Chamber of Commerce of the United States conducted its fourth oversea survey on problems facing American foreign policy.

This important survey sought to find some answers to the question "How significant to American interests is the Sino-Soviet trade and aid offensive?"

This facet of Communist activities could easily be overlooked by the more spectacular. As the U.S. Chamber of Commerce points out, however, the force and momentum of the communistic economic offensive represents a potentially grave threat to the United States and the entire free world.

I respectfully suggest that each of us should read and understand the impact of this whole report. I quote now parts of the survey to indicate the manner in which it was conducted, its scope, and general conclusions:

A questionnaire was sent directly to American business firms with foreign operations as well as to various American chambers of commerce in foreign countries. (American chambers of commerce abroad, some of which have been in operation since the early part of the century, are voluntary associations of American enterprises doing business in a given country and firms of that country interested in doing business in the United States.)

The questionnaire was designed to obtain the views of American businessmen on: (a) the nature of the Communist economic challenge overseas, and (b) the role of private American companies in helping to advance U.S. foreign policy interests while doing business abroad. This was an independent survey made by the national chamber on behalf of the entire American business community.

Response to the chamber's questionnaire was excellent. Five hundred forty-four replies were received from 77 countries and territories—in Europe, the Far East, Latin America, the Near East, south Asia, and Africa.

The questionnaire covered a wide range of specific points: How much Communist economic activity is going on? What methods does the Communist bloc use to develop trade? Do Communist trade and aid serve primarily political or economic objectives? To what extent has the Communist economic drive strengthened the influence of the Sino-Soviet bloc and undermined the position of the West? How great a danger does the offensive pose to the United States and the free world in general? What effect has Communist competition had on American business operations abroad? Is this competition growing or becoming less intense? In what ways can such competition be countered? What can American business firms abroad do to offset Communist penetration and to demonstrate the advantages and strengths of free enterprise?

The Americans who filled out the questionnaire were requested to express their views only on subjects they felt competent to report on and to skip those on which they considered themselves no better informed than if they were residing in the United States.

Four major points are emphasized in the findings:

1. The Communist economic offensive is worldwide in scope, but modest in size, though the intensity of Communist activity varies widely according to local and international conditions.

2. The offensive has had a relatively small direct impact on American business thus far, but Communist economic competition, com-

bined with political and ideological penetration, is increasing.

3. The Communist economic-political drive abroad is a growing and potentially serious threat to free-world commercial and political interests.

4. American business can help offset the threat by contributing to free-world economic progress and security through intelligent participation in the opportunities of trade and private foreign investment.

A survey of this nature does not lend itself to definitive conclusions. Its value lies primarily in reflecting some of the attitudes and opinions of American businessmen abroad, in casting some light on the character of Communist foreign economic programs, and in outlining the relationship between business and national interests in the international arena.

A number of broad impressions emerge from the survey.

For the present, the Communist bloc's trade and aid effort does not seem very large when compared to the total world movements of goods and money.

In many cases, however, Communist countries are in a position to stretch their resources far beyond their significance in world commerce.

If it so wishes, the Soviet Union, through its centralization of foreign trade, can disregard traditional trade patterns and practices to break a particular market price structure without advance notice.

Sino-Soviet foreign economic programs also tend to be highly selective in terms of target areas, frequenly concentrating on projects which lend themselves to symbolic or psychological exploitation.

The Communists, moreover, do not need large amounts of economic resources to exploit indigenous and revolutionary forces in the less developed world.

While economic motives may not play an unimportant role in Soviet aid and trade decisions, in many countries Soviet economic and political interests coincide. This harmony of interests adds flexibility to Soviet policies abroad and potency to the Communist drive for power.

In many parts of the world, therefore, Communist economic penetration cannot be divorced from political, cultural, and other activities.

The Communist offensive—economic and political—is slowly acquiring force and momentum and represents a potentially grave threat to the United States and the entire free world.

Communist competition with American business overseas is likely to grow. This competition is not restricted to economic fields. It includes a contest in ideological, political, and social spheres which is placing new demands on the American businessman operating abroad.

There are significant areas where American private and national interests overseas can be and often are mutually reinforcing.

Through an enlightened and imaginative pursuit of its own interests, American business can help buttress U.S. foreign policy interests by participating in a process of economic progress and constructive change throughout the world.

Through increased trade and through the enlistment of private managerial and technical talents in the development of less-developed countries, American business can help develop with other nations common interests and cooperative relationships based on mutual objectives.

While some countries may prevent various obstacles to profitable business ventures, American business can help improve the investment climate abroad by improving its own performance, by finding better and more creative uses of the resources already employed, and by improving the quality and sophistication of oversea management policies and practices.

A final conclusion emerging most impressively from the survey is that American corporate management engaged in oversea operations is highly conscious of its responsibility to both the stockholder and the Nation.

We, Americans, must never forget that the Communist challenge has been hurled at us in the field of every endeavor and that one of the most important is business and economics. The U.S. Chamber of Commerce in making this survey and disseminating its findings has performed an invaluable public service.

Additional Support for National Voters' Day

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, June 1, 1960

Mr. WILEY. Mr. President, the 1960's opens an era of great promise and challenge for a free country.

We, as a nation, however, face the task of stimulating greater citizen participation in government—particularly in voting—if our Government and our way of life is to benefit from majority support of the people.

As we recognize, the lifeblood of a Republic is its people—well informed, creative, forward-thinking citizens.

Tragically, barely one-half of the people in our country participate in political life, or vote at election time. The big question then is, What can we do about the situation?

Recently, I introduced a resolution, Senate Joint Resolution 186, to designate a National Voters' Day. The purpose would be to coordinate a nationwide effort by Governors, mayors, industry, labor, fraternal, professional, women's and other civically oriented groups, to educate our people on the need for greater participation in our political life.

The designation of a special day, of course, would not magically do the job; however, I believe it would, in a modest way, help to coordinate efforts toward such objectives.

Recently, my colleagues will recall, I reviewed support for the idea of a National Voters' Day, by a great many Governors across the Nation. In addition, the idea has received enthusiastic endorsement from mayors and city managers, as well as such outstanding organizations as: Lions International; the Council of State Chambers of Commerce; Business and Professional Women's Clubs; the League of Women Voters; the American Council on Education; the American Legion; the American Association of University Women; the American Political Science Association, and other organizations.

At this time, I ask unanimous consent to have printed in the Appendix of the RECORD the following: First, an additional series of letters from Governors, mayors, and national and local organizations; and second, an article from the Milwaukee Journal reflecting upon the great power and responsibility endowed upon citizens by the right to vote.

There being no objection, the letters and article were ordered to be printed in the RECORD, as follows:

OFFICE OF THE GOVERNOR,
Salem, May 12, 1960.

The Honorable ALEXANDER WILEY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILEY: Thank you very much for advising me of your efforts in stimulating a greater voter turnout. This is most commendable and I shall be delighted to supplement your efforts in any way you see fit.

I believe that as far as our local effort is concerned we will have a good measuring stick on May 20 when our primary will be conducted.

I trust that you will give me the benefit of your experience. If you have experiences along the way that would be helpful to giving support to the movement here in Oregon we will appreciate them greatly.

With every good wish.

Sincerely,

MARK.

EXECUTIVE DEPARTMENT,
Austin, Tex., May 3, 1960.

Hon. ALEXANDER WILEY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILEY: Thanks for your good letter concerning National Voters' Day.

Your suggestion has considerable merit and I will be glad to cooperate in every way.

Kindest personal regards.

Sincerely yours,

PRICE.

OFFICE OF THE GOVERNOR,
Springfield, May 11, 1960.

Hon. ALEXANDER WILEY,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: Thank you for your letter concerning the stimulation of greater voter participation in local, State and national elections.

I am very interested in your plan and I want to point out that we have in the past issued proclamations of a similar nature.

If I can be of service by following through again this year, please do not hesitate to contact me.

Sincerely,

WILLIAM G. STRATTON,
Governor.

STATE OF WEST VIRGINIA,
Charleston, May 18, 1960.

Hon. ALEXANDER WILEY,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: Your efforts to stimulate greater voter participation are highly commendable.

It seems to me that the principal merit of a "National Voters' Day" results from the fact that it would serve to coordinate and emphasize the numerous efforts of community groups and organizations which are currently employed. I have long believed that the efforts of these groups would meet with greater success, if they were better coordinated. Good luck with your resolution.

With best regards.

Very sincerely,

CECIL H. UNDERWOOD,
Governor.

STATE OF NEW HAMPSHIRE,
Concord, April 25, 1960.

Hon ALEXANDER WILEY,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: Thank you for your letter of April 20 with reference to promoting interest in all citizens to exercise their right to vote on election day. I want to assure you that I will be more than happy to cooperate in any way to stimulate interest in the citizens of New Hampshire to exercise their privilege of casting their ballot election day.

With best wishes.

Sincerely yours,
WESLEY POWELL, *Governor.*

CITY OF EAU CLAIRE,
Wisconsin, April 27, 1960.

The Honorable ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: I would like to extend to you my congratulations for the very fine proposal that a National Voters' Day be observed in November each year. The concern which you express over low voting turnouts is a problem which should worry all of us. Please be assured that the government of the city of Eau Claire will cooperate fully in any attempt to focus public attention and interest in exercising the right to vote.

Best wishes.

Sincerely yours,
D. G. WEIFORD,
City Manager.

CITY OF SHEBOYGAN,
Sheboygan, Wis., April 29,1960.

Hon. ALEXANDER WILEY,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: I have read with approval your suggestion for a National Voters Day in attempt to stimulate voting activity on the local, State and national level. You can count on this office to cooperate in any way possible to further the development of a good voter's participation in the November election.

Very truly yours,
JOHN BOLGERT,
Mayor.

CITY OF LANSING,
Lansing, Mich., May 4, 1960.

Hon. ALEXANDER WILEY,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: Thank you for your letter of April 25 relative to the need for increased public participation in exercising our right of franchise by voting for persons for public office.

Without doubt, a National Voters' Day would be beneficial as it would tend to focus public attention to the responsibility that all people have toward fostering the privilege that free people have.

Some months ago I noticed the following comment in the paper about the ballot:

It is a weapon that comes down as still as snow flakes fall upon the sod. To exercise a free man's will as lightening does the will of God, and from its force no doors or locks can shield you from the ballot box.

This little statement is quite true, so let us hope that those who direct the destiny of our country are chosen by the vast majority of our citizenry.

Yours very truly,
RALPH W. CREGO,
Mayor.

THE AMERICAN LEGION,
Milwaukee, Wis., April 25, 1960.

Hon. ALEXANDER WILEY,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: I have received your letter of April 23 together with a copy of the CONGRESSIONAL RECORD whereby you advocate a National Voters Day.

I think it is a very excellent idea and it certainly should stimulate voting not only in Wisconsin, but in the entire country.

I believe you are to be commended for your part in this proposal.

With kindest regards, I remain,

Sincerely yours,
ROBERT G. WILKE,
Department Adjutant.

LIONS INTERNATIONAL,
Manawa, Wis., May 5, 1960.

The Honorable Senator ALEXANDER WILEY,
U.S. Senate, Committee on the Judiciary,
Senate Building, Washington, D.C.

DEAR SENATOR WILEY: Thank you very much for your kind letter of April 23, with regard to your proposed "National Voter's Day."

I am happy to endorse this proposal with the hope that it will cause a better and more intelligent participation by American fellow citizens in their right to vote and actually go out to the polls on votng days.

I am referring this letter of yours together with the CONGRESSIONAL RECORD to the editor of our Wisconsin Lions State magazine, our good friend Past International Director Lion Ray A. Galipeau, of Merrill, for inclusion in the next issue of our magazine. This magazine reaches not only our 10,000 members around the State, but also is mailed to their homes and is read by their families; through this method this communication of yours will reach a very large number of our Wisconsin citizens.

Thanking you again for your continued interest in these and other civic affairs and your many kindnesses and our best wishes.

Yours most truly,
SHAFEEC A. MANSOUR,
State Secretary, Multiple District 27,
Lions International.

COUNCIL OF STATE CHAMBERS
OF COMMERCE,
Washington, D.C., May 5, 1960.

Hon. ALEXANDER WILEY,
U.S. Senate, Washington, D.C.

DEAR SENATOR WILEY: Thank you for your letter of April 29 with respect to your joint resolution to designate a "National Voters' Day."

Yours is certainly a worthwhile effort to stimulate greater voter participation, and at our next council meeting we shall be happy to present your proposal to the constituent member State and regional chambers of commerce for their consideration.

With expressions of my esteem,

Sincerely,
EUGENE F. RINTA,
Executive Director.

THE WISCONSIN FEDERATION OF
BUSINESS AND PROFESSIONAL
WOMEN'S CLUBS, INC.,
May 15, 1960.

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: There is no doubt that democratic government is in danger when rule by the majority passes to rule by a minority because of indifference of the governed. Before voter interest can be awakened the reasons for voter disinterest must be determined and it is our sincere hope that your proposal will be a step in that direction.

The Wisconsin federation is concerned with the problem of voter apathy and if Congress adopts your resolution I am sure that the local clubs will be happy to cooperate in emphasizing the importance of the voting privilege.

Yours sincerely,
DOROTHY H. SAFFORD,
President.

LEAGUE OF WOMEN VOTERS
OF JANESVILLE,
Janesville, Wis., May 25, 1960.

The Honorable ALEXANDER WILEY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILEY: Indeed I am in favor of your proposal to designate a "National Voters' Day" and feel sure that the League of Women Voters of Janesville will wish to cooperate—both in securing favorable action and in making such a day, if designated, a success.

We are just embarking on a new fiscal year and I hope to call a meeting of our new board next week at which time I will bring your worthwhile proposal to the board's attention.

Sincerely yours,
Miss GRACE W. ESTES,
President.

AMERICAN COUNCIL ON EDUCATION,
Washington, D.C., May 10, 1960.

The Honorable ALEXANDER WILEY,
U.S. Senator,
Washington, D.C.

DEAR SENATOR WILEY: Thank you for sending me the reprint from the CONGRESSIONAL RECORD of your proposed joint resolution establishing a "National Voters' Day," and of your excellent supporting statement.

Certainly I am in full accord with your concern for greater citizen participation in our national elections. The low percentage of citizens exercising their voting privilege in recent elections is deplorable, and I applaud this concrete evidence of your determination to do something about the problem.

Sincerely,
ARTHUR S. ADAMS.

AMERICAN ASSOCIATION OF
UNIVERSITY WOMEN,
Washington, D.C., May 3, 1960.

Senator ALEXANDER WILEY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILEY: Thank you for sharing with me the reprint from the CONGRESSIONAL RECORD in which you outline your idea for a "National Voters' Day." If we can encourage a greater percentage of our citizens to exercise their franchise it will certainly be beneficial, and I wish you every success in this endeavor.

Sincerely yours,
PAULINE TOMPKINS,
General Director.

THE AMERICAN POLITICAL
SCIENCE ASSOCIATION,
Washington, D.C., May 18, 1960.

The Honorable ALEXANDER WILEY,
U.S. Senate, Washington, D.C.

DEAR SENATOR WILEY: Many thanks for your recent letter about stimulating greater voter participation in elections. This is a matter of great importance and I am very much in favor of any action that can be taken to increase voter participation. If

there is anything I can do to help at any time, please let me know.

With best wishes.

Cordially,

EVRON M. KIRKPATRICK,
Executive Director.

[From the Milwaukee Journal, Apr. 5, 1960]

NOW IT'S VOTER'S TURN: A GREAT POWER AND RESPONSIBILITY

A more apt and telling name for a special day like this would be Voters' Day.

Columbus and Washington and Lincoln have their days. Labor has its and veterans have theirs, and so on. Unlike these, the act being performed on Voters' Day is one not of commemoration but of fulfillment. Each opening of the polls enthrones the voter as king for the day.

For weeks the politicians and the aspirants, from presidential to aldermanic, have held the stage. They have flown and traveled and tramped the airways, highways and byways. They have spoken to and shaken hands with and been seen by everybody they could get near. They have besieged all eyes and ears on radio and television, in billboards and advertising, on baseball schedules and matchcovers.

The prospective voter, benumbed by now, has taken it all patiently and meekly. Now it's his turn. The candidates have retired to the wings and must be silent, and can only cross their fingers and sweat out tonight's tallying. The voter has stepped front and center and is having his say.

He is judging the past weeks' performances and promises and impressions. With his secret X's he is quietly but all powerfully disposing of the hopes and claims and ambitions of all who have appealed to him. He is having the last word, and what he says goes.

So it is deeply meaningful to consider that an election day is in this sense truly voters' day. The power being wielded behind the curtains in the booths today is the ultimate power, the wellspring of all other authority. It is where our form of government begins and must ever return.

And great power is great responsibility.

James A. Farley

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. HARRISON. Mr. Speaker, on Monday, a distinguished American—James A. Farley—marked his 72d birthday anniversary. It is a happy circumstance that, with undiminished vigor, he continues his active interest in public affairs and contributes, from time to time, his perceptive comments and counsel on issues confronting his countrymen.

When he does speak out, his observations are recognized as those of a successful, civic-minded businessman who has the additional credentials of long and energetic participation in public life.

It is a privilege to salute him on this occasion and to include, under leave to extend my remarks in the Appendix, an editorial which appeared on May 28, 1960, in the World-Telegram and Sun of New York City:

JIM FARLEY'S 72D

Besides the celebrated blizzard, any chronicle of 1888 should take note of the birth of one of the country's most astute politicians and businessmen. That would be James Aloysius Farley, who will be 72 years old on Monday.

His energy, talents, and commonsense remain undiminished. It's a pleasure to wish Jim Farley happy returns and many more productive years.

Reaffirming America's Concern for the People of the Captive Nations

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, June 1, 1960

Mr. KEATING. Mr. President, it is of the utmost importance for the American people and their diplomatic representatives to keep before the world our concern for the plight of the peoples now trapped behind the Iron Curtain. In keeping with our Nation's traditions, we must grasp every opportunity to reaffirm our dedication to freedom and self-determination for all people, particularly those who live in the captive nations.

In a recent letter to President Eisenhower, preceding the abortive summit conference, Dr. Lev E. Dobriansky, chairman of the National Committee on Captive Nations Week Observance, urged that this whole issue be explored at the conference of the heads of state. In his letter, Dr. Dobriansky noted that the now-famous U–2 plane was not downed over Russian territory, in the proper sense of the word, but over land that is captive non-Russian. This is an important difference which should be carefully considered by all Americans, particularly our diplomatic spokesmen.

The National Committee on Captive Nations Week Observance includes clergymen, labor leaders, educators, civic officials, and officers of numerous nationalities organizations all over the United States. I am proud to be a member of this group, which is dedicated to promoting the annual observance of the event which was established last year by the congressional resolution and Presidential proclamation of Captive Nations Week. Plans are now well underway for suitable ceremonies during the week of July 17–23.

Mr. President, although the summit conference has since collapsed, the sentiments expressed in the letter of Dr. Dobriansky to the President, to which I have referred, are of undying importance. They deserve wide attention and careful thought by all Americans who are concerned with our deep moral obligations to the noble peoples behind the Iron Curtain. I, therefore, ask unanimous consent that the text of this letter be printed in the Appendix of the RECORD. I also ask unanimous consent that a partial list of original members of the National Committee on Captive Nations Week Observance be printed in the Appendix of the RECORD.

There being no objection, the letter and list were ordered to be printed in the RECORD, as follows:

NATIONAL COMMITTEE ON CAPTIVE
NATIONS WEEK OBSERVANCE.
Washington, D.C., May 21, 1960.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: On the eve of your departure for the summit meeting in Paris, I wish to take this opportunity to express the one central idea which binds the rapidly growing membership of this national committee, namely that in the light of our traditions and our moral leadership among the nontotalitarian nations of the free world it is unthinkable that we should fail to press the fundamental issue of the captive nations—those within as well as those outside the Soviet Union—as a paramount subject of summit discussion. Indeed, the U–2 incident and Moscow's distorting propaganda abuse of it necessitate that at long last we face the reality of all the captive nations, not just the minority of them in Central Europe.

In accord with the written intent of Public Law 86–90 enacted last year, this committee is a natural response to the reasoned convictions and judgments of countless American citizens who properly view the captive nations issue as a subject of cold logic and national strategy, not just one of warm sentiment and humanitarian concern. The surging, nationwide support for Captive Nations Week Observance is impressive evidence that the rank and file of the American people view with abhorrence the slavery status of whole nations, the result of Moscow's imperialist totalitarianism. Our American people, thank God, are not reconciled to the captivity of millions by Red totalitarian tyrants, nor do we regard this as their permanent condition. We thus urge you, Mr. President, to expressly convey at the summit both the spirit and the contents of the Captive Nations resolution which our Congress passed last year.

Developments of the past 3 years, highlighted by sputniks and other basically diversionary Russian performances, cannot but cause us to recall here the apt words of Karl Marx—words which still are unquotable in Khrushchev's supposedly relaxed empire:

"They will have learned before that the idea of Russian diplomatic supremacy owes its efficiency to the imbecility and the timidity of the Western nations, and that the belief in Russia's superior military power is hardly less a delusion. There is only one way to deal with a power like Russia, and that is the fearless way."

Applied to the current scene, this is doubtlessly a strong statement and, in part, exaggerated. But when one faces the paramount fact that, in this past century, of all the major colonial empires the Russian one was not only able to survive but also, behind the legalistic mask of the U.S.S.R., now even threatens the security of the nontotalitarian world, the aptness of the statement could scarcely be denied. It is most significant that this observation was made during the reign of Czar Nicholas I with whom Khrushchev now openly compares himself, as witness his Budapest address last December. With secrecy and espionage in the air today, we can all profit by reading the illuminating chapter on "The Secret Life of Russia" in Marquis de Custine's classic "Journey for Our Time," a work written in the days of Khrushchev's present model and about whom the author says: "When I gaze upon this personage, unique in the world, from close at hand, I believe his head has two faces, like that of Janus."

The cold war techniques of Khrushchev who has clearly earned the imperial title of Nikita the Surly, are essentially those of Nicholas I, the former and equally arrogant "gendarme of Europe." Nuclear blackmail threats, exercises in Potemkin Village economics, and many other stratagems have their substantial precedents in the history of Russian empire building, written by the blood of both the oppressed Russian and non-Russian peoples. The peace-at-no-price attitude shown by Moscow toward the summit indicates in itself the manner by which it seeks to exploit this given opportunity. Its proganda machine has even gone to the length of attempting to compromise the position of Western Germany by unjust attacks upon Theodore Oberlaender, the refugee minister of our ally, in whose defense scores of witnesses in this country could be supplied. Its propaganda exploitation of the U–2 incident, which may well backfire, is more generally known. In short, Moscow's carefully calculated game of bluff and bluster has reaped for it another summit: its aim now is to exploit it fully.

It cannot be too strongly emphasized that the irony of the current situation lies in the overall fact that Moscow is able to advance diplomatically and propagandawise though it is really operating from basic weaknesses and multiformed necessity. Our memories are short. All evidence shows that at the time of the Hungarian revolution the Red totalitarian empire was in grave trouble. Surely the passage of 4 years has not erased the inherent weaknesses in the structure of this farflung empire. Plainly, a ruler secure in his empire would certainly not erupt as Khrushchev did upon the passage of the Captive Nations Week Resolution last year. Out of necessity and the need for time to consolidate, Moscow is clearly pressing for Western accommodation to its empire under the spurious label of "peaceful coexistence," along with the hope that its calculated propaganda of bluff and bluster may twist any indication of western timidity into real concessions.

Unleashing Marx at Khrushchev, our actions should be completely guided by the historical truth that "There is only one way to deal with a power like Russia, and that is the fearless way." Disarmament, nuclear test bans, the misnomered topic of East-West relations, involving trade and cultural exchange, are in reality secondary issues. Khrushchev's overriding objective is Free World assent and acquiescence to his empire. His emphasis upon disarmament and other subsidiary issues is designed to deflect our attention from the basic issue. The omission of this subject in summit discussion will certainly be propagandistically exploited in the empire to mislead the captives that the free world's interest in them has waned.

This committee, therefore, strongly urges that our Government seize every opportunity to insist upon this crucial subject as a major point of summit discussion. Failure to do so would be, in effect, an accommodation to Moscow's empire and a victory for Khrushchev, far surpassing anything his unreliable multinational military forces could achieve. We would be bolstering the security of his totalitarian, colonial system and undermining one of our most powerful deterrents against overt totalitarian aggression and a hot war, namely the captive nations both within and outside the Soviet Union. The very implication of an assent to the status quo would make mockery of the Captive Nations Week resolution and also of the proclamation issued by you, Mr. President, last year. In terms of bargaining position, the captive nations are of enormous and strategic value to the security of the nontotaliatrian world. Any rationalization to the effect that this fundamental subject might be discussed later in a possible series of summits would not mitigate some of the above effects.

This summit is truly a ripe occasion for the expression of our initiative, diplomatic offensive, and asserted knowledgeability as concerns Moscow's empire, which includes the Soviet Union itself. At every point we could express these qualities and place Moscow on a retreating defensive. The U–2 incident has revived the open skies plan and the need for breaking through the Iron Curtain. We could also point out that most of the territory flown over by the plane is captive non-Russian and forthrightly bring into question the legitimacy of Moscow's argument on international law. A law which in truth and history is not founded upon the inalienable rights of people is hardly one commanding of dutiful observance. We earnestly hope that after all that has been sensationally revealed by this incident, our Government will manifest at the summit that power of fearless initiative without which the unending challenge of Moscow's imperialist totalitarianism cannot be met.

With God's many blessings upon your historic venture and best wishes in our firm policy of justice and freedom for peace and friendship among all nations, including those in the Soviet Union, I am,

Sincerely yours,

LEV E. DOBRIANSKY,
Chairman.

NATIONAL COMMITTEE ON CAPTIVE NATIONS WEEK OBSERVANCE

Dr. Lev E. Dobriansky, chairman.
Thomas F. Connor, executive director.
Stephen J. Skubik, secretary-treasurer.

Committee members: Robert Arthur, Scranton, Pa.; Bela Bachkai, Washington, D.C.; Frank R. Barnett, New York, N.Y.; James Burnham, New York, N.Y.; Kent Courtney, New Orleans, La.; James W. Crockett, Brooklyn, N.Y.; Hon. Thos. J. Cuite, Brooklyn, N.Y.; Rev. C. S. Dunker, St. Louis, Mo.; Brig. Gen. Bonner Fellers, Washington, D.C.; Dr. Edna R. Fluegel, Washington, D.C.; Rabbi Norman Gerstenfeld, Washington, D.C.; Hon. Robert Hanson, Milwaukee, Wis.; Rev. Frederick B. Harris, Washington, D.C.; Dr. Sidney Hook, New York, N.Y.; John Hvasta, Sommerville, N.J.; Dr. Jan Karski, Washington, D.C.; Dr. Tibor Kerekes, Washington, D.C.; Hon. Chas. J. Kersten, Milwaukee, Wis.; Dr. Chas. W. Lowry, Washington, D.C.; Very Rev. Stephen Loya, Duquesne, Pa.; Eugene Lyons, New York, N.Y.; George Mardiklan, San Francisco, Calif.; Arthur G. McDowell, Philadelphia, Pa.; Rt. Rev. Msgr. Jos. V. Miliauskas, Scranton, Pa.; Don L. Miller, Washington, D.C.; Roy H. Millenson, Bethesda, Md.; Most Rev. Cuthbert M. O'Gara, Union City, N.J.; Dr. Daniel Poling, New York, N.Y.; Very Rev. Msgr. John K. Powell, Scranton, Pa.; Joseph Prusa, Passaic, N.J.; Hon. Antoni N. Sadlak, Rockville, Conn.; W. C. Thorning, Frederick, Md.; Walter Trohan, Washington, D.C.; John A. Volpe, Malden, Mass.; Gen. Chas. A. Willoughby, Washington, D.C.; Joseph J. Woolfson, New York, N.Y.; M. Norvel Young, Los Angeles, Calif.

The Mutual Security Bill

EXTENSION OF REMARKS
OF
HON. J. L. PILCHER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. PILCHER. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the following speech which I made on the floor of the House a few days ago in connection with the mutual security aid bill. This speech is a summation of the findings of the Foreign Affairs Subcommittee of the House of Representatives; namely, Subcommittee on Foreign Economic Policy, of which I am privileged to serve as chairman—Report No. 1386, 86th Congress, 2d session:

Mr. Speaker, first, I want to commend our chairman, the gentleman from Pennsylvania, Dr. MORGAN, even though I disagree with his views on this bill, for giving me so much consideration, and especially for yielding me this time. He had only 2 hours and gave me 30 minutes out of that. He has not only been fair about this, but he has been fair to me at all times. He knows I am not particularly against this bill. If my vote would kill the bill this afternoon, I would not cast that vote. But I am against waste, extravagance and corruption in some places that can be proven in this program. I am still one who believes that a country has to be strong economically as well as militarily. I think it is time we looked into our own economic affairs.

Our public debt is in the neighborhood of $200 billion. That is $45 billion greater than the total national debt of the entire world, including Soviet Russia. The interest alone on our national debt is fast approaching $1 billion a month. Our farm mortgages are increasing at the rate of approximately $1 billion a year. Our interest rates are continually going up. Some of the countries that we have put back on their feet are now discounting our currency. I do not believe that we can carry the ever-increasing load of the entire world.

The mutual security program was born as the Marshall plan after World War II. We were helping people in Western Europe who had banking and commerce experience, who had industrial know-how, people who did not need anything except to have their factories repaired and they would be back in business. It started with 700 or 800 employees, and at the height of the Marshall plan there were only 2,220 people employed. Today ICA which administers the mutual security program has 42,200 people on their payroll. It has gotten so large until it is even shaping our foreign policy in some places. It is one of the largest businesses in the world, and still we change managers every year or so. I think most of our mistakes can be traced to our own people instead of the foreign governments. Since it started, we have spent over $30 billion. We are building the ego of a good many of these little dictators over the world, but we are losing the little people and the masses. Korea is a fair example of this. Cuba is another example within 90 miles of our borders.

The Subcommittee on Foreign Economic Policy of the Foreign Affairs Committee, of which subcommittee I was chairman, traveled 42,000 miles and visited 22 countries on 6 continents. We rode as much as 150 miles a day in jeeps. We rode in taxicabs and helicopters and looked at good and bad projects—the gentlewoman from Illinois [Mrs. CHURCH], the gentleman from Minnesota [Mr. JUDD], the gentleman from Massachusetts [Mr. CURTIS], the gentleman from Delaware [Mr. MCDOWELL], and the gentleman from Florida [Mr. FASCELL]. We worked 12 or 16 hours a day, 7 days a week. The gentlewoman from Illinois has more stamina than any person I have ever known. We were up at 6 o'clock every morning, and she was the first one out. I have seen her walk up the mountains in Korea, through the fields in India, and through the factories, and she never missed a single project.

Our first stop was in Tokyo. Japan is one of the most dynamic countries I ever saw. They are 50 percent above their prewar economy today. Their factories are running 24 hours a day, with one building going up right after another. People are well dresesd. Everybody has a job. There is no unemployment. We have given Japan only $16,253,000 in economic aid, but we have given her $711,557,000 in military aid. Japan is able to carry her own load now. In fact, her economy is making it pretty tough on some of the industries in the United States at this time, and is going to continue to make it more so. The gap between the balance of trade of Japan and the United States is fast closing.

While in Japan we were told by our Embassy that in Korea, our next stop, we would have to pay our hotel bill in American money. One of the first foreign aid projects we had in Korea was to build the Bando Hotel and give it to the Republic of Korea. I advised the Ambassador that we had reams and reams of Korean money and that we were not going to pay in American money and would stay in Korea until they agreed to accept their currency. He advised me that only a week before, Secretary Dillon, while there, paid in American money. I contended that did not make any difference, that our committee was not going to pay in American money. The Embassy in Korea wired back that they would accept foreign currency in payment for the subcommittee, but that our military crew would have to pay in American money. I told him that the military people received only $12 per diem and that room rent at the Bando Hotel alone was $16 a day and we were all in one group and would not agree to anything except paying in Korean money. They agreed to accept this, and I am glad to state that they are now accepting their Korean currency for all our officials and committees.

Since this program started, through 1959, we have given Korea in economic aid $1,410,-709,000, and in military aid, $1,291,947,000. As our subcommittee report shows, they have listed over 300 different projects in Korea. After arriving there, we were told that these had been cut up and they had over 600 projects going in Korea. Anybody with any reasoning at all knows that it is physically impossible to successfully carry out this many different kinds of projects in Korea. They have 25 or 30 different agricultural projects. Yet on the night of our briefing, when the entire staff of ICA was present, including their so-called farm experts, when I began to question them, they could not even tell me the native grass of Korea. They could not tell us the type of cattle they were raising. On our way to the airport the next day, about 20 miles through an irrigation section we saw people working in the fields in groups of 50 or 60, but there was not a person who could tell me the kind of vegetables they were harvesting or what market they were sending them to.

Several years ago when Mr. Stassen was Director of ICA, he authorized the building of a fertilizer plant there at a cost of $16 million. When they got it started, they found out there was not a phosphate mine nor a sulphur mine within 5,000 miles of it; so it was changed into an Urea plant. Urea is a form of nitrogen which has been in use for years, but this particular type of plant is very rare and there are very few in operation anywhere in the world. It will require the finest chemical engineers, electrical engineers, and mechanical engineers to operate such a plant. We have already spent approximately $50 million and they have not been able to start it up yet. I do not believe they can ever start it up until lots of the machinery comes out and a different type is put in.

There are several other large plants which have been converted since the original start and some that have never operated. This is the kind of waste I am opposed to. Now some will argue that all of this money has kept Korea from falling into the hands of the Communists. This is partly true, but the ROK Army on the 38th parallel is not the only reason the North Koreans do not come down. It is the American doughboy stationed down below the ROK Army and the North Korean knowledge that we will fight. The recent revolution and overthrow of the Government is ample proof that all is not well in Korea.

We went from Korea to Taiwan. The first thing we found was another large urea plant that we did not know anything about in Taiwan, which they had been trying to start up for 2 years. There is at least 50 percent of the equipment that has to come out. The Taiwan Government is now suing a New York concern, the same one that is building the plant in Korea, for $12 million.

We then went up through the mountains to look at a project that was headed "Water Resources." They have already started a dam between two mountains that will be 512 feet high. It will have three 40,000-kilowatt turbines at the boot of it. It has 17 miles of 11-foot concrete and steel tunnels through the mountains at the top for highland irrigation. They claim it will cost $26 million. Any businessman with any knowledge of construction knows that before it is completed it will cost $150 million or more. Just realize that this project is larger than Boulder Dam. The ICA people say that we are not going to pay for much of this, that the Taiwan Government will finance it, but what difference does it make if we prime the pump in one part of the Taiwan economy in order that they can take the money out for a project like this? Are the taxpayers of America able to build such projects as this?

The small projects in most cases are doing a good job. The waste and extravagance is in the large projects. In Taiwan the Joint Committee on Rural Rehabilitation is doing a wonderful job. Some of the finest hogs I ever saw are being raised there and some of the prettiest farming I have seen anywhere in the world is being carried out in this project.

Lots of these programs have gone into the hands of big business, and I am sorry to say that some of our large colleges in this country are in the same category, with all kinds of research programs. I have never heard of as many different kinds of research. We found programs in Japan to teach the Japanese people industrial know-how, programs in Israel to teach the Jewish people business know-how. In Saigon one morning having breakfast, I counted 27 retired college presidents, teachers, retired business executives, all with briefcases under their arms, going out on some kind of a research project. Lots of these programs were such that we could have gotten the same information by mail.

From Taiwan we went to Saigon, Vietnam. Our total economic aid for Vietnam through fiscal year 1959 has been $964,638,000, with $496,265,000 in military aid. We were completely rebuffed on our arrival in Vietnam. It was because last year Mr. Colegrove, one of the Scripps-Howard reporters for the Washington News, had an article in the paper here that the foreign aid program in Vietnam was a fiasco. After that they had Ambassador Durbrow and Mr. Gardiner, director of the U.S. operations mission in Vietnam, and General Williams fly from Vietnam to Washington. We had hearings in our Far East Subcommittee, at which the gentleman from Wisconsin [Mr. ZABLOCKI] presided. Mr. ZABLOCKI tried every way humanly possible to have fair and unprejudiced hearings and get at the truth of Mr. Colegrove's statements. The ICA officials tried every way in the world to make Mr. Colegrove out a liar or hurt his reputation, but it turned out that Mr. Colegrove was one of the top reporters of the Scripps-Howard papers and had been with them for 18 years. Our study mission proved that everything Mr. Colegrove said about the highway program, the road program, and the water program was true.

Ten days before we arrived in Vietnam we had wired President Diem for an appointment. We had not gotten confirmation of this appointment when we arrived. No Vietnam officials were at the airport. Our Ambassador had a dinner for us, but President Diem refused to let any of his Cabinet or any of his executives attend the dinner. The next day, after some persuasion by General Williams and our Ambassador, he finally agreed to see the committee the last day we were there. Part of the committee went to see him. I refused to go. I said that to have to beg to see the President of any country that we had put a billion and a half dollars into was just out of my line.

Mr. Colegrove said the highway program in Vietnam was a fiasco. Thirty-two miles of this highway is equal to the Jersey Turnpike. The Saigon River Bridge is equal or superior to the Lincoln Memorial Bridge in Washington. The estimated cost of the highway is $1 million per kilometer. I give you below a completely documented history of the entire Vietnam highway program that one contractor on a cost-plus basis is doing the work on, and see if you do not agree with Mr. Colegrove:

Saigon-Bienhoa Highway: This project involves the construction of 32 kilometers of new road, two major bridges (the Saigon River Bridge, 983 meters including approach spans; the Dong Nzr River Bridge, 453 meters including approach spans, six intermediate bridge drainage structures, erosion control, and traffic control facilities. The road is asphaltic concrete surfaced, 16 meters curb to curb, in the urban section, and 7.5 meters roadway width with 3-meter stabilized shoulders in the rural section. Approximately 12.5 kilometers of this highway are in swampy terrain lying close to sea level and require a heavy sand blanket to support the roadway. Drainage structures in this area are supported by concrete piles. The estimated cost per kilometer is $1 million. Sixty-one percent of this road is completed and overall completion is anticipated by 1961.

National Route 21, Bannethuot to Ninh Hoa: This project involves the rehabilitation and the reconstruction of National Route 21, Bannethuot to Ninh Hoa, 152 kilometers, and the reconstruction of bridges, approaches, and inundated areas along National Route 1, Ninh Hoa to Nhatrang, 12 kilometers. This portion of the project includes the construction of 44 short-span bridges and the installation of some 23,000 linear feet of concrete pipe culverts. The Route 1 portion includes also the construction of 15 bridges complete with new approaches and drainage. The roadway will be 6.75 meters surfaced width and 9 meters shoulder to shoulder. Surfacing is a double bituminous surface treatment.

Route 21 and Route 1 are expected to be completed in 1961.

National Route 19, Pleiku to Qui Nhom: This project involves the rehabilitation and reconstruction of National Route 19 from Pleiku to the intersection of Routes 1 and 19, near Binh Dinh, 151 kilometers, and National Route 1 from that intersection to the dock area of Qui Nhon, 16 kilometers. The Route 19 portion of this project includes the reconstruction of the 151 kilometers of road, the construction of 36 new bridges, and the installation of approximately 39,000 linear feet of concrete pipe culverts. The Route 1 portion of this project includes the reconstruction of 16 kilometers of road, the construction of nine

new bridges, and drainage structures as required. Double bituminous surface treatment is planned for both of these routes. Overall completion is estimated for 1961.

National Route 14, Bannethout to Pleiku: This project is being carried out by the Ministry of Public Works and involves the widening and improvement of existing National Route 14 between Bannethuot and Pleiku, 196 kilometers.

Equipment: More than $13 million worth of construction equipment has been imported in support of these U.S. sponsored highway projects, and for the Ministry of Public Works. This includes, besides shops and fixed plants and their equipment, hundreds of roadbuilding machines and other pieces of movable equipment, such as tractors, power shovels, and other pieces of movable equipment. All this will be given to the Vietnam Government when the projects are completed.

Costs: The total cost of ICA dollar assistance for the highway project is presently estimated at $85 million. This figure includes the period extending to the end of fiscal year 1963 when U.S. dollar aid to the highway project is expected to be terminated. As of the end of fiscal year 1959, $48.4 million had been obligated, of which $25.1 million has been spent. Included in the $48.4 figure is $30.1 million for commodities and $17.8 million for contract services. In addition, a total of $35.6 million equivalent in counterpart funds has been obligated through fiscal year 1959.

When it was first proposed to reconstruct Route 1, a 250-mile stretch northward from Saigon, the Capital Engineering Corp. made the survey. On the basis of this survey, bids for the reconstruction of Route 1 were submitted to ICA Washington. Nine companies submitted bids with total costs ranging from $18 million to $45 million. Johnson, Drake & Piper of Minneapolis and New York was selected for a cost-plus-fixed-fee contract. The company's bid for actual costs was $14,752,606, plus $2,927,394 for direct material purchases, and an additional fee of $700,000. By the terms of the contract, Johnson, Drake & Piper furnished management and training of local personnel. On the other hand, the United States agreed to pay all costs, which included material, equipment, and salaries.

Before work on Route 1 was begun the original agreement was amended and it was agreed to rebuild the highway from Saigon to Bien Hoa only, and to include the construction of Routes 19 and 21. The engineers were of the opinion that hard surfacing of Route 21 was not needed and that a surface of rock, gravel, and soil was sufficient and would hold up with the usual maintenance. However, after the base of the road was completed, it deteriorated in the wet seasons by reason of the rains and in the dry seasons by the wind and dust. This experience brought about another change in plans—another $500,000 was spent for two layers of asphalt on the road.

As a result of all these changes in the highway program, what has happened to a modest $18.3 million highway project?

The total cost of the highway project is estimated to be $85 million, and may exceed $100 million before completion.

The Johnson, Drake & Piper Co. fee is now $800,000, and they are at present negotiating for a higher fee. As a matter of information the fee is a net profit to the company and is above all costs to the project. The company undertakes no risks and makes no investments; the salaries of its employees are reimbursable by the U.S. Government, leaving a net profit of $800,000 or more for the company's dividends.

The bid of Johnson, Drake & Piper was unrealistic to begin with. Competency of the survey made by Capital Engineers for a project of this magnitude is questionable because of the fact that it, together with the report thereon to ICA, covered a period of only 60 days. Furthermore, the actual costs estimated by Capital Engineers were twice as much as the bid submitted by Johnson, Drake & Piper on the survey report. It is apparent that preliminary data to make a reasonable estimate of cost at the time of the survey was either not taken into account or was unavailable.

The study mission believes that more roads could have been built for this money. Comparison with road systems in neighboring countries provides ample proof of this fact. Furthermore, there is no traffic survey justifying the construction of this kind of road. Even if it is contended that this road system is for military use primarily, its scope and cost seems completely unrealistic.

ICA is contemplating the reconstruction of another road, not included in original and amendment plans, before the present projects have been completed. The sum of money to be expended has not been made public, but several more millions of dollars are anticipated.

Since this was written, they have acknowledged to the Appropriations Committee, including Public Law 480 funds, they have spent $129 million on the road program, besides the money we are giving the Vietnamese Army through defense support to build roads.

Mr. Colegrove said the radio program was a fiasco. When our officials were brought from Vietnam last year before our committee to discredit Mr. Colegrove's statement, they testified that the towers were up and in operation. This program was started 5 or 6 years ago and is something the Army Signal Corps could have completed in less than 6 months. At our briefing in Saigon we were informed that the towers were up and in operation. Mrs. Church and I went out to the location with Mr. Gardiner, the ICA Director, and he began to count the towers. He said, "There they are,—one, two, three, four, five, six." Then he could not find the seventh one. He said it must be behind the building, and I said, "Mr. Gardiner, that is a pretty high building." We went around and looked for the tower, but of course it was not there. He said it must be on the inside. We went inside and found a painter painting another tower. He said, "There it is." The painter said, "No, this one came in last week." Mr. Gardiner then said, "I am not a radio expert, but he is out here." We went on the outside and found a young man with an armful of blueprints, and after some questioning I said "Son, how long have you been out here as an expert on the radio program?" He said, "Three weeks." Now the administration building is as large as this Chamber of the House of Representatives. It is completely full of cables, transformers, and all kinds of electronic equipment. You name it; they have it. We did not find one single connection made, and nothing is in operation. One section of the entire staff of our ICA people in Saigon is assigned to this radio program. We have spent several million dollars on it. If it is not a fiasco, what would you call it? Our committee said it was in a state of confusion.

Mr. Colegrove said the water program was a fiasco. Here is a complete history of it given in the following paragraphs. You can read them and see what you think.

Everyone agrees Saigon badly needs a new water system, but plans have bogged down in a heated dispute between two schools of thought. On one side is the International Water Corp. of Pittsburgh which believes in deep wells. It has done business in Saigon for 30 years and has drilled most of the city's wells. On the other side is the Hydro-Technique Corp. of New York which believes in dams and pipelines.

Our foreign aid authorities gave the Hydro-Technique Corp. a $200,000 contract for a survey 2 years ago. Hydro-Technique came up with a report favoring a dam and filtration plant on Dang Nai River near Bien Hoa, 18 miles north of Saigon. From this plant a 72-inch pipeline would lead to Saigon. The International Water Corp. made several surveys, all of which showed again that deep wells are quite adequate. What is more, the International Water Corp. said they would be much cheaper and provide water much sooner. The Hydro-Technique pipeline project is estimated to cost $19.5 million to be put in by the United States. The International claims it can give Saigon all the water it needs indefinitely for $12 to $14 million. The Vietnamese seem to favor the dam and pipeline system, but the military of both Vietnam and the United States have raised the question of security. It was at Bien Hoa that two American military advisers recently were killed when Red terrorists tossed a grenade into a movie audience.

It is pointed out that the 18-mile aboveground pipeline could be sabotaged and the already hard-pressed Vietnamese Armed Forces probably would have to furnish daily patrols, as well as guards for the river plant.

In November 1959 the Development Loan Fund approved a $19.5 million loan for the water system and called for another survey. Who gets the contract for this survey and what it will cost, we do not know.

It would not be fair to criticize the highway program, the radio program and the water program, without stating that in Vietnam we found one of the finest agricultural programs I have ever seen anywhere. Up in the hill country, we visited an experiment station where several young American boys, graduates of agricultural colleges, were living in quonset huts along besides the Vietnamese. This experimental station would do credit to any station in this country. They had planted in experimental plots practically every agricultural crop, including cotton, corn, peanuts, potatoes, grains, all kinds of vegetables, and raefel. In addition to this, they were showing the hill people, who had been given 5 acres of land and a water buffalo, how to plant and cultivate in rows. These people also were doing a good job in their way and were very happy. The entire project has not cost as much money as one mile of the superhighway. This kind of program is helping the little people to buy themselves.

We went from Saigon, Vietnam, to the Philippines. Here it was evident that the death of President Magsaysay was a great blow to the Philippine people. His efforts to build the country and his dedication to the cause of good government had offered much promise for the Philippines. We arrive just before the elections and were startled and shocked to find an increase in lawlessness and corruption in the present government. The doorman at the hotel was armed, and we were advised that it would not be safe for us to go downtown at night. Right in the middle of our large Naval Base, the Philippines have a small boat repair dock. It does not cover over 2 or 3 acres of land. Three years ago they offered it to us for $1 million. Two years ago they wanted $2 million. They now want $3 million. Yet just across the Bay we are building for them some of the finest and most modern docks in the world. Why could not we have done a little horse-trading and secured the small plot of land in the middle of our large Naval Base that could some day be very important to us, according to our own Admiral Carson? Since 1950 we have spent approximately one-half billion dollars in the Philippines.

From the Philippines we went to Sydney, Australia, to visit several homes built for Dutch settlers in Sydney. The building of these homes is the result of a $3 million loan from the Development Loan Fund to the Netherlands Government at 4 percent. (Our

Government is paying 5 percent). These homes were supposed to be refugee homes, and we expected to find something similar to our low-rental housing units in the United States, but instead we found two- and three-bedroom brick homes with tile roofs and concrete runways, all with carports. These homes are being sold to Dutch settlers by cooperatives and Australian banks for 20 percent down and 27 years to pay at 5 percent. This loan does not meet the eligibility standards set up for the Development Loan Fund, requiring that loans from Development Loan Fund should be made to underdeveloped countries. The economic condition of both the Netherlands Governernment and the Australian Government is as good or better than that of the United States.

In India, I do not believe there is enough money in the world to change it overnight, on account of so many different cults and religious beliefs. In Calcutta there are 300,000 men, women, and children who sleep in the streets every night. The children have to resort to being little scavengers, picking up parcels of grain even behind the animals. A certain number die each night and are carted outside the city next morning and burned. Old Delhi is just about as bad.

(1) Grain elevator in India: The study mission had an opportunity to visit Hapur where modern grain elevators have been constructed. The total cost of constructing this modern storage of food grains, with metal building and elevators, 20 silos and a huge warehouse, is approximately $600,000, about $415,000 of which was expended by the United States.

A project agreement was signed in 1954 to assist the Government of India in exploring the advantages of new types of construction for the storage of grain. Two 10,000-ton silos, complete with grain elevators, and 50 prefabricated metal storage buildings were to be provided from U.S. project funds at two locations within the country.

In April 1956 the International Cooperation Administration obligated $4 million for the procurement of 500 additional prefabricated storage buildings, and also planned to contribute an additional $3 million in 1957. These plans were made although the project for the 50 buildings was not progressing. When this condition was recognized the sums were deobligated and the $4 million was transferred to another project.

The study mission is concerned with the magnitude of this program and the apparent lack of adequate planning. The grain elevators at Hapur are larger and better equipped than many in the United States, as well as more costly to build than many of comparable size. There was no food grain in the elevator, and there is very little prospect that there will ever be any need for such a mammoth construction. If the same amount of money had been used for constructing smaller elevators in the country, there is the likelihood that more people would be employed and more mouths fed. Large central storage elevators are not the answer for India in view of the small amount of grain grown in comparison to the population, since there is very little, if any, surplus accumulated.

Agricultural college and community development project, India: This is the project which the President visited on his trip to the Far East last fall.

Those members of the study mission who, on previous trips to the area, had found great hope and, in fact, major satisfaction in the projected expansion of the community development plan must confess to a sense of bitter disappointment over what appears to be a change in direction of the program and lack of evidence of sufficient expansion. Although time did not permit a detailed and expanded study of these projects in many sections of India, the members of the study mission feel constrained to express their concern over reports brought to them that the development of the program has not justified earlier hopes. The study mission was further discouraged by the conditions found in a "model village" chosen for their inspection as representing a community development project for the training of local employees to teach the people of the community proper health and sanitation methods. In neither agricultural expansion nor in sanitary provision did the village typify progress. In riding around the "model village," adjacent to the agricultural center, the study mission noted several torn-up tractors. Not 1 acre of tilled soil nor 1 acre of a growing crop was found nor were there any signs of recent crops. Favorable mention should be made of the small school and the native teacher, however. There was little indication that agricultural training had increased the food supply, nor was there any indication by the appearance of the people, and particularly of the children, that any agricultural improvement had led to adequate feeding or that sanitary training had produced ample results. Although the study mission realizes perfectly that it can base no cumulative judgment on one example, it seems significant that this particular village was chosen as a model to be shown to us.

Some reference was made to the fact that the community development plan had swerved away from its original purpose of helping local underdeveloped communities learn self-improvement through their own efforts, which would increase their self-respect as well as their sense of capacity; and that more emphasis had been put in recent years on rural sociology. The study mission would certainly recommend, if this be the case, as seemed indicated, that a return should be made to the more simple and more successful program of "helping little people to help themselves." At this time, the study mission would make the further observation that there seems to be inherent folly in the creation of the wide gap that will persist for years between the grandiose top level and extravagant projects, from which no benefits would dribble down to the people within their lifetime, and that sad, drab level of humanity such as witnessed in Calcutta, where life consists only of a scramble for a seed of grain to appease insatiable hunger.

In Karachi, Pakistan, we found a new Embassy Building that covered practically a city block that is still under construction even though the capital of the government, 2 years ago, was moved to Rawal Pindi, 700 miles from Karachi, where we will have to construct still another Embassy Building.

In Laos, a country where it is hard to find one with over a sixth-grade education, one member of the committee found a school which had 16 individual class booths with complete tape recording system, with a master control up in front, for teaching language. They had 16 people in these individual booths. It would take them 3 months to learn to run the equipment. The tape recorders cost about $400 each, and they had 16. The master panel was as big as a switchboard in an industrial plant and cost $10,000 or $15,000 or maybe $20,000. Probably the only three places in the United States that teach foreign languages this way are Yale, Colorado, and Georgetown. You can find waste and extravagance like this in every country we visited.

Now, Mr. Speaker, according to the Department's own figures, we have $4,700 million in the pipeline. This year's request is $4,175 million. In addition to this, they will have $1,500 million from the sale of surplus agricultural commodities. This year this figure amounted to $1,567 million. In addition to that, the taxpayers of America contributed in 1960, to international organizations, $144,707,208. This gives them access to $10,500 million. Now in all fairness to ourselves and the other countries and to the American taxpayer, don't you think this bill could be cut at least $1½ billion?

The Texas Shrimp Business

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 1, 1960

Mr. YARBOROUGH. Mr. President, recently I joined in cosponsorship of a bill to establish country-by-country import quotas on shrimp and shrimp products. Such a measure has become necessary because 54 countries are now exporting shrimp to the United States, are serving 43 percent of the American market, and last year alone foreign shrimp imports to thin country increased 24 percent.

In view of this pending legislation, I believe Members of the Congress would be interested in reading a recent article in the May 1960, issue of Texas Parade magazine, by L. A. Wilke, entitled "The Little shrimp Is Big Business." This article by Mr. Wilke is an interesting and informative report on Texas' shrimp business. I ask unanimous consent to have the aforementioned article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Texas Parade magazine, May 1960]

THE LITTLE SHRIMP IS BIG BUSINESS

(By L. A. Wilke)

The fisherman who uses shrimp for bait, or the diner who smacks his lips over a shrimp cocktail, doesn't give much thought to the importance of this unusual little seagoing species to the economy of Texas.

Nevertheless, organized netting along the coastline from Port Arthur to Port Isabel each year produces some 70 million pounds. There is no way of knowing how many more are taken by hand-netters and bait-fishing trawls and not reported.

Hundreds of boats from Texas ports ply all the waters of the Gulf of Mexico in search of shrimp. The bigger they can get them the better.

There are huge basins at such places as Galveston, Freeport, Rockport, Aransas Pass, Corpus Cristi, Port Isabel, and Brownsville, where these boats unload after a few days or a week in the rough coastal waters.

When the shrimp are brought in they are mechanically unloaded into hoppers and moved into the packaging and freezing rooms to be sent out all over the United States. Huge refrigerator trucks haul them from Texas to the market centers of the Middle West.

The business is so important that the organized shrimpers maintain the offices of their Shrimpers' Association of the Americas in Brownsville, with James Barr as executive secretary. The group will hold its annual convention in Mexico City this year.

The association not only works for the good of the shrimpers but for the shrimp, too. For many years there was a great deal

of illegal netting that resulted in many shrimp beds being practically destroyed. Baby shrimp were hauled up by the tons. Some of them were sold to canners away from Texas. Others were dumped into the gulf to die.

Accordingly, members of the association set about to bring reforms in the industry and legislation to protect the shrimp. Now there is a closed season of two months in bay waters to permit the breeding of shrimp and let them grow to a catchable size. These shrimpers who operate the big boats thus realize that the only value in a baby shrimp is for it to mature.

The association also promotes the use of shrimp. It publishes recipe books in natural color, telling housewives how they can prepare shrimp in many different delicious ways. Campaigns are carried on through newspapers and magazines.

While most of us like our shrimp cocktails or a meal of shrimp in most any other way they can be prepared, we seldom think of them except as fish bait. When they come to us frozen or in cans we are not impressed with the difficulty of getting them.

Then we go to the coast to fish. At the bait stands we are told they are in short supply. They are waiting for the trawls to come in. You are offered some frozen shrimp. But you wait around and finally the shrimp come in. You pay from $4 to $6 per quart, put them in a live box and head out.

There are a number of species of shrimp along the Texas coast but only a few are actually utilized either for food or fishing. Generally Texas shrimp are known as white, red, or brown. The white shrimp is the best known in Texas waters. It spawns in the offshore waters in 10 to 15 fathoms of water. The female, which is the largest, will lay some 500,000 eggs in the summer spawning period. It usually takes a couple of weeks for them to hatch. The baby shrimp then are washed by the tides into the nursery grounds along the coastline to develop. They grow to about 3 inches long by September. By December they begin their migration back to the open water.

Next of importance is the brown shrimp whose spawning habits are somewhat the same as the white shrimp, except that they produce the year around. They can take water of higher salinity than the white shrimp, however. Few are found in bay waters during the winter months.

Trawlers operating in the Gulf, mostly in waters inside the 50-fathom curve, bring their fish aboard in huge nets that drag the bottom. The shrimp are deheaded at sea and then packed in ice until they reach port. They are then graded according to size and quality. Jumbo shrimp will average out 10 to 15 per pound. Cocktail shrimp will run about 65 to the pound. On the Texas coast, the little shrimp adds up to big business.

The Changing Face of American Cities—No. 1

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. IRWIN. Mr. Speaker, in the past three decades the face of American cities has been changing before our eyes.

The new urban complexion which has resulted is of profound importance to all who are trying to build a more perfect America.

To focus this problem for the Members of Congress, and under permission previously granted, I am beginning a series of insertions in the RECORD today on the general topic of "The Changing Face of American Cities."

The first insertions, all of which will be based on a two-part series published by Forum magazine and entitled "The New Urbanites," will deal with the nature and dimensions of the problem. The initial excerpt from the series follows:

For three decades, the biggest U.S. cities have operated like whirlwinds, drawing millions of new families in from the countryside, scattering millions more out into the suburbs. Neither group ever meets the other, for their economic and social separation is too great. The outgoing group is urban middle and upperincome white, while the incoming one is largely rural low-income black. Yet only now are the dozen largest U.S. cities beginning to realize that their character is irrevocably changed by this most massive of all population shifts, posing the biggest problems in housing, planning, rehabilitation, and assimilation ever to face the cities. The problems are so big that Forum is treating them in two parts: This month their nature and dimensions, next month the solutions to the most pressing problem, housing.

In the last decade alone, the great population shift has reached an alltime peak, as the bald statistics show:

In Chicago, whites have been leaving the city at the rate of 40,000 a year, while Negroes have been inflowing at the rate of about 18,000 a year. By 1965, Chicago, now 19 percent nonwhite, will probably be at least 26 percent Negro. In Chicago's first heavy Negro influx from the rural South following the First World War, its nonwhite population reached only 8 percent by 1940.

In Philadelphia, Negroes have moved into the central city about twice as fast as whites moved out, both migrations accelerating over the past decade. Today, Negroes make up about 27 percent of Philadelphia's population, but the future is foreshadowed in this fall's school registration, which will be an estimated 50 percent nonwhite.

In Detroit, the past decade has seen some 100,000 white families move out, while some 80,000 new families moved in, mostly nonwhite, but including white families from Kentucky's and Tennessee's hill country. Detroit's peak migrations came in the automobile-boom years of 1950–52 and 1955, and then mostly from the Deep South. Today Detroit is about 22 percent nonwhite, compared to 10 percent in 1940.

In Washington, D.C., Negroes are now in the majority, comprising probably 55 percent of the population. The city has about 11,000 Negro inmigrants a year, most of them from Georgia and the Carolinas. Washington's school population this fall will be at least three-quarters Negro.

In New York, with a nonwhite population of over 1.2 million, still only 12 percent of the total, about 10,000 Negroes enter annually. There is an additional yearly influx of some 20,000 Puerto Ricans, most of whom, though technically white, face the same adjustment problems as Negroes. In peak years, as many as 34,000 Puerto Ricans have come to the city. New York's total population is slowly declining, as whites continue to vacate the city faster than newcomers enter.

These great migrations, unlike those of the past, focus almost entirely on the city. In the first half of this century, over 73 percent of total U.S. population growth was in metropolitan areas, and that percentage climbed early in the last decade to 97 percent. At the same time, the growth of suburbia, which was only one-third again as fast as central cities, jumped up to seven times the central-city rate in the last decade. In the next 15 years an estimated 50 million additional people will live in suburbs, while central cities will absorb only 10 million more.

Pension and Profit-Sharing Plan

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, June 1, 1960

Mr. WILEY. Mr. President, we recall that last year Congress enacted the Labor-Management Reporting and Disclosure Act, Public Law 86–257.

During the first year of operation of the new law, the Department of Labor, which administers the program, has moved ahead with the monumental task of setting up machinery to handle the reporting of the welfare and pension plans.

Recently, the Department issued a report covering the extent of its progress. The Milwaukee Journal published a detailed article by Laurence C. Ecklund reviewing the operations of the Disclosure Act. To give my colleagues the benefit of details of progress, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, May 16, 1960]

LISTS PENSION CONTRIBUTIONS 90 PERCENT BY EMPLOYERS

(By Laurence C. Eklund)

WASHINGTON, D.C.—Employers or employer groups manage and contribute to the financing of 90 percent of all welfare and pension plans and bear the entire cost of 45 percent of such plans.

Frank Kuehl, a native of Fountain City, Wis., and administrator of the Welfare and Pension Plans Disclosure Act in the Labor Department, said Monday a review of 128,000 plans filed with his agency revealed that more than 382,000 benefits are provided.

More than 102,000 plans provide welfare type benefits and more than 25,000 provide pension or retirement benefits, reported Kuehl, who was an assistant attorney general in Wisconsin from 1927 to 1933.

The 102,000 plans classed as welfare plans provide more than 317,000 benefits such as life insurance, accident and sickness insurance, hospitalization, surgical, medical, and dental benefits, paid sick leave, etc.

The scope of these plans, said Kuehl, varies in the number of benefits provided, ranging from a single benefit to several, with 80 percent providing multiple benefits.

Of all benefits provided, hospitalization is the most prevalent, being provided by more than 66,000 plans. Surgical and medical benefits are provided by 64,000 and 51,000 plans, respectively.

Nearly 99 percent of the pension plans provide retirement for age or service, with a smaller proportion also providing death benefits and retirement because of disability.

Nearly half of the welfare and pension plans reported cover workers engaged in manufacturing. The second largest proportion of plans—18 percent—covers workers in wholesale and retail trade, followed by services and finance, insurance, and real estate.

The Dilemma of Punishment

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following address by the Honorable David L. Bazelon, circuit judge, U.S. Court of Appeals, delivered at Brandeis University, Waltham, Mass., on March 14, 1960.

Judge Bazelon's address was reprinted in the April 1960 issue of the Atlantic Monthly.

The address follows:

THE DILEMMA OF PUNISHMENT

A number of my distinguished predecessors on this platform have assessed various aspects of the character and accomplishments of Louis D. Brandeis. An image has emerged of a brilliant intellectual technician possessing a degree of moral strength beyond the capacity of most of us. Many details of his life and work have been presented to round out this impressive image, and also to convey the range of his probing interests. Unhappily, the legal and social problems of criminal law administration were not within this range—with at least one notable exception in his prophetic dissent in the Olmstead case, an early wiretapping decision. Crime and society's treatment of the criminal were not publicly a dominant source of concern for Justice Brandeis.

Not directly, that is. For there is nevertheless an abiding connection between the Brandeis heritage—both in outlook and in method—and the outburst of modern concern with the great problems of criminal justice. Let me spell out this important connection. Above all else, Brandeis believed in fructifying the law by making it responsive to scientific developments and general intellectual advance. He felt that survival of basic social respect for the law on the part of the populace required no less—that the "living law" had to maintain its vital relation to general intellectual advance and changing social life. This, he noted, was specially difficult for the law because of its deep traditional aspect . But not thereby any the less necessary. Those of you who are lawyers will understand this remark as referring to what is undoubtedly the most profound issue in the philosophy of law—the inner mechanism of change. Brandeis' outlook thereon was clear, dramatically forward looking and established him as a creative leader and, indeed, as a prophet to later generations of lawyers. In 1916 he quoted approvingly a psychologist who had said "that a lawyer who has not studied economics and sociology is very apt to become a public enemy." Justice Brandeis was talking to us today—and, moreover, telling us something we still need to know.

It is interesting that Brandeis should have borrowed the words of a psychologist to express this strong view because it applies in our day a fortiori (as we lawyers say) to the behavioral sciences, including psychology. The phrase "public enemy" is perhaps too strong, since through special newspaper use after 1916 its has lost its traditional quality. But lawyers working in the field of the criminal law who resist or ignore the facts, the insights, the whole considerable offering of sociology, psychiatry, and allied disciplines, do a deep disservice to the public, for that public expects its experts to improve our ways of carrying on the business of society. Such a lawyer is no friend of the public, nor is he a good servant of the law. And he is not working within the Brandeis heritage. This can be asserted, I think, without reference to the current shortcomings or ultimate limits of these behavioral disciplines.

I said there is a true connection between this heritage and the current agitation in the criminal law not only with respect to outlook but also as to method. Naturally I refer to that deservedly famous event in the history of American law when Brandeis filed a 112-page brief in the case of *Muller* v. *Oregon*, which he argues before the U.S. Supreme Court in January 1908. This initiated the startling legal tradition of what came to be known as the "Brandeis brief"; as his biographer has characterized the event—"he made the law grow a hundred years in a day." A recent use of this still new, still vital form of legal argument was, as many of you know, appellant's brief in *Brown* v. *Board of Education*, the chief of the desegregation cases. The brief in *Muller* v. *Oregon*, which concerned the constitutionality of a State statute limiting the hours women might work in industry, amounted to a major sociological treatise. It referred in full, cogent detail to the more important scientific studies—factual, statistical, and theoretical—concerning the actual and very urgent problem of women then working in American industry. Nothing quite like that had ever been done before. The law was supposed to be concerned with something called the law, and its technique of adjustment to changing experience was lost somewhere among the higher mysteries of the law-fact dichotomy. Then Brandeis overwhelmed the highest court of the land with the full, relevant weight of modern social scientific facts. And he won his case.

I am not suggesting that the Brandeis brief has finally resolved—or that it was designed finally to resolve—the very difficult problems of both substance and procedure which center around the continuous adjustment of existing rules of law and changing circumstances. Hardly that. It is not my purpose this evening to discuss the complex theory of when and how the law properly takes cognizance of new facts and altered awareness in society, and the differing roles of the legislature and the courts in this process. I simply note that the law does change, through both instruments of government, and that the Brandeis brief remains a still vital weapon in the methodological arsenal of such change. Of course everyone—especially judges, I assure you—would rest more comfortably if administration of the law were a mechanical process, and all law was initiated by a democratic legislature after full public hearings. But our system, and life itself, is much more complex than that. The courts unavoidably have their unique role to play.

In both the Muller and the desegregation cases, scientific material was used referring to the important psychological effects of overwork on women and segregated education on Negro children. When the law welcomes science, psychological insight plays its specific and important role in depicting reality by its focus on the inner effect of circumstances on the individual and the resulting generation of healthy or distorted motive.

In the criminal law, where one might expect the assistance of the behavioral sciences and especially psychiatry to be most eagerly solicited—because most obviously relevant—the fact of the matter is that they are not. In my opinion, not nearly enough. I will not burden your patience by recounting again the century-old struggle against the exclusionary M'Naghten rules. These rules have dominated the administration of the insanity defense in England and most American jurisdictions. It should suffice to remind you of their continued vitality. The M'Naghten formula emphasis the rational capacity of the mind, and excuses from criminal responsibility only the individual who at the time of the crime "was laboring under such a defect of reason, from disease of the mind, as not to know" what he was doing or that it was wrong. However this test might have been interpreted—volumes have been written on the possible meanings of the words—it had in fact worked to exclude medical evidence. I am almost tempted to say that under M'Naghten practice the psychiatrist appears in the proceeding at all only to testify to the irrelevancy of psychiatry—that is, to confirm the irrelevance that the law has already decided upon. It assigns to the psychiatric expert in court a sacrificial role in a ritual of condemnation. The expert is asked a question which—most leaders of the profession inform us—cannot be answered within the terms of their discipline. And unless the rules are breached—as they frequently are on the trial level—the psychiatrist is not encouraged or permitted to address himself to the clinical questions which are the only ones he is truly expert in answering.

That is the scientific expert testifying at the trial level. But on appeal, you may ask, have there been no "Brandeis briefs" setting forth the relevant facts and insights of modern scientific psychiatry? Yes, for example many psychiatric works were referred to in the appellant's brief in the Durham case, which, as many of you know, resulted in the adoption in the District of Columbia of a broadened insanity test—a rule designed to relax the rigors of M'Naghten and to welcome genuine phychiatric testimony presented in its own terms. The Durham test simply asked whether the accused was suffering from a mental disease or defect, and inquires as to the relation between any such condition and the criminal act. But the District of Columbia is only one out of a multitude of jurisdictions. A judge in another jurisdiction had this to say in rejecting the Durham rule:

"The District of Columbia Court was persuaded to this doctrine chiefly by treatises on subjects other than law to which the decision refers, by Weihoffen, Zilboorg, Deutsch, Glueck, Guttmacher, Overholser, Reik, and others doubtless learned in the field of psychiatry. I am not willing to accept their teachings and to reject completely the philosophies of such eminent jurists as Blackstone."

And so on. This judge preferred to follow what he called "guides furnished by accepted principles of the law."

In the administration of the criminal law today, we desperately need all the help we can get from modern behavioral scientists—before trial, during trial, and after trial. The law by itself, without these workers, is cast in the hopeless role of a socially isolated, traditional bulwark against the welter of personal, social and economic forces which create today's problem of crime and the so-called criminal population. And in this losing struggle, the law—by which I mean police, judges, lawyers, and prison guards—would have at its disposal a limited set of concepts honored largely by time alone. In brief, the law would have the lex talionis—the idea of retributive punishment based on absolute moral principles of purportedly universal application. By itself, the law would dispose of both the problem of crime and the criminal himself with the one idea of punishment. The "program" would be: Repress crime and all antisocial behavior by punishment alone; rehabilitate the offender by punishment alone; achieve social understanding of wrongdoing and the wrongdoer by the sole mechanical response—"Punish them—they deserve it."

If the foregoing remarks seem intemperate, that is of course because they do not describe our actual system of criminal law administration. For one thing, stern retri-

butive justice has always been tempered by mercy and forgiveness—by the ubiquitous impulse to afford the transgressor a "second chance." This happens in practice even when it is not allowed by theory. We simply find it too difficult, too nonhuman to punish, punish, punish—even though our feeling is that we are wrong when we do not. And for another thing, the behavioral scientists—along with their facts, ideas, and methodology—have as a matter of fact intervened increasingly at many stages of the administrative process. Social workers, clinicians, welfare agencies, even the police, as well as many others, attempt to deal constructively with the juvenile delinquent before he is sent to a reformatory to begin his professional training as the criminal of the future. The psychiatrist comes to court and sometimes his presence there does have something other than a ritualistic effect on the outcome of the proceeding. Again, he and his coworkers are more and more frequently consulted in the course of sentencing, probation, parole, and even—as the light of a new dawn—in the institutional rehabilitative process. Occasionally all of this activity ends up having its effect in a judicial decision, even one delivered from an appellate bench.

So clearly our criminal system is a very mixed affair—some would say a very mixed-up affair. But things are happening, there is agitation and movement, much heat and a certain amount of light. To put it simply, it is a system in transition. We are, painfully and slowly, coming to a clearer understanding of alternatives and necessities. We are also making some practical progress in working out institutional and administrative means. While much of the intellectual ferment has centered around the wording of the jury instruction when the defense of insanity has been raised, I think it is obvious that this can be compared to the peak of an iceberg that is visible above the waterline. The peak is important chiefly as an indication of the general whereabouts of the much more significant six-sevenths lurking beneath the surface. It is foolhardy to take the visible peak for the whole massive obstruction.

Well, what is this iceberg? If our system is in transition, then the question properly arises—Transition from what to what? From M'Naghten to Durham? Hardly. Certainly from M'Naghten—but not just from that ritualistic phrase, except perhaps symbolically. And Durham—even viewed as a concept, as an approach, which is the way I prefer to view it, rather than 19 words of a jury instruction—is merely one way of welcoming the psychiatrist into the courtroom. It is a beginning, not an ending—and it relates to the insanity defense, which is only that visible one-seventh of the iceberg.

I believe that the deeper part of the iceberg consists of the retributive urge to punish irrespective of effect, and the accompanying intellectual justification of this primitive urge, the so-called theory of deterrence. A deep emotion and a complicated rationalization.

But before I elaborate these speculations of mine, I want to say that they are my own opinions, which I hold as an interested citizen. While I do not stand alone with these views, not by any means, I am afraid that I cannot even vouch for the faithfulness of my presentation of borrowed ideas. If they seem original, that is probably due as much to lack of scholarship as to anything else. They should be taken merely as one man's speculative opinions.

Wherever one turns in an effort at reform in the treatment of offenders, one comes up against this need to punish and its defense by the theory of deterrence. Of course, there are many other arguments put forward at various times in justification of the present system, with its great emphasis on punishment for its own sake or punishment as the answer to all problems. For example, both Judge Learned Hand in this country and Lord Justice Denning in England—the first sadly and the latter more firmly—have referred to the public's demand that the sinner shall suffer. Judge Hand stated that he did "not share that feeling, which is a vestige * * * of very ancient primitive and irrational beliefs and emotions." Lord Justice Denning spoke more strongly by saying:

"It is a mistake to consider the objects of punishment as being deterrent or reformative or preventive, and nothing else. * * * The truth is that some crimes are so outrageous that society insists on adequate punishment, because the wrongdoer deserves it, irrespective of whether it is a deterrent or not."

I can assure you that similar views are frequently expressed from the bench in courts throughout our land—and often enough when the crime is no more "outrageous" than juvenile car theft. Sometimes the court in relieving itself of these sentiments will refer to society's demand for retribution—communicated to the court by some unknown intermediary, or perhaps so obvious as not to require communication. On other occasions a court will abandon that rhetorical flourish and speak directly, saying—"You are going to be punished good and proper because you deserve it, and because too many of you hoodlums have been getting away with it."

So it is still the need to punish that confronts us—although at times not my need, but somebody else's. All this, as Judge Hand suggests, is highly irrational. I am sure that we must recognize this irrational need as a social fact, but I cannot see that we must abandon attempts at reform because of it. After all, that public out there that needs to punish also needs to forgive—and it especially needs to be given, for its own protection and well-being, the most rationally effective administration we can devise for it. It is not getting it now. The excessive emphasis on punishment, with the consequent neglect of genuine rehabilitation, is accomplished by a disastrously high level of recidivism. In the relatively progressive Federal Prison System, for example, the rate increased between 1949 and 1958 from 61 percent to 67 percent. In this same period, the number of serious offenders who have had two or more previous commitments has grown from 39 to 46 percent. Please realize what these figures mean: In two-thirds of the cases punishment neither reforms nor deters the individual who has served one sentence. And with those who have served a second sentence, it fails again in nearly half of the cases.

Another point of view toward this problem is put forward by Harry Elmer Barnes. He says that two-thirds of the criminal population is always at large and that moreover the ones on the outside tend to be the smartest and the most dangerous of the lot. So that while he feels lack of funds and the fear of escape, rather than the urge to punish, are the greatest obstacles to needed reforms, he argues for more rehabilitation as follows:

"The public is unmindful of the fact that convicts, on the average, will serve less than 3 years in prisons and law-abiding citizens can only be protected from their depredations by successful rehabilitation during this brief term of incarceration."

From more than one point of view, then, punishment rather than rehabilitation just does not work.

This being the case, why such persistent, irrational emphasis on punishment? I think one thing is the deep childish fear that with any reduction of punishment, multitudes would run amok. It seems to me this fear must be based on exaggerated notions of the role of punishment when we were children. The reasoning is: We are good adults because we were punished when we were bad children; any adult who is bad should get some more of what we got when we were children. "They" must be punished to reconfirm our adulthood and our goodness—to distinguish us from them. But most of us who have been good for many years—or at least haven't been caught—have not maintained our high estate because of witnessing frequent public hangings and whippings or stopping to observe a malefactor being drawn-and-quartered on the corner of a busy intersection. Quite the opposite. According to the famous Warden Lawes of Sing Sing Prison, this is especially true of the prosecutors and judges who so zealously take upon themselves the rhetorical burden of carrying out society's need to punish. He sent invitations to the appropriate officers of the law to attend each of the 114 executions carried out at Sing Sing while he was warden. Not one ever found time to attend.

Perhaps one should be encouraged by the fact that the modern urge to punish is no longer so immediately personal. I suppose we should all be pleased by the recent report from Saudi Arabia announcing an important reform in criminal law administration—that hereafter a thief's hand will be cut off by an expert surgeon using anesthetics rather than by an amateur with a hatchet. An accompanying reform is that adulteresses will no longer be stoned to death, as in Biblical times. As Saudi Arabia enters the modern world, they will now be shot.

So there is something like progress in these matters. I would remind you that not half a century before the M'Naghten rules were enunciated, more than 200 crimes were punishable by death in England. It is interesting to speculate as to whether England could possibly have become the civilized place it is today if the number of capital crimes had not been reduced. But Lord Justice Denning still believes in punishment for its own sake—or still believes that society believes in it.

The belief in punishment at a distance was strikingly illustrated by a report from South Africa last April. It seems that the flogging of offenders was being carried out in a magistrates' court located near the center of Capetown. Sentences of up to 10 strokes are inflicted on malefactors beginning with 8-year-old boys. The matter became newsworthy when the public began to object to the practice. The objection, however, was not to the punishment itself, but to the uncomfortable circumstance that it was administered in the business district of the city. One citizen complained, "We can clearly hear the swish and smack of the cane and the pleadings and screams of people being beaten." It appears that this noise was upsetting women officeworkers, one of whom expressed herself as follows: "I sympathize with the police. It cannot be nice to have to deal out these beatings. But I wish we didn't have to listen to it." Not only the women were disturbed. One man said that his conversations with important clients had been interrupted by the howling of somebody being thrashed. The problem was solved by police assurances that the beatings would thereafter be administered in a basement, where they would not disturb the public.

I think we are, generally speaking, very confused about the whole subject of punishment. And it is in truth a very complicated matter, with a large admixture of deep emotions concerning views of our own childhood and the child within us, half-spoken beliefs about the nature of our daily self-control, fear of other people, complex attitudes toward authority, and so on. All this helps to indicate for me the direction at least of an explanation of the dilemma of

punishment. Because what has to be explained—and finally understood—is the really frightening scope of the irrationality of our notions and practices regarding punishment. It seems that we just do not know how to be practical about the matter. For example, most of us, I imagine, have achieved major control over our own aggressive and vindictive impulses. We would be revolted to watch a hanging or a beating, and even more to participate in one. When we are personally called upon to administer punishment or any form of serious deprivation, we take the task as a heavy duty and think very hard to make certain that we do no more and no less than we feel to be necessary and effective in the circumstances. This would be so in the disciplining of our own children or any subordinates. But when it comes to the administration of crime, we hand the whole matter over to a distant bureaucratic machine, and we want to hear no more about it. Our attitude is—let the State take care of them.

In other words, our personal resolution of the issue of vindictiveness seems to be achieved at the cost of our human capacity to identify with the offender. Isn't it strange that the criminal law tradition which not so long ago was based on the supposedly deterrent spectacle of public punishment has come full circle and now can be said to be based in effect on the distance and even the secrecy of actual punishment. I wonder how many in this audience have ever seen the inside of a prison? What you would see there can be justified only on the assumption that the prisoners are less than human, and that, therefore, the obviously dehumanizing process they are undergoing is appropriate for them. Because they have stolen property or committed acts of violence, they are outside the pale of human society, and that is the end of the matter. But of course after having further brutalized them, after having failed to deal with the causes of their behavior, and having failed to effect any serious rehabilitation, we then release them into society where they can experience their second or third or fourth opportunity to fail. As Karl Menninger has said, these people are failures first and criminals later. To be a criminal is not strictly speaking merely to have committed a crime—it is a social branding plus penitentiary training, all of which serves only to confirm the initial personal failure which led to the first antisocial act. (As I speak of crime and the criminal tonight, I should emphasize that I am thinking of the delinquent car thief, the mugger, the amateur burglar, an armed robber, the sex offender, and the man who commits assault and other crimes of violence—my attention is not directed toward the special problems represented by the criminal elite consisting of competent professionals, the organization men of the syndicates, or the whole separate area of white-collar crime.)

It is as if society cooperates with certain human beings who are social failures to create this object called the criminal. Our present system of punishment is an essential part of this process, not of any process that can be called reforming or rehabilitative. Why does society go to all the trouble and expense of creating this special class of human beings? I think chiefly because we really do not comprehend what we are doing, because we do not want to deal with the facts of social failure to begin with, and because we are not prepared to follow out the logic of our attitude and dispose of these failures outright. There results a sort of half-way house, neither disposal nor rehabilitation, but a new class of human beings to mirror society's confusion on the profound issue of failure in the educative process—and reliance on punishment to cure or cover over all such failure.

What I am suggesting is that the criminal serves as a scapegoat. And this as much as anything is impeding obvious and sorely needed reform in the treatment of offenders. I use the word "scapegoat" in the specific sense in which it has become a key term in the psychosociological analysis of prejudice. That is, a deeply held, unrealistic, projective image of a minority group indulged by members of a dominant group. The essential fact in this form of prejudiced perception is that the member of the dominant group refuses ordinary, human one-to-one identification with representatives of the minority group, sometimes for lack of opportunity, sometimes because of a deeper unwillingness. But, as the analysis of prejudice has revealed, there is a very meaningful if distorted identification nevertheless. Just as the Jew is avaricious and the Negro lazy and lascivious, so the criminal is violent and impetuous in trying to achieve his ends—he has been foolish (if caught), has lost control over himself, and has done what he wanted to do just when he wanted to do it. Don't you and I have these impulses? Doesn't the anti-Semite envy the Jew as he imagines him, and doesn't the Negrophobe believe that the Negro has more primitive pleasures in his life? First, we bestow upon them our repressed desires, then we place them outside the pale, thus neatly disposing of them and our forbidden impulses.

But of course it doesn't work. Eventually one meets and gets to know a Jew, a Negro, or a criminal, and then the trouble begins. The Jew may be poor, the Negro deprived and unhappy—and in any event, both are recognizably and disturbingly human, that is, "like us." Likewise the criminal. We can see that he would like to master his impulses, and we see that we might have responded as he did to his provocations, to his miserable social and psychological background. We identify on a one-to-one human basis—if we retain the capacity to do so—and behold: the whole complexion of the problem has changed. He is like us—only somewhat weaker, and he has failed in a primary obligation of the mature citizen. He needs help if he is going to bring out the good in himself, and restrain the bad. But first, we must stop treating him like a pariah, as a person who is entitled to punishment and only punishment, because if we treat him that way he will become that way.

Another point to be understood about punishment is that it is not a universal solvent. Different people react differently to it. This is perfectly obvious with regard to children, and needs no elaboration. Our response to punishment is like anything else we learn; some learn better than others, and some learn the same lesson differently than others. In this broad sense, the criminal is the person who has been miseducated with respect to punishment and the threat of punishment. His reeducation must consist of something in addition to just more of the same, more punishment. To conceive otherwise would be like giving harder and harder lessons in algebra to a student who has already evidence his inability to absorb the basic lessons. Only an incompetent teacher, a man of ill-will or one with very limited resources, would go about destroying a student in such a fashion. But that is just what we do with so many people who, if they had had the proper capacity to respond to punishment, would not have gotten into trouble in the first place. We do just the wrong thing by confirming all of their wrong feelings about punishment. And so we create a class of hopelessly recidivistic criminals.

I think that all I have been saying about punishment can be summed up under the headings—punishment without thinking, punishment as a mechanical and exclusive response, punishment unaccompanied by a rational view of its purpose and effect. As the late George Dession, one of the most careful, creative legal thinkers about these matters, has said—"punishment is never good in itself." That proposition is perhaps the first step toward wisdom in thinking about the criminal law system. Professor Dession, in rethinking the whole matter and attempting to devise a more rational and effective approach, preferred to use different words in describing the criminal law system so as to get away from the idea that it concerned only this special class of people called "criminals" and from the sole response of punishment. He felt that this was self-defeating both in its effect on offenders and on the public, in that it broke the crucial conduit of identifications, and limited the role of imagination. He preferred to speak of a system of sanctions having application to proscribed behavior, with the purpose of preserving public order. Punishments—called negative sanctions or deprivations—naturally have their part in this system, but it is a functional part no greater than may be necessary to do what can be done to prevent antisocial behavior, and to account for it when despite our efforts it does occur. "Accounting" for it means, again, doing what practically can be done to insure that the particular individual alters his course of behavior thereafter. Moreover, sanctions were to be recognized as "positive" as well as "negative"—rewards as well as deprivations were to be used as proper techniques for inducing proper behavior. Our moral education as youngsters was based on both techniques—and if an individual's moral upbringing was faulty, both techniques were deemed necessary in correcting it. This sounds so reasonable and so simple—but it is a never-never land compared to our present system.

This point about the utility of punishment perhaps requires some emphasis. I would not want to leave you with the impression that I am opposed to all measures of punishment, or deprivation. It seems superfluous to state that I recognize their necessity, but perhaps I had better do so because thinking in this field tends to be characterized by an either-or, all-or-nothing attitude. It is just this attitude which I object to and from which I wish to dissociate myself. Let me illustrate its unfortunate effects. When the Durham case was decided in the District of Columbia, a great hue and cry was raised that great numbers of vicious criminals would soon be roaming the streets of the city. Nothing could have been more off the mark, as subsequent events have shown. But at the time many people felt that either offenders are punished by execution of a penitentiary term, or they in effect get off scot-free—that all of them must be punished and just punished, or nothing would be done to protect society against them. Our Court of Appeals was compelled to reverse a number of cases on the ground that the jury was not properly instructed regarding the consequences of an acquittal by reason of insanity. The court now requires a positive instruction to the effect that the defendant acquitted by reason of insanity will be put in a mental institution until cured and judicially determined to be no longer a danger to himself or others. Such commitments, incidentally, may continue for a longer term than would have been served in a penitentiary for the offense charged. They are clearly a deprivation, a negative sanction—and in this sense a punishment—but with the very important difference that it is not retributive, it is no more than may be necessary, and it is punishment subordinate to the purpose of rehabilitation.

Or another point. Some people seem to feel that whenever trained workers including psychiatric therapists supplement the work of police and prison guards, or play any independent role at all, the offender will be

mollycoddled and consequently society's bulwark against crime will crumble. This is nonsense, but the attitude persists. Dr. Melitta Schmideberg of the Association for the Psychiatric Treatment of Offenders is one of the most devoted and distinguished workers in her field. I am not competent to underwrite the validity of her views, but she is a richly experienced therapist in this special and rather neglected area of treatment. She believes in a strongly directive therapy, and in the course thereof gives practical recognition to the fact that the threat of loss of liberty—of going to jail or going back to jail—plays an important part in her work with probationed offenders or repeaters. This threat is an ever-present backdrop to her efforts to help the patient get along with his probation officer, to stop breaking the law, to get a job and hold it, and so on. She feels that—"Fear of punishment and guilt keep normal people in check, but an overdose of anxiety can react in the opposite direction on criminals." She states the problem as follows: "If the therapist condemns the offender out and out, he cannot treat him; if he condones his offense, he cannot change him." This is certainly not a mollycoddling approach. On the other hand, she objects eloquently to the psychological effect on offenders of a period in the usual penitentiary. She feels one of the most imperative uses of therapy is to help the ex-convict overcome the effects of prison. Now does it strike anyone here as sensible to deny early treatment of first offenders, send them to a penitentiary where their dangerous problems will be dangerously augmented, and then end up with an infinitely more difficult problem personality to deal with later on?

Why do we do it? Why do we treat offenders this way? I trust that by this time you are aware that I do not really have a neat answer, and that any satisfactory answer will be found to lie very deep indeed—probably at the core of man's inhumanity to man, in each of us and in the history of all of us. As of today, the main problem is that the problem has been with us so long. Its insolubility has been sanctified by history. But as regards the similar and not unrelated problem of poverty, more and more people are now refusing to be stopped by this traditional historical impasse. Perhaps this revolutionary century of ours will also effect a little revolution on behalf of the fallible humans who cannot live up to even the more obvious rules of social order, without somewhat more help than most of us get or need. One doesn't have to be a wild radical to see this problem as one with which we are doing very poorly and one which calls for top-to-bottom rethinking. As Morris Cohen reminds us, "It was the conservative President Taft, later Chief Justice of the United States, who characterized our criminal law as a disgrace to civilization."

But when we transcend our emotional urge to punish, and begin to think seriously about crime and the criminal without such undue reliance on the one idea of punishment, we very shortly come right up against an intellectually much more formidable barrier. And that is the ubiquitous theory of deterrence. On the intellectual level, it turns out to be the greatest barrier to progress in the criminal law.

This theory proposes that actual malefactors be punished in order to deter potential malefactors. In its pure form, it is willing to assume arguendo that punishment may not reform and may even damage the particular individual being punished. But this unfortunate person must be sacrificed to the common good—he must be punished as an example to all, to keep all the rest of us from committing his crime. Of course, the theory is not always stated in this pure form. Indeed, there is a common confusion which you may notice in arguments based on the premise of deterrence—a confusion between deterrence of the person being punished and deterrence of all others. Now clearly the convicted prisoner was not deterred by the prior punishment of others from committing the crime which placed him in prison. And to speak of deterring him from committing another offense later takes us back to the previous discussion of the effectivenes sof punishment, and concerns rehabilitation not deterrence. So the theory, properly considered, involves only the justification of punishment because of its show effect, its supposed effect on others. I need not labor the point that the individual so used is a scapegoat, a sacrificial victim. This is an admitted feature of the theory.

Logically, of course, the more we witness the pains of punishment, the more apt they would be actually to deter us from crime. (That is, if active fear deters.) Originally, this logic was a part of the deterrence theory. But in our day it is not. To illustrate this I would like to quote from the 1953 report of the Royal Commission on Capital Punishment:

"In the first half of the 19th century executions still took place in public. This indeed was thought to be an essential part of the deterrent value of the death penalty. But public executions, 'though the publicity was deterrent in intention * * * became in practice a degrading form of popular entertainment, which could serve only to deprave the minds of the spectators.' "

Parliament ended the practice in 1868. The report also suggests that the method of hanging was invented and found favor because of its advertisement value. But at the hearings before the Commission, witness after witness defended hanging because it was the most humane method of execution. The report notes this surprising inversion succinctly as follows:

"Thus a method of execution whose special merit was formerly thought to be that it was peculiarly degrading is now defended on the ground that it is uniquely humane."

So clearly the deterrence theory is not quite so logical as it used to be. (And just as well.)

I understand that what empirical studies have been made of the deterrent value of capital and other forms of punishment can properly be characterized as "inconclusive." If this is so, and as long as it is so, we are free to speculate about the problem—but I think we do have an accompanying obligation to avoid rigid formulations and dogmatic stands.

A common argument offered in support of deterrence is this: The ordinary citizen would not obey traffic signals if sanctions were not imposed on all drivers for breach of the rules. This argument, please notice, depends for its persuasiveness on a supposed identify between a traffic violation, on the one hand and murder, assault and grand theft, on the other all these being breach of the rules. Although I suppose they all do come under this category, the empirical differences are more impressive to me than the abstract similarity. But more important, because of the preconditioning of licensing, the persons to whom traffic rules are addressed are a select group to begin with: Those who are incompetent to conform to the rules, for whatever reasons, are weeded out before the sanction system is applied. And that is an important point. Although traffic rules have very little moral force behind them, the system works tolerably well just because reliance is not placed solely on sanctions, but also on the judgment of competence.

I think we all understand that the maintenance of public order must be backed up by a system of sanctions, deprivations, punishments, if you please. Neither law nor morality can sustain itself, from generation to generation, without the threat of some form of punishment. But the difficult point to be comprehended here is that the system requires the threat of punishment, not punishment itself. An internal control system generated by our mores and received beliefs keeps most of us from stealing. For those who require external controls, it is the threat of going to jail, not actual time spent there, that keeps them from stealing. Actual sanctions are needed—as far as the system is concerned—only to give substance to the threat, to keep it from being reduced to impotence. The problem really posed by the question of deterrence is, how much actual punishment—and what kind of actual punishment—is required in order to sustain the threat of punishment at an effective level? Or, stated inversely, now looking at the problem from the point of view of the individual rather than the system, how much nonpunishment, how much besides punishment, can be allowed in treatment of the individual without inviting a breakdown of the system of sanctions?

I do not propose to solve this problem, even stated in such fashion, from this platform, this evening. But I do want to conclude with a few observations about this critical and perplexing question. First of all, I believe that in the absence of decisive empirical data, we should take a developmental approach. That is, we should view the issue historically and not assume that any particular status quo is ultimate and unalterable. I will confess that I am subjectively distrustful of many ponderous proponents of deterrence who answer the question, how much punishment is necesary, with the quick reply, exactly as much as we now have. And those who use the necessity of deterrence to justify the scandal of our prison system, also earn my suspicion.

Some people have argued in favor of the M'Naghten ritual on the grounds of a deterrent effect—that the mentally ill offender should not be recognized as such and treated as such because to do so would encourage crime and perhaps even mental illness. This argument I consider beneath contempt. The M'Naghten rules were adopted 25 years before the English saw fit to do away with public hearings. As Dr. Eliot Slater has stated, "* * * the effect of the rules has been to stabilize the law at the time of 1843 into being the law of the country for all time. This is an event without equal in the history of English common law." Whether or not without equal, it is certainly rare, and certainly contrary to the modification by experience that we are told is the genius of the common law. Why, I wonder, are these rules considered still necessary to deter crime, when public hangings and capital punishment for petty offenses are not? And if M'Naghten is so necessary for this purpose, why do the same people justify it by reminding us that trial courts frequently ignore it?

To sum up briefly: Punishment has a role to play in the education and reeducation of the individual. The threat of some form of deprivation is of course essential in the functioning of any moral or legal system—and the threat must have substance. But these basic requirements of the criminal law have been used—I will say misused—to justify the present system which contains a preposterous predominance of senseless punitive elements. The theory of deterrence, as too frequently applied, results in degrading the individual for a purported social purpose—contrary to the democratic ethos and with no convincing evidence that the purpose is promoted. In doing so, in casting the individual offender in the role of a scapegoat, it begs the entire question of justice. And while no sociolegal system can reach a perfect incarnation of justice, none can survive in the hearts of the people which bypasses or does not engage the issue seriously.

If we were not so set on punishing the offender for the sake of punishment, if we did

not justify this practice by reference to its deterrent effect, we could understand that rehabilitation lies at the spiritual heart of any vital moral system. The alternative can only be destructiveness. Even the violent corporal punishments of the past were designed to rehabilitate the wrongdoer's soul, which was held to be of much greater concern than his body. In our secular age, we have lost sight of this spiritual truth. But we still punish—without hope of reformation, without belief in saving the soul by damning the earthly body. And our entire moral system necessarily suffers thereby.

Would it really be the end of the world if all jails were turned into hospitals, or rehabilitation centers? The offender would then—just as the committed mental patient is today—be deprived of his dearest possession, his personal liberty. Punishment enough, I should think—to satisfy our punitive urge and to induce a deterrent fear. The offender's purpose in such a rehabilitation center would be to change his personality, his very style of responding to life. I would like to suggest, quite seriously, that the effort, toward such a personal alteration is the greatest sanction of them all. To make this is indeed the true command of all religion and all morality. And it is the normal law-abiding person's most profound and continuous punishment. The difference between the offender or the mental patient and the rest of us happily normal citizens, is that they have a special problem and need special help in living up to society's expectations. A few of us have had special problems in the course of our lives but were lucky enough to get the help we needed, or strong enough to get by on our own. We are entitled to congratulate ourselves on the superiority of our endowment or good fortune—but not, I think, to celebrate our triumphs by degrading our less fortunate neighbors. Is it in any way necessary for our own benefit to perpetuate the shame of our penitentiaries—where a youthful offender, having been processed through the homosexual auction block, will be taught the ways of crime and perversity by a hardened expert?

I am at the end of my remarks—for this evening, at least. I have not said enough, and perhaps I have also said too much. I know that I have oversimplified, because my purpose has been to emphasize a pervasive and half-hidden factor in a highly complex matter. The ubiquitous and irrational quality of the need to punish is an essential key, I believe, to an analysis of criminal law problems—but it is of course not a substitute for that analysis itself. Among the many serious issues I have not discussed this evening, prominent mention should be made of the current and future limits of that omnibus grouping called the behavioral sciences. How much of their promise is valid hope, how much wishful thinking? We can only find out by trying—by experimenting. Take the question of psychiatric treatment, for example. It seems clear that new, more sophisticated techniques will have to be developed with more pointed relevance to the problems of offenders. But where are the experimental clinics, where are the budgets to attract competent staff, where is the administrative approach that would welcome and facilitate this urgent work? Blocked, I have suggested, by the belief in punishment. Many critics of the reforming attitude in criminal law administration fear the unknown contours of a future dominated by the experimental ideas of rehabilitation. Reformers may share some of these fears, but they are motivated even more by fear of the consequences of continuing our present practices. For example, I am deeply disturbed by the whole question of the indeterminacy of the period of incarceration, which is a very serious problem today and will undoubtedly grow in importance as reforms favoring rehabilitation are instituted. The image of one class of experts administering the lives of another class of "unfortunates" has some very disquieting aspects. I comfort myself with the thought that images of the future are frequently discomfiting, and that early surgery, for example, was probably greeted with the same disquiet. Imagine one man cutting up another. But it has worked out tolerably well.

Perhaps we can take comfort that new problems have a way of begetting new solutions and that, in this instance, solutions may be found which are consonant with our traditional concern for civil liberties. I, for one, have no intention of ushering in permanent incarceration for behavior not seriously dangerous to society.

After all this speculation of mine, I would like to leave you at least with a restored sense of reality. Crime and criminals belong very much to their particular time and place. They grow out of very specific social settings. Moreover, any system of sanctions and any system of rehabilitation applies to and within a society, it does not substitute for one. And these systems cannot be much better than the society in which they exist. On the other hand, they should not be worse. I leave you with the question whether they in fact are.

Greater Wilkes-Barre's Fine Arts Fiesta Termed Successful

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of May 29, 1960, which comments upon the recently concluded Fine Arts Fiesta that was held in Wilkes-Barre:

FIESTA'S SUCCESS

After phenomenal success, and a record-breaking attendance, this year's Fine Arts Fiesta, was concluded brilliantly yesterday despite cloudy skies.

It was cited by community leaders, not only as an expression of the community's creativity in the arts, crafts and entertainments, but also as a demonstration of the new, forward-looking spirit of the community itself.

The cooperation of 35 cultural organizations and over 1,000 individuals is indeed the best sort of evidence of how a community can work together toward a common goal.

Not the smallest achievement of the Fine Arts Fiesta is its mounting renown in the national picture. Typifying the kind of national attention it is winning for Greater Wilkes-Barre is the fact it "made" the Sunday New York Times twice this month. First, the fiesta was listed on the New York Times' tourist calendar of outstanding attractions for the month of May.

Secondly, and even more impressive, in the New York Times of May 15, the fiesta under the caption "Wilkes-Barre Fiesta" was in a prominent paragraph midst other paragraphs describing tourist attractions in Scandinavia, France, Israel, South America, India and elsewhere.

This type of attention indicates that the Fine Arts Fiesta has "arrived." What is more, it indicates how much further it can go, by way of bringing national repute to the community. As such—and as a cultural asset of the community—it should have every backing and encouragement in future years.

Special community thanks are due Miss Annette Evans, fiesta president and founder, and her valiant coworkers. "The Renaissance" was indeed a fitting them for this year's event. It may well describe the entire enterprise.

Results of the Annual Questionnaire

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. WESTLAND. Mr. Speaker, each year I send questionnaires to the voters of my district because the answers are of value to me, the Representative on whom these voters depend. The answers to this year's questionnaire indicate to me that there is a greater interest among the people of the second district in national and world affairs than ever before.

Although the returns have been excellent in past years, the return this year exceeded my expectations and this is gratifying to me. I mailed 92,700 questionnaires this year and received a return of 12 percent.

The returned questionnaires have been grouped into six categories, which are self-explanatory. They include labor, white collar, farmer, professional, business, and miscellaneous. The last category included unsigned questionnaires, housewives, retired persons, students and others who could not be classified easily in one of the other groups.

Mr. Speaker, the substantial thought given to the issues and problems covered by the questionnaire is encouraging. About 40 percent of those who answered took the time and the trouble to comment in detail on these matters, and these comments help me to determine how I should represent my district. I regret that time simply did not permit a detailed reply to these people for I should like to have done so.

I am sure the Members of Congress will be interested in the outcome of my questionnaire, so under leave to extend my remarks in the RECORD, I include the detailed results. The figures I use here represent percentages, not the number of persons who answered a particular question.

1. In order of their importance to you, number the six most important issues today.

	Labor	White collar	Farmer	Professional	Business	Miscellaneous	All
National defense	48	31	33	26	38	36	36
Peace	17	22	17	21	17	19	21
Inflation	12	20	23	14	25	20	19
Education	4	5	4	16	2	5	6
Foreign affairs	3	7	2	11	5	4	5
Budget	3	4	4	3	3	2	3
Social security	3	1	3	1	1	4	3
Civil rights	3	2	1	3	1	3	2
Missile development	1	1	1	1	2	1	1
Atomic energy	1	1	1	(1)	1	1	1
Farm program	1	1	8	1	1	2	1
Disarmament	1	1	(1)	1	(1)	(1)	(1)
Flood control	(1)	(1)	1	(1)	1	(1)	(1)
Space exploration	1	1	(1)	(1)	1	1	(1)
Other	1	3	2	2	2	2	2

[1] Less than 1 percent.

2. The President has estimated a surplus for fiscal 1961. Should we: (A) Spend it, (B) reduce taxes, (C) reduce the national debt.

	(A) Spend it	(B) Reduce taxes	(C) Reduce the national debt
Labor	8	32	60
White collar	6	24	70
Farmer	5	20	75
Professional	8	19	73
Business	4	27	69
Miscellaneous	7	26	67
All	7	26	67

3. Liberalization of social security will require increases in individual and employer contributions. Under such circumstances do your prefer: (a) No change in the low, (b) surgical and hospital care for beneficiaries, (c) higher ceiling on allowable earnings?

	A	B	C
Labor	23	44	33
White collar	36	28	36
Farmer	35	38	27
Professional	35	23	42
Business	39	26	35
Miscellaneous	22	51	27
All	29	39	32

4. Do you favor a series of summit conferences such as the one scheduled for Paris this spring?

	Yes	No
Labor	74	26
White collar	88	12
Farmer	78	22
Professional	85	15
Business	73	27
Miscellaneous	81	19
All	79	21

5. Do you favor continuation by the United States of its mutual security program of military and economic aid to countries outside the Soviet bloc?

	Yes	No
Labor	68	32
White collar	78	22
Farmer	73	27
Professional	87	13
Business	72	28
Miscellaneous	71	29
All	73	27

6. Do you favor recognition of Red China?

	Yes	No
Labor	26	74
White collar	27	73
Farmer	18	82
Professional	30	70
Business	24	76
Miscellaneous	25	75
All	25	75

7. Do you favor: (A) An increase in minimum wages from $1 to $1.25 an hour, (B) extension of minimum wages to cover more workers who are exempt now?

	A		B	
	Yes	No	Yes	No
Labor	73	27	88	12
White collar	55	45	78	22
Farmer	42	58	66	34
Professional	52	48	71	29
Business	45	55	68	32
Miscellaneous	58	42	80	20
All	59	41	78	22

8. Do you favor repeal of the 22d amendment which limits the President to two terms?

	Yes	No
Labor	27	73
White collar	23	77
Farmer	22	78
Professional	24	76
Business	22	78
Miscellaneous	27	73
All	27	73

9. Should the Federal Government provide funds for (A) school construction, (B) teachers' salaries?

	A		B	
	Yes	No	Yes	No
Labor	58	42	33	67
White collar	46	54	24	76
Farmer	41	59	22	78
Professional	57	43	42	58
Business	39	61	33	67
Miscellaneous	48	52	30	70
All	50	50	29	71

10. Do you favor so-called wilderness legislation now pending before Congress?

	Yes	No
Labor	47	53
White collar	48	52
Farmer	27	73
Professional	55	45
Business	38	62
Miscellaneous	43	57
All	44	56

11. In November 1960, whom would you like to see elected (A) President, (B) Vice President?

A

	Labor	White collar	Farmer	Professional	Business	Miscellaneous	All
Humphrey	5	1	3	1	1	2	2
Kennedy	12	8	3	5	7	8	8
Johnson	2	3	1	1	(1)	1	1
Nixon	44	60	67	62	71	63	59
Rockefeller	8	11	10	10	8	7	9
Stevenson	7	6	3	10	2	5	6
Symington	3	1	1	(1)	(1)	2	1
A Democrat	10	3	3	4	5	6	5
A Republican	5	4	4	4	4	3	4
Others	4	3	5	3	2	3	4

[1] Less than 1 percent.

B

	Labor	White collar	Farmer	Professional	Business	Miscellaneous	All
Kennedy	5	7	3	7	3	5	5
Lodge	8	9	7	11	14	13	10
Rockefeller	17	26	29	28	33	22	24
A Democrat	35	21	13	17	11	23	23
A Republican	27	30	34	29	32	30	30
Others	8	7	14	8	7	7	8

Mr. Speaker, the results show that the people of my district are concerned with national defense. The fact that peace ranked next in importance is an indication they believe that a strong defense will prevent an atomic or conventional war. I find that the fact inflation ranked third and the budget was among the top six issues indicate that the people support the President's efforts in this direction. They want a balanced budget, and if there is a surplus they want the national debt reduced.

I am pleased to note there is no dissension between the six categories. Substantially the majority of each group expressed the same viewpoint toward all major issues. This means the people of my district are solidly bound in their feelings toward what is good for the Nation.

John L. Erickson

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 1, 1960

Mr. FULBRIGHT. Mr. President, on June 1, today, my administrative assistant, John Erickson, is leaving to become a regional manager of the Ford Motor

Co.'s new political study program for employees. This decision of Mr. Erickson's is my loss and Ford's gain.

I first became acquainted with John Erickson when I was president of the University of Arkansas and he was a student. He became my administrative assistant shortly after his graduation from college and has been a dedicated and efficient employee for the past 18 years. I shall miss John Erickson's unerring ability to get to the essential root of a problem, to discern the special pleader from the legitimate advocate, and, most of all, his unyielding loyalty. He will not be easily replaced. He will be missed on Capitol Hill.

Mr. Erickson is, I believe, one of the most competent men in his field that I have ever met. I regard his leaving not only as a loss to me but also as a loss to the State of Arkansas and to our country. I congratulate the Ford Motor Co. upon their discrimination. I deplore the fact that our Government cannot afford to compete with the Ford Motor Co. in the ability to pay for superior talents.

I ask unanimous consent that a news item and editorial which appeared in the Arkansas Gazette be inserted in the Appendix of the RECORD; as well as a release issued by the Ford Motor Co.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Arkansas Gazette, May 21, 1960]

A GOOD MAN'S NEW WORK

John Erickson, a near 20-year veteran of the Washington jungle at 39, has announced his resignation as administrative assistant to Senator FULBRIGHT to become a regional manager of the Ford Motor Co.'s new political education program for employees.

As the often inadequate expression goes, Arkansas' (and, of course, Senator FULBRIGHT's) loss will be Ford's gain, just as it could have been said that it was journalism's loss and Government service's gain when "Sonny" Erickson first went to Washington in 1942 on the staff of former Third District Representative Clyde T. Ellis. Trained in journalism, and a student editor both at Rogers High School and the university, Mr. Erickson brought a lively intelligence and a solid academic background to the job of being a Congressman's "other self," an assignment which has its undeniable fascinations and rewards but one that also involves an uncommon amount of painstaking drudgery. How well he succeeded can be attested to, not only by the thousands of Senator FULBRIGHT's Arkansas constituents who have found him in a stout champion of theirs and the State's best interests, but also among the company of his peers, by whom he has long been rated as one of the really top-drawer old Washington hands.

It is true—and in instances such as this, saddening—that Government will never be able to match the material rewards which private corporations can offer to bright young men of John Erickson's caliber. But after the long hitch of direct service to the public which he now has put in, Mr. Erickson certainly has every right to go where the material reward will be greater—and the nonmaterial satisfactions not inconsiderable. For, indirectly, he still will be making a contribution to improvement of governmental standards as a key man in Ford's nonpartisan program for stimulating employee interest in an active, educated participation in the political processes, a program which already is being called a model for other public-spirited corporations.

[From the Arkansas Gazette, May 20, 1960]

FULBRIGHT ASSISTANT TO TAKE FORD MOTOR POST

WASHINGTON, May 19.—John Erickson, administrative assistant to Senator FULBRIGHT, Democrat, of Arkansas, and one of the State's best known contact men in Washington, is resigning to become regional manager of the civic and government affairs division for Ford Motor Co., at Kansas City, it was learned here today.

Erickson, 39, will head a seven-State area for the company, which has recently initiated a new program aimed to interest its employees in government and political affairs.

Erickson has been associated with Senator FULBRIGHT since 1943 when he came to Congress as a Representative from the Fayetteville district.

A graduate of the University of Arkansas, Erickson grew up at Rogers. He received a bachelor of arts degree in journalism in 1942, and went to work for former Representative Clyde Ellis.

RELEASE FROM FORD MOTOR CO.

Appointment of John L. Erickson, 802 Janney's Lane, Alexandria, Va., as regional civic and governmental affairs manager for Ford Motor Co. in Kansas City, Mo., was announced today by Allen W. Merrell, director of the Civic and Governmental Affairs Office.

Mr. Erickson, administrative assistant to U.S. Senator J. W. FULBRIGHT of Arkansas, will assume his new position June 1.

He will be in charge of the company's civic and governmental affairs activities in the States of Missouri, Nebraska, Kansas, North Dakota, South Dakota, Wyoming, and Colorado.

The appointment of Mr. Erickson completes the staffing of eight regional offices, a central feature of the current extension of Ford's civic and governmental affairs program. Believed to be the first of its kind in American industry, the field organization also includes offices in Chicago, Atlanta, Cleveland, Dallas, Albany, Los Angeles, and Trenton, N.J. Each of the regional managers has been selected for his extensive background in government or political affairs in his region.

Mr. Erickson's responsibilities will include counseling with company executives on government relations matters at the Federal, State, and local levels, working with the company's community relations committees in the public affairs field and representing Ford's viewpoint on legislation affecting the company in the seven-State area.

Mr. Erickson has been on Senator FULBRIGHT's staff since 1943. In 1943 and 1944, Senator FULBRIGHT was a Member of the U.S. House of Representatives and in 1945, he became a Senator.

Prior to joining Senator FULBRIGHT's staff, Mr. Erickson was executive secretary to former Representative Clyde T. Ellis of Arkansas in 1942. He is a Phi Beta Kappa graduate of the University of Arkansas.

An Editorial Miracle

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. MASON. Mr. Speaker, a miracle has happened. The Washington Post has taken one of my conservative proposals and given it complete approval in an editorial carried in the issue of Monday, May 30. This is so unusual and so unexpected that I feel my colleagues who know what a conservative I am should have their attention called to it. The Washington Post editorial follows:

AID TO CAMPAIGN FINANCING

By way of encouraging widespread contributions to political candidates and parties, Representative MASON has introduced a bill to exempt such gifts from the income tax, within certain limitations. We do not lightly approve any measure that would have the effect of depriving the Government of revenue, even in small amounts, but this added incentive to campaign giving would serve a basic political purpose—that of reducing the reliance of candidates on a few wealthy benefactors who may have axes to grind. This advantage is so great that it ought to dominate the debate of the measure.

The proposed exemption is limited so as to elicit moderate and small contributions and discourage excessive ones. A taxpayer could claim exemption up to only 2 percent of his adjusted gross income, and the maximum sum that he could deduct in any event would be $1,000. Fat cats would get relatively little relief from the bill; the rank and file of small contributors could give to the candidates and political committees of their choice without paying any tax on the amount donated. This notable incentive to sound campaign financing seems to us to override any objections based on the small amount of revenue that would be lost.

Bright Future Predicted for Nanticoke, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. FLOOD. Mr. Speaker, an extremely unusual and happy development took place during the past week in a city in my congressional district, Nanticoke, Pa. At the annual dinner of the Nanticoke Chamber of Commerce, it was announced that the municipality had reached the happy state of being debt free. This condition, I am sure it is agreed, is indeed a most unusual development in this day and age where huge fiscal debts seem to be the rule and accepted as a part of the modern way of life. I, therefore, want to take this means and opportunity to warmly congratulate the public officials of Nanticoke for their high degree of fiscal responsibility and prudent management. It indeed speaks well for the future success and further development of that fine municipality. In line with this, I include as part of my remarks an informative newsstory which appeared in the Wilkes-Barre Record of May 26, 1960:

MARTIN SEES BRIGHT FUTURE FOR NANTICOKE—HIGHWAY CHIEF TELLS PLANS; CITY BURNS LAST OF BOND DEBT

Enthusiasm and optimism for Nanticoke's future ran high at last night's annual dinner of the chamber of commerce in the American Legion Home. Alexander Choman, chamber of commerce president; Mayor Charles A. Makar, toastmaster; Senator An-

drew J. Sordoni, who was presented a plaque honoring his golden jubilee in business; and the principal speaker, Park H. Martin, secretary of highways, all contributed to a bright outlook for the future.

Martin was presented by Leonard Siegel, past chamber of commerce president, who reviewed the services and accomplishments of the speaker. Mr. Martin stated he was pleased to come to Nanticoke and felt he had heard real success stories both of Nanticoke's accomplishments and the growth of the Sordoni Enterprises.

He said it gave him reason to review the work done in Pittsburgh where it took 14 years to rebuild the downtown area and it is now referred to as Pittsburgh's renaissance. He directed the planning and said the hard task was accomplished because of the real stamina, perseverance and determination of the citizens led by a small group of dedicated planners.

Martin said he took the highway post reluctantly and knew it was a hard task and demanding. But, he said, the highway system and need of industrial development are related and jobs depend on good transportation.

Pennsylvania was shown with 41,700 miles of State roads as having more miles than all of New England, New York, New Jersey, and Delaware combined. This makes it a tough challenge because many of our roads are old, obsolete and need complete rebuilding to meet today's need.

Martin added there are two systems, Federal aid and interstate roads, which get 90 percent Federal aid: a primary system, which gets 50 percent Federal aid; and strictly State roads that get no outside help.

Martin said, "We in Pennsylvania have to do some long range financial planning to promote good programing. We have completed a list of projects to a total of some $3 billion that should be spent in the next 12 years. That's an average of $250 million a year, more than ever was contracted in a single year and still does not include strictly local projects."

The department anticipates twice as many cars and trucks in 15 years and these must be planned for, he said. Speeds have been increased, safety factors must be expanded, Martin said and added, "My story as I see it is your story."

He said he came to Nanticoke hopeful the Keystone Shortway will be beneficial to the area and said the department expects soon to contract for a bridge over the river near Berwick as part of this road. He added the State will relocate a State road in the Nanticoke Redevelopment area and on Friday will open bids for a new bridge over Forge Creek on West Main Street, near Alden Road.

SORDONI HONORED

Mayor Charles A. Makar, as toastmaster, drew on a fund of numerous stories to lighten spots in the program. He was serious, however, when he presented an illuminated and framed plaque to Andred J. Sordoni as a remembrance from the people of Nanticoke in honor of Sordoni's golden jubilee in business.

Senator Sordoni thanked Nanticoke for the great honor shown him and thanked some old personal friends who went through several political campaigns with him, giving him stalwart support in Nanticoke.

He said he got from working in the mines for 10 cents an hour to meeting a payroll of $50,000 a day only because he picked the right parents. He paid tribute to his mother and her honest philosophies so deeply impressed in him that he has passed on the urge to his entire organization to be sure it is the right thing and then do it. He added a tribute to Park H. Martin for his ability that led Governor Lawrence to pick a stalwart Republican to fill so important a post.

CITY BURNS BOND

Mayor Makar reviewed the problem facing the city back in 1952 when it was terribly difficult to determine where the city actually stood. Old bills and debts of some $269,000 were tabulated and then the Economy League was called in to help formulate a program to get the city out of debt.

He said today, Nanticoke is debt free, the largest city to be able to say that. Arnold in western Pennsylvania shares the same honor. The debt represented "paying for dead horses," the mayor explained, but any future debt will be sound financing for public improvement and needed equipment.

Gerald Mangan, vice president in charge of Miners Bank of Wilkes-Barre, Nanticoke Main Street Branch, presented the canceled bonds to William Dudeck, finance officer of the city, who burned a bond as evidence the city is free from debt.

President Al Choman welcomed about 300 guests and friends from other chambers. He reviewed the accomplishments of the chamber and set a target of 350 memberships in 1960. He declared a larger group is needed to get more energy back of the push to move Nanticoke forward.

Miss Irene Bavitz and Joseph Shymanski entertained with duets, accompanied by Mrs. Bertha Rule. They sang "The Desert Song," "Some Day" from "Vagabond King"; and as an encore, "Sweetheart."

Invocation was by Rev. Francis A. Dobrydnio, of Holy Trinity Church, which followed the singing of the national anthem. Benediction was by Rev. H. Jerome Leinbach, pastor of Zion Reformed Church.

Fighter Interceptors Needed

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. RIVERS of Alaska. Mr. Speaker, I speak again of the recent decision of the Air Force to inactivate the 449th Fighter-Interceptor Squadron at Ladd Air Force Base, near Fairbanks, Alaska, by August of this year, and I vigorously protest, as I have before, this untimely weakening of America's defenses against manned bombers which, according to Gen. Thomas D. White, Chief of the Air Force, are still Russia's most dangerous weapons.

Much in point from the standpoint of all of us is an editorial in the May 28 issue of the Anchorage Daily Times, which I submit for the consideration of all my colleagues. The editorial follows:

OREGON SOUNDS ALARM FOR DEFENSES HERE

What Alaskans think about the defense requirements in their State, apparently makes no difference to the men in the Pentagon who makes the decisions.

Despite the repeated and persistent protests and warnings from Alaska's Representatives in Congress, there has been no change in plans to weaken the defenses here by the withdrawal of the 449th squadron at Ladd Air Force Base.

But it may make a difference what the people of the other 49 States think about it. Weakening of Alaska's defenses makes the other States targets for quick and easy Soviet aggression. The gateway through Alaska is obviously going to be left wide open and guarded only by an alarm system that tells when they are coming.

This is being discovered in the other States, as reflected in an editorial published in the Portland Oregonian this week.

The editorial follows:

"Word from Washington that almost half the fighter planes assigned to Alaskan air bases will be removed this summer has alarmed and angered residents of the new State.

"And well it may disturb residents of the other 49 States, too. To weaken the defense strength of an area hitherto regarded as a keystone of the Nation's military structure would be difficult to understand at any time. But at this time, in the wake of the U-2 incident and the collapse of summit talks, it is simply incredible.

"Gen. Curtis LeMay, the cigar-chomping Deputy Chief of Staff of the U.S. Air Force, told members of the Alaska congressional delegation the Pentagon doesn't regard their State as strategically important any more. He believes Alaska will be sufficiently defended by the 33 interceptors of the 317th Squadron at Elmendorf Air Force Base, Anchorage, after the disbanding of the 449th Squadron with its 25 aircraft based at Ladd Air Force Base, 225 miles away at Fairbanks.

"Furthermore, General LeMay said he doubts the Russians would choose the Alaskan route for any bombing raid on the North American Continent because the DEW line radar stations would rob them of the element of surprise. And in any case, the general concluded, long-range fighters based on the Pacific coast could knock down the intruders as well as the Alaska planes.

"This appraisal of the Alaskan defense situation is a slap in the face for Lt. Gen. Frank A. Armstrong, the Alaska defense commander who last year urged the location of more offensive and defensive missile bases in that State to prevent its use as an invasion route by the Reds.

"General LeMay's views most certainly are not shared, either, by the chief of the North American Air Defense Command, Gen. Laurence S. Kuter, whose job it is to beat off airborne intruders with the tools the Pentagon gives him. General Kuter is firmly on record against the degradation of his defenses against manned bombers, holding that these will continue to be dangerous adversaries for many years to come despite the increasing emphasis on missiles.

"What can civilians do when generals disagree on military questions? We can only follow our instincts, and ours tell us the assumption that the Reds are going out of the bomber business is overly optimistic. According to intelligence estimates the Soviet Union now has about 1,200 firstline, long-range jet bombers. Even if we can believe Nikita Khrushchev when he says he's not going to build any more bombers, our fliers figure that by "cannibalizing" spare parts from grounded planes and allowing a 5-percent attrition rate per year, Russia still could put into the air as late as 1975 a fleet of 700 bombers able to hit us with 1,000 megatons of nuclear weapons if unopposed. So we had best be prepared for another decade to oppose them. * * *"

Coalfield's Output Hits Record 29,401,573 Tons

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled, "Coalfield's Output Hits Record 29,401,573 Tons," which appeared in the

May 26, 1960, issue of the Messenger, of Madisonville, Ky.

The article is as follows:

COALFIELD'S OUTPUT HITS RECORD 29,401,573 TONS—SHOWS GAIN IN 1959 WHILE U.S. TONNAGE DROPS

Coal production in the western Kentucky field hit an alltime high of 29,401,573 tons in 1959, while national coal output decreased about 15 percent.

This was reported today by Kentucky Coal Agency Secretary William M. Shanks in the agency's annual tonnage report, which showed a production increase of 6.19 percent in the western Kentucky field over the 1958 tonnage of 27,687,566.

The tremendous growth of the coal industry in western Kentucky in recent years is shown by the fact that the 1959 tonnage figures are more than 3½ times the production for this area only 20 years ago.

Hopkins County continued to be the leading producer in the field—and presumably in the State—despite a 3 percent dip in tonnage. Hopkins' tonnage for 1959 totaled 11,336,474 in 1959, compared to 11,687,026 in 1958.

Muhlenberg County gained 9 percent, increasing its tonnage from 1958's 8,902,872 to 10,037,026 in 1959.

Hopkins County produced 38.56 percent of the field's tonnage while Muhlenberg's output accounted for 34.25 percent.

TOPS 1956 RECORD

Jumping from fourth to third place in the field was Union County, with a 29-percent gain—2,741,048 tons in 1959 as compared to 2,084,238 the previous year.

Ohio County, despite a 6-percent gain, dropped from third to fourth place, with 2,635,077 tons, compared with 1958's mark of 2,469,966.

The previous high mark in the western Kentucky coal field tonnage was in 1956, when the area produced 29,250,781 tons.

Tonnage figures for 1959 in the other seven counties are as follows: Webster 1,244,937; Daviess 759,808; Henderson 277,791; Butler 215,082; Hancock 118,511; McLean 3,590; and Christian 1,372.

Coal tonnage carried on river barges jumped more than one-million tons during 1959, totaling 9,294,953 tons, compared to a 1958 tonnage of 8,252,484.

Truck-mine tonnage also showed a sharp upturn, from 1958's total of 1,000,984 to 1,412,313 in 1959.

Tonnage from rail-connected mines also went along with the increase, showing 18,693,707 tons in 1959 to 18,434,098 in 1958.

Production reports from the entire State have not been published yet by the Kentucky Department of Mines and Minerals.

Hopkins County's tonnage for 1959, by seams, was as follows: 11th seam, 6,395,243; 9th seam, 2,651,994; 6th seam, 1,364,274; and 12th seam, 924,963.

The 10 leading producers in the county, with their 1959 tonnage figures, are:

West Kentucky Coal Co., East Diamond mine, 1,314,681.

Peabody Coal Co., White City mine, 1,219,060.

Nashville Coal, Inc., Fies mine, 1,082,925.

West Kentucky Pleasant View mine, 1,019,695.

EIGHT MILLION TONS IN 1939

Colltown Mining Co., 833,825.

Bell & Zoller Coal Co., Oriole mine, 747,313.

Pittsburg and Midway Coal Mining Co., Colonial mine, 683,721.

Ruby, Chandler & Jordan, 637,682.

Peabody Coal Co., Pond River mine, 555,960.

Norton Coal Corp., Sternberg mine, 495,445.

The two largest single producers in the field are the river-connected strip mines—Peabody's River Queen mine in Muhlenberg with 2,399,155 tons produced in 1959, and the same company's Ken mine in Ohio County, with 2,057,450 tons.

Other big producers in the field are Peabody's Vogue mine in Muhlenberg, 1,748,020 tons; Nashville Coal, Inc., Uniontown mine in Union County, 1,501,727; Gibraltar Coal Corp., Muhlenberg, 1,573,761; P & M's Paradise mine in Muhlenberg, 1,331,441; and its De Koven mine in Union County 1,155,977.

The western Kentucky coal field has had an almost unbroken record of progress in tonnage in the 21 years since the coal agency began recording statistics here. The agency's first year was 1939 and the tonnage for the field that year was only 8 million tons, less than one-third of the production for the field last year, Shanks said.

In the American Tradition—America, Still the Land of Opportunity

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. WATTS. Mr. Speaker, it is my privilege today to commend and offer congratulations to one of Kentucky's and, indeed, America's outstanding citizens. I refer, Mr. Speaker, to a man who has become a living testimony of what a man can do with his life in America.

This man, Mr. Speaker, is Garvice D. Kincaid, of Lexington. He is one of the eight winners of the 14th annual Horatio Alger Awards of the American Schools and Colleges Association. These awards are annually conferred upon outstanding citizens who, in the rags-to-riches tradition of the fictional characters of Horatio Alger, have achieved outstanding successes from modest beginnings. By their lives, as the award notation reads, these men demonstrate and enhance, "the American tradition of overcoming obstacles to achieve success through diligence, industry, and perserverance."

Mr. Speaker, under leave to extend my remarks I submit for inclusion in the RECORD the following brief remarks about this great American and fellow Kentuckian.

Mr. Kincaid has this month been singled out from 2,000 Americans with outstanding careers to take home one of the coveted 1960 Horatio Alger Awards presented to America's leaders during its 14th annual ceremony in New York at the Waldorf-Astoria.

A self-made man from humble beginnings in Tallega, Ky., this business giant heads a $200 million empire of finance and insurance companies, 16 banks, real estate companies, hotels, office buildings, newspaper, and radio stations.

He started out by selling newspapers and doing odd jobs. He knew early the importance of an education. He attended Eastern State College in Richmond; he then put himself through law school at the University of Kentucky. How Garvice Kincaid managed to pay his own way foreshadowed the financial brilliance that soon characterized his life. He borrowed $1,500 to make a down payment on three small houses to be sold at auction. Then he sold them at a profit and thus financed his law-school tuition.

Today, Mr. Kincaid controls more than 150 corporations. The story of his financial successes literally reads like one of the Horatio Alger-type legends that characterize Americans in real life who have his kind of drive.

In his second year at law school, Mr. Kincaid passed the Kentucky bar though he went on to complete his full course. Following law school, he practiced law in Lexington and "dabbled" in real estate; with profits made he began to expand his interests, bought a small finance company, and later acquired control of a bank.

During the past 20 years, with a midas touch, Mr. Kincaid has blazed a legendary financial trail. Associates say he seems to have an intuitional genius in figuring the growth potentialities of every business he purchases and as far as anyone can recall, he has never lost a cent on any of his transactions.

It is not just as a financial genius that this father of twin daughters, attending Stephens College in Columbia, Mo., is noteworthy. Philanthrophy, though he has not taken credit for a lot of it, has been a part of his way of living. True to the spirit of give and take that is a part of the American way, Mr. Kincaid has been the backbone of many of the Big Brother organizations that give direct and needful aid to many underprivileged children. The Kincaid corporations contribute $50,000 each year to the Boys Club of Lexington. A contribution of $100,000 was signed over by him to the YMCA. He has donated $25,000 toward construction of a rehabilitation home for delinquent boys. In addition, he annually underwrites 12 scholarships to the University of Kentucky. When Tallega needed a new church they found that Mr. Kincaid had donated 10 acres of land to them for this purpose. Then he donated the lumber for the building. All in all, Kincaid's charitable donations total about $200,000 each year.

When presented the Horatio Alger Award, Mr. Kincaid in a short speech said:

I feel that all of us should be ever mindful to watch what is going on not only in our country but in the countries around us—that this way of life that makes opportunities like this possible, shall not perish from the earth.

What Is Wrong With Our Approach to Education?

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. WOLF. Mr. Speaker, much concern has been expressed over our inade-

quate school buildings and equipment and our shortage of competent teachers. We now have in the House Rules Committee a bill to provide some Federal aid for school construction only.

Sunday the Des Moines Register carried in its Open Forum Editor column a letter from a dedicated teacher which expressed, in a better way than I have previously seen it expressed, what is wrong with our approach to providing for the future education of our children. This letter should shock us all into a basic reevaluation of our attitudes toward this problem:

WHY CHOOSE TEACHING AS YOUR CAREER?

To the OPEN FORUM EDITOR:

Recently my neighbor and friend presented me, a teacher, with his personal problem. At first I considered it a unique affair. However, upon further consideration I wondered how many other teachers have had the same problem presented to them * * * and then later have sat down and written a letter similar to this:

Our discussion, you will recall, concerned your son. You indicated his desire to finish high school, graduate from college, and then you said, "He wants to teach." Your reaction to his preference is what bothers me.

You asked me, as a friend and as a teacher, to use all the influence I could to dissuade him—to persuade him to learn a trade, or to enter another profession in order to arm himself against the perils and insecurities of the future.

WHY CHOOSE TEACHING?

I suppose that, at the time, I should have shown offense at your implication that I had made a serious mistake by becoming a teacher and that I ought to do all that I could to prevent your son from making the same mistake.

Of all the professions that there are, why choose teaching? Discord and frustrations, a life of unending conflict, forever fighting for security with the superintendent, the school board, the public, and forever begging for more money.

Why should it be so? Surely you must agree that the future cannot and will not be any better than the youth of today will make it. And who, then, shapes this youth and, therefore, this future? Parents should and many do—but. Our churches too—our town and society in general should—but.

WHERE DOES SCHOOL FIT?

Just where does the school fit into this development of the mind, the heart and the soul? Must I repeat all the old, but valid, comments about the impact of a teacher upon the students—from Socrates, Christ, Bacon to Horace Mann? Teachers all.

And you don't want your son to join their ranks. Why? Because, by the rules of our commercial society, it doesn't pay. Then who will teach his children? Some other dodo?

May I make a suggestion? If it's the pay with which you, as a parent, are most concerned, then, why not do all that is just and necessary to make the teaching profession all that it could and should be financially?

Raise the pay and raise the standards and the status of the profession so that, should the time come when your grandson might say, "Grandpa, I think I'd like to teach," you will then react with pride and satisfaction, knowing that at least you have a grandson who has chosen an honorable profession.—Paul J. Frank, 400 Seventh Street SW., Oelwein, Iowa.

Outstanding Citizen Award

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Plain Speaker of Hazleton, Pa., on May 23, 1960, which reports that Mr. J. Anthony Christopher was presented the outstanding Citizen award by the Hazleton Unico Club at its 10th annual "I Am An American" testimonial dinner held recently in Hazleton with the main address of the evening delivered by Judge J. Harold Flannery of the Luzerne County court and former Member of Congress representing Pennsylvania's 11th Congressional District:

CHRISTOPHER GETS UNICO AWARD

J. Anthony Christopher, Unico national vice president, was awarded the Outstanding Citizen Award by the Hazleton Unico Club at its 10th annual "I Am An American" testimonial dinner at Genetti's Pennsylvania Room Saturday night. The main address was delivered by Judge J. Harold Flannery.

In making the presentation the club's past president, John B. Colombo, said "Christopher's acts of charity, his dedication to community service and his contribution to the welfare of his fellowman truly exemplifies the club's motto—"Service Above Self."

CHRISTOPHER

In his acceptance address, Christopher said, "I am well aware that my small contributions of effort and time to the civic activities of my community do not warrant such an honor, but, for as long as I live I will remember that so many of you believe that they did."

After reviewing his life, he continued, "As I matured into young manhood I was determined, through community service, to pay rent for the privilege and space I occupied in my community. I have never considered my participation in civic, community, and church activities as a duty but rather as an honor and privilege.

"In all humility I say to you that whatever I have done is not at all deserving of this honor you confer upon me. As I stand before you, I believe I do not stand here alone. There is nothing that I have done that I do not owe to my dear wife and my wonderful family. They have been most understanding when daddy had to spend so much time away from them.

"I owe a lot to my past and present employers, who have been most cooperative in granting me much actual employment time for participation activities and projects."

HELP OF OTHERS

"I honestly believe that none of us can attain any degree of success or any measure of accomplishment without the aid of hundreds of others—teachers, clergy, family, friends, acquaintances, coworkers in our industrial and social life. Everyone who has given us any encouragement or taught us something—all these people deserve your plaudits too.

"My many years of participation in community activities has taught me my greatest lesson—that of appreciation of people for what they are and not because of nationality, religion, or political affiliation. Bigotry and discrimination should have no place in our American way of life. If we are honest with ourselves, and we should be, bigotry and discrimination does exist. We are living during the most dangerous period ever recorded by man. The slightest spark may ignite the world to total destruction—God forbid. Let us then, as Americans on this 'I Am An American Day' live in harmony with each other. How can we preach friendship and peace among other nations when we cannot live in friendship and peace among ourselves. For the love of God, let us learn to live so that we will not be needing anti-discrimination organizations to protect and defend the integrity and the dignity of any American, irrespective of his nationality, race, color, or creed."

AGAINST DISCRIMINATION

"Let us stop now any discriminatory action or utterances. Let us unite solidly in only one kind of American by riding our motion picture screens, TV programs, radio shows, and the varied printed word media of the defamation of any one national extraction, religious group, or color of skin. Being American is being united. If we fail in this, we cannot win against our enemies.

"As a national officer of Unico National, I know we combat discrimination, wherever and whenever we find it. Our success in every community is testimony to this statement. Unicans recognize no barriers. We are not better Americans than any other, and no other is any better than we are.

"In closing I wish to say that I am convinced nothing happens just by itself, and so it must be with this event tonight. Some one conceived the idea and others cooperated. To all of you who are responsible for this wonderful event, to all of you who are here, to our distinguished speaker and to our national president, and to the commitee and members of Unico, to the visitors, from near and far, and to all who aided in any way, I say to you, thank you, from the bottom of my heart and may God bless each and everyone of you and all your loved ones."

FIRST CLUB MEMBER

The award is presented each year to an individual who in the minds of Unico members fulfills the club's motto. This marked the first time the award was presented to a Unico member.

The club gave Mrs. Christopher a bouquet of red roses. It was presented by the Christopher's 8-year-old daughter, Roseann, third-grade pupil at Mother of Grace School.

MAIN ADDRESS

The main address was by Judge J. Harold Flannery, Luzerne County Court of Common Pleas, who after extending congratulations to Christopher spoke briefly on the contributions of Rome and Italy to civilization.

Rome, he said, gave to the world law and order, and was the capitol of world culture at a time when England was a vast wasteland. Italy can be termed as a dowager who has served her destiny and served it well.

In turning to the present day, he said, we are at war tonight—an economic war—a social war. We have split the atom but we have not reached the human heart. We have soared to the moon—we have not reached the human conscience. We need volunteers—men of commerce, men of ability, men of discern, men dedicated to the preservation of high economic and social ideals, men of sound citizenship and leadership, men of understanding and men of charity, he said.

In closing he referred to Christopher as one of the men with "Doctor of Human Philosophy."

In addition to the presentation of the award by Unico, Christopher was given a citation from Joseph Fenstemacher on behalf of the Catholic Charities.

PROGRAM

Taking part in the program were: The Rt. Rev. Msgr. William A. Crotti, Unico national chaplain, invocation; Demo Calvani, toastmaster, and Rev. Anthony C. Marra, assistant pastor, Mother of Grace Church, benediction.

Sister Mary Joseph Angela, the former Carolyn Christopher, sister of the guest of honor, was a guest. She is with the Active Order of Carmelites, Davenport, Iowa.

In addition to the national president, the National Vice President Matthew Garfolo, Scranton, and National Treasurer Rocco D. Fescina, this city, were also present.

Delegations attended the affair from Wilkes-Barre, Dunmore, Panther Valley, Binghamton, N.Y., Chicago, Jersey City, Davenport, Iowa, and Jessup.

Brief remarks were given by local chapter President Vincent Santopoli, Mayor S. Thomas Capparell, Unico National President Barnard Torraco. Welcome address was given by Joseph A. Lucia, who was general chairman for the affair.

The U.S. Navy at Key West—U.S. Lady—The Service Family Journal Selects Key West, Fla., Post of the Month

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. FASCELL. Mr. Speaker, U.S. Lady is a magazine for service wives, service women and service families. Circulated in 50 countries overseas and throughout the States, it serves a vital need to our military families.

The format is diversified and interesting. One of the basic components is to tell the ladies all about one of the posts at which they may be stationed.

Recently, U.S. Lady selected as Post of the Month, the United States greatest naval base, Key West, Fla. All Floridians are honored and proud of the outstanding contribution to our country being made by the men and women at this important naval installation.

The importance of Key West to the Navy and the Nation is pointed out by Rear Adm. Lloyd M. Mustin, commander, Naval Base, Key West, and commander, Key West Force, in this statement for U.S. Lady:

The Navy in Key West—the base, and the ships, submarines, and aircraft which operate from it—is doing a job which simply must continue to be done, and done well, if we are to continue to have a U.S. Navy which can fight and win whenever the country needs it.

For the sort of work we're doing here, Key West is the absolutely ideal base, unmatched by any out of which our fleets operate in all the seven seas. Nowhere else in the world can we accomplish so much at so little cost in men and ships, time, and money. The Navy has been in Key West as long as Florida has been part of the United States (longer, if you count the interval of the War Between the States), and is going to stay here for a whole lot longer, for these very excellent reasons.

Writer Emily M. McCormick is the one who factually and interestingly tells the girls all about Post of the Month, Key West, Fla., in her well-written article of the March issue, U.S. Lady.

The Successful Launching of the Titan ICBM

EXTENSION OF REMARKS

OF

HON. GORDON ALLOTT

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, June 1, 1960

Mr. ALLOTT. Mr. President, on Friday, May 13, 1960, an American rocket lifted gracefully from its launch pad at Cape Canaveral, Fla. The time was 5:24 p.m., e.d.t. Thirty minutes later this rocket's nose cone reentered the atmosphere at a velocity in excess of 17,000 miles an hour and struck a point in the ocean off Ascension Island—5,000 miles from Florida. Just before the nose cone hit, it ejected a data capsule which parachuted to the water and signaled its position for recovery.

The flight I have just described was that of our mighty Titan, ICBM, a Colorado product. This performance was flawless, and delivered the nose cone to the Atlantic Missile Range splash net target with incredible accuracy.

Mr. President, this was the fourth long-range flight for the Titan. All four have been successful, and in each case the data capsule has been ejected and recovered—a record as yet unequaled by other missile programs.

I should like to bring you up to date on the record of this ICBM which has every indication of becoming fully operational ahead of time. The Titan ICBM has attempted 16 launches. On two occasions the Titan was accidentally destroyed at the moment of launch. On two other occasions, it was only partially successful due to malfunctions in the latter period of its powered flight. The remaining 12 flights have been completely successful.

Mr. President, sometime this summer the first operational Titan will be delivered to Vandenberg Air Force Base where it will be installed in its underground silo, and readied for its initial operational test. This will be an important milestone. In this, Titan will fulfill its future, as it was designed from the outset to be hardbase, simpler to operate, and capable of delivering a greater payload over intercontinental distances.

Beginning with the 7th of the proposed 14 squardons, an even more advanced version than the current Titan will join our arsenal. This will be Titan II. It will utilize storable liquid fuels and an entirely airborne inertial guidance system. It will be launched out of its silo as a shell fired from a cannon. Its propulsion system and engine alone will have one-third less parts. Its reaction time will be virtually instantaneous. It will have global range, and yet carry a greater payload. Using storable fuels, problems associated with hard to handle liquid oxygen are eliminated. The propellants can be kept in the missile at all times, ready at a moments notice, just as the gasoline in our own automobiles.

Mr. President, a highly informative series of articles upon the subject of space projects and missiles is currently being published in Skylights, a fact sheet of the National Aviation Education Council. This information is made available to school teachers and students across the Nation and provides a basis for greater understanding of the complex and awesome age upon which we have entered.

In its May issue, Skylights focuses attention upon the Titan ICBM. The story is cast along purely informative lines and provides a clear and objective story about the missile and its background, together with some basic plans for its future. So that my colleagues may share the pleasure and new knowledge I gained from this article, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TITAN

If the ancient Greeks had had to find a name for Weapon System 107A–2, probably they, too, would have called it "Titan." To them, Titans were powerful giants with enormous strength and size—a fitting description of our newest intercontinental ballistic missile (ICBM).

Titan is a "second generation" ICBM—an improved missile that ranges farther and carries heavier payloads than early first generation missiles such as the Atlas. While the Atlas is already operational or on duty for the defense of our country, Titan is still in the testing stages. Scientists and engineers have learned much from the well-known Atlas. Their hard won knowledge has been applied in the development of Titan.

The first Titan was flight tested in February 1959. As of May 1, 1960, 14 Titan missiles have been test fired at Cape Canaveral. Of these 14, 10 were successful, 2 were partially successful, and 2 were unintentionally destroyed by fire during launching. Armed with these facts, Under Secretary of the Air Force Joseph V. Charyk told a congressional committee that Titan's test record is the best success ratio to date.

The Titan is built by the Martin Co. at its Denver division in the foothills of the Rocky Mountains. This new plant is the free world's first and only one devoted entirely to the design, construction, and testing of missiles. Here 10,000 engineers, technicians, and skilled workers make and assemble the missile's many parts and haul them up the winding roads to test stands among the canyons.

When the engines and all the missile systems have passed their static tests, the Titans are trucked to nearby Lowry Air Force Base, and are flown to Cape Canaveral in C–133A's. At the Cape they are erected on the launch pads and are prepared for their final test firing down the Atlantic Missile Range.

Titan is launched by two Aerojet engines that lift the 98-foot, 2-stage, 110-ton missile off the pad. Within 2 minutes after launch,

Titan's two first-stage engines are hurling the missile upward along a curving path at 5,300 miles per hour. The first stage drops from the missile, the second-stage engine ignites, and Titan darts forward under new power to a height of 500 miles. As Titan speeds toward its target, over 6,000 miles from the launching site, the second-stage engine shuts off. Four vernier nozzles controlled by a radio guidance system then take over, providing small amounts of thrust to set the nose cone on exact course and speed. The second stage falls away and the nose cone begins its long downward glide to the target.

Titan was designed as a military rocket to deliver a nuclear warhead on enemy targets. However, flight tests have proved its ability to perform missions in space, too. Titan's second stage is the largest, heaviest, and most powerful upper stage the United States has ever sent into space. The second-stage engine is five times more powerful than any other "space started" missile engine in the free world. It produces 80,000 pounds of thrust after the first stage has separated. When this added power comes into play, the missile is well into the upper atmosphere where fuel is used much more efficiently than at lower altitudes. This second-stage engine, operating most efficiently at extremely high altitudes, is the most important factor in Titan's outstanding performance.

Originally intended as an "ace in the hole" in case the older Atlas failed in its mission, Titan has additional advantages over other existing ICBM's. Its slender 10-foot diameter will adapt easily to a "silo" or underground launching pad, well protected from nuclear attack. Its strong aluminum alloy skin can withstand the tremendous pressures built up during silo launchings. While Titan is now fueled with liquid oxygen that can be pumped into the fuel tanks only minutes before launching, later models will be propelled with a noncorrosive fuel that can be stored in the fuel tanks without damage to them. Thus Titan will be ready for firing after a very short countdown.

Based on present Titan designs, an even more reliable Titan of tomorrow is foreseen. With the development of more powerful engines and more efficient fuels, today's Titan holds greater promises for the future than any other existing U.S. intercontinental ballistic missile.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. LONG of Louisiana. I congratulate the Senator from Colorado on the achievement of his State. I only express the wish that we in Louisiana had more of the Titan program.

Mr. ALLOTT. I know that a great many people all over the country have had a hand in developing it.

Consumer Protection in the Field of Footwear

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter I received May 23, 1960, from Mr. Wilbur Gardner. Mr. Gardner lives in Medford, Oreg., in my district. He is the father of the fight for shoe labeling. I ask my colleagues to consider giving their support.

In his letter he outlines why he believes labeling is necessary and lists the many supporters this legislation has. My bill, H.R. 1320, proposes that shoes be labeled as to content. In my recent poll of Fourth District residents I learned that Oregonians agree overwhelmingly.

The letter follows:

MEDFORD, OREG., *May 23, 1960.*

The Honorable CHARLES O. PORTER,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN PORTER: Could you give me some information as to how many Senators and Congressmen know about your bill H.R. 1320 to label shoes?

I feel that all who do not know, or have not read of this bill, should be informed so they could form some opinion as to the merits and support of this bill. As the one who has fought and won your support of shoe labeling I would like to again give you some idea of the reason for this effort and the need for this legislation.

THE WHY OF SHOE LABELING

First, may I say that this effort is to help the consumer, not hinder or confuse, as has been suggested by the opposition. Nothing new is being asked for every major item we wear has some buying protection in the way of a label to inform the consumer as to what the article is made of or contains. But this is not true of shoes, for no information is given the consumer by label on all shoes for informative buying.

The consumer is helped by a label to buy all other items he or she buys in the way of clothing, but shoes are still unlabeled. In the changing times and the changing of materials in shoes, the consumer now needs this information more than ever, for the intelligent choosing of footwear for health sake, and loss of money spent on materials the consumer is not told of.

Shoe manufacturers tell of the wonders of new materials, then fill shoes with the following hidden materials: Paper base heels, plastic welts, paper insoles, paper sock linings, oilcloth linings, plastic linings, paper heel counters, starched cloth liners for toe cap support, paper heel pads, and many other imitations of leather too numerous to mention.

Where has the pride of the shoe manufacturer gone? Well I will tell you. They look for a faster turnover in shoes and a faster dollar, rather than a foot health, and giving the consumer a break for his or her dollar. What are they doing to the foot health of our children, and the pocketbook of families hard put to keep within the family budget? This is hard to understand.

The accent is on style in shoes, and the shoe manufacturer of low and medium price shoes strives to get as much of the consumers money, through the manufacture of shoes that hold together only long enough for the consumer to forget when they bought them.

There is no thought given to the repairability of such shoes.

Any minor thing that happens to such shoes, such as the sole coming loose, or water entering shoe and softening paper insoles, heels falling off because the nails pulled through paper insole, will cause shoe to be discarded and another bought of the same construction because no label is used to tell good from bad.

THE VICIOUS CIRCLE

And so goes the vicious circle in buying shoes without a label. Cement-on-type shoes account for a lot of this trouble, and in 1940 only 27 percent of all shoes made were cement type, while in 1960 64 percent of all shoes are cement-on-type construction.

Many shoes are using soft crepe soles cemented directly to the upper of the shoe. Children and adults kick this sole loose at the toe end; and the paper insole, upon contact with water that enters where sole comes loose, goes to pieces. The shoe is lost to further wear, and is not repairable. This happens to shoes only a week old, or at 3 weeks at the most.

GOOD SHOES HURT BY POORLY MADE SHOES

There are many good shoes on the market that will give normal wear, but the consumer has no label to tell the difference; so they buy blindly, for the good shoes look like the poor ones as far as looks is concerned, and imitations of good shoes have reached perfection by the shoe manufacturer.

A good shoe is made and sells for $15 and another manufacture will tell his designers, "I want that shoe made to sell for $3.98"; and they do it so cleverly that only an expert can tell the good one. The use of fiberboard or plain old cardboard or pressed paper has reached the point in shoe construction that it is a crime for the consumer not to be so informed when buying shoes. Only a label on shoes showing the kind of materials used will give this protection to the consumer.

CONSUMER PROTECTION SOUGHT

I do not fight for the use of any one kind of material, but rather that all good materials and the use of same in shoes. I feel that the consumer has a right to see on a label the true names of the materials used in their construction, and then, by trial in wear, buy by a label the shoes constructed of the type materials best suited for his or her needs. So that the kind of shoes made of materials they find best suited to their needs can be bought again by a label, thus eliminating the method of buying shoes without informative labeling.

To tell the truth on a label would not be hard. Some shoes have so few parts that it would be quite simple. Others that have more parts would not be as complicated as the shoe manufacturer would have you believe.

Staffmen of the Federal Trade Commission in their investigattion of paper in shoes state (quote from Leather and Shoes, Apr. 2, 1960): "If a child's shoe is made of paper, all it needs is one hole, and the water pours through it, a staffman at the FHC explained. And a sole of paper cannot stand being in the water more than a few times without going to pieces. At least, not the paper that is in some of the shoes that we have seen."

They refer to the insole in shoes.

THE HISTORY OF A FIGHT

So, in the building of the information I have just discussed, I have had a rather hard, and long time, in getting this information before Congress and the consumer. My first start came after I wrote Senator WAYNE MORSE of Oregon, asking how to go about getting Federal legislation for the consumer in labeling shoes. He sent several letters informing me of the actions of the FTC in the past, and gave me the foundation for such action in Congress. He told me I would have to prove consumer support for this type legislation in a large part of the country; also that I would have to show support by large organizations.

Next break in this crusade came when the late Senator Richard L. Neuberger took interest in a feature article about me and my efforts. This was in the Medford Mail Tribune, Medford, Oreg. The Senator inserted this story in the CONGRESSIONAL RECORD. John W. Gwynne, then Chairman of the FTC, saw the article in the RECORD and in part started an investigation into the shoe industry that has continued with the

present Chairman Earl W. Kintner. This investigation is in its closing stage now, and shoe manufacturers fear the outcome. May I say here that if there was nothing wrong with shoes, then this investigation by the FTC certainly shows after close to 2 years, that they sure found something wrong with the way materials are used in shoes.

My next step was to send a national petition into over 40 States, that read as follows, "For my own protection, I desire legislation which will compel the attachment of a label to shoes, indicating what materials were used in the construction of said shoes, either real leather, paper fiber or imitations of leather. I believe I could buy and would buy better shoes if they were labeled. I believe if I could choose better shoes by label, better foot health would result. I believe great savings in money would result, if I could buy good shoes by label." Consumers responded with 30,000 signatures, asking that shoes be labeleld for informative buying.

SUPPORTERS FOR SHOE LABELING

Next, I asked the American National Cattlemen's Association for their opinion. They gave support in national convention with over 200,000 consumer support. They also awarded me the blue ribbon award for distinguished service to the American National Cattlemen's Association, in support of their industry.

Next, I contacted the local Grange, who supported my crusade and endorsed this effort. They in turn submitted it to the Oregon State Grange, who in State convention endorsed this effort. The Oregon State Grange in turn submitted this endorsement to the national grange, who also in national convention endorsed this effort in principle. This added another 800,000 consumers.

I also received the support of the American Academy of Chiropodists, of West Virginia. The American Foot Health Foundation gave approval of my efforts. Good Housekeeping also commended me for this effort. The Readers Digest ask me to keep them informed, and said if shoes are as badly made as your letter indicated, an article discussing the reasons why the situation exists might well make provocative reading.

The Credit Managers Association of Central and Northern California, add their support. The National Consumers League have this effort up for consideration. The National Farmers Union has given full support to this effort, this adds many more thousands of consumers to this cause. Consumers Union is most interested, and state they will report on the hearings for this bill.

Then came your questionnaire that 18,509 consumers in the Fourth District of Oregon answered as to question No. 6. Do you approve putting labels on shoes listing the materials used? They voted as follows, 16,476 yes, 2,033 no. Or, 89 percent, yes and 11 percent, no. This is the general feeling of the consumer and this effort.

"IF THE SHOE FITS * * *"

Many famous Senators and Congressmen have expressed more than a passing interest in this effort to label shoes. Shoe manufacturers jumped as if struck with a needle when they found they had to face up to this issue of shoe labeling.

From the standpoint of foot health, this bill will give parents a better gage to buy better shoes for our children. From the standpoint of money, much lost in the buying of shoes that last only a few weeks will be saved and go toward the purchase of good shoes, and the savings of untold thousands of dollars by families who can ill afford to spend money that should go toward other family needs.

So, in reviewing the reasons and support for shoe labeling, I ask your continued support of this effort. Also, I sincerely hope that the Members of Congress will give serious consideration, and express their views of this bill that is a serious effort to give the consumer protection in the field of footwear.

As I have stated before, if this effort will bring foot health to one small child, that will be my reward.

With kindest regards.

WILBUR L. GARDNER.

Tunisia's Day of Independence

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. POWELL. Mr. Speaker, in accordance with Tunisia's Day of Independence, I wish to salute the President of the Republic of Tunisia, Mr. Habib Bourguiba, His Excellency, the Ambassador of Tunisia, Mr. Mongi Slim, and all of their fellow countrymen.

This young nation, derived of an ancient civilization, would certainly astound the most keen observer of its myriad achievements, from the viewpoint of her own history and of that of humanity in general. Dating as far back as from the middle of the fifth century B.C., Carthage became from her foundation, a metropolis of civilization and exceptional economic expansion. Tunisia has given to the world, in addition to architectural progress, a vast culture of greco-latin humanities, municipal organization and the development of literature and the arts. Her heritage is indeed a cradle of a brilliant civilization, as seen by the vestiges to be viewed in the museums of Carthage and Bardo, the ruin of the majestic temples, amphitheatres, thermal establishments and gymnasia, in sites which at one time witnessed the refined way of life of that period.

Following the conquest and destruction of Carthage, Rome ruled the country under Emperor Caligula's jurisdiction. Years later, the Arab, Moslem, and Spanish influences entered the country. Torn and crippled by her ever-changing succession of rulers, the French Republic then took advantage of Tunisia's misfortune and of the lack of authority of its rulers and occupied the country in 1881 under the treaty of Ksar Said.

Tunisia's long and persistent struggle for freedom, however, was not to continue unrewarded. A nationalist movement began 20 years later, inspired by the impact of a foreign occupation, and Tunisia's laborious fight for freedom ended when, in 1957, the Deputies of the Tunisian Nation and members of the National Constituent Assembly, "in the name of the people" and "for the edification of a democratic regime" declared the abolition of the monarchy and proclaimed Tunisia a Republican State, entrusting to Mr. Habib Bourguiba, President of the Council, the duty of "President of the Tunisian Republic."

The few years have already seen the flourishing achievements since President Habib Bourguiba's election. Indeed with him at its head, Tunisia will see the fulfillment of its dreams for it is in him whom the people see the symbol of their liberation from French protectorate and the artisan of their future.

Again, on this, their day of independence, I wish to extend my sincerest best wishes to all the people of this young and expanding nation.

Cooperstown, N.Y., Beautiful Otsego County Resort Area, Fabled in Song and Story, Is Now the Museum Capital of the Empire State

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. STRATTON. Mr. Speaker, I am privileged indeed to be able to represent in this body a district which includes the famous village of Cooperstown, the original home of the great American novelist, James Fenimore Cooper, and today a lovely resort community nestled in the rolling hills of Otsega County on the shores of a lake of unparalleled beauty, Otsego Lake, the home of baseball, and location of one of the outstanding medical research centers in the country, the Mary Imogene Bassett Memorial Hospital.

To these many and varied distinctions Cooperstown had added still another—museum capital of New York State, largely as a result of a combination of generosity and hard work and community planning on the part of all of the citizens of Cooperstown.

This new development was recently noted in detail in an article that appeared in the May 28 issue of the Amsterdam Evening Recorder, and under leave to extend my remarks I include that article:

COOPERSTOWN NOW MUSEUM CAPITAL OF NEW YORK

A rare combination of museums in the picturesque village of Cooperstown makes this central New York State community a museum capital of museum-conscious America, says the New York State Department of Commerce.

BIRTHPLACE OF BASEBALL

Birthplace of the Great American game, home base for the National Baseball Museum and Hall of Fame, and scene of the annual midsummer Hall of Fame Baseball Classic at Abner Doubleday Field when teams from the two major leagues compete, Cooperstown each year is home plate for baseball fans.

The wide agrarian interests of farmers: practical, gentleman, or backyard garden variety, are pleasantly aroused and stimulated by the displays, exhibits, and demonstrations to be seen in a tour of the vast Farmers' Museum. For the husbandman

this museum is sufficient to make Cooperstown home away from home.

Both the Farmers' Museum and Fenimore House are operated by the New York State Historical Association. Headquarters of the association are in Fenimore House as is the association's museum. For the history-minded the priceless treasures at Fenimore House make the museum an attraction of great importance.

IMMORTALIZED BY COOPER

Cooperstown has much more to add to its fame as well as museums. This is the country immortalized in the writings of James Fenimore Cooper. The village lies at the southern end of Otsego Lake. There are ample facilities for visitors to enjoy fishing, swimming, and boating. A boatride over the lake is also available.

It was at Cooperstown in 1839 that Abner Doubleday invented the game of baseball. Today, on the site where the first game was played, is a modern diamond, Doubleday Field. Close by, in a red brick building of modern design, is the National Baseball Hall of Fame and Museum. Each year well over a hundred thousand visitors view the interesting exhibits and displays which cover the entire history of the sport. Bronze plaques commemorate the game's immortals elected to the Hall of Fame bienially and rare and priceless relics of the game are to be seen. The building is open to visitors daily from 9 a. m. to 9 p.m., from May 1 through October 1, and from 9 to 5 o'clock in other months.

The Farmer's Museum is so large and varied that it is able to present a recreated village crossroads with country school, law office, village store, rural blacksmith shop, print shop, doctor's office, druggist shop, tavern, and farmhouse and barn. New York State's most famous hoax, "The Cardiff Giant," supposed to have been a petrified man, also is to be seen at the museum.

FENIMORE HOUSE

Fenimore House is but a short distance from the Farmers' Museum. The historical museum pieces to be seen here include materials related to the Cooper family and the complete documents representing Aaron Burr's side of the famous Hamilton-Burr argument. Also displayed are 17 Browere life masks of famous early American statesmen, portraits by Gilbert Stuart and Benjamin West and one of the most important collections of American folk art to be found in the United States.

The three museums are open daily the year around. Admission is 75 cents adults and 15 cents children at Fenimore House and the Baseball Museum; $1 adults, 15 cents children at the Farmers' Museum. Two- or three-way combination tickets range from $1.30 to $2 for adults and 20 or 30 cents for children.

INDIAN ARTIFACTS

Another interesting collection is to be seen at the American Indian Museum in Cooperstown. Indian artifacts from prehistoric times, exhibits of potterymaking, dioramas of Indians making a dugout canoe, flint quarrying, hunting, tanning, and basketry are among the displays. The museum is open daily from June to September. Admissions are 50 cents adults, schoolchildren 10 cents.

A short distance outside the village limits are two other attractions which help to enrich a visitor's stay at Cooperstown. On Route 20 the Petrified Creatures Exhibit displays fossils from the Devonian period (300 million years ago). Visitors at the place are encouraged to dig for fossils. The collection displayed includes petrified wood and six life-size dinosaur restorations. The museum is open daily from May through November and admissions are adults 90 cents, children 10–15 years 30 cents. Scheduled school groups are admitted free.

Cooperstown is described in a free guide, "New York State Vacationlands," which is issued by the New York State Department of Commerce, 112 State Street, Albany, N.Y.

Salute to Italy

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. RODINO. Mr. Speaker, on June 2 we commemorate the 14th anniversary of the founding of the Italian Republic. I should like to take this occasion to salute the determination and industry of the Italian people, who, in 14 years, have achieved democracy, economic progress, and international status.

On June 2, 1946—a short 14 years ago—Italy faced almost insurmountable obstacles. World War II had wreaked havoc and destruction over most of the country. And 20 years of totalitarian dictatorship had left its mark upon Italian freedom. Widespread economic reconstruction was necessary, and the foundations of a new political system had to be constructed over the ruins of fascism. Both economic and political wounds had to be healed if Italy was to achieve economic recovery and partnership status in the free world.

The people of Italy, under able and inspired leadership, attacked both problems frontally and with vigor and determination. Rejecting attacks from both the right and the left, Italy established a democratic Republic through orderly democratic processes. She stands today as a bulwark of democracy, and an integral part of the free world in the fight against Communist tyranny.

Progress on the economic front has been no less inspiring. A broad plan of development, the 10-year Vanoni plan, which aims at a 5-percent increase in the gross national product by 1964, is currently in progress. As part of this program, capital investment is being increased, unemployment problems are being tackled, and foreign trade is being expanded. By efficient use of the generous aid provided by the United States, some progress has even been made in the development of the less prosperous areas, particularly in southern Italy. With sheer force of determination and effort the Italian people have managed to repair the ravages of war and rebuild their country.

Needless to say, much yet remains to be accomplished. Complicating Italy's economic problems today is the steady influx of refugees who are forced to leave Tunisia and must seek refuge in Italy. Over 10,000 refugees have already been admitted, and they continue to arrive at the rate of 200 per week. Although the Italian Government is doing its best to care for them, the task of absorbing this large number of expellees is an overwhelming one for an already overburdened economy. I am hopeful that we can relieve this situation somewhat by admitting some of the refugees to this country. I have introduced legislation to accomplish this.

Italy's progress cannot only be measured by her internal success, but must take into account also her significant participation in world affairs. As one of the "European Six," Italy is a part of the European Common Market, Euratom, and the Coal and Steel Community, and thereby contributes to the joint effort to achieve common goals through cooperation and unity. And recognition of Italy as a leader in the free world is most clearly acknowledged in the North Atlantic Treaty Organization, where Italy is a vital and indispensable partner.

It is important, on this 14th anniversary of the Republic, to pause and remember just how much Italy has achieved in the short span of years since World War II. Today let us salute the Republic of Italy—a stanch defender of democracy and a leader in the free world.

Minimum Wage Law Extensions

EXTENSION OF REMARKS
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. KING of Utah. Mr. Speaker, on April 27, 1960, there appeared in the CONGRESSIONAL RECORD a statement made by Miss Ginger Joyce, executive director of the Chamber of Commerce of Jeannette, Pa. The American system requires that free opportunity be given for all points of view to be heard. Accordingly, a letter was written to me by one of my constituents, Electa Clark, with the request that her answer be given the same opportunity to be heard as was given to the original letter. I agree that the demands of fairplay require that this letter be printed, and, accordingly, I herewith submit a copy of this letter to be printed in the Appendix of the RECORD:

DEAR CONGRESSMAN KING: I am writing this letter to you, in answer to the letter that was written by Ginger Joyce, of Jeannette, Pa., and entered into the CONGRESSIONAL RECORD, April 27, by the Honorable JOHN H. DENT, Representative of Pennsylvania.

I am Electa Clark, women's activities director of the Utah State Committee on Political Education, AFL–CIO, and a member of the International Ladies' Garment Workers' Union Local 430, Provo, Utah.

I have not been asked by anyone to write this letter. I have written this to give you the other side of the story, concerning the minimum wage law extensions.

I shall take the city of Provo, as an average American city, with a larger population than the city mentioned in Miss Joyce's letter, but whether it be Jeannette, Pa., Provo, Utah, or any other average American city, they all are much the same. The same people, the

same kind of businesses, the same struggle for a decent standard of living.

Provo is one of the newer industrial centers of the West. Provo has such business as the Geneva Steel Mills, the Ironton-Geneva plant and Pacific States Pipe plant. We also have a modern hospital, the Brigham Young University, the Utah State Mental Hospital, a vocational school, and a good sized business area. Many people are employed daily by these business firms and industries.

I know of families who are actually hungry in this city, and it should be no different in any other city, yet the welfare departments are unable to give these people assistance, because the allotted welfare funds have been depleted, or are too overburdened now, to take additional cases.

For example, the breadwinner of the family, Mr. A is out of work because United States Steel installed automatic equipment in the plant, and there was just no other department to which Mr. A could be transferred. Mind you Mr. A is nearing 50, and it is a little late for him to start over on another kind of job.

Mrs. A has found employment in one of the department stores, but she receives only 80 cents per hour. This could feed the family, but they had to borrow money from the "P" Finance Co. to get their son out of the hospital, after an appendectomy. They already owed the "H" Finance Co. for their new furniture they bought, before they knew Mr. A was going to lose his job. Then there is the house payment that must be made. Mrs. A can't possibly make ends meet on $32 per week. She does keep the interest fees paid to the finance company in order to keep her furniture, she pays the utilities and buys only absolutely necessary clothing which they must have and by this time there is little, if anything left for food. How much can this 80 cents per hour job contribute to the purchasing power and economy of the community.

In addition to all this Mrs. A's mother is living with them. She receives her social security check. She suffers from diabetes and arthritis and it takes most of her income for medical bills.

By the way, Miss Joyce, what is your chamber of commerce stand on the Forand bill that would enable Mrs. A's mother to have her medical bills paid, and what is the chamber's stand on the Douglas bill, that would enable Mrs. A to know how much interest and other charges she must pay on her loans? It seems each month she pays a different rate on the same amount of money. What is the chamber's stand on proposed legislation for the rehabilitation of displaced persons resulting from automation? All of this legislation would enable the citizens of the communities to have more purchasing power to support local businesses and department stores. I assure Miss Joyce, the chamber of commerce takes great pride in opposing all of this kind of legislation.

If these retail workers were to receive the purposed $1.25 minimum, what would they do with it? Certainly not bank it, or put it into savings. They would spend it. It would go back into the economy of the community for some of the much needed things they have not been able to obtain on their present income. The businesses would receive this increase back sevenfold. People surely cannot buy goods and services if they do not have the money to buy them with.

We have a furniture and appliance store on our Main Street, much the same, I imagine, as Mr. L. Why should Mr. L be worried, if he is already paying the $1.25. Surely any kind of an appliance salesman isn't interested in a $1.25 minimum wage. What he is interested in, is a customer with enough money in his pocket, and a desire to purchase the product which he is selling. With the $1.25 minimum increase to the hotel and restaurant workers, the retail clerks, the laundry workers, the cannery and poultry workers, surely there would be need for businessmen like Mr. L not to discharge employees, but to hire additional help to service the increase in business.

As for sentimentality between employer and employee, I'm very sure the employee would appreciate an increase in his pay envelope far more than an endearing word from his employer.

Now we will enter one of our cafes. Everyone is aware that bulk purchasing is what Mr. B will be doing, when the sales clerks, office workers and bank clerks receive $1.25 minimum instead of the present 80 to 90 cent, because those who now pack a sandwich and apple for lunch, can afford to eat in Mr. B's cafe, and he could even cut the price of his hamburgers by 5 cents.

The minimum wage extension will not, and is not intended to, affect any wage or income of those already receiving $1.25 or more. I would like to ask Miss Joyce, How can more money put into circulation possibly contribute to less jobs? It would mean more customers, which in turn requires more people to dispense the services that this added income would demand.

Now to visit the garment industry in Provo. This industry manufactures womens apparel, slips, pajamas, nightgowns and other lingerie. The garment industry, I personally know well, having been an employee myself since 1939, when the starting wage was 25 cents per hour. I have seen these industries expand and the increase in wages grow without any loss, but with a financial gain, to the employers. Training or apprenticeship programs have been established in this and other industries, that enable the employers to hire and train, on the job, new employees at a rate far below the minimum wage. No employee in the garment industry receives even the minimum wage until he or she has earned the minimum according to the piece rate schedule. If an employee isn't able to earn his or her way, at a profit to the employer, within the training period, that employee is discharged. I have worked in some places, where the specified beginners time has been set as low as 4 hours, others as much as 120 days. All this I know from 20 years of experience.

Also, in my 20 years of experience, these same industries have not increased their wholesale prices. I can still, as an employee, purchase a bra at the wholesale price, the same price the business firms purchase these garments for, and the same price that was charged in 1939. I can purchase lingerie at the plant in Provo, for the same wholesale price as was charged in 1946 when this industry first came to our city. The wages have more than doubled in the garment industry. The wholesale prices of these garments have not been increased. The companies are operating at a profit, or they would not still be expanding their operations.

It is not the industries, or the wage earner that tend to spiral our prices, as we are so often led to believe, but the retailer, the poor businessmen, that depend upon the amount of purchasing power of their customers. Yet it is these same business people who strive to keep their customers from having more purchasing power. It is these same people who shower sentimentality upon their employees, rather than help make it possible for them to enjoy a better standard of living.

Allow our young people the opportunity to earn extra money and time to receive a higher education at a university or vocational school. Give the older people, who must work, an opportunity to achieve a fair standard of living. Leave our communities the opportunity of maintaining a modern front, without Federal assistance, that they may grow and prosper in dignity by their own efforts and of their citizens who receive a just compensation for their employment.

Sincerely,

ELECTA CLARK,
Director, Women's Activities, Utah State COPE, AFL–CIO.

Firsthand View of Foreign Aid

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. STEED. Mr. Speaker, a thoughtful and timely editorial by Mr. Gus Brandborg, general manager of radio station KVOO, Tulsa, Okla., entitled "Firsthand View of Foreign Aid," was broadcast on May 23.

It expresses forcefully the concern many of our citizens feel about the administration of some phases of this program. This concern is shown graphically by the fact that in response to a cross-section survey I took early this year of voters in my own congressional district, sentiment ran against the current foreign aid program by some two to one.

Mr. Brandborg's editorial follows:

FIRSTHAND VIEW OF FOREIGN AID

One day last week while we were waiting for a plane at Idlewild, New York's International Airport, a Tulsan, just back from several months in Europe as representative of a Tulsa business firm, made this worried statement: "I wish something could be done about our foreign aid program. It's a mess. Everywhere I've been in recent months the United States is either laughed at or hated. Those who laugh are the black marketers and minor foreign government officials who are benefiting from our aid program. Those who hate us are the poor people of those nations for whom our aid is intended, but who are not getting it. The black marketers and doublecrossing governmental agents of those nations are getting our money and our surplus foods."

This sums up rather vividly what is happening to our well intentioned and wholly honest effort to help a backward and too often cynical world. This man, whose travels in practically all parts of the world within recent months have given him a broad and firsthand view of things, is deeply concerned not only at the waste which results from our present program, but from the dangerous after effects, and these, of course, are found in the attitudes and impressions the masses of people in foreign aid nations are now forming of our assitsance program. They say it's a farce, that we aren't giving anything we're merely selling our surplus and the majority of them are too poor to be able to buy any of it.

"It would be the smartest thing of all to stop the whole business," said this Tulsan, "And I'm speaking from a firsthand look into many lands. I've talked with a lot of people in many nations—they don't like us now, and every day that passes during which our present foreign aid mess goes on will create more disrespect and hate for us."

It ought to be evident by now, even to a politician, that America cannot buy friendship. If we stop our foreign aid program as it is presently operated, we might find ourselves more respected and at the same time

cause the "you've got to do it for me" nations to get on the ball themselves, and finally amount to something. It's worth a try, why don't we try it?

Dedication of the Interchurch Center in New York City

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. ZELENKO. Mr. Speaker, under leave to extend my remarks, I wish to inform the House of an event of tremendous religious significance which occurred on Sunday, May 29, 1960, in the 21st Congressional District of New York City, which I have the honor to represent. It was the dedication of the Interchurch Center. It is best described by an article which appeared in the New York Herald Tribune on Monday, May 30, 1960.

The article follows:

THREE THOUSAND FIVE HUNDRED ATTEND DEDICATION OF INTERCHURCH CENTER—100 CHURCHMEN LEAD PROCESSION FROM RIVERSIDE CHURCH RITES

(By Jo-ann Price)

The new $21 million 19-story Interchurch Center, 475 Riverside Drive, south of the Riverisde Church, was dedicated ysterday by leaders of Protestant and Eastern Orthodox churches bodies.

In a ceremony in the Riverside Church, followed by a procession of 100 churchmen to the main entrance of the center, the keys of the building were given to center officials by representatives of the architects and builder.

A ribbon 40 feet long across the entrance was cut by Edmund F. Wagner, president of the board of trustees. Afterward several thousand spectators toured the center to inspect exhibits of religious art and memorabilia. They included a Gutenberg Bible, under special guard; ancient Biblical scrolls and papyri, rare icons, the manscript of "America the Beautiful," and other hymns.

THREE THOUSAND FIVE HUNDRED ATTEND

More than 3,500 persons at the dedicatory service heard Bishop Johannes Lilje, president of the Lutheran Church in Germany, describe the center as symbolic of "the willingness of the American churches to contribute on their part to the great historic mission which has befallen this country through its leading role in the Western World."

Other participants in the service included the Reverend Dr. Robert J. McCracken, minister of Riverside; Bishop William J. Walls, of the African Methodist Episcopal Zion Church; Methodist Bishop W. Angie Smith, of Oklahoma City; Mrs. William Sale Terrell, president of the United Church Women; the Reverend Dr. Eugene Carson Blake, stated clerk of the General Assembly of the United Presbyterian Church in the U.S.A.; the Reverend Dr. Edwin T. Dahlberg, president of the National Council of Churches; and the Reverend Dr. James E. Hoffman, stated clerk of the General Synod of the Reformed Church in America.

Police rerouted traffic away from a four-block area adjacent to the church and center for the procession and other exercises on Riverside Drive.

During the ceremonies a scroll of appreciation was presented to John D. Rockefeller III, son of the late John D. Rockefeller, Jr., who gave the one-block site and $2,650,000 toward construction of the center.

Mr. Rockefeller responded by saying that his father was a very religious man who was concerned with the inadequacy of individual churches and looked to the day when a broader protestantism would fit the needs of changing times. The center, he said, was a major step to his father's ultimate vision of "cooperation, not competition" toward unity among the churches.

KEYS PRESENTED

The keys of the building were presented to William J. Demorest, chairman of the building committee, by Stephen F. Voorhees, representing the architectural firm of Voorhees, Walker, Smith & Smith, of New York, and by F. B. Warren, representing the Turner Construction Co. The Boston architects, Collens, Willis & Beckonert, designed the building in association with the New York firm.

After the ribbon was cut by Mr. Wagner, a benediction was offered by the Reverend George Bacopoulos, representing Archbishop Iakovos of the Greek Archdiocese of North and South America.

The cornerstone of the center, a paving block from the marketplace of Corinth, Greece, where St. Paul preached, was laid by President Eisenhower on October 12, 1958. The first of the center's 28 tenants moved in last fall.

"OFFICE" FOR 2,000

The center is "the office" for more than 2,000 churchworkers, many of whom have moved to Morningside Heights. It has a cafeteria for 1,500 persons.

It houses, on the fifth to eighth floors, the headquarters of the National Council of Churches, numbering 33 Protestant and Eastern Orthodox communions.

Other major religious bodies with offices in the center are the World Council of Churches (American headquarters), American Baptist Convention, Reformed Church in America, United Presbyterian Church in the U.S.A., Methodist Board of Missions and Methodist Information, Commission of the Churches on International Affairs, the Interboard Committee for Christian Work in Japan, and the World Convention of the Churches of Christ (Disciples). The United Lutheran Church in America is one of the investing bodies but does not have offices in it.

Visitors yesterday commented approvingly on the religious art on the main floor. In addition to the exhibits, they visited its chapel, notable for rose brick walls, a pipe organ elevated at the rear, and altar table and pulpit of Salisbury granite illuminated from the left by a gigantic rear-lighted alabaster window.

The narthex to the chapel is richly appointed with a "night sky-canopy" ceiling in modern sculpture. Other features include a public lounge, treasure room, orthodox room, and the exhibit-lined hall of ministers and the hall of laymen.

No Legal Barrier for an Agreement To Exchange Chinese Newsmen for American Newsmen

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1960

Mr. PORTER. Mr. Speaker, administration officials have frequently asserted their wish to arrange an exchange of American newsmen for Chinese newsmen. However, our Government refuses to make an agreement with the Chinese Communist Government but, instead, keeps insisting that individual Chinese journalists should apply for visas.

It is plain that the Red Chinese are unreasonable and are concerned with clever propaganda advantages they can achieve from this situation. However, if we are truly interested in making this exchange a reality, all we have to do is to enter into an agreement. There are no legal barriers. In my recent correspondence with the Secretary of State, which I included in the Appendix—May 27, 1960, on page A4566—the Secretary did not assert that there was any legal barrier to such an agreement.

The Secretary's position is that it is unreasonable for the Red Chinese to demand that there be an agreement of a newsman exchange with us because they have no such agreement with any other nation nor do we have any such agreement with any nation. All right, it is unreasonable.

Let us also recognize that we have nothing to lose from making such an agreement and that we will have a newsmen exchange itself to gain or, if the Chinese refuse to go through with such an agreement, then we can make important propaganda gains throughout the world by publicizing the previous statements by the Chinese Government.

The legal aspects of this are interesting and I am including hereafter, under unanimous consent, a memorandum prepared for me by John P. Earner, legislative attorney of the American Law Division of the Library of Congress Legislative Reference Service. The text is as follows:

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D.C., May 24, 1960.

To: Hon. CHARLES O. PORTER.
From: American Law Division.
Subject: Question of the legal admissibility of Red Chinese newsmen under U.S. immigration law and procedure.

For the purposes of this memorandum it is assumed Red Chinese newsmen would be seeking entry into the United States as aliens who are nonimmigrants.

BACKGROUND CONSIDERATIONS

Before 1952 newsmen lawfully entering this country were classed as temporary visitors for business. The Immigration and Nationality Act of 1952 (66 Stat. 163, c. 477; 8 U.S.C., sec. 1101 et seq.) created a specific nonimmigrant class for representatives of foreign information media (sec. 101(a)(15)(I); 8 U.S.C. sec. 1101(a)(15)(I)):

SEC. 1101. Definitions—

(a) As used in this chapter—

* * * * *

(15) The term "immigrant" means every alien except an alien who is within one of the following classes of nonimmigrant aliens—

* * * * *

(I) upon a basis of reciprocity, an alien who is a bona fide representative of foreign press, radio, film, or other foreign information media, who seeks to enter the United States solely to engage in such vocation, and the spouse and children of such a representative, if accompanying or following to join him.

The purpose of Congress in creating this class was identically expressed in Senate and House reports:

This is a new class of nonimmigrants and is designed to facilitate, on a basis of reciprocity, the exchange of information among nations. It is intended that the class is to to be limited to aliens who are accredited as members of the press, radio, film, or other information media by their employer. (S. Rept. No. 1137, p. 21 and H. Rept. 1365, p. 45; 82d Cong.)

THE LAW WITH RESPECT TO RED CHINA NEWSMEN

Under the Immigration and Nationality Act, a Red China national seeking entry to the United States as a newsman is presumed to be an immigrant until he establishes by legally prescribed evidence that he is entitled to nonimmigrant status under 8 U.S.C., section 1101(a)(15)(I). The burden of proof is upon him to establish that he is entitled to the nonimmigrant classification and type of nonimmigrant visa for which he is an applicant.

Since he is to be engaged in the United States in newsgathering activities between the United States and Red China, he must, if otherwise qualified, be classified as a nonimmigrant under the provision, set down above, as section 1101(a)(15)(I).

That means he must establish that he is a representative, in good faith, of the Red China press, radio, film, or other information medium having its home office in Red China, and that he will leave the United States upon the termination of that status. He must possess credentials from the employer he will represent in the United States. His admission will be on the condition that he will not change his information medium or the employer by whom he is accredited unless authorized to do so by the Director of the Immigration and Naturalization Service for the district in which he resides in the United States.

But, having complied with every requirement and agreed to all conditions imposed by U.S. immigration law, no Red China newsman is entitled by law to the privilege of entry into the United States unless his Government grants upon a basis of reciprocity similar privileges to representatives of such a medium having home offices in the United States.

The statutory law is mandatory and impressively clear on this essential point. The legislative intent, uniformly expressed in both House and Senate, emphatically forecloses any other interpretation.

JOHN P. EARNER,
Legislative Attorney.

Defense Strategy for the Soul

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. EVINS. Mr. Speaker, we are all doing a great deal of self-searching analysis as a result of the unfortunate events of the past weeks. In this connection, while visting briefly in Morristown, Tenn., I was privileged to hear a most inspirational sermon by the Rev. M. O. Sommers, pastor of the First Presbyterian Church of that city, which pointedly suggests similar anxieties many individuals fear today following the collapse of the summit conference.

Because I feel that this sermon will be of interest to many of my colleagues and others, I ask unanimous consent that Dr. Sommers' sermon be reproduced in the Appendix of the RECORD. The sermon entitled "Defense Strategy for the Soul" follows:

DEFENSE STRATEGY FOR THE SOUL

(By M. O. Sommers, First Presbyterian Church, Morristown, Tenn., May 22, 1960)

(Text: Philippians iv: 6, 7—"Be careful for nothing; but in everything by prayer and supplication with thanksgiving let your requests be made known unto God. And the peace of God, which passeth all understanding, shall keep your hearts and minds through Christ Jesus.")

These are days when many minds are deeply absorbed in the study of defense strategy. The events of the week just passed have greatly intensified this whole matter. The sooting down of the U-2, the collapse of the summit conference in Paris, the blustering, raving, ranting threats of Khrushchev, the stepped-up activities in space, have all served to make us very defense conscious. Our scientists and militarists have speeded up their work in missiles and anti-missiles and rockets. They are working feverishly on radar and all sorts of electronic detecting devices. Yesterday in hundreds of Armed Forces Day parades and celebrations the whole theme of defense strategy was emphasized. We are told that Civilian Defense authorities have been literally overwhelmed in recent days by requests for information concerning the construction of bomb shelters. It has been a week to give us all the jitters. Many are suffering from a terrible malady, which some columnist has called "nuclearitis".

However, this morning we are thinking of another kind of defense strategy. We shall not pose as armchair generals or pseudo-scientists. We shall leave the devising of our military defense strategy to those who have been trained in such things. We are thinking about a defense strategy for the soul. We are much in need of such a strategy. How hard it is for our souls to face the bewildering and confusing conditions of life today without fear and anxiety. The shaky conditions of international relations, the uncertainty and insecurity of the economic structure of our world, the tense situation among the races here at home, the terrific pressure of an intensely speeded up routine of life, the ever present threat of the ravages of war with its death, destruction, disease, suffering, imprisonment, and sacrifices—these are things which try men's souls. Indeed, there is need for a defense strategy for the soul.

And that is precisely what the Apostle Paul gives us in the words of our text. He is telling us here how we can fortify our souls against anxiety and worry. He is telling us how our souls can remain calm in the midst of storms of life. He is telling us of a defense strategy which, if adopted and applied, will keep our souls steady, no matter what happens. Dr. Moffatt's translation of our text brings out this fact very clearly. This is the way his translation reads, "Never be anxious, but always make your requests known to God in prayer and supplication with thanksgiving; so shall God's peace, that surpasses all our dreams, keep guard over your hearts and minds in Christ Jesus". I want you to think with me for a few moments this morning about this defense strategy for the soul which Paul gives us.

In the first place, notice what this defense strategy is. Paul says, "Do not be anxious, do not worry, do not fear, do not lose your faith—be calm, be brave, be strong, be cool." This would be hollow mockery were it not for the fact that Paul goes on immediately to show how we can do just this. How do we do it? Why, by taking our fears and doubts, our anxieties and fretfulness to God.

Notice what Paul says, "But in everything make your requests known to God in prayer and supplication with thanksgiving." Dr. Moffatt uses the word "always." This means that we are to take everything always to God. Everything includes our worries, our doubts, our fears, our anxieties. It is a wonderful thing when we come to the realization that we can take everything in our hearts and minds to God. Prayer begins to mean something to us when we come to the understanding that it does not consist simply of repeating stereotyped and staid words, phrases, and sentences. When we realize that what God wants us to do is to take to him our worries and fears and doubts and burdens and cast them upon him, we begin to understand something about the meaning of prayer. When we understand that, just as an earthly father wants his child to share everything with him, so our Heavenly Father wants his child to do just that, we begin to understand the genius of prayer. What God wants us to do is to take everything, always to Him in prayer.

"O what peace we often forfeit,
O what needless pain we bear,
All because we do not carry
Everything to God in prayer."

Notice again that Paul says, "Always make your requests known to God in prayer and supplication with thanksgiving." We must not miss that note of thanksgiving. What Paul is saying is this, "When you are feeling low and depressed in spirit, when the way looks dark and foreboding, when your burdens seem more than you can bear, stop a moment and think of God's many blessings. Don't look only on the debit side of the ledger; consider the credit side, too." No matter how heavy our loads, no matter how lonely and desolate our pathway, no matter how deep our darkness, life is still filled with mercies and blessings. Let us not forget the beauty of the sunset, the wind in the trees, the breath of the still night air after the rain, the profusion of gorgeous colors on the mountainside in spring, the starlit heavens on a frosty night. Let us not forget the gifts of intellect and memory and hope and love and courage. Let us not forget the clasp of warm and understanding friendship, the blessings of family and home, the cheerful laughter of boys and girls at play, the gurgling noises of a chubby baby as he talks himself to sleep, the patient, quiet, uncomplaining cheerfulness of those who suffer greatly. Let us not forget the experience of our Christ's forgiveness at the cross of Calvary, the ties of Christian brotherhood, the quiet calm of the hour of worship in the church, the unseen, but surely felt, presence of God the Father.

Dr. Alexander Whyte, the great Scottish preacher, one day in his pastoral visitation, went into the home of a woman who greeted him with an outpouring of her troubles and misfortunes. For 20 minutes Dr. Whyte sat in her home and patiently listened to her tale of woe. She told him of all her sorrows, of all her disappointments, of all her losses, of all her burdens, of all her tears. Finally, when it became very apparent that he would have absolutely no opportunity to act as a spiritual adviser to the woman, Dr. Whyte picked up his hat and made for the door, throwing back over his shoulder as he went this word of admonition, "And be sure you forget not all His benefits." That is what we must do. We must be sure that we do not forget all His blessings and benefits. Even in life's darkest moments there is much for which we must thank God. "Always in prayer and supplication with thanksgiving."

In the second place, think with me of how this defense strategy for the soul works. It is when we take everything to God in prayer that we get things into their true perspective. Unless we do make our burdens and problems and sorrows and fears matters of prayer, we are never able to get far enough away from

them to see them in their true light. They are too close to us. We are too much wrapped up in them. They loom too large to us. They are all out of proportion. We cannot see them in their proper light.

Some years ago, while vacationing in a small Indiana town, I saw an oil painting hanging in the window of a corner drug store. It was a very interesting pastoral scene which, to my untrained eye, seemed to be quite well painted. I suppose it had been painted by some local artist. But the thing which attracted my attention was a card placed under the painting with this notation: "This picture may be seen in its best light by standing at the outside edge of the sidewalk." Of course, those instructions had been placed for the guidance of the passers-by who were not accustomed to looking at oil paintings. Whoever placed that picture wanted to be sure that those who looked at it would not simply look at it close up where the imperfections were so noticeable. He wanted to be sure that those who did look at it would look at it from the place where the painting would show to its best advantage.

When we make our burdens and problems, our losses and sorrows, our fears and doubts, matters of prayer, we get over to the outside edge of the sidewalk where we have the right perspective. Prayer enables us to stand back from the noise and bustle and confusion of life and view things in the quietness which comes only from God. Prayer steadies our nerves. Prayer defends our souls. Prayer brings us a sense of quiet. Prayer brings us into the presence of God. Prayer places us in a position to see things in perspective. Prayer makes us feel round about us God's everlasting arms.

Not only so, but prayer will relieve our anxiety and reinforce our souls by bringing our wills into harmony with God's will. After all, that is precisely what prayer is. It is coming into harmony with God. It is surrendering our human wills to the will of God. Our souls are restless and ill at ease simply because far too often we do not bring our wills into harmony with the will of God. I wonder if it is not true that even when we talk to God what we really do many times is to demand that God conform to our will. We go to Him and we say: "This is what I want. Thou must do this for me. I pray that this will meet with Thine approval. Thou must save my son who is in danger. If my son is not spared to me, then I shall lose all faith in Thee. Thou must prosper me in my business, or I shall turn away from Thee." Now, such an attitude is not the attitude of prayer at all. To be sure, God wants us to make our requests known to Him, but we must not make them known to Him in that manner. When we really pray to God, we take our own life and the lives of our loved ones and all of our affairs and we place them in His keeping. We put ourselves under His command. We do what Jesus did in Gethsemane. We say, "Not my will, but Thine be done." God's will for us and our loved ones may not be our will at all; but if we take ourselves and our burdens and our problems to Him in this spirit, we shall find, whatever happens, a wonderful sense of calm and assurance and peace which nothing in this world can take away from us. Then, indeed, will our souls be defended against the onslaughts of dread and worry and fear.

And that brings us to the consideration of the outcome of this defense strategy for the soul which Paul prescribes for us. Notice what Paul says will happen if we use this strategy: "And the peace of God, which passeth all understanding, shall keep your hearts and minds through Christ Jesus." Or, as Moffatt puts it, "So shall God's peace, that surpasses all our dreams, keep guard over your hearts and minds in Christ Jesus." You see, this is a defense strategy that Paul has given us. "If you want that which will keep you calm and steady, if you want that which will quiet your nerves and strengthen and fortify and defend your souls, do this," Paul says, "and the peace of God, which passeth all understanding, shall guard your hearts and minds in Christ Jesus."

Yes, when we make our problems and burdens and cares matters of prayer, the very peace that dwells in the heart of God himself comes to stand as a sentry to our souls. The Greek language here means literally, "will stand as a sentinel." Can you imagine any more wonderful defense for the soul? God's peace. It passeth all understanding. It surpasses all our dreams. God's peace will guard the door of our hearts. God's peace will strengthen our lives. God's peace will defend our souls. God's peace will hold the fort against every invader.

That is precisely what this strategy for the soul will do for us. Now, we must understand once and for all, that the Christian who adopts this defense strategy for the soul will not necessarily be spared difficulties and losses and sorrows and troubles. Adopting this strategy does not mean that God will give the person adopting it preferential treatment. It does not mean that he will be exempted from all of life's cares. It does not mean that if a person takes his troubles and problems to God in prayer, God is bound to give that person an easy and untroubled passage through the tangles of life. But, it means something far more wonderful than that. It means that when the sorrows and losses and disappointments come, as inevitably they must, the inner citadel of the soul will stand. It will have God's peace to defend it. It will be protected, for God's peace stands guard.

I said in the beginning that we are in need of a defense strategy for our souls in these days. It is my honest conviction that, as the days come and go, more and more we shall know the need of some sort of defense for our souls. Why not try that strategy? It will work. As a matter of fact, it is the only defense strategy for the soul that will work.

Proposed Amendments to the Wage-Hour Law

EXTENSION OF REMARKS
OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. HIESTAND. Mr. Speaker, the National Federation of Independent Business, Inc., presented to the Committee on Education and Labor what, in my judgment, is a very effective statement showing how the proposed amendments to the wage-hour law would be especially crippling to independent business and small business. The statement follows:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUSINESS, INC.

MAY 17, 1960.

Subject: Minimum wage.

HOUSE COMMITTEE ON EDUCATION AND LABOR:

I am George J. Burger, vice president, legislative activities, National Federation of Independent Business.

We are the largest business organization in the Nation, from the standpoint of directly supporting business and professional enterprisers. Our membership is exclusively among small, independent enterprisers. These people, who are your constituents, and they alone, set our stand on bills and issues by direct signed ballots, which they send to their congressional representatives on the House side, in our mandate polls. I mention this only to emphasize the fact that what I say here is intended to reflect their collective thinking, just as though they were here to speak for themselves.

I might mention here that the federation is the only independent business organization performing this function for smaller firms and their Congressmen.

We have polled our members on four occasions over the past 4 years on earlier bills that touch on the points at issue as presently before your committee. The results of these polls are my authority to speak before you on this subject matter.

For instance, in mandate No. 215 (September 1955) we polled our members as follows:

Bulletin 215—S. 622. Extend wage-hour law to larger retail firms: for, 42 percent; against, 54 percent; no vote, 4 percent.

Bulletin 235—H.R. 585. Extend wage-hour law to all retail-service concerns: for 28 percent; against, 67 percent; no vote, 5 percent.

Bulletin 245—H.R. 83. $1.25 minimum wage: for 30 percent; against, 66 percent; no vote, 4 percent.

The results of these polls, none of which evoked an overwhelming "for" or "against," tell us that, by and large, our members are opposed to (1) wholesale inclusion of all businesses under Federal wage-hour control; (2) expansion of this control to a limited number of larger independent firms; and (3) any further increase in the Federal minimum wage, at least to the $1.25-an-hour level.

These results are especially interesting when considered against the background of federation membership. Of course, we have all sizes and types of independent business and professional man operations among this membership. Some of them, for one reason or another, are already subject to Federal wage-and-hour control. Others are in the category of the larger independents thus far exempt from these controls. Many operate under contracts with labor unions. But, by and large, the greatest proportion are the smaller-sized independents generally proposed for continued exemption from Federal wage-hour controls.

This might explain the two-thirds vote against the proposal for wholesale inclusion of all businesses under Federal wage-hour controls. But it doesn't explain the majorities against the proposals for limited expansion and for the new $1.25 minimum hourly wage, except in the light of these important considerations: That among these smaller independents are many who fear that if their larger brethren go under control now they may be next; that they fear this is part of a trend that will in time deprive them of necessary freedom of judgment in running their own businesses; and that it amounts to another step in the direction of complete Government controls.

Frankly, I can understand these fears. The history of past years has been one of constantly expanding Federal controls. I do not mean to say that these businessmen have been deprived of their freedoms. I do mean that the controls have become more extensive, to the point where no one can be sure when they will stop spreading.

And let me say that as a former independent businessman, for 25 years the owner and operator of a retail tire firm with six or more in employ, I know what freedom of judgment can mean in the operation of a business, particularly in the field of wages. I can tell you that many times during the depression years I was faced between making across-the-board reductions or of eliminating entirely hard-to-find jobs.

Now, consider these business and professional men Federation members. From my own experience, and from observations now and then, I can safely say that most of those who opposed these earlier bills were, and are, paying at least the Federal minimum wage rate, many even more. As practical men they realize it costs money to live, to marry and to raise families. They realize that employees burdened by financial difficulties are not most efficient. They know that to attract and hold the kind of worthwhile employees a good business needs, they have to meet wage-rate competition from other firms, some bound by the Federal standards, others by union contracts. Besides this, due to their size they have to live in intimate daily contact with their employees whom they know as human beings, not as mere statistics on a weekly payroll.

Of course, I don't ignore the fact that there are some who may be paying so-called substandard wages. But I think, and I feel the facts will bear me out, that most in this category are doing so for reasons beyond their control. I know that in my own business, when sales and profits were good, our wages and bonuses were good. But once the giant automobile manufacturers stepped in and snapped up a goodly share of my customers, and once the depression struck, I had to cut, and cut all along the line. Given the opportunity I would have done better, and I think that given an opportunity they would be doing better. Denied the right to private judgment, I might have been driven to the wall. Denied this right, they could be driven to the wall.

Nevertheless, there's no denying the fact that there are, always have been, and likely always will be, a small minority of "chiselers" interested in getting the most for the very least. To the extent employees of these people need protection, it should be given them.

But these protections should not be fashioned in such manner that they act as a deterrent to, or threaten the freedom of, businessmen who are honestly doing their level best to keep afloat and pay the best wages they can.

You know, our system of justice holds that it is better, in terms of legal safeguards, for 99 wrongdoers to escape punishment than it is for 1 innocent man to be convicted unjustly.

I do think it is the sense of our members, based on the polls cited, that this is the principle that should be applied in connection with the basic issues raised in this bill. In order to convict and control the guilty we must not sacrifice, or endanger, the welfare of the innocents. Further, I think the majority of our members, as indicated in these polls, are flatly opposed to any further expansion in these Government controls.

Finally, as a further aid to this committee we wish to advise that under date of May 12, 1960, our head office at Burlingame, Calif., advised us by wire message of the results of our poll, just completed, of our nationwide membership on S. 1046, and the results of that poll showed 21 percent of the Federation membership for, 76 percent against, and 3 percent not voting.

GOP Thinks in Terms of 1860—Not 1960

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks I wish to insert an article authored by the Honorable JOHN W. MCCORMACK, which appeared in the Tribune publications in Massachusetts as well as numerous other newspapers throughout the Nation.

JOHN MCCORMACK is one of the greatest of the great leaders in the Democratic Party. He has served the Nation, its people, and his party with remarkable ability through the years. He speaks with the authority gained from his vast experience and from his vigorous leadership under our two outstanding Democratic Presidents, Franklin D. Roosevelt and Harry Truman. I commend the following to the attention of my colleagues in the House:

GOP THINKS IN TERMS OF 1860—NOT 1960
(By JOHN W. MCCORMACK, National House majority leader)

With a united Democratic Party, and with the issues that now exist, the situation looks very optimistic for the election of a Democratic President and the continuance of a Democratic National House and Senate.

Seldom, if ever, has there been such an abundance of issues previous to a presidential campaign as there are now in evidence.

As we analyze the events which will lead into the issues of the forthcoming presidential campaign, we find that they have combined in the present administration that produced a faltering, uncertain government, both foreign and domestic. On the international level, we are threatened by loss of leadership in the world.

On the homefront, numerous unmet needs and unsolved problems have been accumulating.

The Eisenhower-Nixon administration permitted these critical problems to develop. They do not want to admit they even exist.

Instead, they substitute slogans and phrases for policy and action.

The issue of foreign policy, as directed by the Eisenhower-Nixon administration, will be of paramount importance. Our foreign policy, influenced by the old guard element of the GOP, has resulted in:

Nations friendly to us turning to a policy of neutralism, and this is not for our best interests.

Facts will be advanced that will show that the present administration has conceded to the Soviets in the field of intercontinental ballistic missiles a superiority over us of three to one. This is a calculated risk which is not healthy.

In the field of outer space, particularly in propulsion power satellites, we are from 4 to 5 years behind the Soviet Union.

The Republican policy in this field is to "catch up." The Democratic policy is to "go ahead." If it is going to take us 4 or 5 years to catch up with the Soviet Union now, where will they be by that time?

At the present time, we have no defense at all against intercontinental ballistic missiles. The one partial defense we could develop—the Nika-Zuss—has been scrapped by the administration.

The Democratic Congress, for the present fiscal year, appropriated $137 million additional for the development of this defense of America, and the administration has refused to spend one penny—freezing the entire amount.

On the domestic level, it is very apparent that the Republican old guard on the congressional level is completely in control of the Republican Party.

They think in terms of 1860, not 1960.

They have no appreciation of the fact that the space age is here with the great technological revolution that is under way.

Further evidence of the old guard influence is shown by the strenuous GOP opposition to legislation for the hospitalization of the aged, the housing legislation, the increase in hourly minimum wage, to extend the coverage of the minimum wage, to extend the standards of unemployment compensation law, and their vigorous opposition to water pollution control, just to mention a few measures the Democratic Congress has sponsored and the old guard has opposed.

As I view the next 4 years, they will be the most important era in the history of our Nation. The next 4 years call for not only leadership of great ability, but with vision and with courage.

There is no hope of that leadership from the Republican old guard, and the Republican candidate for President, if elected, would be a prisoner of the Republican old guard.

Boris Pasternak

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. VANIK. Mr. Speaker, under leave to extend my remarks, I commend to my colleagues an excellent article on Boris Pasternak by Henry H. Taylor, Scripps-Howard staff writer, which appeared in the Washington Daily News of Tuesday, May 31, 1960. Mr. Taylor is believed to be the last American correspondent to have interviewed Boris Pasternak in his home near Moscow.

The article follows:

PASTERNAK HATED BEING JUDGED AS A POLITICAL THINKER
(By Henry N. Taylor)

"In every generation there has to be some fool who will speak the truth as he sees it," said Boris Pasternak, a man the Communists were calling "Judas" and the free world was calling "defiant martyr."

Outside the poet's brown board farmhouse a snowstorm was ruffling his beloved birch trees, and further off across the Iron Curtain a political hurricane was raging around this Russian whose smuggled-out novel had won a Nobel Prize he was forbidden to accept. But here in Pasternak's study there seemed to be an uncanny pocket of serenity.

"You must remember that I am a Russian and a writer," said Mr. Pasternak. "I wish to live in this land. I wish to go on writing. My heart is warm that the world outside reads 'Dr. Zhivago,' but I understand why this book cannot be read in my own country. So let us just drink tea and talk about books."

LONE DISMAY

The most striking thing about Mr. Pasternak in person was his dismay at being judged as a political thinker, not a teller of tales.

He hated the Soviet shackles which required books in his own country to help build socialism or else molder unpublished. But he was also shocked at the eagerness of overnight Pasternak experts abroad to treat his book as an anti-Communist manifesto, rather than as a novel about humans who happened to live in a dehumanizing society.

I came a stranger, floundering unannounced through hip-deep February snow, bearing messages from some poets outside Russia who did not want to embarrass or endanger Mr. Pasternak by sending their words of encouragement through the censored Russian mail.

At the kitchen door, interrupted but smiling, he welcomed me in, for Mr. Pasternak was an Old World gentleman, hospitable and

trusting until betrayed a few days later by a British visitor who took abroad a private poem by Mr. Pasternak then broke confidence by publishing it.

"I believe mightily in human beings," said Mr. Pasternak. "Only individuals seek the truth. Big groups, and governments, can only end up limiting men's individuality, and that is what 'Dr. Zhivago' was about. They charge the Nobel committee with making a political decision. But I honestly believe they were judging the work of a man's life."

Money meant nothing to Mr. Pasternak. He never even considered going to Stockholm to collect his $42,800 Nobel money. In my presence, he signed a letter to this Italian publisher giving away forever more than $100,000, in one pen-stroke.

"Here is what matters," said the author, striding to a bookshelf and running his hand along a row of volumes—all 'Dr. Zhivago,' in English and German, in Swedish and Danish and French, but not in Russian. Worldwide, this book sold more than 2 million copies, probably the biggest surprise best-seller of modern times? Yet, there were probably never more than 100 copies inside the Soviet Union—and most of these seemed to be right there in Pasternak's study.

VIEW OF LIFE

The novel's hero says, at one point, "The great majority of us are required to live a life of constant, systematic duplicity," and to some extent even Mr. Pasternak lived such a life. Warned by the Kremlin that he was in danger of losing his home, that, at 69, he might be taken out of sight of the woods and streams of his home village outside Moscow, away from the shadow of the onion-spired village church and the snow-cape beyond—Mr. Pasternak stopped short of becoming a total martyr.

He wrote both Nikita Khrushchev and the Nobel committee and asked merely to be left alone in peace.

If Mr. Pasternak feared for his safety, there was no sign of it in his house that day in 1959, although fellow writers he had known all his life were busy declaring him "a parasite," an "extraneous smudge" and a "snake from the dungwaters."

Address of Calvin Robinson, Editor, Appomatox (Va.) Times-Virginian

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. ABBITT. Mr. Speaker, southside Virginia, and Appomattox in particular, is most fortunate in having as one of its outstanding citizens the Honorable Calvin H. Robinson. He is known far and wide in our area as "The Country Editor." He and his charming wife are co-owners and publishers of the Times-Virginian, a splendid weekly newspaper. As editor of our paper, he has contributed much to the cultural, social, and economic progress of the county of Appomattox. He has given of his time, his talent, and labor in making our area a better place in which to live. I am proud to call him my friend.

Mr. and Mrs. Robinson have contributed greatly to a better understanding of the cause, effect, and historical significance of the War Between the States. Mr. Robinson has made a study of the history of the War Between the States, and all its great leaders. He is one of the outstanding authorities in Virginia on this era.

On May 30, 1960, at the Memorial Day exercises in Lynchburg, Va., Mr. Robinson made an outstanding address which I desire to include herewith:

REMARKS OF CALVIN ROBINSON, EDITOR, APPOMATOX, VA., TIMES-HERALD-VIRGINIAN, ON MAY 30, 1960, AT MEMORIAL DAY EXERCISES, LYNCHBURG, VA.

Madam Chairman, and gentle friends, it is indeed a precious privilege to come here from my "country editor's" desk at Old Appomattox, to meet with you and witness these impressive ceremonies.

There are times when some of us become a bit discouraged about the world in which we toil, and I share the sentiment of those who are puzzled, perplexed, and ofttimes bewildered by the pressure, the tension, and the rapid flow of events.

But, we are sustained, and we take new heart with each sunrise, because we have so many companions with us along the way, who dip the cup of memory into the fountain spring of our sacred heritage.

May I offer the comment that our patriotic organizations are so very important? From time to time, I am invited to make some remarks at meetings of chapters of the United Daughters of the Confederacy, the Daughters of the American Revolution, etc., and I salute all such chapters, their leaders and membership, as well as the C of C, SCV, SAR, American Legion, VFW, and all their auxiliaries and like patriotic groups.

These groups are motivated not only by maintaining friendships and ideals, but also in aiding us one and all in living today and facing tomorrow better prepared because we know and treasure what went on yesterday.

To me, as we face a new decade in 1960, which may become known as anything from the sentimental sixties to the sizzling sixties, I love to recall a decade 100 years ago which I look upon as the sacred sixties.

The mountaintop scaled by gallant and heroic men and women such as we honor here today if of such majesty and grandeur, I am prone to pass by and forget the petty greed of small souls, the lust for power, of those who pillaged the recess of the valleys below.

So long as we have such groups as are represented here today, we are on solid ground. This story will illustrate:

During recent weeks, certain Members of the U.S. Senate felt it necessary to discuss at some length a matter of pending legislation. It was about 3 o'clock one morning, when the beloved Senator ERVIN from North Carolina was making a masterful address. But he noted that he was almost alone, as weary fellow Senators were at rest. He said he was reminded of "Pete," a Confederate veteran who lived in Chatham County, N.C.

Pete was one of those veterans so fortunate as to survive the war, and the longer he lived the more he loved to talk about the war, and the more he talked about it, the more he glamorized it. One day one of his friends asked him if he had ever known Gen. Robert E. Lee. Pete said, "Certainly I knew General Lee. As a matter of fact, he and I were not only comrades in the army, but personal friends, and I helped him plan many of his battles." Then Pete was asked when was the last time he ever saw General Lee. He said that it was about 6 months after Appomattox. He said he heard General Lee was teaching school up in Lexington, Va., and he went up there to see his old friend once again. He said they spent the afternoon talking about old days, and then General Lee turned to him and said, "Pete, were you at Appomattox?" Pete said, "Yes, General, I was at Appomattox." And according to Pete, General Lee turned to him and said, "Pete, I am sorry to hear that. If I had only known you were there with me, I would never have surrendered."

Now, that is a story, but I do say that our way of life will never be surrendered, but will be kept sacred—and so I am led to say that my remarks on this occasion have that in mind. There are things we want to preserve. There are principles dear to us. There are memories we treasure, but beyond our remembering them, we want the world to remember, too.

And so, for a few moments I ask your patience while I chat with you about three simple points.

First. The idea of Memorial Day is historic and good.

Second. It pays tribute to great and gallant heroes.

Third. It preserves sacred principles, for which sacrifices were made.

I

Now, as to Memorial Day itself, I commend to you a perfectly splendid article by that eminent UDC historian, Ella F. Harlee, in which she details the story of Decoration Day, from its very informal beginning in Columbus, Miss., in 1862, while the war was still in its beginning. Formal Decoration Day was organized in Jackson, Miss., April 26, 1865. The story is so very interesting. News had arrived that Lee had surrendered at Appomattox, and that Joseph E. Johnson was surrounded in North Carolina. And then on April 25, 1865, couriers came into Jackson, Miss., with news that the Federal were coming in from Vicksburg, and would arrive on the 26th, to demand the surrender of the city. Immediately a stalwart southern girl, Sue Adams, later Mrs. Vaughan, seized a pencil and sent out a message for all the southern ladies to meet on the 26th at the cemetery, with flowers to place on the graves. Ah, yes, and so it was, that on April 26, the mothers, and widows, and the children came to the cemetery. The children came with their aprons filled with cowslips, bluebells, white heliotrope and rosebuds. Leading the flower girls, Miss Sue noticed that some graves were not covered with flowers. "But, they are northern graves," the children said. She replied, "I will garland them with my pink roses. Their mothers and sisters sobbed for them, too." And there was born the spirit we cherish today, as a united nation. We honor all of our gallant dead.

May 30, 1868, is said to be the background date for Memorial Day as we know it now, in most of the Nation. The wife of a northern general decorated graves in Petersburg on that date.

So far as I know, at Appomattox, the first meeting to form a Ladies Memorial Association was held May 18, 1866.

North and South Carolina observe Confederate Memorial Day on May 10. In Louisiana, Kentucky, and Tennessee, Confederate Memorial Day comes on June 3, the birthday of Jefferson Davis. Florida, Georgia, Alabama, and Mississippi still observe April 26.

Most other States observe May 30 as a National Memorial Day.

And is it not true that in France, Luxembourg, Belgium, and distant corners of the world, there are cemeteries, many of them handsomely preserved by a grateful people, where lie the remains of those who were and are heroes of World Wars I and II. A friend of mine returned recently from Europe, and told me he was privileged to see the simple mound, one like all the rest, where is buried the incomparable Gen. George S. Patton. In fact, he brought me pictures he took. And on many a hill in Korea and many a sacred cemetery around the world they repose. And

at Arlington today, they are placing flowers on the grave of the Unknown Soldier.

II

And now, secondly, I wish to remark that Memorial Day pays tribute to great and gallant heroes.

It has been my privilege to make addresses on such great heroes as Jefferson Davis, Robert E. Lee, and Thomas J. Jackson, and once I was asked to speak about the horses the Confederates rode. Also, I have been asked to speak about the saga of sheer glory * * * the matchless story of what the women did in wartime. In each case I have done what I could in my humble way to read and study and understand the life of some particular hero. And eacn time, it seems now, looking back, at that moment, I was ready to conclude: This one was the greatest.

It is now my judgment that no nation has been blessed more exceedingly with individual heroes than has America, and it is best for us not to forget that.

The proof is the fantastic literature, the incredible number of books and articles pouring from the printing presses. I recommend the new magazine, the Civil War Times, published in Gettysburg, as being impartial and most informative. The Atlanta Journal is issuing a weekly magazine feature, the Atlanta Century. And Lynchburg's Iron Worker came out with a wonderful presentation on the Battle of Lynchburg. Our newspapers, our radio and television people, and our book and magazine publishers are already adding to what has been building up—an incredible library of historic material. And I salute the Jones Library here in this city for its tremendous material.

As for me, I am going broke. My own library is getting out of hand, and I am not able to employ a librarian. It is amazing how many books have been written about Appomattox. I have been working on one of my own, but ere 1965, the only thing I might have left to talk about that has not already been covered might be the old white mule in Mexico that General Grant talked about for an hour after he had met General Lee in the McLean House.

I am a member of the Federal Civil War Centennial Advisory Board and have attended many meetings of Civil War round tables and such, and I am proud to report that we are striving for dignity and most proper observances. In my humble opinion, it is in itself a tribute to our forefathers that 100 years later a nation salutes its heroes and the sacred memories, all the way from Fort Sumter to Appomattox, and the spirit is that of honorable testimony.

I might mention that while my wife has been attending UDC meetings all over, I have not just been sitting at home. I have been out with a modern metal detector, on the battlefields, digging up Civil War relics. If they ever start shooting again, we will not run out of ammunition, I can personally guarantee that.

III

Ah, yes, but I must hasten on to say, that perhaps most important of all is that Memorial Day presents us with an opportunity to remember the sacred principles involved. After all, why men fought and offered their lives, and lost their lives counts in the history books and in the lessons to future generations.

Our South fought for a way of life. It was a precious way because it had been won by brave pioneers who came to these shores not running away from anything but moving toward a dream of a new world of freedom and opportunity. Of course, we believed in States rights and local self-government. Had we wanted federalization, nationalization, dictatorships, and such, there were plenty of them in the Old World. Virginia was the Ark of the Covenant of setting up the true American way of life—representative self-government, as conceived by that galaxy of scholars, orators, statesmen, and gentlemen who embellished our early days. To believe in a principle is the source of the valor which brings one to fight for it. And there would not so many have been "funeralized" had there not been the strong arm to force us to nationalize, federalize, and socialize.

Indeed, beside the great bend in the Potomac, at blessed Mount Vernon are the ashes of the one first in war, first in peace, and first in the hearts of his countrymen. And where Little Mountain raises its stately head above Albermarle, we remember the immortal Jefferson. We go to sacred shrines where Jackson rests, where Stuart sleeps, and we shed tears that they died so young. Today all over Virginia and much of the Nation, the graves are decorated with the flowers of spring. It is good that that is so. But it is not enough. It is not enough. We live in a tremendous age. To those to whom much has been given, much is expected. And there may not be much time. There was the sad story of an unfortunate fellow who was in death row. All efforts for a reprieve had failed and finally this poor fellow scribbled off a note to the Governor. He scribbled: "Dear Governor: Does you know that they is fixin' to hang me on Thursday, and here 'tis Tuesday."

The streams of time down their channels fret, and we must take our stand. I put it to you that the principles for which Americans, of all sections have fought and died are precious in our sight. God did not place just one star in the sky for us to admire and pause to marvel. He did not place just one rose in some garden for all to come to see. He poured a myriad of stars and how many roses we can love to see is up to us. So precious is history.

They say that "as the twig is bent, so is the tree inclined." Let us then, on this Memorial Day rededicate our own selves to maintain and protect, inviolate, our heritage and our way of life, and as Jefferson Davis said, transmit it "unshorn" to future generations.

I have come here from Old Appomattox Court House to memorialize the patriotism of those who observe this day as a time of sacred memory, to salute the gallantry and heroism of our forefathers as an inspiration for today and all the tomorrows, and to suggest that we not forget the principles for which they lived and died. Let us be constructive. Let us be understanding. Let us be tolerant. In that way, we will be invincible.

For one, I will strive to live in the spirit of Gen. Robert E. Lee, who from his home in nearby Lexington, left these words:

"I have fought against the North because I believe they were seeking to wrest from the South dearest rights. But I never cherished bitter or vindictative feelings, and I have never seen the day when I did not pray for them."

Memorial Day, 1960

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. SCHWENGEL. Mr. Speaker, on Memorial Day last Monday, I had the distinction of sharing the 92d Memorial Day observance at the national cemetery in Keokuk, Iowa, with Mr. John Moore, State department commander of the Iowa American Legion. I was very much impressed with the remarks which Commander Moore made on this solemn occasion and under leave to extend my remarks, I ask that his address appear in the Appendix of the RECORD:

MEMORIAL DAY, 1960

My fellow Americans, today we are joining with people all over the Nation to observe Memorial Day. Today we pay tribute to all in our Nation who have sacrificed so much to preserve the liberties we cherish in America.

Memorial Day means much to members of the American Legion and all veterans because they know many of the hardships endured by those valiant comrades who have given so much on the Altar of Freedom.

The graves we decorate with real flowers and the flowers of memory can only in a very small way, consecrate the acts of courage performed by those whom we honor.

I do not speak to you in soft words of tribute for our beloved dead. Neither they, nor their living comrades in the American Legion, would have me do so. With their lives these immortals, whom we honor, from Valley Forge to the bloody slopes of Okinawa and Heartbreak Ridge, sanctified their faith in the democratic principles, that even as men are born with the God-given birthright of freedom, so too shall they be permitted to live in the righteousness of peace.

We can no more add to their valor than we can impart added brilliance to the sun or added beauty to the eternal stars. Rather let us rededicate ourselves to the completion of the work which they have so nobly begun and for which they gave their lives. Let us therefore, give voice to their stilled lips, and speak out unafraid in their behalf.

Would they be satisfied with the conditions we have today if they could be here?

Peace is still not a reality to most of the people of this world.

Suspicion, hatred, civil war, starvation, and greed ride the range of human misery as ruthlessly as when the war lords of Berlin and Tokyo dreamed of their "master races."

Eastern Europe is closed to Western Europe by an Iron Curtain of censorship. Communist agents throughout the world, taking their orders from Moscow, are trying to seize control of governments and make them subject to the will of the Kremlin.

Today the American people are realizing that tyranny is a monster most difficult to destroy. Other despots have risen to make known their dreams of world dominion. They do not believe in an America with peace and freedom and opportunity for all people. They dream of a Soviet empire with the hammer and sickle waving in triumph over the ashes of democracy and a commissar ruling the life of every individual in the world with an iron hand.

Of all the threats to human liberty and freedom, communism is the greatest.

Hunger, unemployment, and pestilence are stalking many lands. These victims of war have become the grist for the mills of communism. Many of these weakened nations have toppled before the force displayed by Communist Russia with its inexhaustive manpower and natural resources.

The picture of Russia's long stride from Czechoslovakia to China is too recent to have been dimmed in its ugly potentialities. In Korea it was brought to us in a most forceful and realistic way. Now again, in Indochina, Asia, and Cuba the same tactics are used.

The American people know that the only hope of preserving human freedom, or making peace secure, lies in American national strength. That means strength in the faith of American ideals, strength in American economy and finally, strength in American fighting power.

The American Legion has always championed peace and freedom through strength. Despots and tyrants have only contempt for people who are so passionately devoted to peace that they foolishly never prepare to defend their peace.

The words that may be spoken, on this Memorial Day will soon be forgotten by the average listener, but every man, woman, and child, worthy to be called an American, can never forget the sacrifices made by the heroic men and women of our land, sacrifice has been the price of all progress, from the earliest pioneer who braved the uncharted sea to the first settlers who landed on the bleak New England coast, meeting the savage resistance of Indian as well as the soul-breaking weather, to the finest young manhood that marched into the jaws of almost certain death at Guadalcanal, Iwo Jima, Okinawa, Normandy, Anzio, Africa, and Korea. We cannot, nor shall not, forget these lives, for they died that our glorious flag might wave as the symbol of truth and loyalty and freedom.

The observance of Memorial Day does not hang upon the words of any speaker, for deep down in our hearts we know the obligations that are ours in memory of the sacrifices that have been made. They who have died have written their names not upon tablets of paper or stone but in the everlasting memory of mankind.

Today is more than a Memorial Day. It is a day of rededication of ourselves to those high ideals for which the men and women of this country died. We are not entirely unaware of the faults and frailties of our human makeup, but let us not forget the great heart of our people. We are thinking today of the gallant men of the Civil War period—those whose ranks have thinned out to the point of extinction but their deeds will ever stand as the symbol of Americanism at its best. Again in 1898, our fathers answered their country's call, and paid the price of their patriotism with their blood. Similarly in 1917 and again in 1941 they withstood the tyranny of pagan demons who would have blotted out our civilization and culture, and destroyed all the sacred institutions of our people, and foisted a paganism upon us that would have desecrated all that we can call holy and sacred.

And again on the rugged terrain of Korea, our American boys joined with those of other peace-loving nations to suppress the ugly head of tyranny.

We can build no lasting memorials to those who gave their all until we treat the living in such a way that our world will be worthy of the tremendous sacrifices made.

Memorial Day should be a day in which we decide that we shall live worthy of the men and women who gave themselves for America. Memorial Day should be a day when we pledge to fight against intrenched wrong, whatever the cost.

This Memorial Day is not just another day. It is a most important day to all thinking Americans, and, to a greater degree, to all thinking veterans. It is not just a day to pay homage and respect to those who have died; it is a day of solemn rededication.

As we bow in reverence in memory of our heroes before their graves, let us pledge ourselves anew to the great task of making this world a better place for the coming generations and under the guidance of Almighty God, may we dare to give ourselves, as unselfishly as we expected them to give themselves. Then we shall truly build an America where the fruits of their great sacrifice shall ever sustain and nourish the deepest needs of the world.

This is our American way of saying, "We remember all of the brave things that you who have passed on have done. We remember and we are grateful. We, too, love this United States. We, too, are willing to do whatever is necessary to keep it great and good and strong, just as you were. We will not forget."

Thank you very much for letting me talk to you on this Memorial Day.

Is It Wrong To Tell the Truth?

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. MOORE. Mr. Speaker, since the U–2 incident has occurred, more lines have been written about this event than any that I can recall over the last decade. Political writers across the Nation have analyzed the incident and the manner in which it was handled by our President in many different ways. We have more answers and more analyses of what should have been done than the situation actually merits.

I, for one, believe in the action taken by the President of the United States. I commend him for it and feel it only follows a pattern of forthrightness that he has applied to his tremendous undertaking—the Presidency of the United States. Also, I have had unshaken faith in the Defense Establishment of this Nation of ours and as most Members of Congress, have some slight knowledge that flights such as the U–2 was engaged in were taking place. Previous to the U–2 incident, I had felt that these flights were necessary in order that we might obtain intelligence information to help safeguard the free world. I was for them then and I am for them now.

Among the many editors that have commented on this matter is a very close friend of mine, L. H. McCamic, of the Wellsburg Daily Herald in Wellsburg, W. Va., who writes a column daily entitled "Editor's Uneasy Chair." On May 25, there appeared an article entitled "Is It Wrong To Tell the Truth?" which I at this time submit for the RECORD and which I respectfully call to the attention of my colleagues:

EDITOR'S UNEASY CHAIR—IS IT WRONG TO TELL THE TRUTH?

Uneasy Chair has no patience with those people associated with the Government, or outside of it, principally those who make a living commenting on events as they happen, mispredicting what is going to happen and explaining away their wrong guesses on public, political, and other affairs, who have been emphasizing President Eisenhower's mistake in handling the U–2 airplane incident over Russia.

The President's great mistake, they point out, was in telling the truth about the incident. One writer distinguished himself by stating that the President should have used "diplomatic language," or in other words procrastinate or prevaricate, or a bit of both. With that opinion and the opinion of others who have expressed similar views, Uneasy Chair cannot agree. Most of the trouble nations get into comes through trying to understand diplomatic language. The plain unvarnished truth would be better in most circumstances.

The truth of this matter is that the United States and other nations send planes over Russia to try and keep abreast of their warlike activities. The information they get should help prevent a repetition of Pearl Harbor. In this particular case Russia shot down the plane.

Russia has spies throughout the world. Her planes are flying everywhere they think they can learn anything about the United States, Great Britain, France, Switzerland, and other countries. Two diplomatic spies of Russia were arrested in the United States and deported during the period when Premier Khrushchev was accepting the hospitality of our country. Our State Department could have exposed them and embarrassed Khrushchev no end, but this was not done. Spying seems to be a legitimate national practice and occasionally it causes embarrassment, but we do not believe the President should have lied about this case. Had he done so he would have been lying to his own people as well as Russia. Uneasy Chair believes truth is the best policy. President Eisenhower is strong enough to take any criticism that comes to him from Khrushchev or the people at home.

The Wausau Story on School Construction

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. LAIRD. Mr. Speaker, in this morning's mail, I received a very informative and interesting letter from the president of the board of education of the largest community in my congressional district. I believe that this letter from President F. W. Braun of Wausau, Wis., deserves the careful consideration of every Member of Congress. Mr. Braun's letter reads as follows:

WAUSAU, WIS., *May 26, 1960.*

Hon. MELVIN LAIRD,
House Office Building,
Washington, D.C.

DEAR SIR: This letter comes to you as president of the Board of Education of Wausau.

News releases and newspaper articles have appeared in regard to the current bill in Congress for Federal subsidies for school construction and the Senate bill even goes farther than that, giving some of the money for teachers' salaries.

We fully understand and realize the terrific impact of teachers' organizations and teacher lobby in the States and their desire for money from any source. Also, many school boards and communities who do not want to realize their responsibility, trying to get money from the Federal Government for school construction.

We feel that this is absolutely unnecessary because the record of the country shows classrooms have actually been built without any Federal aid from anywhere but by community desire and intent and want and actually takes care of individual needs thus far. We realize there is a peak coming in school attendance but proper advance planning by school committees and school boards can foresee this actual need in their own community and take care of their school construction requirements accordingly.

You are familiar with the fact that Wausau has just recently secured a bond issue

of $3,500,000 to build a new junior high school on the west side as well as an addition to our present senior high. Also, we recently completed a new grade school a few years ago on our west side as well as several additions to other schools in our community.

I could go on and on with figures that you are probably more familiar with than I am and have more information on. I am not familiar with the Washington political situation and the pressures that are brought upon you and other Congressmen to vote for this bill—but actually if people want good schools and more schools, they can have them without any outside aid. Where there's a will to do something for their children, nothing would interfere with it.

Isn't there some way that this bill can be eliminated once and for all from the record?

Kindest regards.

Sincerely yours,

F. W. BRAUN,
President, Board of Education.

United States Handicapped by Excise Tax in Compact Car Competition

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. GRIFFIN. Mr. Speaker, from the first day he came to Congress, our colleague from Michigan, Mr. CHAMBERLAIN, has been aggressively engaged in a determined effort to obtain a realistic review of the inequitable "wartime" excise tax which severely handicaps our automobile industry, and those employed in it, as they seek to compete with foreign automobile manufacturers. Mr. CHAMBERLAIN'S untiring efforts were appropriately noted recently in an excellent editorial which appeared in the Flint (Mich.) Journal on May 24, 1960. I believe the editorial, reprinted below, is worthy of the serious attention of every Member:

TAX HINDERS AUTO INDUSTRY IN COMPACT CAR COMPETITION

Representative CHARLES E. CHAMBERLAIN again has called congressional attention to the damaging 10 percent Federal "wartime" automobile excise tax that he has been fighting to have removed ever since he has been in Washington.

"In keeping such a tax in peacetime, the Federal Government is cutting off its taxes to spite its revenue," he pointed out in a speech on the floor of the House.

"This tax was levied for the specific purpose of decreasing automobile production in order to divert it to war production. The purpose for which this tax was imposed no longer exists but we still permit this tax to retard sales, production and employment."

CHAMBERLAIN sounded his warning again in view of the new competition of foreign-made cars on the American market. He contends that the excise tax, adopted as a temporary tax more than 10 years ago, is dragging down the speed of the American automobile industry.

He suggested that this country's lawmakers ask themselves if it is not politically immoral to penalize an industry which is the basis for one of every seven jobs and one of every six businesses by exacting a tax not levied on other manufacturing.

The automobile long since has ceased to be recognized as a luxury. In our way of life, it unquestionably is an everyday necessity. But Congress refuses to recognize this fact. The cost of the family car is loaded up with a Federal tax that amounts to 17.3 percent of the wholesale value—or $346 on a $2,000 car.

Supporting CHAMBERLAIN'S stand is an editorial by Robert B. Powers, editor and publisher of Wards Automotive Reports, in his publication's yearbook, pointing out the peril both to the automobile industry and the Nation in the forthcoming struggle for the U.S. compact-car market. The problem can be appreciated by realizing 668,070 foreign cars were sold here last year compared with 252 in 1940.

Powers' editorial, which CHAMBERLAIN had included in the CONGRESSIONAL RECORD, made this point:

"Three European motor vehicle manufacturers who presently have the lion's share in the American market either are government-owned or government-controlled. Their sales total more than 40 percent of all imports. * * * Lower labor costs, smaller and less costly staffs of management, engineering, styling, sales and marketing offer them a flexibility in the pricing of their products that presently all we can do is envy.

"Washington policymakers, experts, and legislative committees surveying Federal tax structures can forestall possible future injury to the industry and prevent national embarrassment and harm by taking positive action now."

The situation that CHAMBERLAIN has been fighting to relieve even before the compact-car race assumed its present significance today has grown into one of our country's most serious economic problems. Unless the warning of such tax repeal advocates as CHAMBERLAIN is heeded, Congress may soon be faced with the necessity of taking drastic emergency action to protect a faltering industry.

If such a course—of having to discourage imports, for example—is followed, it may have far-reaching effects. In Powers' words, "* * * it may cost us those friends throughout the world we have worked so diligently and expensively to win and influence."

Such action can be averted if only Congress and the administration will take a realistic look at the automobile market and give the sale of U.S. products a shot in the arm by removing the excise tax choker.

Appropriation for Mutual Security

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks I include an article by Sylvia Porter printed in the Boston Sunday Herald of May 29, 1960, strongly urging an adequate appropriation for mutual security:

MUTUAL SECURITY PROGRAM NEEDS WIDESPREAD BACKING

(By Sylvia Porter)

In the days since the summit collapse, surely millions of Americans the Nation over have wondered in anger frustration, "What can I do to help now?"

One crucially important thing you can do is to make clear to Congress that you want no backtracking whatsoever now on our mutual security program—and that you insist it vote all the cash necessary to back up the foreign aid program that was written into law and signed by President Eisenhower on the eve of his departure for Paris.

MESSAGE TO ALLIES

If Congress does vote this cash quickly and decisively, it will tell our allies in unmistakable terms that in this key area of our foreign policy we have a firm course and we're following it.

It will assume the underdeveloped and uncommitted nations of the globe that we recognize how desperate is their struggle for advancement and that we intend to continue to help them achieve higher living standards without sacrificing their independence.

It will smash home to Russia the message that we know she is fighting an intensifying economic war with us all over the globe and that we are ready and prepared to fight back.

It will support our critical alliances in the North Atlantic and Asia, help maintain the unity which is imperative for survival.

It will be the best "next step" we could take after Paris—one big step forward after the dismaying series of steps backward.

The mutual security program, authorizing the spending of $4 billion for foreign economic and military aid in the year starting July 1, is on our lawbooks. But, as I emphasized Friday, the authorization is meaningless unless Congress also appropriates the money to back up the authorization. Before the summit, influential Members of Congress were saying plainly that they planned to slash the appropriation 25 percent or more under the $4 billion authorized.

And while President Eisenhower in a private letter sent to around 100 top citizens of the country has just urged "a crusade" to prevent this, and while this past Monday Vice President NIXON made the unusual move of publicly asking each GOP member of the House Appropriations Committee to prevent it, it is far from sure the pleas will be heeded.

Why is the opposition so strong?

One reason is the admitted maladministration of the program in many instances. Some of the bungling has been abominable.

But the way to correct maladministration of a law is not to cripple the law to be administered. The commonsense move is to get the machinery into operation, then to act with determination to make the machinery more efficient and put more efficient men in control.

A second argument against the law is that, if we can't "afford" to spend millions to aid such depressed areas of our own as West Virginia, we can't "afford" to spend billions to aid foreign areas.

This argument is cockeyed and loaded with obvious politics. We do not further aid to our depressed areas by cutting foreign aid—and this is definitely no time to be playing politics with our foreign policy.

A third reason for the opposition is the feeling of disenchantment with the results of the program, the belief that foreign aid is not being adjusted to today's world.

Here again, it seems to me that the way to find a new program is not to sabotage the only one we have. In the past the mutual security program saved Greece from communism, Turkey from chaos, preserved a free Western Europe. Our economic aid to such lands as Laos, Jordan, Pakistan, South Vietnam, is averting Communist domination in those areas. We haven't gained as much as we hoped, but neither have the Soviets.

Imperfect as the foreign aid program is, it is at the heart of our foreign policy. The first major act to come out of Congress following the Paris debacle must not be a retreat on this program. You can help your country by making your support known now.

All 19 Scripps-Howard Newspapers Back Johnson

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. ANFUSO. Mr. Speaker, on March 30 of this year, I proposed in an article in the Capitol Hill weekly newspaper Roll Call that a poll be conducted among the Senators, Representatives, and their aids on the Hill to determine who of all the present candidates is best qualified to be President of the United States. Since nearly all of the candidates are associated with Congress and are probably best known here, I thought that this would be a logical medium for a proper determination.

Roll Call accepted the proposal and undertook the poll. After a month of careful canvassing, it came up with the following results:

Senate Majority Leader LYNDON B. JOHNSON topped all other candidates by capturing 44 percent of the vote.

Vice President RICHARD M. NIXON was second with 20 percent of the vote.

Other leading Democratic candidates scored as follows: Senator Stuart Symington, 11 percent; Senator John F. Kennedy, 10 percent; Senator Hubert H. Humphrey, 8 percent; Adlai Stevenson, 5 percent.

I stated at the time that there was no question or doubt as to Senator LYNDON B. JOHNSON'S qualifications and that a ticket headed by him would be a sure winner. As a northerner, however, I still held some reservations. By his actions and his able leadership, Senator JOHNSON is erasing these reservations one by one. His stand in a few recent instances will prove the point. It was due to his efforts that Congress passed a civil rights bill this year assuring voting rights for all citizens. He is on record in support of a health program for the aged and retired citizens, including hospitalization and medical care. He is in favor of a higher minimum wage and the extension of minimum wage coverage to include millions of people who work for substandard wages. He supported enactment of the depressed areas bill over the President's veto. These are only a few instances, there are others.

I have always felt that if Senator JOHNSON would go forth campaigning on the road as other candidates have done these past few months and would project himself to the people, there is no doubt in my mind that they would reach the same conclusion as the experts, namely, that LYNDON B. JOHNSON towers over his opponents in ability and leadership.

In the face of the recent summit failure, citizens all over the country are having second thoughts and reevaluating the candidates in terms of ability to lead our Nation in the stormy years ahead. They feel that the times demand a man of outstanding ability to lead the American people—and in that category LYNDON B. JOHNSON is in a class by himself. Many feel he is the man of the hour.

It is not surprising to learn that more and more newspapers and periodicals in all sections of the country have come to the conclusion that if the Democratic nomination for the Presidency was to be based on ability alone, Senator JOHNSON "would be a walk-in."

Today, 19 editors of the Scripps-Howard chain of newspapers have announced their preference for Senator JOHNSON as "the ablest and strongest Democrat." In an editorial entitled "The Ablest Democrat: LBJ," the editors emphasize that presidential candidates should be measured by the requirements of our times and that "those requirements are stern and challenging."

Regarding these standards, there can be no question as to who should be President and who is best able to carry forward the banner of the free world against communism. Khrushchev will meet his master when he is confronted with LYNDON B. JOHNSON. He will meet a dedicated leader who knows how to handle people, good and bad. He will meet a man who works around the clock and who fully understands that the best and surest way of attaining world peace is by restoring the United States to its position as the strongest and most powerful nation on earth.

Mr. Speaker, I predict that the Johnson era will be an era of responsible leadership and it will be a period in our history in which this Nation was saved from the danger of deteriorating into a second-rate power.

Under leave to extend my remarks, I wish to insert into the RECORD the editorial cited above which is published in today's issue of the Washington Daily News:

[From the Washington Daily News, June 1, 1960]

THE ABLEST DEMOCRAT: LBJ

The Scripps-Howard newspapers will support LYNDON B. JOHNSON for the Democratic presidential nomination. The 19 editors of these politically independent newspapers believe Senator JOHNSON is the ablest and strongest Democrat available. We hope he will be his party's choice.

As to our preference for the Republican nomination, we delay an announcement until a later day when, and if, a contest develops. We hope there is a Republican contest, for we believe it would be healthy for our two-party system.

After the conventions have chosen their nominees and the fall campaign has drawn the issues, we shall meet the obligation we share with all other independent voters in choosing between what the Democrats and the Republican offer.

In saying we like LYNDON JOHNSON best of all the probable Democratic candidates, we hope some of our readers will agree with us—and we know some will disagree. For your own reasons you will form your judgments, and we grant they will be just as sincere as ours.

Here are our reasons, for your consideration:

Candidates should be measured by the requirements of our times—and those requirements are stern and challenging.

The drumbeat of history quickens as 1960 opens a decade that will challenge the staying power of America and the free world.

The men who rule the Kremlin have an announced and clear purpose to dominate the world. They can be stopped only by superior strength and purpose on our side.

The times call for a man in the White House who has demonstrated qualities of leadership, who has experience and judgment, a man of vitality and courage, and patriotism that rises above partisanship.

LYNDON JOHNSON, in our opinion, has those qualities to a greater degree than any other potential nominee in his party.

He has proven his leadership in the U.S. Senate, where he has been majority leader for the last 6 years, while the executive department has been controlled by the opposition party. A petty partisan in his position could have made a shambles of a party-divided Government, but Senator JOHNSON'S leadership has been constructive and responsible.

He is a man who gets things done. He would rather settle problems than create political issues.

Some of his detractors say that LBJ is "too southern." Yet the only two civil rights bills Congress has passed since the Civil War came through under his leadership.

Some say he is too provincial. Yet at the time of the sputnik crisis, he is the one who took the lead in giving drive and direction to our own Nation's space exploration.

Some say he is not versed in foreign affairs. Yet in the hubbub over the U–2 plane incident and the collapse of the summit conference, Senator JOHNSON was the only one of the Democratic aspirants who said the right things at the right time.

While others were yapping at and second-guessing President Eisenhower, the tall Texan was unruffled in maintaining that the paramount threat was the rocket rattling of Khrushchev and Malinovsky, and that America could not be made stronger by partisan acrimony.

It was just another test where Senator JOHNSON showed his sure-footedness. And another reason why we hope he will be the Democratic nominee. For there seems to be a 50–50 chance that whoever is the Democratic nominee will be our next President, and will serve as President for all of us—Democrats, Republicans, and independents, through crucial years ahead.

Indian "Operation Bootstrap"

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial which appeared in the May 25, 1960, issue of the Daily Sentinel, Grand Junction, Colo., on my bill entitled "Operation Bootstrap—Reservation Style."

The editorial is as follows:

INDIAN "OPERATION BOOTSTRAP"

Deserving serious consideration by Congress is a bill known as "Operation Bootstrap—Reservation Style" for the Indians of America. Pushed by Representative BERRY of South Dakota, this measure is one of the few in recent years that makes sense. It provides incentives for the establishment of industry on Indian reservation land and employing Indians.

Most Indian legislation has always fallen down because nearly all of it has involved removal of the Indian from his own people and from his known country. This would correct this procedure and in so doing

would probably make far more worthy many existing laws, particularly those concerning education on the Indian reservation.

While there is little chance of this legislation passing this Congress, we hope that it is kept alive and seriously considered in 1961.

A Call for More Democratic and Representative Government in Taiwan

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. PORTER. Mr. Speaker, Mr. Thomas B. Dodd of Hong Kong has written an eloquent letter in the Christian Science Monitor for May 5, 1960, with respect to the need for changes in the U.S. policy toward Chiang Kai-shek and the present government of Taiwan.

Mr. Dodd applauds our recent measures with respect to an attempt to restore a measure of democracy in Korea, but he notes that in the Korean elections a sizable number of Koreans did vote for Korean officials while in Taiwan only 18 Taiwanese are permitted to join with 1,400-odd Chinese "national representatives" to "elect" Chinese officials to govern Taiwan.

He also points out that these 1,400 Chinese who are allowed to vote were themselves elected to office 13 years ago in China. This means that, at best, they may claim to represent the 2 million Chinese on Taiwan. They do not represent the 8 million Taiwanese who also have an interest in the policies of those governing Taiwan.

"The Taiwanese," according to Mr. Dodd, "have fewer voting representatives in this election than has the oversea Chinese community in San Francisco."

Our policies with respect to Taiwan need prompt and careful attention.

Under unanimous consent I am including hereafter the text of Mr. Dodd's letter:

TAIWAN, TOO?

To the CHRISTIAN SCIENCE MONITOR:

The official American rebuke administered the Rhee government for its handling of the recent Korean elections and the subsequent riots are to be heartily applauded.

Not only does the American attitude give hope to those who oppose authoritarian and unrepresentative government on principle, but for the first time in some years the United States has served notice on such governments that we are not irrevocably, unconditionally, or unavoidably committed to their support; that on the contrary, we believe American support for any foreign government can be effective and in the long-range American interest only so long as the government in question has the collateral support of its own people.

Only did the timing of the American action leave something to be desired. Why was it necessary to await the outbreak of riots before making clear our stand on a matter which is essentially one of principle? Have we not now perhaps established a precedent in favor or riots? Have we not told Asians in so many words: "If you are seeking our support for political reform in your country you will have to demonstrate the urgent need for such reforms through insurrection?"

If this becomes the generally accepted interpretation of the American action, then we can certainly expect more riots in this part of the world.

Taiwan, for example, presents one of the most riot-fraught spectacles in Asia if riot-potential is henceforth to be measured in terms of absence of democracy. Elections are now in progress in Taiwan for the President and Vice President of the Republic of China. But in numbers of voters participating they are demonstrably even less democratic than those which took place in Korea.

At least it can be said of the Korean elections that sizable numbers of Koreans voted for Korean officials. But this is not the case in Taiwan. In the Taiwanese elections 18 Taiwanese will be permitted to join with 1,400-odd Chinese "national representatives" to "elect" Chinese officials to an exiled Chinese Government which currently wields de facto but unwelcome sway over the island of Taiwan. (The one-party Chinese element has of course picked the candidates for President and Vice President in advance.)

Note, too, that the 1,400 Chinese voting in this election were themselves elected to office 13 years ago in China. It seems rather doubtful that they can, today, still speak with authority for the people of China. They have, of course, never pretended to speak for the people of Taiwan. At best they may claim to represent the Chinese element on Taiwan but to do so is to admit openly that the island's 2 million Chinese enjoy representation 75 times stronger that the island's 8 million Taiwanese.

By way of a final it-would-be-funny-if-it-were-not-so-sad highlight, this fact: The Taiwanese have fewer voting representatives in this election than has the oversea Chinese community in San Francisco.

In this island country where historical tradition is one of a "rising every 3 years, a rebellion every 5," news of the Korean affair and other reaction to it must be falling on rather attentive ears. The Taiwanese rose in 1947 against the same government which now sits it Taipei—at a cost of 10,000 Taiwanese lives. It would be tragic indeed were we to wait for a repetition of this massacre before calling for more democratic and representative government in Taiwan.

THOMAS B. DODD.

HONG KONG.

Geography and the New York Times

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 31, 1960

Mr. HUDDLESTON. Mr. Speaker, in its June 1, 1960, issue, the New York Times carries, on page C–31, a map showing the Times' version of the Southeastern States of the United States. The map is used in connection with a story on the Supreme Court decisions on the tidelands oil cases it has just decided.

This map labels my State of Alabama as "Mississippi" and "Alabama" is inscribed on what is actually the State of Mississippi. Then, compounding the error, the Times' map places the city of Birmingham in the center of that State which should be identified as Mississippi, and leaves the cities of Montgomery and Mobile located in the State which it names "Mississippi."

That a newspaper which prides itself, and accepts praise, for always being accurate should display such apparent ignorance of geography is, in my opinion, simply amazing.

Mr. Speaker, as my colleagues know, several weeks ago I presented evidence in another connection which showed that the New York Times is, in contrast to an ethereal belief held by some, far from being infallible. May I emphasize that I did not merely employ harsh epithets to indicate that the Times, in two articles which it published about Birmingham had, in my strong opinion, breached the ethics of responsible journalism. I cited facts, and I cited them, among other instances, in a four-page letter to the editor of the Times. My colleagues may be interested to know that that letter, aside from not being published, was never even acknowledged.

In any event, after the Times published a purportedly factual account of what was going on in the city of Birmingham and the State of Alabama, under the byline of Reporter Harrison Salisbury, it now turns out that the Times apparently does not even know where Birmingham and Alabama are located.

I just want to say, Mr. Speaker, that as the New York Times continues to display incredible carelessness in drawing maps and reporting the news, there is little wonder that its once fine reputation is fast diminishing.

Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks, I submit herewith two articles written by Mr. Harry Farrell, political editor of the San Jose Mercury News, regarding the recent hearings of the Un-American Activities Committee in San Francisco. The article entitled "Riots at San Francisco Hearings Deliberately Planned" was printed on May 22, and "Committee Hearing Evaluated" appeared on May 23.

I submit these articles as a splendid example of objective reporting in a reputable newspaper.

[From the San Jose Mercury News, May 22, 1960]

RIOTS AT SAN FRANCISCO HEARINGS DELIBERATELY PLANNED

(By Harry Farrell)

It is high time that some of the aspects of the Un-American Activities hearings which rocked San Francisco last weekend were viewed in perspective.

In the wake of the hearings and the accompanying riot (which hospitalized a dozen persons including eight policemen), there has arisen a great uproar against "police brutality."

VIOLENCE

This writer sat all through 3 days of the hearings and was an eyewitness to the mob violence in the San Francisco City Hall rotunda, though not to the specific incident that touched it off.

One obvious circumstance, it seems to me, overrides all others in assessing the rights and wrongs of the situation.

In the eyes of any reasonable and seasoned observer, the riot and many of the disturbances which preceded and followed it—both within and without the committee room—were deliberate, planned uprising against law and order.

It is the height of naivete or insincerity to argue that the demonstration preceding the riot was merely a legitimate exercise of the rights of peaceable assembly and petition for redress of grievances.

For one thing, it was not peaceable. Chanting, shouting, singing and jeering echoed throughout the City Hall, for hours, disrupting public business.

Too many insults and shouts of ridicule came right on cue—like dialog in a play—to make any claim of spontaneity credible.

This is not to say that all the demonstrators were Communists. Most were obviously students, fired up with well-meaning zeal for civil liberties, and used shamefully by tough, seasoned agitators with no such high motivations.

Neither can it be said with certainty that the police were blameless in the way they handled the uprising.

S. F. Chief Thomas Cahill testified after the riot that it erupted when a demonstrator grabbed an officer's club and hit him on the head with it. The chief was called a liar by Vincent Hallinan, San Francisco's well-known leftwing lawyer, who counseled several committee witnesses.

As mentioned earlier, I did not see the immediate incident that triggered the violence. I have no reason to doubt Cahill, but I cannot support his testimony from personal observation.

It is entirely possible, I think, that certain individual officers got rougher than they had to be.

But certainly, if any group ever asked for rough play, it was the gang that camped outside the door of the hearing room. The mob of 200 or so goaded and taunted the police and defied every peaceful appeal before and after the violence started. Anyone not looking for trouble could have avoided it.

[From the San Jose Mercury News, May 23, 1960]

COMMITTEE HEARING EVALUATED

(By Harry Farrell)

Both the champions of the House Un-American Activities Committee and its detractors tend to get overemotional when they discuss its operation.

After watching its subcommittee for 3 days in San Francisco, this writer finds that the passionate denunciations of those who cry "witch hunters" and "Red baiters" leave him pretty cold.

On the other hand, there are aspects of the committee's procedure which could stand a lot of tightening up.

TOUGH

It is hard to differentiate between the complaints of sincere Americans who see in the committee a threat to civil liberties and the hypocritical tirades of its Red-tainted enemies.

The most disturbing complaint is that the committee might subpena a person totally uninvolved in communism and blacken his name by the mere act of calling him.

Conceivably it could. But there is evidence that it knows its people pretty well before it calls them. How else can one account for San Francisco's "fifth amendment parade" wherein witness after witness refused on grounds of self-incrimination to answer questions about Communist affiliation?

If the witnesses were called indiscriminately, it seems at least one of the 40-odd would have protested: "You've got the wrong man. I have nothing to hide."

PROSECUTOR

Yet the committee and its staff, it seemed to this writer, invite some deserved criticism.

The interrogation technique of its staff director, Richard Arens, was far from that of an objective truthsecker. His tone, manner, his phraseology were those of the prosecutor.

Arens could not seem to resist the temptation to insert little barbs into his questioning.

Once he sneered: "We have had witnesses that would make these people here look like creampuffs."

EXPERIENCE

We have had more than a little experience ourselves in tossing embarrassing questions to people. Just last week in fact, we had to ask the very question Arens asked time after time: "Are you now or have you ever been a member of the Communist Party?"

It would seem to us that a congressional investigator, in a sensitive spot like Arens', would do well to lean over backward to avoid the prosecutor's manner.

This is not to say that Arens lacks provocation. Indeed many of those at the hearings thought he demonstrated great restraint by managing to keep his temper at all in the face of vituperative personal attacks by the witnesses.

Eloy Alfaro International Foundation

EXTENSION OF REMARKS

OF

HON. ROBERT R. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. BARRY. Mr. Speaker, I have been asked to insert the highlights of the proceedings of the Eloy Alfaro International Foundation of the Republic of Panama, on the occasion of the reception and ceremony, at the Sheraton-Carlton Hotel, Washington, D.C., at which an award was made to Mr. Brown by Gen. Jacob L. Devers, U.S. Army, retired. This high honor has been bestowed on such distinguished Americans as President Eisenhower, former President Truman, and Governor Rockefeller.

The invocation was delivered by the Very Reverend Edward B. Bunn, S.J., president of Georgetown University, who also delivered the benediction.

Mr. Irving V. Gellis, deputy American provost, read a cable from the Honorable Olmedo Alfaro, secretary general of the foundation, authorizing the ceremony and conveying his personal greetings to all those assembled. Mr. Gellis then introduced Dr. Herman A. Bayern, American provost, who outlined the background of the foundation. Dr. Bayern said, in part:

The foundation was authorized by decree of the President of the Republic of Panama on January 22, 1949, to perpetuate the memory of Eloy Alfaro, martyred ex-President of Ecuador, a movement which has been devoted to the task of encouraging the study and propagation of the liberal ideals and principles for which this Ecuadoran statesman and leader fought during more than a half century.

General Alfaro was a soldier, patriot, statesman, and martyr; a citizen not only of his native Ecuador, but of all the Americas. The personal integrity, the unwavering defense of the principles of truth, justice, and friendship among nations that marked about one-quarter of a century of unflagging service to his fellow man extended beyond the confines of his own country, Ecuador. He is recognized as a leader of a generation fired with the hope and desire that responsible political action would enhance the prosperity of their country and the welfare of their people. General Alfaro advanced the cause of his nation by setting up the judicial system and expanded her schools and colleges and other institutions of learning.

Following additional remarks, Dr. Bayern called on General Devers, who presented Mr. Brown with the Eloy Alfaro Grand Cross and diploma. In conferring the presentation, General Devers said, as follows:

SPEECH OF GEN. JACOB L. DEVERS, U.S. ARMY, RETIRED, CONFERRING THE ELOY ALFARO GRAND CROSS ON THE HONORABLE FRANCIS C. BROWN, PRESIDENT OF SCHERING CORP., ON MONDAY, MAY 16, 1960

Hon. Francis C. Brown, Dr. Bayern, Mr. Gellis, guests and friends, this is a meaningful occasion. Four factors, each significant in itself, contribute to its significance. They are:

First, the life of that unforgettable man, Eloy Alfaro.

Second, the aims and activities of the international foundation which bears his name.

Third, the world situation which exists on this 16th day of May 1960.

Fourth, the selection of the Honorable Francis C. Brown as the individual in whose honor we have assembled here.

To understand the significance of the selection of Mr. Brown as recipient of the Eloy Alfaro Grand Cross and Diploma we must consider the first three factors.

It is said of Gen. Eloy Alfaro that his life was dedicated to two things—service to his fellow human beings, and the cause of international peace. I have said there are two things—but actually they are one—for it follows as the day the night that he whose life is dedicated to the service of his fellow human beings cannot but be dedicated to the cause of international peace.

Dr. Bayern has set forth the aims and purposes of the foundation. Translated from the the Spanish, the diploma reads: "Thus one goes to the stars"—a poetic description of the way of men whose selflessness has lifted them from the level of routine living to the heights of noble achievement.

There is an ancient story which clearly illustrates what I am trying to convey. Some 2,000 years ago a lawyer once asked a teacher how to achieve these heights—how, in the words of the foundation diploma, to "go to the stars"—and the teacher replied that the way to achieve this end was to love God and to love his neighbor. Asked to define the word "neighbor"—the teacher told the story of the good Samaritan. The central truth of this parable is that one's neighbor is anyone who stands in need of help. One goes to the stars by seeking, and by recognizing, and by fulfilling opportunities to be of service to one's fellow man. As I see it, this was General Alfaro's way of life, and the foundation seeks to perpetuate his memory and to encourage emulation of that way of life by bestowing its diploma upon those who live in

like manner. It follows, too, that he who is faithful in little things shall be given opportunity to be faithful in great things. If the details of General Alfaro's life were known, I am sure we would learn that it was early consistency in small, quiet services to his fellow men that resulted in development of service of international scope.

This brings us to our third factor of significance in today's ceremonies—the precarious position of peace in our world today—for international peace is of primary concern to those of us in this room.

Suspicion, lust for power, trickery, greed, enmity, hatred, selfishness—all these are running rife among the nations today. All of these untoward attitudes are attitudes of men—for nations are comprised of men. How then can nations' attitudes be changed except by changing the men—and how can the men be changed? We find ourselves in the position of the lawyer in the ancient story—asking a question—and the answer is the same—by loving God and loving one's neighbor.

We today signally honor a man who knows a depth of concern for his fellow men and who, because of this concern, has led an exemplary life. The Honorable Francis Cabell Brown has, in his personal and professional activities, embodied the attributes sought by the ruling body of the foundation in its quest for a recipient worthy of its highest honor. His unswerving faith in the ideals of liberty and his tireless efforts in advancement of medical services to humanity at home and abroad, richly merit the honor he receives today.

On behalf of the Eloy Alfaro International Foundation, it is my privilege to confer this diploma, and the Eloy Alfaro Grand Cross, upon an outstanding American, the Honorable Francis C. Brown, president of Schering Corp.

ADDRESS BY FRANCIS C. BROWN, MAY 16, 1960, ON PRESENTATION OF ELOY ALFARO AWARD

I thank the council of dignitaries of the foundation most sincerely for awarding me this unique honor. I am indeed proud to be included in the roster of distinguished people who have received the Eloy Alfaro Grand Cross and Diploma. However, I must say that I accept this award with humility for it represents a standard for which I must strive as well as a recognition of any accomplishment.

The distinguished man which this organization honors with its name, General Eloy Alfaro, was dedicated to the principles of freedom which he ceaselessly struggled to obtain for his people. Precious freedoms have been won for mankind, only through determined and unselfish men who were welling to lay down their lives to obtain them. These freedoms can only withstand continuous assault through equal dedication by today's leaders. Never has the world seen a more universal yearning for freedom, peace and personal dignity among its people. Yet, instead of unity we find a world of division and uncertainty. Why is this? I think the answer is seen most clearly where the rights of individuals have yielded to the rule of the state. This is the case in totalitarian states where selfishness and hunger for power and self-perpetuation leave no room for individual liberties.

If there is one freedom which is characteristic of our hemisphere, it is freedom of the person. In general the governments of the free world hold supreme the rights of the individual.

The struggle surrounding communism today is not only economic; it is a struggle to secure and preserve the dignity of man and the freedoms basic to its maintenance. These basic freedoms were dramatically depicted for us during the last World War—freedom of speech, freedom of worship, freedom from want and freedom from fear. I am certain that most of us remember the dramatic posters put out by our Government during those trying years to remind us of these liberties. Today, however, we talk of them in abstract terms. I cannot help but wonder how many people, particularly among the youngsters, could name these basic rights of man and express them as simply as those posters.

We talk of communism with apprehension and we fear Communist governments because they openly threaten our institutions and individual liberty. Communism feeds on frustrated aspirations, hopelessness and want. If a man lives under a system which holds no better promise than emptiness, why shouldn't he embrace communism? Also, I believe that those whom we depict as "intellectual Communists" are led to their views by these same conditions; frustration of personal aspirations, a feeling of spiritual hopelessness, and want of true intellectual depth. It was a more material want which brought vast areas of the world into the iron grip of communism and which strongly lures many others who eagerly turn to those who promise freedom and happiness. We who have rarely felt the keen edge of want must nevertheless realize that we must compete with communism on the basis of eliminating disease and want in the world. However, we should be careful of the measures we use to accomplish our ends, and should endeavor to do more by encouraging private endeavor and less by congressional acts than we tend to do. We should stop and ask ourselves periodically how far we can move in our social dynamic without undermining the fabric of our social structure to such a degree that we may endanger our basic freedoms.

I would not be here today, I am sure, if it were not for my interest in international affairs and the people of other countries, born of my relationship to the pharmaceutical industry. Our industry is engaged in meeting one of the most crucial wants of man—the need to be free from pain and to be free from disease. In the light of my abiding interest in health, I can think of no more appropriate subject to emphasize than freedom for health and for health progress.

For the last 50 years we have made great progress in this country in combatting disease and since he last World War our emphasis on research in the field of health has come of age. While the Communists have been developing propellants for space vehicles which would enable them to probe the heavens and master their brothers, we have devoted our principal efforts to the more important and immediate job of making man healthier. Without health, and without food, other freedoms can have little meaning. Disease knows no geographic barrier nor language barrier and does not discriminate on the basis of color, sex or culture—nor does it respect political power. Men suffer equally from disease. Today, the newest of freedoms, freedom from disease, has achieved real and growing stature.

In step with our government-to-government and people-to-people programs, distribution of surplus foods, point four programs and the like, there are vitally important "industry-to-people programs" by which our research achievements in all fields of industry—but particularly in medicine and health—have been brought to the world.

Health care today is popular and prominent in the headlines. The politicians have "discovered" it and the manifestations of this discovery are evident in many ways. The research establishments of our Federal Government have mushroomed as each year larger appropriations have been made to support their programs administered by the National Institutes of Health. This is commendable where the money is being used for study the unknown causes of disease.

In my opinion, the proper climate for progress in health as well as other fields can only be found within the free enterprise system which has been traditional in the Western World. This is a system built on minimum Government interference in enterprise consistent with basic public needs and on the encouragement of initiative and progress through the offer of rewards. To people who owe it all their material gains, our system is, unfortunately, characterized in the minds of many as the profit system and the term is in danger of becoming one of opprobrium.

The people of East Germany today, while not so well off as those in West Germany, are living in a thriving economy but one where business has been socialized and individual liberties crushed under the iron heel of the Communist masters. One critical step in the postwar evaluation of the socialist state in East Germany was the gradual enslavement of business and the corporate enterprise by government. This was accomplished by a sequence of moves which initially made the government a partner in business and ended when the government, from its partnership vantagepoint, ousted the owners and emerged supreme.

No one questions the current need to protect our own people from exploitation, whether by industry or government. Yet, it is important for us to remember that the men who forged our Nation in the face of English oppression and at the price of their own blood, set forth their basic beliefs in the Declaration of Independence and the Constitution, that internal Government process is no less a danger to freedom than the enmity of foreign kings and empires. These men also felt it important to create incentive and stimulate innovation by providing for a patent law and copyrights, which are monopolies. Our leaders in the 19th century, drawing upon the experience of English traditions and law, took steps to secure principles of competition and protection against other and improper monopoly and illegal restraint, by writing protections into the laws of our land. Here, as always in the affairs of men, it was important to preserve a balance of power between conflicting forces in order that none would gain complete sway. Today, in the anxiety of the U.S. Congress to see disease banished and in the zeal of economic reformers to protect the public from undue exploitation, great care must be exercised lest we destroy the precious ideals we are seeking to protect by overabundance of regulations and by harsh and discouraging restraints.

Friendship follows trade and progress is made through the incentive of profit which operates to improve the products of industry just as the incentives of power, prestige, and service motivate the aspiring public servant. Those countries which have provided the incentives of patent protections, such as Germany, Great Britain, and the United States, have far outstripped in inventive progress those countries which have afforded little or no patent protection. When we hear patents criticized by our economists, we should remember that they were created to provide incentive to progress. Risks must be run with capital to make discoveries and the business disaster can be great for a misjudged step. The reward for achievement should also be reasonably good. Hope and expectation are no less driving forces for corporate achievement, invention and commerce than for the individual.

Progress in this country, not only in the field of medicine but in industry generally, has been made best under conditions of moderate competition. Cutthroat competition is praised by some impractical theorists, but it is destrucitve not only of profit but of progress and is no less dangerous than the

paralysis of monopoly. Today, in the United States, the average person lives better, eats better, and enjoys better health care than his counterparts in most nations of the world. In general, this is due to the contributions which have come from private sources; from industry operating in an atmosphere of profit incentive and reasonable competition—a condition we should do our utmost to preserve.

Free enterprise has been the most constructive force in the world for improvement of health and social standards, personal happiness, and economic well-being.

I believe it would be timely for the Congress of the United States to make a study of the current status of our basic freedoms quite apart from any specific legislative proposals and to recommend how they should be protected in every legislative endeavor in order that the concepts which gave birth to our Nation should be maintained strong and inviolate. It is time, in my opinion, for a national soul searching and appraisal, to restore traditional concepts from which we have deviated, to preserve what we have held intact and to guide our future growth by the fundamental goals of our national culture. Let us be reminded that freedom is lost by degrees. If we communize or socialize one aspect of society, we open the door to further intrusions and finally total subjugation to the philosophy of totalitarianism. The 1960's will provide opportunities for close cooperation between the American nations for continued advances from the standpoint of health and industrial progress. We of the Americas should urge our Governments to maintain and renew the strength in the Organization of the American States and a close liaison among the members of the Pan American Health Organization. This should be a total effort, based on mutual aid, cooperation, faith, and desire for common goals.

Let us, therefore, dedicate ourselves, as did General Alfaro, to protecting liberty whenever anyone's liberties are infringed; for, "there but for the grace of God go I" must be our thought when the rights of any man or organization are abused.

Electric Power: Key to Progress for the Underdeveloped Countries

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. PORTER. Mr. Speaker, this past May 4, Mr. S. L. Descartes, executive director of the Puerto Rico Water Resources Authority, in San Juan, discussed in Washington, D.C., the role he felt electric power can play in the economic development of this world's underdeveloped countries. He feels it is the key to progress.

Alex Radin, the genial and hard-working general manager of the American Public Power Association, termed Mr. Descartes' speech before the APPA, "A significant summing up of the role of public power in underdeveloped areas of the world" when I talked to him recently.

Under leave to extend my remarks in the RECORD, I include the text of Mr. Descartes' remarks, as follows:

ELECTRIC POWER: KEY TO PROGRESS FOR THE UNDERDEVELOPED COUNTRIES

(Address by S. L. Descartes, executive director, Puerto Rico Water Resources Authority, San Juan, P.R., annual convention, May 4, 1960, Shoreham Hotel Washington, D.C.)

Electric power consumption is closely related to economic development. The close relation between per capita use of electric power and industrial and economic advancement is undeniable. The clamor for more power and the well-known power shortages in many of the countries struggling against economic backwardness, corroborate the existence of this intimate relationship.

Highly industrialized countries have a high per capita consumption of electric power. For example, the annual per capita consumption in kilowatt-hours in the United States is 4,251; Western Germany, 1,819; England, 1,951; and France 1393. The consumption per person in semi-industrialized countries is much lower. Argentina has a per capita consumption of 355; Chile 630; Mexico, 285; Venezuela, 356; Cuba, 266. Puerto Rico has attained an average consumption per person of 639 kilowatt-hours.

Countries in earlier stages of economic development reveal figures such as 160 kilowatt-hours per person for Panama, 273 for Costa Rica, 41 for Guatemala, 32 for India, and 195 for the Malaya.

NOT IDLE TALK

Statements by economists and Government officials on the essentiality of a basic structure of services—without which communities cannot hope to break the vicious spiral of poverty engendering more poverty—are not idle talk. They are based on sound theory supported by proven facts in countries where the rate of economic and social progress has been faster. Electric power ranks as one of the most important components of the required basic structure of services essential to progress.

Power and light, reasonably dependable, and at reasonable cost, influence life positively in many ways. The efficiency of labor is basically the multiplication of human energy by the use of machinery. There is not a more versatile and easier way of multiplying strength than by the use of electric power. The existence of central stations ready to supply power reduces the required investment of the private entrepreneur. This may well be a decisive factor in the initiation of projects since capital scarcity is almost always present in underdeveloped economies.

But it is not only industry and commerce that are facilitated by the availability of electric power. Nor are the growth of industry and productive activity the only goals of economic development nor the means to assure a continued advancement. The basic aim of industrial and economic growth is the improvement of living conditions, the overall improvement of man to enable him to fully develop himself and the potential of his environment. The overall improvement of man is the only sound assurance of continued development. The extent to which health, and the social and intellectual life of every community are bound to electric power is so large and varied that it is difficult to conceive of our way of life without it.

LOW-COST ELECTRIC POWER STIMULATES ECONOMIC DEVELOPMENT

Electric power at reasonable cost is one of the most powerful supports of health and adequate nutrition everywhere. In tropical or semitropical regions, where many of the countries engaged in economic development programs are located, this relationship is even closer.

Man develops through education, through the formal or informal acquisition of information, attitudes, techniques, and values. A sense of participation in the affairs of his community, his country, and the world's life is essential to growth. Reading in the evening and radio—and already in semideveloped countries, television—are all greatly facilitated by widely available power at low cost.

For us, who are fortunate to live in this large and prosperous country, these arguments about the relationship between power and economic growth in developing countries in southeast Asia, Africa, or even Latin America, sound remote and theoretical.

It is hard to visualize how different, how limited as compared to our own, are conditions in those countries. For this reason, it is desirable to bring our own firsthand experience to bear on this vital subject in our international aid programs: electric power and its influence on economic and social progress.

What happened in the Tennessee Valley? What changed that relatively poor region into a strong, productive area, proud of its contribution to peacetime prosperity and to national defense in time of war or peril of aggression? It is an old story to us how industry and economic development, and the cultural and human improvement that followed, were triggered at first and sustained later by the accessibility to abundant and economical power, accompanied by other broad regional improvement plans. The course of spectacular growth in the Northwest and in many semidesert areas in the Southwest follows closely the availability of electric power resulting from the multipurpose utilization of large river systems.

ELECTRIC POWER HELPED PUERTO RICO

Now let us take a brief look at Puerto Rico. Observers of all sorts, liberal and conservative, industrialists, bankers, and professors all agree that we have in Puerto Rico one of the outstanding examples in the world of a community sustaining over many years a high rate of economic and social progress—an average yearly increase of 6 percent per year in income after allowing for changes in the price level during the decade of the fifties. Puerto Rico has been moving forward in an orderly, balanced way, on all fronts of human improvement. Our advancement is, of course, as that of the Tennessee Valley, the result of many factors. But in Puerto Rico, as in the Tennessee Valley region, it stands out that electric power has been available: dependable power, with no shortages, and allowing for differences in the basic situation, at low cost in both areas. In both areas power has been made available to the people, by the people themselves, acting through their government, in a concerted action to improve themselves.

But there is still another instance of the influence of electric power on the improvement of one sector of our society. This experience is widely diffused throughout the entire country and most of us have visible proof of it by riding a few miles away from our cities. I refer to rural electrification. The problems of keeping the agricultural sector of any economy from lagging behind the fast moving industrial and trading sectors—mostly urban—is extremely difficult in all countries. The period of the thirties, with its tragic disparity in living conditions and in productivity between the agricultural and other sectors, is still vivid in the memories of most of us.

One of the greatest farm development and welfare programs this country has ever conceived was inaugurated then: the Rural Electrification Administration and the Rural Electric Cooperatives movement. We still have a farm problem, but living conditions in our rural areas and farm productivity have advanced so much that the character of our farm problem today is quite different from what it was.

Are these next-door, familiar experiences of what has happened when power at reasonable cost has been made available in this, the most prosperous country in the world, transferable to our international aid programs to promote economic development in other countries? I hold that they are.

The Tennessee Valley Authority, that of the Puerto Rico Water Resources Authority, and of the Rural Electrification Administration are examples, among many others, that have brought about a clear-cut demonstration of the influence on economic development of making power available at low cost. Let us now search for the common elements in these examples.

First, these programs or institutions were all conceived and pushed forward by men with a firm conviction that if power at reasonable cost is made available it will promote growth. Power would tend to create its own markets, and help move forward the entire community or group. There must be equal conviction, zeal, assurance, willingness to surmount the many obstacles that always arise, and push forward to a well-defined objective in pushing this idea for the benefit of less fortunate peoples in other countries.

Direct grants to finance power supply expansion, or the creation of conditions that make possible such financing at low interest cost with long repayment terms, is another common element. Provision was made in some cases for technical and management help to the new users of power.

In all cases planning for expansion was conducted on a sound but confident basis. Power demand estimates recognized the self-growth generated by the very availability of power. The need for plant was not foolishly overstated, but estimates were neither pettily nor timidly made. The Rural Electrification Administration, for instance, has been willing to accept financing requests based on projects conceived on those bases. And, for that matter, so have the private buyers of revenue bonds done and are doing.

In brief, financing to build adequately forecasted demand, has been available in all these examples either by grant to be returned later or through loans at low interest cost, payable over a long number of years. It would be difficult to overestimate the importance of these two factors in the creation of adequate electric power services. If they were needed in this country, so generously endowed with natural and human resources, isn't it logical that they are even more urgently needed in less fortunate areas?

A word of caution here. If an economic development program is successful demand estimates would tend to fall short of actual demand. This was our experience in Puerto Rico until 2 or 3 years ago when the criteria for demand planning had to be revised upward significantly. It is my understanding that this has been the experience in other places where similar situations of successful development have occurred. In most countries at the semi-industrial or intermediate stages of development the provision of power facilities must start by meeting already staggering shortages of power. This is the case in practically all Latin American countries.

THE CASE FOR PARTNERSHIP DEVELOPMENT

There has been much talk in the United States of the need for partnership arrangements. Let us first acknowledge that publicly owned electric utilities in the United States have grown in many areas under very real partnerships. The Department of Water and Power of the City of Los Angeles and the Puerto Rico Water Resources Authority, as well as hundreds of other publicly owned electric utilities, which finance their growth through the sale of revenue bonds, are de facto partnerships of the private investors and the public.

They are partnerships in which the consumer-owned electric utilities retain powers of ultimate decision while the private investors retain the right to see that funds are invested as pledged and that the plant, and the required rate structure are maintained to assure legitimate creditor interests. These arangements are sound, generally accepted, respectable, and enjoy great favor in financial circles. They certainly point the way as to what to do elsewhere.

Equal instances, or even more advanced concepts of joint efforts by all sectors of the community to provide adequate power supplies are found in Latin America. A noteworthy contribution is the "mixed corporation" in which private electric utilities, private investors, private industry, the government as such directly, or the government through public financing or developmental agencies, participate in financing and in management. Huge hydroelectric developments are underway in Brazil under this institutional pattern.

We are very conscious, and this has been learned by painful experience, that publicly owned electric utilities require a climate of political discipline that allows for sound management, free from the demands of partisan political patronage. The absence of such discipline is always pointed out as a deterrent very generally found in countries undergoing development. This requirement, that we have been successful in substantially achieving in most regions in this country, is being also gradually achieved in many others. The mixed corporation pattern used in Latin America is also an institutional arrangement that contributes to the achievement of sound management. Its management policies are determined by a board in which the private sector, experienced and considered less vulnerable to partisan pressure, is represented.

There are some countries in Latin America where the foreign-owned, privately operated, generally well run electric utilities, with a trained cadre, are cooperating to provide power in the desired scale for the national welfare with the newer, enthusiastic, public agencies, with some capital, perhaps technically shorthanded, and with less management knowledge. This is happening, for example, in Costa Rica, Mexico, El Salvador, and Brazil and points to another way in which diverse organizations are complementing each other for a common good.

This cooperation requires firm but just government leadership. On the other hand, it requires that financial or aid agencies be equally firm but fair, unencumbered by inclinations toward either side. In many places, Panama at present may be an example, such a joint approach may be essential because of previous discouraging experiences with public management.

THE FINANCING FACTOR: HOW CAN IT BE DONE

It is unfair and unrealistic to expect foreign private investors to commit the large amounts of capital required in the power industry at low cost in a far away country with attendant risks. There is, therefore, a field for financial cooperation between local government capital and the United States or international financing agencies. In most of the developing countries there is more acute need for low interest rates and long repayment periods for electric power development than there ever was in our own country even during the depth of the depression of the thirties.

Privately operated foreign-owned companies can make a real contribution to power expansion in developing countries under fair arrangements, in the distribution field, or perhaps in the less advanced places through management contracts in the operation of publicly owned facilities, or in carrying out specified construction projects. In the achievement of the objective of the desirable cooperation betwen foreign-owned private electric utilities and local governments to increase power availability, contracts for the sale of power to the private companies, and workable laws regulating the electric industry, have proved successful in some countries in Latin America. A good beginning has been made in some countries but there is opportunity for great improvement in the field of simplifying and making fairer the provisions of regulatory legislation.

In this broad and vital field of power supply to foster economic development and the related aspects of management of electric utilities and regulation of the industry, men like you, who have formed your views in sound, practical operation, guided by the principle of service at the lowest possible cost for the welfare of the community, are a logical source for advisers.

You would find in many of the countries in Latin America where I have had direct experience that some of the most dedicated, outstanding public servants in Latin America are found in the publicly owned electric utilities; basically the same type of men of vision, motivated by the same ideals, as those who created the great publicly owned power systems in the United States.

PROGRESS THROUGH LOW-COST POWER

We have also found by experience that the low cost of power is a very important element in promoting its use and speeding up progress. We have found, however, that if this low-cost power is to be on a sound basis it must arise out of low-interest cost, long repayment periods, or even outright grants if possible and desired, to finance construction. Of course, sound but economical plant engineering, efficient management, and good promotional programs are also needed.

We have found also it is a folly to attempt over the long pull to maintain rate levels that do not meet operating costs and meet financial obligations. The need for adherence to a cost-of-service policy must also be conveyed to the less experienced countries.

I hold that little, if anything, new is needed, definitely no newfangled theories or ideas, to guide our national policy in helping to provide the power essential to economic and social development in less advanced countries. Time-tested principles which have been successful throughout this vast and diverse country, throughout the West, in California, in Nebraska, in the Northwest, in Puerto Rico, and throughout almost all the States in the great program of the Rural Electrification Administration and of the Rural Cooperatives movement, have equal validity elsewhere.

There are differences between people and communities—that call for differences in details of approach or in institutional forms—but let us, also, in guiding our aid programs in the electric power field remember that some of the same charges of apathy, lethargy, lack of maturity, which are used to explain so many things, were unjustly leveled against the good people in our own depressed areas. There is almost nothing about the shortcomings of any people, of the deficiencies of political institutions in any semideveloped country that I did not hear expressed at some time or another—part of it in very learned reports—about our own shortcomings in Puerto Rico.

LET'S KEEP MOVING

Our national differences on details of internal policy—such as about areas to be served, distribution of tax burden and others—as between the publicly and privately owned electric utilities have no place in our aid programs. The private versus public power controversy among us, in this fully developed country, should not influence our international aid programs. Such programs have a good enough base in our well-tried-out, generally accepted principles and tra-

ditions as to do, by whomsoever can do it effectively, a job that needs to be done. This is a part of our American heritage which will strike a responsive chord throughout the world in all areas in which men are engaged in fighting poverty.

It is my belief that the necessary and just accommodations between conflicting interests can be found by the people of the underdeveloped countries, in very similar ways to those we have found in this country. In many, this is being done already. Our experience and success in living together despite our differences, and all contributing to our well-being, transmitted with tact, wisdom and intelligence, without prejudices, as we can surely do, may even help to accelerate the achievement of this accommodation.

Summing up: In our rich experience in aiding our own regions, communities or sectors of our economy in need of help, by providing conditions favorable to the creation of electric power supply at low cost, we have both the inspiration and the sound practice of incalculable worth in fulfilling the great responsibility of helping others beyond our borders to improve themselves, that we have so wisely assumed.

Grassroots Support for Eisenhower

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. SCHWENGEL. Mr. Speaker, in all of the hubbub which has been created because of the U–2 incident and the collapse of the ill-fated summit meeting, we are apt to lose our perspective and cloud the issue with political charges and wild statements which have no actual bearing on the real significance of this event.

As an indication that the people at the grassroots level are often more objective about national affairs, I would like to quote from a letter which I received from one of my constituents.

The writer of the letter is Mr. Frank Engel, of Davenport, Iowa. Mr. Engel is a recognized leader in the Democratic Party, not only in Scott County, Iowa, but across the Hawkeye State as well. He is a former member of the Iowa Legislature and has also served on the Iowa Employment Security Commission. He has every reason to be as partisan as any Democrat who wishes to read into these events a failure on the part of the administration to protect the public interest. The fact that he rose above this and stated his feelings as an American is significant and I trust that his words will have an influence on some of the members of his party who always have a tendency to put their party first.

Excerpts from Mr. Engel's letter follow:

DAVENPORT, IOWA, *May 20, 1960.*

DEAR FRED: The Paris collapse of the summit meeting has taken most of the front pages. Perhaps the United States was caught in the act of a little spying, but on the other hand the Russians have committed so many hostile actions during the past years since World War II, one wonders why they made such a great fuss. Khrushchev certainly displayed his real feelings toward the United States of America. If he was so sincerely interested in preserving world peace he would have acted differently. As a result he has revealed himself and in effect united Americans against the Russians instead. Actually, I believe we have come out ahead, because if the summit conference had come off without this plane incident, we might have been taken in by the insincere Russians with their communistic philosophy. It is their great purpose to sovietize the world into a state of international communism. Wherever and whenever they have taken command they have permitted no other point of view, no other way of life. They have established and maintained their system by the use of force, not liberty. I have always felt they understood and respected only one language—force. Therefore, how can one appeal to them on a basis of morality and human liberties? They are an immoral force in the world. We should go right ahead with our own military defenses since that is the only thing that will deter them in their efforts. It is the only thing that has deterred them up to now.

You should well remember how the propaganda was used in both World War I and II. (First that the Kaiser wanted to come over here and then that Hitler wanted to do it.) Germany wanted to get back territory that was lost. The Nazi party was not built to establish a political system for the entire world nor a philosophy of life for the United States. The strip of land dividing Germany then known as the Polish Corridor was what led to war you will recall, when Hitler invaded Poland. Now we are faced with a real threat to our way of life. For the first time. If any of the numerous hostile acts of the Russians had been committed by the Germans during the time of the second World War, we would have gone to war sooner. We have taken it from the Russians repeatedly, however. Since the realization occurs now to everyone here that a third war might bring death and destruction to our own land, the American people are not so anxious for war. It's quite different from sending the boys over to European battlefields while the rest stay at home to wave flags and make big money. Eisenhower having been a military man will not sell our defenses short in the interests of communism by listening too much to idealists who think the Communists can be wooed with homogeneity, love of humanity and other wild dreams of a convocation of orderliness, cooperation, deference, respect and smoothness.

As the President said, we can probably expect more "incidents" to occur from now on, in the Russian push to drive forward the Soviet system.

Write soon and best wishes, as ever.

FRANK L. ENGEL.

Social Progress—The Record

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mrs. ST. GEORGE. Mr. Speaker, we are now gravitating toward that period with which we are all too familiar. It starts out slowly as campaign oratory and then ascends to a peak of charges and countercharges that are generally quite irresponsible.

Social progress is, of course, a question that interests all Americans, regardless of political affiliation, and for that reason the following article appearing in the Wall Street Journal of May 31 is both timely and factual.

The record made in social progress in the last decade is one of which we can all be proud. At this time in our history it is important that we as Americans should be proud of our country and of what we have done to promote the more abundant life and social progress for the individual:

SOCIAL PROGRESS—THE RECORD

The more ardent liberals in this country have been decrying for some time now what they consider to be the lack of social progress in the last decade. We are spending too much on the good life, these people say, and we are not fulfilling our obligation to provide better schools, roads and other public facilities that the Nation needs.

Well, let's examine the charge that social progress has faltered during the last 10 years, the phrase being taken here as a synonym for promoting the general welfare.

The States and communities have built more new schools since 1950 than in any other decade in history. New schools, the liberals must concede, represent social progress.

The States have built more and better roads since 1950 than the most shining-eyed planner ever dreamed about 25 years ago. Turnpikes, parkways, and conventional highways add up to social progress.

The number of Americans now gainfully employed exceeds by millions the most optimistic goal of the liberals less than 15 years ago. These same Americans are working under better conditions, are making more money, live in better homes, and have a higher living standard generally than their counterparts in any previous period of history. Millions of them are enjoying their new family cars—the tail-fin-hating liberals notwithstanding. Ask a worker if he thinks that's social progress.

Industry is still in the process of expanding and decentralizing, with the effect of both enlarging and spreading its benefits throughout the whole country, bringing with it new opportunities for all the people. This, too, is social progress.

Scientific and social gains made since 1950 in the field of medical care are unequaled in history. There are more private health insurance plans, more community clinics and, as reported in this newspaper the other day, more State sponsored medical benefits available to more Americans than ever before.

Private insurance and company pension and profit-sharing funds permit increasing numbers of older people to face the prospect of retirement with less financial worry.

While not all citizens have been able to share fully in this great progress, there can be no question that minority groups have made significant social gains in the last decade; certainly these groups are in a far better position than they were just a generation ago.

And while moving ahead in the social and economic fields, the Nation has made important advances on a related front. Cultural advantages, long denied so many sections of this big country, have been provided for almost every American. Television, for all its twaddle, has offered Shakespeare and opera and major league baseball to people who previously knew little of these. And the problems television has brought are the problems of progress.

There is no intention here to deny that our society is far from perfect, that we need more schools, more roads, a higher standard of living in some sectors, more industrial expansion, equality under the law for all citizens, cheaper and more available medical care, and a good deal less drivel on our TV sets.

But who, looking honestly at the decade 1950–60, can say it has not given the people a greater chance to fulfill themselves, a higher hook to hang their hopes upon? So what, then, do they mean, those who say there's been a lack of social progress these past 10 years?

Actually, they do not deny the progress. What they really decry is that the progress has been made in what they consider a haphazard and unplanned way, without the Federal Government in total command. They are angry because the American people have sought a cure for social ills—and, indeed, have successfully treated many of them—without yet handing over all our troubles to Washington.

The record of the past decade shows that individuals, working with their State governments and in their local communities, can accomplish more in a more orderly fashion than by any series of dicta laid down by a distant bureaucratic complex. This record is all the more remarkable when you consider that it has been done in the face of inflation created by the Federal Government and in spite of the heavy tax burdens laid upon the people by that same Central Government.

So perhaps in those who deride our society for its ills there is as much frustration as anger. For after a decade of unprecedented social progress they can no longer mount their soapboxes and point a wrathful finger at the bread lines. They can only complain that America produces an abundance of bread without following their recipe.

This Nation, Under God, Shall Not Perish

EXTENSION OF REMARKS

OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. MOORE. Mr. Speaker, during the Memorial Day weekend, a number of Members, including myself, made memorial addresses in our respective districts participating along with community leaders and veterans' organizations. Significantly, in this great country of ours, Memorial Day is also the subject matter of many sermons from the pulpits of all denominations in our country.

A very sincere friend of mine, the Reverend John F. Streng, of St. James Evangelican Lutheran Church of West Virginia, has always devoted a great deal of time in the preparation of his Sunday memorial address. I respectfully submit this speech for inclusion in the Appendix of the RECORD for the benefit of my colleagues:

THIS NATION, UNDER GOD, SHALL NOT PERISH

One hundred seventy-five million Americans approach another date with destiny. Memorial Day 1960 dawns upon us in peaceful and prosperous surroundings because an all-seeing God and a vigilant Government have kept watch o'er the ramparts. From Alaska to Texas, Maine to California, all branches of the military are on the march. Their ceaseless alert reminds citizens and Communists that we shall not break faith with sleeping comrades.

FAMOUS WORDS LIVE ON

Holy principles and promises hallow this day with halos and hallmarks of freedom. A strong chain of spoken, outspoken, and unspoken warnings twines its chords about our national life.

More challenging than ever are the thoughts expressed in the immortal Gettysburg Address. Abraham Lincoln's voice still startles thousands of complacent citizens: "It is for us, the living, rather to be dedicated here to the unfinished task which they who fought here have thus far so nobly advanced. It is for us to be dedicated to the great task remaining before us; that from these honored dead we take increased devotion to that cause for which they gave their last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, and for the people, shall not perish from the earth."

A government can rise no higher than its source or resources. No law, however strong, can make the idle industrious, the thriftless provident, the shiftless steadfast. We walk today amid death dealing sky rockets pointed toward Heaven from which cometh our help. America's journalistic nerves and radar receivers criss-cross strategically to intercept and interpret every whisper made somewhere in the world. Charges and countercharges fill spools of microfilmed documents blassified for future reference. Citizens have been subjected to minute investigation by inference, ink, identity, and ideology.

WISDOM DESERVES A HEARING

The illustrious Thomas Jefferson once said: "Liberty can never be safe but in the hands of the people themselves." George Washington is said to have given orders: "Make sure that none but Americans stand guard tonight." The people, through prudence and wisdom, righteousness, and brotherhood, must govern themselves. They make and break the law. They must establish justice and equality, keep the mountains free and valleys secure.

God has made America a rich and powerful nation. Such honor demands relentless watchfulness. Leadership demands statesmanship. We have become the world's friend and foe. Millions are either praying and paying for liberty or they are cursing the mighty American leviathan, a supposed monster monarch in sheep's clothing.

We have the duty to chart a course for generations unborn. Veterans of World War I were urged "to make the world safe for democracy." Their sons in World War II were told to save the Republic. Their sons of Korean "police action" fame were reminded to stand fast. So history carves its indelible mark of sweat and blood upon each generation.

Swords and plowshares have never mixed well. Atomic arsenals cannot be readily converted into auditoriums of peace on earth and goodwill among men. "In God we trust," say our coin to all the world. But do we? Do the people believe what they see and read daily? Then let liberty and life and the pursuit of happiness be equally important on Memorial Day with picnics, auto races, and ball games. Freedom never has been free.

LEST WE FORGET

This is the day when Gold Star mothers rekindle fading moments of agony; when paralysed veterans lie all but forgotten on hospital cots; when national cemeteries circling the globe echo to the tramping ritual of General Logan's order. No American has the right to forget its significance.

How quickly nature's wounds heal and ugly battlescars are transformed into gleaming thoroughfares of trade and glistening skyscrapers rise above the ruins of shattered cities. Political and military leaders concur that a spiritual rededication is paramount. Churches are pleading for the citizens' return to obedience to God. What chance has the Voice of Righteousness amid a babel of deafening clatter of the platters. Americans want to celebrate more than they want anything. The urge to "eat, drink, and be merry" has lost none of its charm.

There is no safety in weapons. Both freedom and slavery are built upon ideas. Neither can be annihilated with hot lead or steel or nerve gas. As leaders think so goes the Nation. Thoughts are the most potent weapons ever forged.

Three gigantic forces mold public opinion: the press, the Government, the citizen. Individually they would be hard pressed to change the course of history. But together they cast the deciding vote in the Halls of Congress. The Government is you and I. The press is what you think. The citizens are people from all walks of life.

The average American has two supreme desires: (1) security, for today and tomorrow; (2) savings, for old age. Both are noble aims. Neither is guaranteed through collective bargaining or the dole. They must be earned with sweat and blood and eternal vigilance. The best things in life, like honesty, integrity, church, liberty are free only to the extent that each of us is worthy to accept and use them.

WHO WILL WIN?

Communism is a contagious idea engulfing world thinking. Christianity is a loftier idea for it promotes brotherhood through individual rights. The two are irreconcilable. One will take over. America is still fortunate to choose. If we believe that Jesus Christ died to make men holy as He died to make men free, we have made our choice.

Our fathers brought forth upon this continent a new Nation dedicated to the proposition that all men are created equal. This precept is the last bulwark between the land of the free and the home of the slave.

The Chinese sage said: "It is better to light one candle than to curse the darkness." One law-abiding citizen, laboring and praying for freedom is worth a thousand critics who curse government but make no constructive amends.

Citizens love rights. Citizens must assume obligations, too. Both hang in the balance. Nowhere does the Constitution provide that only patriotic and military groups are in duty bound to defend the country. Woodrow Wilson said: "The sum of the whole matter is that our civilization cannot survive materially unless it is redeemed spiritually. It can be saved only by being permeated with the spirit of the Lord." He would not find unanimous agreement today.

"The finest tribute we can pay unto our hero dead today is not of speech or roses red; but living throbbing hearts instead that shall renew the pledge they sealed with us upon the battlefield: that freedom's flag shall bear no stain and freemen wear no tyrant's chain."

May all Americans again learn to sing our national anthem. May there be renewed respect for the colors passing by. May groups increase who provide generous scholarships for outstanding citizenship essays.

The Declaration of Independence states: "We hold these truths to be self-evident." That is a mandate to America to read and study and obey the Constitution.

Sapt. Joseph E. Lally, Jr., USAF, 9552d Air Reserve Squadron, Wheeling, W. Va., addressing a Rotary Club meeting, March 29, 1960, quoted Lt. Col. K. P. Kelley, USAF, writing in the Pittsburgher, March 1960: "You may remember a World War II poster which portrayed a marine charging, bayonet in hand. He was muddy, bloody, and bandaged. The poster didn't say anything about pay, opportunities for civilian career advancement, or retirement. It said simply, "Fight."

"I have just returned from a tour in a troubled oversea area. There I came to know

the enemy at firsthand. He is formidable, dedicated, and he numbers several hundred millions. His purpose, despite his great number, is singular—to take away all that we have, and to destroy all that we believe in.

"As an American, I not only have a basic faith in the best system of government which man has yet devised, but I have a basic faith in the individual himself. * * * I've found that the best prediction of future performance is past performance * * * and most of you have been there before. I believe that you are ready because you have the social consciousness, the dedication to your beliefs, the will, and the plain old guts to fight again if you're needed. And that's why I'm proud to be your center commander."

With such inspired and inspiring dedication aloft, ashore, afloat, aboard, and abroad today, those who sleep shall not have died in vain. From 13 to 50 stars—we proudly hail at the twilight's last gleaming, Old Glory. As of 1960 these colors are guaranteed not to run—not for anybody. Let's keep it that way.

Let's Swear Off Summitry

EXTENSION OF REMARKS
OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. BOSCH. Mr. Speaker, since first coming to Congress in January 1953, I have each Congress introduced legislation for the complete disclosure of each and every commitment made at the Yalta, Teheran, and Potsdam Conferences. The resolution introduced in this Congress is House Concurrent Resolution 16. No one to this day knows what agreements were made at these conferences in the name of the American people without their consent or approval. It appears obvious to me that much of our world dilemma is the result of these conferences and their farflung implications on our many policies at home and abroad. We have sadly indeed, Mr. Speaker, discovered how utterly useless are conferences when they are not based on common decency and forthright dealings, open and above board, by all participants.

Under leave to extend my remarks, I include an article from the June 2, 1960, of Human Events which I commend to the attention of my colleagues:

LET'S SWEAR OFF SUMMITRY

(By William Henry Chamberlin)

The summit that never was seems in retrospect very clearly the summit that never should have been. May 16, 1960, should be remembered as a sorry day for the dignity and prestige of the United States. The bloody clown who heads the totalitarian Soviet state should never have been given the opportunity to heap gutteranipe insults on the President of the United States and to turn what was supposed to be a serious international conference into an obscene Communist propaganda circus.

All the arguments that were trotted out for the acceptance of a top-level East-West meeting, so vigorously urged by Khrushchev, were refuted and made to look downright ridiculous—by K. himself. A summit meeting, it was alleged, would make it possible for the men in the highest positions to confer on big international issues. But K. refused to discuss any international issue, or to let the summit get off the ground. A meeting of heads of state of the most powerful countries, it was suggested, would foster better personal understanding and contribute to relaxation of tensions. It seems doubtful whether K.'s soapbox performances, in which he called President Eisenhower treacherous, an aggressor and many other abusive names, helped along the cause of good personal relations. And perhaps that much overworked phrase, relaxation of tensions, is best understood if one notices that its three initials spell rot.

In view of the monumental fiasco at Paris, almost as incredible as a violent pathological scene in a Dostoevsky novel, one would imagine that the inveterate appeaser, in the syndicated columns of American newspapers or in British public life and British publications, would be willing to confess that summitry, as a method of conducting international relations, should be relegated to the mothballs. But advocacy of summitry is a persistent disease. Let Khrushchev change his record and the same voices that pleaded for the policy that led to the debacle in Paris will be urging another trial for the top-level conference.

In intervals of temper tantrums Khrushchev himself has been chirping about a new summit, to be held in 6 or 8 months, when he hopes to have a President of the United States more to his liking. What sort of Gauleiter, ready to bow to his will, would K. like to see in the White House? Let him speak for himself.

"That is for the American people to decide. But there was one American with whom I could do business. There was one American with whom I could honestly have negotiated. That was Roosevelt. But when he died, his policy died with him."

Khrushchev would like to see a return to Roosevelt's wartime policy of appeasement. Are there Americans who, consciously or unconsciously, would fall in with this design? Well, there is Adlai Stevenson, not likely to be President (about 300 voters out of over 100,000 thought it worthwhile to write in his name in the Oregon Democratic primary), but a real potential menace as a possible appeasing Democratic Secretary of State. In a speech at Chicago, Stevenson reproached the Republicans for "having helped to make successful negotiations with the Russians—negotiations that are vital to our survival—impossible as long as they are in power." It gives your opponent a big advantage when you acknowledge in advance that you must have successful negotiations with him. Stevenson also waxed indignant, offering the hypothetical question: "How would we like it if Soviet spy planes based in Cuba were flying over Cape Canaveral and Oak Ridge?"

Some of the sting is taken out of this question if one recalls that, since 1955, we have been officially committed to the open skies policy which would have permitted mutual international aerial inspection of America and of the Soviet Union. This proposal foundered on Soviet opposition.

In the two columns which Walter Lippmann published during the week of the Paris fiasco there was just one critical reference to the Soviet part in breaking up the conference. But the rest of his articles were devoted to efforts to prove that we wrecked the conference ourselves.

Certainly there is reason for criticizing, not the high-altitude flights, which may well have been vital to U.S. security, but the manner in which the downing of the U-2 was handled. The President's insistence on a sadly misplaced George Washington candor about an intelligence operation created serious headaches for himself and for Secretary Herter.

But it is highly improbable that the downing of the plane was the cause of the torpedoing of the conference. Khrushchev had long known about these flights; he asserted in his Paris press conference that he intended to take up the subject with President Eisenhower at Camp David; but then had an intuition that there was something "fishy" about the President's friendship.

There has been much speculation, much of it very sensational and very dubious, about Khrushchev's losing political control, being buffeted about by pressures from the Red army, from Red China, from mysterious Stalinites in Russia. But there is a much simpler and more plausible explanation of his behavior. The key to the wrecking of the summit may well be in a brutally provocative and threatening speech which the Red boss delivered in Baku some time before the reconnaissance plane was brought down. In this speech he threatened that, if a settlement, on his terms, of the West Berlin issue were not reached, he would conclude a separate peace treaty with his own puppet creation, the "German Democratic Republic." (This very title consists of three lies; a regime, most of whose leaders are trained in Moscow and some of whom are Soviet citizens, is not German; a regime that permits no semblance of freedom of press, speech, assembly or election is neither democratic nor a republic.) This, according to Khrushchev, would end the right of access to West Berlin for the allied powers. So, by this very statement, issued before the plane incident occurred, the conference in Paris was faced with two alternatives, deadlock or appeasement.

The basic lesson to be drawn from the Paris breakup is that summit diplomacy is a thoroughly bad idea, in theory and in practice. About such sensationally publicized meetings there is always an aroma of appeasement or, at best, of futility. Let's look at the record.

The first summit conference of modern times was at Munich, when Hitler on September 30, 1938, exploited the fear of war in Great Britain and France to impose his own idea of how Czechoslovakia should be carved up. The defenders of Munich argued that the breakup of a heterogeneous new state like Czechoslovakia was a price worth paying for peace. So it might have been, if Hitler's ambitions had stopped there. But here one comes to the fundamental fallacy of appeasement: that a ruthless aggressor will be satisfied and cease and desist from his evil ways if he gets his demand of the moment. But this never happens. Less than a year later Britain and France were at war with Nazi Germany.

The next big summit conference (skipping Teheran, which was largely military, although it marked the first step toward the betrayal of Poland) was at Yalta in February 1945. It might have been imagined that the Western leaders of a war which was being fought largely on the assumption that appeasement does not pay would have shunned appeasement of Stalin at the expense of Poland, a loyal wartime ally.

But Yalta was a repetition of Munich, with Poland the victim instead of Czechoslovakia, with Stalin playing the role of Hitler and Roosevelt and Churchill filling in for Chamberlain and Daladier. Again the result was disillusioning. Stalin did not become more friendly to the West; he became more bellicose and aggressive. It took the Berlin airlift, the war in Korea and the build-up of American military power to convince Stalin, whom even George Kennan in a recent lecture rightly described as "a man of almost inconceivable criminality," that further aggression would not pay off.

Perhaps intoxicated by Soviet success in developing space satellites, Khrushchev followed in Stalin's footsteps when, on November 27, 1958, he demanded that the Western Powers withdraw their token garrisons from West Berlin. In retrospect it seems clear

that this insolent challenge to the existing situation should have been met head-on, with a flat, uncompromising "No." But British Prime Minister Macmillan tried to create a climate of discussion on an issue that was really not suited for discussion. His trip to Moscow was followed by the futile Foreign Ministers Conference at Geneva.

Then the diplomatic ball was kept rolling by the invitation to Khrushchev to visit the United States, followed by Eisenhower's agreement to take part in a summit meeting. Macmillan was the principal advocate of yielding to Khrushchev's insistence on such a conference; stouthearted Chancellor Konrad Adenauer and General de Gaulle were skeptical from the beginning.

The experiment was tried, with no advance agreement, with no serious prospect of success and Khrushchev blew it up with all the glee of a juvenile delinquent setting off a giant firecracker under the chairs of some respectable solid citizens gathered for a serious talk. The point that should now be clear is that a totalitarian dictator is psychologically incapable of carrying on negotiations as an equal among equals. He must rule or ruin; he must dictate or he won't play ball.

There was an ugly suggestion of appeasement (which may be defined as one-sided yielding in the face of force or threat of force) about the whole buildup of the Paris summit that was never reached. Had Khrushchev not made his threats about West Berlin, there would never have been a foreign ministers' conference, or the invitation to the butcher of the Ukraine, and of Budapest, to make his propaganda tour of the United States or the meeting in Paris which he utilized for unprecedented tirades of abuse against America and its President.

There may be a case for a meeting of heads of state to affix the formal signatures to agreements which have been worked out at lower levels. Even this is dangerous with a treacherous totalitarian dictator. There is no case at all for a summit meeting when there is an irreconcilable difference of position in advance.

The collapse at Paris may be of some benefit if it leads to clear recognition that the cold war is the normal state of relations between free countries and Communist dictatorships and that Khrushchev in the role of the dove of peace is strictly phony. And if it leads to a firm resolution to swear off summitry—for good.

Veterans' Pension Law

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1960

Mr. DENT. Mr. Speaker, I want to present to Congress today correspondence containing a resolution from my hometown, Jeannette Post No. 344, American Legion.

This resolution is duly signed by Philip J. Entinger, Frank Altman, Paul Malloy, and Fred Croushore, officers and members in good standing of the Legion.

I want to call to the attention of Congress the serious nature of the results of our passage of the so-called veterans' pension law, H.R. 7650, Public Law 86-211.

I questioned at the time of passage the inclusion therein of the means in determining both eligibility and amounts of benefits under this act.

I sincerely believe we will be derelict in our duties if we fail to give serious consideration to the problems of our aged veterans and to the inequities created by the terms of H.R. 7650.

I compliment my local post for its leadership in the battle for fair treatment for our distinguished, but apparently forgotten, veterans.

AMERICAN LEGION POST NO. 344,
Jeannette, Pa., May 16, 1960.

Hon. PAUL R. SELECKY,
President Judge, Orphans' Court, Wilkes-Barre, Pa.

DEAR JUDGE SELECKY: Written below are the two resolutions adopted by Jeannette Post No. 344 and the Westmoreland County Council:

"RESOLUTION 1

"Whereas it is the desire of the membership of Jeannette Post No. 344 and the Westmoreland County Council of the American Legion to have law H.R. 7650, Public Law 86-211 amended; and

"Whereas it is the desire of the membership of Jeannette Post No. 344 and the Westmoreland County Council of the American Legion, that the following resolution be presented for appropriate action with a view to having said law amended: Now, therefore, be it

Resolved, That appropriate action be taken to amend law H.R. 7650, Public Law 86-211, for the purpose of eliminating variable payments; and be it further

Resolved, That a copy of this resolution be presented to the Pennsylvania State commander of the American Legion, with full authority to act as per the sense of said resolution."

"RESOLUTION 2

"Whereas it is the desire of the membership of Jeannette Post No. 344 and the Westmoreland County Council of the American Legion, that the following resolution be presented for appropriate action with a view to having action taken: Now, therefore, be it

Resolved, That appropriate action be taken to eliminate social security or pension programs authorized by the Government in lieu of social security, when a veteran 65 years of age or over applies for his veterans' pension; and be it further

Resolved, That a copy of this resolution be presented to the Pennsylvania State commander of the American Legion with full authority to act as per the sense of said resolution."

We have complied with all the regulations, we hope, in presenting our resolutions to the adjutant, Daniel W. Shaub. There has been considerable misunderstanding in the past, so let it be understood by all that we are trying to be helpful to the old veterans and to our country. We will be glad to give you a few facts. These figures are not ours; they were printed in the Pittsburgh daily papers.

In Allegheny County 93,000 are unemployed; in Westmoreland County it's about the same percentage. Many of these unemployed are young men with families. Can a young man and wife maintain the respect of their children if they must go to the city hall for food or wait for a relief check? We think not. We also are of a firm belief that the relief checks are much more of an expense to the taxpayer than the veterans' pension would be. Many of the vets have been laid off their jobs; by company policy men over 65 must go. Many more are laid off because of company and union agreement, be that as it may.

There are also many of these old vets who are holding down very good jobs. Do you agree with us it would be much better for all concerned if the old vet would retire and give the young man a chance for a better job, help him, give the young man all the know-how at his command—things he has learned by many years of hard work? Without this know-how the young man is in trouble. If the old vet is assured of decent treatment, there is no doubt he will do all he can to help. Otherwise he will keep all the know-how he has and stay on the job as long as he can—and we don't blame him.

On April 20, 1960, the Pittsburgh papers had this statement on the front page: "Pennsylvania Congressman seeking Federal money for stricken areas." We ask you, Judge Selecky, is it good policy to have the young men with families walking the streets, losing the respect of their children while the old vet goes on dragging his weary feet and tired body to work every day? These old vets are tired; they have worked hard all of their lives. It was never easy for them. When they receive decent treatment, they will be glad to quit.

At Uniontown our national commander stated that the GI bill of rights was sponsored by the American Legion and referred to it as one of many great accomplishments by the Legion. He forgot to mention the fact that the old vets in his audience were the men who fought the battle that made the GI bill of rights possible.

We sincerely hope you and your committee will not only support our resolutions, but fight for them and accept nothing less. It is high time that something decent is done for the old vets and the American Legion should be proud to support these men as they supported those who followed them.

Copies of this letter will be sent to all district commanders and to others who we feel will be interested.

Sincerely yours,

PHILIP J. ENTINGER,
Past Commander, American Legion.

Rehabilitation as a Force in International Relations

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address by Miss Mary E. Switzer, Director, Office of Vocational Rehabilitation, Department of Health, Education, and Welfare. Miss Switzer spoke on the subject, "Rehabilitation as a Force in International Relations," at the annual meeting of the President's Committee on Employment of the Physically Handicapped in Washington, D.C., on May 6, 1960.

At this same meeting, my own State of Rhode Island was specifically honored in the selection of Miss Betty Murby to sing the Star Spangled Banner at the opening session. Miss Murby is a graduate of Perkins Institute and a resident of Pawtucket, R.I. She is an accomplished singer and a charming young lady who has deservedly won the admiration of all of us in Rhode Island.

The address follows:

REHABILITATION AS A FORCE IN INTERNATIONAL RELATIONS

(Remarks by Miss Mary E. Switzer, Director, Office of Vocational Rehabilitation, Department of Health, Education, and Welfare, Washington, D.C., before the annual meeting of the President's Committee on Employment of the Physically Handicapped, Washington, D.C., May 6, 1960)

The interdependence of nations is one of the certainties of this age. As the world shrinks in time and distance, all of us become increasingly aware of how one part of the world depends on other parts, not only for economic well-being, but for measures that protect world health and enhance the welfare of the disabled.

It is eminently fitting that such an important organization in our national rehabilitation effort as the President's Committee on Employment of the Physically Handicapped should help to point up the fact that rehabilitation has grown into a truly worldwide movement, by bringing us together at this luncheon to make us better prepared for the highly important international meetings that will take place this year, and their effect on international understanding as well as international rehabilitation.

We are on the eve of the Eighth World Congress of the International Society for the Welfare of Cripples, in New York City, in August. Its theme, "Rehabilitation and World Peace" is particularly appropriate. Man's greater awareness of the forces within his environment that affect his welfare is bringing to a heartening glow the regard for the disabled that, in this country, was kindled 40 years ago. Few of us who are concerned with rehabilitation can escape the feeling that the forum of 5,000 people from many countries who will exchange opinions, information, and viewpoints at the Congress, respite any differences in nationality, religion, ideology or economic status, can end with anything but accord and greater bonds of international friendship.

I was literally amazed last summer while attending the First Mediterranean Conference on Rehabilitation, in Athens, Greece, to learn of the progress that some of the eastern nations have made toward rehabilitating their disabled. They, too, are realizing the great burden of dependency that can be erased through vocational rehabilitation of the disabled. As the importance of the individual becomes more pronounced in nations that for centuries had accepted ill health and disability as a condition of existence, the health of the individual becomes of more concern.

This feeling was substantiated and extended toward most of the nations of the world by a publication since issued under the direction of the Committee on Government Operations of the U.S. Senate. Under the title, "Rehabilitation of the Disabled in 37 Countries of the World," it is a highly informative contribution to the cause of international rehabilitation programs, and the needs and hopes of the future.

In January, a seminar on international rehabilitation, held here in Washington, was the means of our taking a look at the expansion of activities and interest in international rehabilitation in the past few years. It was sponsored by the National Rehabilitation Association and the International Society for the Welfare of Cripples, and marked the first time that voluntary groups in the United States had met with Government agencies concerned with rehabilitation, to review the past and to explore the future of our programs with relation to international rehabilitation.

One of the subjects for seminar discussion was the use to which counterpart funds in several countries could be placed as the world moves toward acceptance of rehabilitation as a universal ideal rather than purely national activities.

The U.S. Government acquires and expends large amounts of foreign currencies in its oversea operations. The Department of Health, Education, and Welfare, in its proposed budget for 1961 has asked for $930,000 in these funds to be set aside for rehabilitation activities in nine countries. Included are India, $350,000, Israel, $100,000, Yugoslavia and Poland, $90,000 each, United Arab Republics, $80,000, Pakistan, $70,000, Brazil, $60,000, Indonesia, $50,000, and Burma, $40,000.

These funds—which, of course, have to be expended in the countries where they are accumulated—would be used for two principal purposes—eduactional activities in the need for and use of rehabilitation measures, and for support of selected research and demonstration projects. The program would be carried on through the regular grant mechanisms of the Office of Vocational Rehabilitation, with utilization of the resources of the various international rehabilitation organzations.

A major problem in international rehabilitation, according to the seminar, is the public attitude of governments and their people toward rehabilitation. One of the reasons for slow progress in some countries is this lack of understanding of what rehabilitation is and what it means. Possibly one of the best uses to which some of these funds could be put is to aid the efforts of strong international rehabilitation organizations in emphasizing to governments and pepole the dividends that rehabilitation of the disabled can pay.

It is considerably within our own interests that international research and demonstration projects be initiated. There are 20 million persons throughout the world, for instance, who are stricken and disfigured by Hansen's disease, or leprosy. Some are in the United States, particularly in the new State of Hawaii. New drugs and surgical procedures enable many patients to regain use of their hands. Many scars are eliminated. Total rehabilitation is becoming a reality, but more research is needed. Highly valuable work is underway in India, and, with further development of research facilities there, specialists from all over the world can learn the techniques that are helping so much to remove the effects of this dread disease.

In Burma, there exists an ideal opportunity to conduct research into the manufacture of prosthesis from native materials that are resistant to the effects of heat and humidity. The rehabilitation center in Solo has done some remarkable things along this line which could be of benefit to us and to the rest of the world, if further research and demonstrations were conducted.

A great deal of rehabilitation activity in India is among its blind, but one of the great problems there is finding employment for those who are prepared for work. This is being overcome, and the methods used to find employment in a country that is overpopulated where unemployment is widespread are worthy of study.

These are some of the trends in our thinking and illustrate some of the ways these funds could be importantly used. Other projects in relation to the specific needs of various countries are in our collective thoughts, so that international research will be speeded on its way to solution of problems common to many countries.

Rehabilitation, by its very nature, involves people closely with the verities of life—their physical or mental state, their independence, their abilities to earn and to enjoy basic satisfactions. This universal yearning of the disabled to be accepted on individual merit has met a guardian and protector in that phase of the growing people-to-people program that deals with the disabled and the handicapped.

Our co-worker and friend, Gen. Melvin Maas, Chairman of the President's Committee on Employment of the Physically Handicapped, has most appropriately been named to head the Committee on the Physically Handicapped within the people-to-people program. Under his guidance, the committee is doing several things that add a needed human touch to international rehabilitation. On the more administrative side the committee has brought together in liaison the efforts of close to 30 organizations in the United States that are concerned with rehabilitation, and has formed lines of communication with rehabilitation groups all over the world. It has also performed a notable service in compiling a directory of international rehabilitation groups.

In more personal and intimate context, the committee promotes correspondence among disabled persons in many countries, and on the intensely practical side the committee provides a fine service for amputees over the world by acting as a clearing house for component parts of the many kinds of prosthetic devices that are in world use.

The research and demonstration program of the OVR is developing on its own account somewhat an international flavor. Though we do not have as many resources for this purpose as we would like, some of our projects do have worldwide implications. We have moved to support world organizations working in international rehabilitation, and to carry on projects that will benefit other nations as well as ourselves.

Grants have been made to the International Society for the Welfare of Cripples to aid the exchange of information that is developed on technical skills and knowledge in their Congresses, and the same was done for the American Congress of Physical Medicine and Rehabilitation in Chicago this year. Another grant was to the Excerpta Medica Foundation to abstract worldwide publications on rehabilitation and publish them periodically.

In more active settings, the World Federation for Mental Health, of New York, has received a grant to study attitudes toward mental health and mental illness in diverse settings, so that there will be greater opportunity for effective community health programs to evolve. Gallaudet College has an award to help support a study and analysis of communicative patterns developed by young deaf persons, in order to improve communicative techniques for vocational rehabilitation. And, in 1958, the Industrial Home for the Blind, of Brooklyn, N.Y., completed a project that provided the first definitive steps anywhere for rehabilitation of the group whose plight arouses a most poignant desire to help the deaf-blind. It also gave impetus to a method of palm writing, developed by experts in England, Holland, and the United States, that many persons believe will become a standard way of communication for these people over the world.

An immense amount of interest in international rehabilitation has been aroused through the health for peace bill, passed by the Senate last year, and now pending in the House.

This legislation would establish a program of financial aid for international research into diseases that cripple and kill mankind, and be a means of gathering, correlating, storing, and disseminating knowledge about medical advances as they are made over the world. It has high potentialities for speeding the eradication of disease, and for lessening the incidence of disability.

The eagerness of governments and their peoples to learn about rehabilitation and to apply knowledge and methods effectively is well illustrated in the growth of activities in the International Unit of the Office of Vocational Rehabilitation.

The principal activity of the International Unit is to prepare the way for people from other countries to study and observe rehabilitation in the United States. Physicians, health and hospital administrators, and workers in related fields come to our colleges, universities, and rehabilitation centers, under arrangements made by OVR. Some are government officials, as was a recent visitor, the director of rehabilitation information activities for Yugoslavia, which has a rehabilitation program well underway. But there are physicians and technicians who come for stays of up to a year or more, under sponsorship of the United Nations or the World Health Organization, International Labor Organization, State Department, or voluntary agencies.

In 1947, as nations began to readjust their economies to a postwar world, there was a notable upsurge of interest in rehabilitation over the world. In that year eight persons from other countries visited our country to study rehabilitation under OVR guidance.

The number has increased regularly, to 42 in 1958, and we have 30 more in the first quarter of this year, to bring the total of long-term visitors to 295 since 1947. In short-term training, that is, periods of 2 months or less—the numbers are even greater. We have had 60 in the first quarter of the year, bringing this total to 769 since 1949.

The mission of rehabilitation is to mend, and not destroy; to prevent and heal the scars of disability. We have arrived at the place where all of us must blend our national aspirations for our disabled into a world viewpoint. We who work in rehabilitation should keep in mind that, whatever our task may be in working with and for the disabled, we are individual ambassadors of peace. Our efforts to restore the hopes of those who seek only adequate opportunity to live useful and satisfying lives justify our existence in rehabilitation. More than that, our cumulative efforts can mount up to becoming a powerful instrument in international affairs, one that could be profound in the establishment and maintenance of enduring peace among nations.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Not in Vain

EXTENSION OF REMARKS
OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, June 2, 1960

Mr. BEALL. Mr. President, last Monday the annual Memorial Day service sponsored by the American Legion and the American Legion Auxiliary, Baltimore District, Department of Maryland, was held at the Baltimore National Cemetery.

Although the day was bleak and cloudy, with rain stopping only moments before the ceremony began, the service was most successful and impressive. Approximately 4,000 persons attended the event, and they were privileged to hear an excellent address by the Honorable Dewey Short, Assistant Secretary of the Army.

In addition, there was a memorable program arranged by a committee consisting of Donald E. Miller, chairman; Mrs. Worley H. Van Camp, cochairman; Mrs. Leonard J. Huber; Walter C. Jones; Frederick C. Miller; and Mrs. Glenn G. Rowland. Mr. Short was introduced by William H. Robinson, district commander.

Because of the great depth and timeliness of Mr. Short's remarks, I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NOT IN VAIN

It is with a distinct sense of honor and a feeling of deep humility that I join with you here at Baltimore National Cemetery to pay tribute to our fellow countrymen who gave of their lives that we might be free.

At times like this, we are given a wonderful opportunity to reappraise our own contributions to the cause for which our comrades laid down their lives, and that is why Memorial Day has become one of the most solemn, one of the most reverent, and certainly one of the most meaningful experiences for Americans throughout the Nation.

It is altogether fitting that this occasion should be sponsored by the American Legion and the American Legion Auxiliary, for in the great spirit of these devoted organizations lies the pulse and heartbeat of an America dedicated and strong.

Memorial Day is that day when Americans lay aside their daily tasks to pause and reflect on the memory of that body of men who died while fighting for the honor and ideals of our United States. In a way it is like Christmas and Easter when we pay tribute to One who suffered and died for all mankind. But also like Christmas and Easter, Memorial Day is not the 1 day out of 365 that the values and bravery of these men are honored; as with the ideals and teachings of Christ, they live with us every day. For what American has gone a moment without the knowledge that he is free to speak as he pleases, read as he pleases, or worship as he pleases? These are the values these men, in peaceful repose about us today, died for, and thus before God in the highest courts of ultimate judgment, may we declare that their deaths were not in vain.

In cemeteries throughout the country and the world, similar commemorative services are being held today. For some, it is a time for difficult personal memories mixed with pride and sadness. To these fall the obligation and sympathy of all Americans. But for each and every one of us it must be said that we share in the great losses suffered through the deaths of these men. Each one of their deaths marked the loss of a potential living contribution to the family that is America; each one of their deaths marked the loss of a brave and dedicated soul.

That is why in Arlington National Cemetery there are monuments to the Unknown Soldiers of World War I, World War II, and the Korean war. These tombs are the symbols for all of us and for all future Americans to mourn in memory of what the heroic men of these conflicts died for. The inscription over these tombs is simple and moving. It reads: "Here Rests in Honored Glory an American Soldier Known but to God."

The fact is, it is not even known whether they are from the Army, the Navy, the Marine Corps, or the Air Force. Neither do we know their race or creed, nor does it make one iota of difference.

We do know this: they were brave, upright, loyal, devoted, and patriotic Americans. We know that as babes each nestled in a loving mother's arms. As they grew up they enjoyed the benefits of the American way of life, the privilege of complete freedom of worship, educational opportunities unsurpassed on earth, and they inhaled the fresh, clean air of freedom that imbued within them a love for America and for the ideals which to them were worth the supreme sacrifice. These fine products of our American homes serve as an inspiration to us today to strive with ever more determination to maintain the love for liberty that will provide for our children and our children's children those wonderful opportunities and privileges for which they gave up their lives.

From the windows of my office in the Pentagon I can look out onto the magnificent Washington Monument, the glistening white dome of the Jefferson Memorial and the architectural beauty of the Lincoln Memorial—all are works of art to forever acclaim the contributions these three great American Presidents have made in the building of our glorious Nation. And from that same office I can look out onto the row on row of stone markers that lace the rolling, green hills of the Arlington National Cemetery. A sight similar to that we see around us here today meets my eye. And as I gaze upon those silent headstones over our heroic dead, I am reminded of the awful price of war. It is then that I am filled with a renewed determination that this curse must be lifted from us; that somehow, by some manner there might be devised in the thoughts and actions of human beings—that from the innermost depths of our very hearts and souls—a way of solving our problems may be found without resort to the horrors of war.

It is not my intention today to restir the pangs of sorrow that came with the passing of our comrades and loved ones which we memorialize today, nor do I need to impress upon you the unspeakable horrors that are inevitable in mortal combat. At a time like this, I experience an emotion which cannot be put into words. If silence is ever golden, it must be beside the graves of those whose lives were far more significant than mere speeches. For love of country they accepted death and thus resolved any and all doubts that they possessed the highest virtues of men and citizens. They have become immortal by their patriotism and their virtue.

For the noblest man who still remains alive there yet remains a conflict. He must still withstand the tempest of the times and the vicissitudes of temptation and misfortune before which many lofty men have fallen. With these whom we honor today, the conflict has ended; their victory was won when death stamped upon them the great seal of heroic character and closed a record which the travail of the years can never blot. Their honor and their patriotism have remained unsullied with the passage of time.

I believe that no heroic effort is ever lost; that the characters of men are molded and inspired by what their fathers and their forefathers have done before them. Those of us who enjoy the kinship of such men as these can face the challenges of tomorrow and share the inspiration which was theirs as they fought on the fields of battle where, each for himself, gathered up the cherished purpose of life, its aims and its ambitions, together with those dearer affections and flung them all, with life itself, into the scale of battle.

If each grave around us had a voice to tell us what its silent tenant has to share, we here would renew with them our faith and would rededicate our efforts to a more peaceful tomorrow—but not at the price of our freedom. For, to accept the price of submission and of prostration would be to break faith with these and the multitude of our other countrymen who have died to guarantee that the flame of eternal light might never be extinguished.

We know here today that in spite of the awesome toll in blood and sorrow which war exacts, there remains abroad in the world at this very hour those who would sacrifice more blood upon the battlefield to satisfy their evil ambitions for conquest and aggression. They, who by their lust for power and for their personal greed, would plant additional markers in this and other cemeteries throughout the world. We are resolved, therefore, that we shall possess the strength necessary to defend ourselves and to deter the power-hungry force of atheistic communism. We are resolved to maintain America's strength to the extent required, taking into consideration her economic capabilities and her military potential. We are determined that all free nations of the world shall be capable of resisting aggression so that liberty everywhere shall thrive for all men.

All this we are doing because we want earnestly to avoid the ravages of war and fervently desire to achieve peace as our brave sons and forefathers knew it. If we keep this goal constantly before us; if we steadfastly and continuously pursue all efforts to attain it; if we periodically pause in our daily activities to recall the message from these sacred graves, we cannot fail. While eternal sleep enshrouds these men, it has given us a new purpose for the living. Their

deeds have provided us the inspiration and the challenge which we willingly accept.

Today the world is again divided over belief: belief in liberty, peace, and democracy as we understand the terms and belief in a godless doctrine of international communism. The Communists are truly dedicated to their belief, and they are determined to make the necessary sacrifices to see it become a reality. If we are to thwart this ambition, we must be equally dedicated and firmly convinced of our abilities as a nation and strong in our belief in the sovereignty of the individual and the integrity of man.

Those men who we so proudly honor throughout America today and wherever our beloved ones lie beneath the sod in some foreign land, like us, loved peace. But as much as they loved it, they did not forget that the fulfillment of our dream of freedom has been possible only because men were willing to struggle for it. No one desires a peace without freedom. All of the people of this great Republic recognize that in order to have the peace we desire, we must be willing, if need be, to fight for it, perhaps even to die for it, as did the millions of brave Americans who gave their lives in the wars in which our country has been engaged.

So, today as we reaffirm our faith in the righteousness of the principles upon which our Nation was founded, we pledge, with God's help, that we will keep faith with those whom we are honoring this morning. That their death be not in vain, they have passed to us the flaming torch of eternal light to keep forever bright. My good friends, that great responsibility rests with you and me today, and in this regard I would like to leave you with the stirring prayer of some nameless poet who said:

Father, God, we bow on bended knee,
Thankful for the blessings of the free;
May we always true and faithful be
To the author of our liberty.
O God, we pray that Thou
Will light the way
Give us strength and
Courage day by day.
May we earn the right for
All to be free
For now and always,
For eternity.

The Story of Chief Joseph: From Where the Sun Now Stands—Part II

EXTENSION OF REMARKS
OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I wish to present the second article of the story of Chief Joseph, one of our country's most famous Indian chiefs.

This story, authored by Bruce A. Wilson, editor of the Omak Chronicle in Omak, Wash., has received wide acclaim and it provides an excellent account of the last year of independence of the mighty Nez Perce Indian Tribe before they were confined to the Colville Indian Reservation, located in the Fifth Congressional District of Washington which I have the honor of representing. I will insert into the RECORD additional articles of this story during the next few successive days.

The article follows:

SUNDAY, JUNE 17, 1877

Dawn: A soft gray ribbon fringing the eastern horizon. Cursing nervously, Captain Perry's troopers lurch into their saddles. Two days of nearly steady riding have brought them to the upper reaches of White Bird Canyon which twists down to the rushing Salmon. Now, stiff muscled after a few hours' rest, they move into the ravine. As daylight breaks, barren slopes rise on either side. The advancing column finds a white woman and her child, hiding in sparse underbrush. Her husband was killed by Indians 3 days before. They give her food and pass on.

Below, the Nez Perce camp is astir. The Indians know Perry is coming and what his strength is. Many of the young braves are hot for action. But Joseph and other chiefs still hope to avoid fighting. About 65 warriors, half with repeating rifles, the rest with muzzle-loading guns or bows and arrows, ride a mile north of camp. Six continue under a white flag to meet the troopers. Two Moons, the wing bone of a crane hanging from his neck as a charm, leads others to the east. The rest follow Ollokot, Joseph's steel-muscled brother, to the west. Tension grips the canyon.

As the Indians wait, Perry's advance guard breaks over the crest of a tortuously eroded knoll. His men halt as word is sent back the Nez Perce are in sight. Arthur Chapman, a civilian scout with the advance party, has boasted he could "whip the cowardly injuns" himself. Now he snaps a shot at the slowly-advancing peace envoys. Otstotpoo, a middle-aged Nez Perce waiting with Two Moons, fires back. His lucky shot at long range slams Perry's only trumpeter out of his saddle. The battle has been joined, and the Wallowas, like a misty mirage, have drifted beyond Joseph's reach forever.

A scattering of shots rippies across the canyon as for the first time Nez Perces open fire on white soldiers. Perry has dismounted one of his two troops; the other swings abreast on his right. But almost immediately a handful of Two Moons' mounted warriors breaks onto a rocky butte where six civilian volunteers anchor Perry's left flank. Two whites are killed; the others scramble to get away. Their panic begins to spread. White Bird Canyon has exploded into a smoky turmoil stabbed by red spurts from the Indians' repeating Winchesters. Blood-splattered soldiers slump to the ground. Horses lunge out of control. The troopers, many under fire for the first time, blaze away wildly at clouds of smoke. The Nez Perces shoot cooly at dusty blue targets.

A larger group of Nez Perce horsemen sweeps up the ravine. They have no single leader. A few braves started out; others followed. Many cling to the sides of their ponies with scarcely a hand or foot visible. They slash through Perry's wavering line. His right flank collapses. Troopers begin running. The howling, naked Indians are everywhere.

Yellow Wolf, one of the finest warriors from Joseph's band, will later relate: "I ran to strike one soldier with my bow. I leaped and struck him as he put a cartridge to his gun. I grabbed the gun and shoved hard. The soldier went over backward but was not hurt. I wrenched the gun away from him. At the same time a warrior back of me killed him.

"I now jumped down a bank where was another soldier. My feet slipped and I slid in front of him. He was on one knee, pointing his rifle. The bullet passed over my shoulder. I grabbed the barrel of his gun. While we wrestled, a Nez Perce fired from the bank, and the soldier fell dead."

Turn to one Indian; another strikes from behind.

The shattered remnants of Perry's command stream back up the ravine. Lieutenant Thaller gathers 18 men as a rear guard. Fighting with high courage, they edged disastrously into a blind ravine. The Nez Perces wipe them out, leaving their bodies sprawled across a litter of empty cartridges.

The crush of battle has lasted only 10 or 15 minutes. But the exultant Nez Perces continue harrying the mauled troopers for several hours before returning to the canyon. There they collect rifles and strip clothing from the bodies of 34 whites, nearly a third of Perry's force. This is what 60 or 70 braves (others were too drunk or too far away or too busy watching the pony herd) have done to 99 soldiers and 11 volunteers. Not a single Nez Perce has been killed. Two were wounded.

Wild triumph in the Nez Perce camp presently sagged into indecision. What to do next? Anyone with a plan would be heard. Happily, Rainbow and Five Wounds had a good one. Veteran buffalo hunters who had arrived the day after the battle, they suggested the Nez Perces cross the Salmon. If General Howard did not follow, they would be safe. If he did, the Indians could recross the river and cut across Howard's supply line with ample freedom of action.

The Nez Perces made boats of buffalo hide stretched across green willow poles. Loaded with women, children, dogs, and supplies, these were towed across the swollen Salmon by braves on ponies. Then the herd, more than a thousand head, was swum across. The passage was accomplished easily—the Indians were old hands at this sort of thing.

General Howard, with a force of 225, arrived at the banks of the Salmon 10 days after the battle at White Bird Canyon. In his eyes, transporting infantry, cavalry, pack mules, cannon, foodstuffs, and munitions across this boiling, white-tipped torrent loomed as a risky and complex maneuver.

Howard knew the Nez Perces, even with their families and baggage, could travel more easily than he through rough country. Following them now meant risking battle with a raging river at his rear. Also, a few days' delay should bring reinforcements. From virtually every fort in the Northwest, troops were heading toward Lewiston. Other companies were coming from California and Arizona; the 2d Infantry had been ordered up from Georgia. Slouch-hatted volunteers were swaggering into Lapwai.

But the Nez Perce uprising had thrown all of Idaho and eastern Washington into a turmoil streaked with fear. To sit in camp while the hostiles melted into the Seven Devils country or lanced toward the Wallowas was unthinkable. After losing several rafts, Howard's engineers fastened a cable across the Salmon and attached two boats with ropes and rings. The crossing consumed 2 days. Through pouring rain the troops struggled up slopes so slippery that several pack mules lost their footing and plunged into canyons hundreds of feet below. Meanwhile the Nez Perces, as Howard feared they might, recrossed the Salmon 15 miles downstream and moved leisurely across Camas Prairie toward the South Fork of the Clearwater.

As a mobile force the Indians were highly efficient. Each morning their camp would appear to collapse into a frenetic bedlam of hastily built cooking fires, collapsing tepees, squalling children and yapping dogs with squaws rushing about and braves driving in skittish ponies. Yet half an hour later families would be falling into line as the procession moved smoothly out. Usually two or three groups of warriors were ahead scouting. One such party, led by Five Wounds

and Rainbow, wiped out a detachment of 10 Army scouts under Lt. S. M. Rains.

On the morning of July 1, near the Clearwater, bugles sounded and guns banged as cavalry and volunteers, with Capt. Stephen G. Whipple commanding, attacked a camp of Nez Perces headed by Looking Glass, a powerful young veteran of the Sioux wars who wore a small piece of mirror as a charm. Before hostilities broke out, Looking Glass had withdrawn to the reduced reservation. He wanted no trouble. Whipple's mission was to take the band into custody, because Howard believed some of Looking Glass' braves planned to join the war party. But during negotiations at the village a halfbreed volunteer fired his rifle. The nervous Indians jumped for their guns and war ponies. Again a single shot ignited a powder keg. The brief battle which followed left Whipple in possession of the camp and 750 ponies, but sent Looking Glass and his inflamed band galloping to join the nontreaty warriors.

The attack on Looking Glass' camp can be considered either a criminal assault on peace-loving Indians or a sensible but ill-fated move to deprive the hostiles of possible reinforcements. In either case it accomplished exactly the opposite of what Howard had in mind. The Nez Perces welcomed reinforcements. Their effective fighting strength was by no means as large as Howard believed it nor as many historians have subsequently guessed.

Including the Looking Glass band, some 700 Indians early in July had raised their tepees in a pasture bordering the south fork of the Clearwater River, with rough timbered slopes rising on either side. These 700 included about 195 male adults—60 from Joseph's band, 50 led by the mild, elderly White Bird, 40 contributed by the agile Looking Glass, 30 headed by Toohoolhoolzote, aging but still a remarkably powerful man, and perhaps 16 in Hahtalekin's Paloos band from southeastern Washington. Of the chiefs, only Looking Glass was also a war leader. Among the 195 males, some were too old to fight. Others were disabled or faint-hearted. Perhaps only 150 were useful warriors. At no time could all of them join the same battle, for some must watch the herds and help protect 500 Nez Perce women and children—a staggering burden for a war party heavily outnumbered by its enemy.

At the Clearwater the Indians camped, waiting to see what Howard would do next. They rested, hunted, raced their ponies along the river. Nobody bothered to keep much of a lookout.

Perspiring in the July sun, General Howard was a man with many problems. A dozen Idaho settlements demanded protection. The War Department was suggesting a decisive action would be appropriate. But these and a stultifying variety of other concerns all had been eclipsed by a single blinding awareness: the Nez Perces Howard faced were a far move powerful and determined foe than most bands of warring Indians. At White Bird Canyon their courage and amazing marksmanship had shattered two companies. Now they had slipped neatly around end, and behind an alert screen of scouts were moving casually across central Idaho. No wonder Howard concluded their best known chieftain, Joseph, was a military genius. Besides, such a halo helped to blunt outraged questions hurled by newspaper editorials even as the main command struggled back across the Salmon.

His force swollen to 500, Howard headed for the general area where the Nez Perces might be if they were not somewhere else. A few days later he was marching north along a broad ridge paralleling the Clearwater's North Fork. His scouts had no idea the Nez Perces were camped just across the river.

Statement of Secretary of Defense Before Senate Committee on Foreign Relations

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1960

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement delivered by Secretary of Defense Thomas S. Gates before the Senate Committee on Foreign Relations, on today, June 2, 1960.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SECRETARY OF DEFENSE THOMAS S. GATES BEFORE THE SENATE COMMITTEE ON FOREIGN RELATIONS, JUNE 2, 1960

Mr. Chairman, I appreciate this opportunity to appear before you and I have a short statement if I may read it.

I am certain that you wish me to cover the role played by the Department of Defense in the U–2 overflight program. Elements of the Department of Defense gave technical advice to the U–2 project. No military aircraft were used for these flights nor were the pilots military personnel.

From time to time the Director of the CIA, after obtaining the concurrence of the Secretary of Defense and the Secretary of State, recommended a series of programs to the President. More specifically I reviewed program proposals embracing several priority missions, one or more of which it was proposed to execute in the near future. Responsibility for the operational conduct of the program rested with the CIA.

Of paramount importance was "the take" of these flights. Information on airfields, aircraft, missiles, missile testing and training, special weapons storage, submarine production, atomic production, and air defense deployments were of the types of vital information observed. These data were considered in formulating our military programs. We obviously were the prime customer and ours is the major interest.

On a separate subject—

One incident, and one over which I assume full responsibility, is the calling of a test of the readiness of our military communications from Paris. In view of the fact that my action in this matter has been questioned by some, I would like to give you the facts.

First of all, our military forces are always on some degree of alert. So it is merely a matter of moving this degree or condition of alert up or down the scale. On Sunday night (May 15) we were already aware of the sense of the statement which Mr. Khrushchev was going to make the following morning. The conditions which he had set for his participation in the conference made it apparent even at the time that he deliberately intended to wreck the conference.

This communications alert was not an act that was either offensive or defensive in character. It did not recall Army, Navy, Air Force and Marine personnel from leave. There was no movement of forces involved. However, I want to emphasize that it did make certain that if subsequent developments made necessary a higher state of readiness, such action could be taken promptly and convincingly.

Under the circumstances it seemed most prudent to me to increase the awareness of our unified commanders. Moreover, since the command and individuals concerned in the decision process, including the President, the Secretary of State, and myself, were overseas it was important to check out our military communications. At about midnight, Paris time, Sunday night, I requested that a quiet increase in command readiness, particularly with respect to communications, be instituted without public notice, if possible.

One phase of our testing is to call no-notice exercises of our command communications. While some commands went further in executing the instructions issued by the JCS as a result of my message than I had anticipated, I consider the order proper and absolutely essential. In similar circumstances I would take exactly the same action.

Can Private Carriers Provide Medical Care for the Aged?

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. COHELAN. Mr. Speaker, I am in receipt of a copy of a letter to the New York Times from Prof. Julian Friedman of Syracuse University and formerly of the University of California in Berkeley. An authority on the problems of medical care, Professor Friedman offers some valuable comment on the issues confronting the Congress as we consider legislation in the field of medical care for the aged. I submit his letter to be reprinted in the RECORD so that it will be available to all for consideration:

SYRACUSE, N.Y., *April 14, 1960.*

EDITOR, NEW YORK TIMES,
Times Square,
New York City, N.Y.

SIR: If I understand where we now are in the great debate on health insurance for the aged as aroused by the Forand bill, the voluntary health insurance enterprises, including the commercial carriers and Blue Cross organizations, propose that they be given a chance to solve the problem in lieu of the Nation's proceeding to a public program as part of social security. Surely the industry is to be heartily congratulated for this extraordinary move toward assuming this responsibility, especially when what is involved is contrary to sound principles of commercial insurance and stands little chance for success under private auspices. Permit me this space to explain what I have in mind.

From the viewpoint of insurance, health costs of the aged are not an authentic risk phenomenon; what may be properly insurable items at a modest premium barely touch the ills of persons 65 or over. Moreover, health insurance for this sector of the population entails a moral hazard; the availability of policies is in itself a major incentive to the seeking of benefits. Obviously the insurance itself does not increase morbidity, at least not significantly, but it does lead to the treatment of ailments that in the absence of insurance benefits tend to go untreated. Hence, utilization of services by the aged can be expected to follow the purchase of medical care and hospitalization policies. Finally, the advantages of the group insurance technique can be extended to the aged only if the industry ignores the fact that the aged do not constitute a true

group in insurance practice or law. If this fact is taken into account, then the policies that are marketed are bound to be cutoff benefits—very high premium or restricted benefits—relatively high premium policies, with a substantial portion of the income otherwise available for benefits siphoned off for the costs of administration, reserves, and earnings.

In offering to take on this task that the Forand bill proposes to entrust to Social Security, the insurance industry is surely acquainted with the following facts:

(a) rate of enrollment in voluntary health insurance is gradually declining because the bulk of the good risks have been sopped up, for the remaining population policies are priced beyond reach, and adaptation of the insurance mechanism to the characteristics of that population is currently stymied;

(b) "experience rating" on a group basis has generally replaced community rating, and the effect has been to discriminate so heavily in favor of the good risks that it is unlikely that the costs of health care for the aged can be spread over the community as a whole through private insurance. Experience rating has resulted in a power structure detrimental to a broad voluntary social approach to health insurance;

(c) revival of community rating, were it at all possible on a local, regional, or national scale, involves the increasing of premium or alternatively reduction of benefits, as Blue Cross plans almost everywhere are facing. In brief, it can confront the younger population with a dis-incentive to procure health insurance, particularly comprehensive coverage, and to protect dependents adequately.

(d) the level of benefits provided by voluntary health insurance currently is stabilizing with increasing premium income-benefit payment closeness but concurrently a wide benefits-health needs discrepancy. Adding the aged to the voluntary insurance rolls extends needs disproportionate to benefits available. More illness will be chasing relatively few insurance resources unless relatively more income flows to the profit-making and nonprofit carriers. If the insurance industry has a way for breaking through this impasse, more power to it.

One further observation is relevant and necessary. Whether Social Security or commercial insurance handles health insurance for the aged, someone or some group will have to work out rules, including fee schedules for the program, and enforce the rules. Hence, governing is involved, whether in public or private hands. Under a non-governmental system presumably the insurance industry and medical profession will perform these legislative and police functions together, though basically their immediate interests are conflicting. Under the Forand bill both will also perform these roles directly and indirectly but in this instance will be joined by another interested party, namely, the consumer. Where in any of the proposals for a private arrangement is there any provision for consumer representation?

Sincerely yours,

JULIAN R. FRIEDMAN.

Importance of Urban Renewal Stressed at Conference

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, June 2, 1960

Mr. WILLIAMS of New Jersey. Mr. President, in Paterson, N.J., community interest in urban redevelopment runs high. A great effort is underway to bring certain areas of that city to more modern and more efficient use.

An editorial in the May 31 edition of the Paterson Morning Call captures some of that spirit and also offers significant quotations from others who believe that much must be done to keep our cities attractive and economically healthy.

Mr. President, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IMPORTANCE OF URBAN RENEWAL STRESSED AT CONFERENCE

We came across a copy of the U.S. Municipal News in which the matters discussed at the recent conference of some 1,000 mayors are highlighted.

Mayor Robert F. Wagner of New York spoke on "Urban Renewal," a topic that is receiving priority of attention by many municipal officials, including our own.

Because we regard his views in the matter of great public interest, we bring you a salient portion of Mayor Wagner's comments:

"Why is urban redevelopment so important? There is the social answer: Poor housing is connected with social friction, disease, delinquency and crime. There is the economic, dollars-and-cents answer: Satisfactory housing is necessary to maintain our cities as desirable places to work and live, and to prevent deteriorating and obsolescence of the real estate upon which the solvency of our cities is based. There is the esthetic answer: Comfortable, attractive housing is the first requirement of the good life and the attractive community.

"We must combat urban decay with the combined zeal and skills of all levels of government and the total community. Urban renewal offers a special challenge to the mayors of our Nation's cities. I submit to you that never before in American history have local officials needed to be so creative and so imaginative as today. Never before has the future of our country rested so precariously upon the answers that we find today, not only for today's problems, but for tomorrow's. I am confident that the history of the next 20 years will record that we are meeting the challenge."

To those of us here who are striving mightily to move ahead with needed redevelopment, the words of Mayor Wagner should prove an inspiration to redouble our efforts for community advancement.

Consider these remarks of David M. Walker, Federal Chief of Urban Renewal, who also spoke before the assemblage:

"Urban renewal is real. You can see it. You can touch it. And it is here to stay. Urban renewal is also hard work. Money alone will not bring it about. Though Federal, State and local dollars are indispensable, they must be combined with knowledge and determination, skill and patience."

Sensible advice such as this must be followed if a community is to achieve its goal.

And we in Paterson should pay heed to the sound observation of John W. Rouse, president, ACTION, Inc.:

"It's almost without exception that the central business district is in decline. It's grim, ugly, disorderly, inefficient, congested, won't serve the purpose for which it was intended, can't do its job, the number of business transactions is declining. Beyond the central business district are the slums. Just beyond the slums come the middle age areas, the middle age areas which in every American city are next on the slum pipeline. Not yet in any American city have we succeeded in mounting a program that is capable of resisting the spread of slums into the area next beyond. Not yet in America have we succeeded in any American city in eliminating slums as fast as we are creating them, and furthermore, we are running out of land.

"Everyone knows dynamic things are beginning to happen, but the real story is that we have reached the point in the American city now where the job to do is obvious. It is to now undertake a total study of the city, a total plan for making the city into what it ought to be and fashioning a total program for carrying it out. There is no longer any justification in an American city for a timid project, for a piecemeal approach to the problems we face. It not only isn't the cautious and conservative thing to do, it is the reckless and irresponsible thing to do. We must develop a total study of what the city really needs to do to make itself slumless, blightless, livable, and efficient. From such a study we begin to learn over what period of years this job can be done, over what period of years can we correct the fact that we have built our cities largely without plan, over what period of years can we actually eliminate slum and blight from any individual American city.

"The reason we seem to stop short of undertaking a total plan and a total program is the notion that it can't be done. We still labor in America under the belief that the arithmetic of the city can't be made to work. We still look upon the process of redevelopment and renewal as if it were a burden, an expense in city government. This simply isn't true. It is an investment. It is the most important and dynamic investment the city can make."

The challenge has been hurled, and we have accepted it. Our investment in Paterson's future is essential if we are to forge ahead.

What are you doing about it?

Judge James P. Houlihan

EXTENSION OF REMARKS

OF

HON. PRINCE H. PRESTON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. PRESTON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD I include the following editorials which speak eloquently of the life of one of the great men of the State of Georgia. Judge James P. Houlihan will long be remembered for his many contributions to his city and county. It is indeed seldom that I put in the CONGRESSIONAL RECORD any comments on the passing of citizens of my district, but in this instance I feel that I would be remiss if I did not call to the attention of the Nation the greatness of this distinguished citizen who has left his imprint indelibly on the affairs of my native State.

The editorials follow:

[From the Savannah (Ga.) Evening Press editorial, May 26, 1960]

JUDGE JAMES P. HOULIHAN

The announcement this morning of the death of Judge James P. Houlihan came as a shock to this, his native city. Judge Houlihan had not been well recently and had been absent for several days from the financial scenes that knew him so well, but the countless Savannahians who were his

friends were not prepared for the sad word of his passing.

Judge Houlihan held an unexcelled place of esteem and affection in the hearts of his fellows. He was in the best sense of the expression a self-made man, rising in the banking world from a messenger to the presidency of the Georgia State Savings Bank, a Savannah institution of the highest standing and traditions. Prior to becoming head of the Georgia State he had been president of the Liberty National Bank & Trust Co., the successor of the Germania Bank, the institution with which Judge Houlihan began his financial career.

It was characteristic of Judge Houlihan that in addition to the attention he gave to major business as a banker he was always ready to listen to the needs of smaller clients, especially among young people who needed help over a household or business financial tight spot. The regard these young people formed for Judge Houlihan lasted undiminished through their adult lives.

The public service of Judge Houlihan was highlighted by many years of service on the Board of Chatham County Commissioners. He served long as chairman of the board and held that office when he retired. As in every endeavor to which he applied his talents, Judge Houlihan served the people of Chatham County with dedicated earnestness as head of their county government. The description of "progressive conservative" had been applied to Judge Houlihan and this admirably described his sound administration of county affairs.

One of the most beautiful aspects of Judge Houlihan's life was his devotion to his family and to his church. The late Mrs. Houlihan was the center of his life and Judge Houlihan never really fully recovered from the loss of his wife several years ago. A communicant of the Catholic Church, Judge Houlihan was a devout man and received from his church comfort and solace, and in recognition of his service, honors. He was a Knight of St. Gregory, the Pope having conferred on him this distinction, one of the highest given to laymen.

There will be a void in Savannah life now that Judge Houlihan is gone. But the city and the people will long enjoy, and gratefully remember, what he meant to them.

[From the Savannah (Ga.) Morning News, May 27, 1960]

JAMES P. HOULIHAN

A life of devoted service to Savannah and Chatham County ended Wednesday with the passing of Judge James Patrick Houlihan.

Judge Houlihan's career as a banker and public servant was studded with many fine accomplishments, not the least of which was his guidance of the county's fiscal affairs for more than a score of years. He assumed the financial reins when the county government was hopelessly in debt, and through careful management and insistence upon balanced budgets lifted it to the excellent condition it continues to enjoy today.

Born in the Washington Square section of Savannah in 1884, Judge Houlihan started his business career as a messenger boy for the old Germania Bank in 1901. He became president of the Liberty Bank, successor to the Germania, in 1929, and at the time of his death was president of the Georgia State Savings Bank. He was elected a county commissioner in 1925. In 1937 he was chosen chairman, a post he held until he resigned in 1955.

Service on the county board would have in itself been ample contribution to his native city and county. Yet Judge Houlihan found time to join in every worthwhile move for the betterment of Savannah. His prime interests were highways and commerce. The James P. Houlihan Bridge over the Savannah River at Port Wentworth stands as a monument to his contribtuions in this field.

Judge Houlihan had served as president of the Georgia County Comissioners Association, the Hibernian Society of Savannah, and was a member of the original Georgia Ports Authority. A devout member of the Catholic Church, he was honored by the late Pope Pius XII by being named a Knight of St. Gregory.

A man of unfailing fairness and attractive personal traits, Judge Houlihan's career in the political field was marked by high votes of confidence from the people of the county. His friends were legion. In the death of Judge Houlihan, Savannah has lost a citizen of great worth, and the Morning News joins Savannahians in all walks of life in extending deepest sympathy to his son and other members of the family.

The Military Services

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, June 2, 1960

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles relating to our armed services which were published in the Army Times of May 7, 1960, and May 28, 1960, written by Monte Bourjaily, Jr. I think they are very timely and interesting.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Army Times, May 28, 1960]

KIBITZER'S SEAT—THE DOLLAR IS STILL IN COMMAND

(By Monte Bourjaily, Jr.)

Released by the Army is a new regulation on activating, inactivating, and creating permanent installations for Army use. If the Army now sticks to the rules it has laid down in this regulation, it will have to close down all but 10 of the posts in the United States now housing tactical and training (for combat arms assignment) units. It will also have to close many of its technical service installations, consolidating their activities into joint depot and industrial installations.

I find it difficult to believe that the Army will stick by its own rules.

These rules, for example, require that posts housing tactical units have a division reinforced by support and logistical troops, that is, 20,000 to 25,000 men. The regulation says further that the post should not be larger than 25,000 men.

The regulation, AR 210–15, also calls for grouping activities at single posts for reasons of economy and efficiency. This could mean using an arsenal-depot complex for the activities of several different technical services.

At 20,000 men per post, the Army would require 20 posts in the United States. It has, of course, far more. There are in fact few posts at which there are 20,000 assigned. And, of course, there are not 400,000 men in CONUS assigned to tactical or basic training units.

While the above is an oversimplification of the purpose and intent of the new regulation, the regulation certainly confirms the fact that centralization continues to be the Army's policy. I wonder if it should be.

Unfortunately, there is little the Army can do to change this policy. The arguments in favor of continued centralization are persuasive these days. A single central heating plant, a single large power station, a single consolidated messhall or office building or industrial (factory) complex is cheaper to run and easier to maintain.

Control is also easier when larger numbers of men are gathered into a single area. Statistics are more meaningful when applied to large groups than to small. This makes prediction of requirements at large posts easier. And if prediction is easier, then budget planning is easier, because it depends on forecasts of requirements.

The key is, of course, budget planning.

In this Army regulation, the all-pervading control of the Bureau of the Budget is apparent. The Budget Bureau neither wrote nor approved this regulation, but the Bureau was laid down broad guidelines which say in effect, "So long as you reduce costs, what you do is good. If you can't show continued savings or if you ask for more money, we'll chop you down."

Centralization is a requirement, even though Budget never says a word about it. Saving money overrides such other considerations as:

Dispersal: For a potential attacker with lots of weapons, how nice of the Army to put its combat strength together in division-size targets. Four or five good sized bombs wipe out a division and its support and their equipment.

Community relations: "Out of sight, out of mind." The fewer posts the Army has, the fewer communities will be closely connected with the military. The fewer communities that see soldiers regularly, the fewer people who will be aware of what the Army is and what its needs are. The fewer who know the Army, the less support it will have from the general public. The less support the Army has, the less pressure there will be for money to meet modern Army needs. This balances budgets.

Centralization and the arguments for it ignore modern communications potential—ADPS, transceiver, teletype and similar means—which have made separation of units unimportant.

Also ignored is the requirement that relatively junior officers such as colonels (a major general must command a post of 20,000 to 25,000 men) are better prepared to be effective commanders if they must solve daily problems on their own. The close control that is exercised at large posts destroys initiative.

This regulation proves again that the dollar is in command. Decentralization, dispersal of units and facilities to a reasonable degree would certainly cost money, even $100 million or $200 million. This is a sum that the powers that be figure is worth saving.

But investment of this amount could pay off handsomely. The payoff, however, can't be assigned a dollar value that can be computed. So the budgeteers can't recognize it. This is too bad for the Army.

[From the Army Times, May 7, 1960]

KIBITZER'S SEAT—COST AND CONFUSION OF MISSILE PROGRAM

(By Monte Bourjaily, Jr.)

The Army at present has under development or in operation 15 missiles. Since 1943, it has worked on 19 by itself and 2 more with the Navy. Of these 21, then, 6 missile programs have been canceled. The cost of the canceled programs has been $168.7 million for the four solely Army missiles canceled and $26.9 million for the two joint Army-Navy development projects.

The Navy today has 14 guided missiles under development or in operation. Since

1943, it has done developmental work on 30 missiles, by itself plus the 2 it worked on with the Army referred to above. Cost of developing the 16 canceled missiles has been $680.4 plus the Navy share of the $26.9 million for the 2 joint missile projects.

Since 1946 (possibly earlier), the Air Force has worked on 31 different Missiles. Of these today 12 are either operational or under development. The Air Force has done no joint work with the other services, although it transferred to the Army its interest in and work on the land-based Talos. The Defense Department charges the Talos to the Air Force.

Cost of the 19 Air Force missile projects canceled is $1,451.5 million.

Total cost to the Defense Department of 41 missile projects which went into development but have not paid off in usable military weapons systems has been $2,327.5 million. Of this almost half the missiles and more than half the cost are chargeable to the Air Force.

Sources for the above information are:

Missiles operational or under development—Defense Department Fact Sheet or Guided Missiles and Rockets (no rockets are included in the above figures, by the way) dated April 4, 1960 and carrying the release number 344–60.

Missile projects which went into development and were "canceled, terminated or reorientated"—a Defense Department table appearing on page 262 of part 7 of the hearings before the Subcommittee on Department of Defense Appropriations of the Appropriations committee of the House on the 1961 defense appropriations, released to the press and public on April 27.

Not included in the recitation of cancellations, etc., are such missiles and the funds spent for them as Snark and Bomarc. Snark is an operational missile. Bomarc, according to the same hearings, is partially operational, although it will not achieve operational readiness (the Air Force calls it C–2 status) for some months in its "A" or short-range version, will not achieve C–2 status for the "B" or long-range version for at least 2 years. This C–2 status, by the way, is actually less than 80 percent ready.

These figures are called to your attention because of the recent decision by the British to cancel their Blue Streak IRBM to abandon any idea of having missiles in stationary positions and to convert their forecs to fully mobile ground, sea, air, and even missile forces as the best military posture in the atomic era.

The cost, the British have found, is too great in terms of treasure to be spent and lives threatened for them to adopt the maginot line strategy of digging into fire back when attacked.

The indicated conclusions above need not suggest, even require, a detailed investigation of the Defense Department missile program and the approaches used by each of the services to missile development. Such an investigation, undertaken with the goal in mind of setting up a development agency likely to produce the most for the least expense in money and manpower, could pay off in better defense for less money. But those who sponsored such an investigation would have to be willing to be bound by the results and not let political and industrial pressures sway them.

More than $2.3 billion, plus additional sums spent on such marginal programs as Bomarc is turning out to be, could have been far better spent in other areas.

But a course leading to best use of R. & W. dollars in the future will require far stronger leadership than has been exhibited up to now. At the moment, it is hard to see where such leadership is coming from.

Student Addresses at Convocation Honoring Rt. Rev. Msgr. John J. Dougherty, New President of Seton Hall University

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. CANFIELD. Mr. Speaker, I was privileged to attend and address a convocation last Wednesday, May 25, in honor of the Right Reverend Monsignor John J. Dougherty, new president of Seton Hall University. The convocation, held in the Alexander Hamilton Hotel, Paterson, N.J., was the first to be held by Seton Hall's Paterson college.

A most interesting program included talks by Monsignor Dougherty, Msgr. Thomas J. Gilhooly, and Dean Edward Fitzgibbons. Spokesmen for the students were Miss Anne Longstreet, sophomore, whose subject was "The Contrast Between Two Revolutions," and Mr. Louis A. Gallo, a senior, who discussed "Federal Aid to Education." I am inserting these student speeches in the CONGRESSIONAL RECORD at this point:

THE CONTRAST BETWEEN TWO REVOLUTIONS

(By Miss Anne Longstreet)

In March 1848, the people of Hungary, spurred on by events in Paris and Vienna, established a modern constitutional regime with the Austrian emperor as King of Hungary. When the Austrians refused to cooperate with the new government and incited the subject nationalities to revolt, the Hungarians bravely defended their freedom, and when all hope of agreement with Austria had disappeared, declared their independence. They were, despite their courage, defeated by the combined forces of Austria and Russia and remained subject to Austrian despotism until 1867, when the dual monarchy was created.

Again in 1956, the people of Hungary revolted against oppression, this time against Russian Communist oppression. The people of Budapest fought tanks with their bare hands and for 5 amazing days seemed to have triumphed. Hungary declared its neutrality and political freedom was restored. The dream was ended when the Russians, on the morning of November 4, attacked the city and, after several days of hard fighting, finally subdued resistance.

Surprising likenesses appear between the Hungarian revolution of 1848 against the Hapsburg monorachy and the 1956 revolt against the Communist regime. The fact that the first was a revolt against the extreme right while the second was directed against the far left is of less importance than first appearances would indicate. Totalitarian governments, whether rightist or leftist, are remarkably alike, and the two revolutions against them display many significant similarities, as well as several important differences.

The conditions in the country in prerevolutionary times are similar. Hungary was ruled by an authoritan government in each case—in one instance by the Austrian monarch and the aristocrats of Hungary, in the other by the Stalinists Rakosi and Gero and their underlings. In each case, a constitution existed—in 1848 the Golden Bull of feudal times, guaranteeing the rights of the Hungarian nobles and slightly limiting the Austrian crown, in 1956 a constitution embodying on paper the liberties usually associated with democratic governments. In each case, the constitution was violated. A legislative body without real power—in 1848 the feudal diet, in 1956 the national assembly—existed, but while the diet held many responsible leaders and provided the springboard for the 1848 revolt, the national assembly of 1956 had nothing at all to do with the revolution. This is explained by the fact that, while in 1848 the common nobility, which elected deputies to the diet's lower house, often voted for outstanding liberals, the membership of the 1956 national assembly was made up entirely of Communist puppets placed there by rigged elections.

The economic exploitation of Hungary under both regimes presents many parallels. Hungary was, in 1848, an extremely backward nation. Agriculture was primitive, roads were almost nonexistent, river transportation was poor, and the country was in bad financial shape. Austria treated Hungary as an agricultural province, forcing her to sell grain cheaply to Austria through the imposition of an export tax, while crippling industrial development by customs policies which forced the Magyars to buy manufactured items almost exclusively from Austria. This treatment compares strikingly with Russian treatment of Hungary.

The country is still backward in comparison with Western nations. Though the Russians have indeed industrialized the nation to a considerable degree, this has not always been in Hungary's best interests, for she has not the resources to support the extensive heavy industry Russia desires, and much coal and iron must be imported. Trade agreements between the two countries have been arranged to Russia's advantage and Hungary is, when possible, drained of her resources. Thus, just before the revolt broke out, the Soviets began to exploit in Russia's interest the newly discovered uranium deposits of Hungary on terms dictated to the Hungarian puppet government. Rural discontent, present in 1848 when emancipation of the serfs and land reform were so desperately needed, appeared again in 1956 in the peasants' discontent under the collective system and their willingness to disband it at the first opportunity.

The upper classes took a major part in the 1848 revolt, comprising the leadership of both conservatives and liberals. The 1956 rebel disclaimed all connection with the former aristocracy and refused to allow them any part in the uprising. But while the Communists, as a matter of course, also disclaimed any connection with an upper class, Mr. Djilas' concept of the new class under communism invites comparison of the Communist elite with the aristocratic elite of 1848. While it would be dangerous to carry the comparison too far, the similarities of the two classes shed light on the class structure of authoritarian governments.

The police state in Hungary was not an invention of the Russians. The Austrians too had their infamous prisons, notably that at Spielberg, and they had their secret police as well. Censorship was enforced, then as in 1956. The AVO, the secret police organization, refined the techniques of repression under the tutelage of the Soviets and made them a far more significant force in the daily life of the population; the mass distrust and fear existing in Communist Hungary was not found in 1848. Nonetheless, they by no means originated these techniques. It is interesting to note that a short time before each revolution, these repressive measures were somewhat relaxed. Thus in the 1840's Kossuth could publish a newspaper openly advocating liberal ideas, and in 1956 the

Petofi Circle could criticize the regime at public meetings without reprisal.

Nationalism played an impressive role in the course of both revolts. Indeed, in one sense the 1956 revolution seems almost an anachronism, a nationalist revolt against foreign dominion, carried on with 19th century gallantry and sentiment in the Atomic Age. While domestic conditions cannot be thrust aside, hatred and resentment of foreign control played a major part in each rebellion. In 1848 the nationalist movement was at its zenith. It was a time of quarrels over language and national symbols, a time when nationalist aspirations were awakened among the peoples of central Europe and were, it seemed, about to be fulfilled. Again in 1956, resurgent Hungarian nationalism, seizing as its inspiration the traditions of 1848, demanded an end to Russian hegemony and the withdrawal of Russian troops.

One element in the nationalist picture of 1848 was missing, however, in that of 1956. In 1848, nationalism, having sparked the revolt, also proved its downfall. The ambitions of the Serbs, Slovenes, and Croats, encouraged by Austria and unfairly supressed by the Magyars, divided the country at a crucial moment and forced Hungary to fight two enemies at once. Further, by the final act of nationalism, the Declaration of Independence, the Magyars lost needed support, both at home and abroad. This element of internal dissension and minority dispute was absent in 1956, partially because Hungary had since lost most of her minorities to surrounding countries, partially because of the universal hatred of communism. In 1956, the nation was united.

Each revolution was touched off by disturbances in other countries, that of 1848 by revolts in Paris and Vienna, that of 1956 by uprisings in Poland. Moreover, in their originators the two rebellions are similar. Students, writers, and other intellectuals provided the inspiration of each movement. This to a certain extent is true of all revolutions—the revolutionary student is a perennial character, as recent events demonstrate. But the part played by the writers and students of 1956 is particularly outstanding. They not only provide the intellectual ammunition of the revolt and organized demonstrations, but served as military leaders of the workers as well. The revolt of 1956 was carried on consciously in the traditions of 1848. The poems of Petofi, the words of Kossuth, the deeds of Bem, the Marseillaise, these old revolutionary symbols rallied the people. Liberal ideas of freedom provided the basis for many of the student and worker demands.

There are, however, several important differences that should be stressed. The liberal economic ideas of 1848 had no place in the 1956 programs. On the contrary, most of the rebel leaders were committed to some form of socialism. The workers, the industrialized proletariat, scarcely existed in 1848 and had no part in the revolt; in 1956 they were its backbone. Without the support of their members it could never have succeeded, even for so brief a time. This is the more significant because the regime had done so much for the "loyal workers" of Red Csepel.

The two revolutions are similar in the course of events they followed as well as in the conditions provoking them. The rebellion of 1956 compresses into a few weeks events that took over a year in 1848, yet the pattern is definitely similar. Both revolts seemed at first to succeed with almost no opposition; there followed close on initial happenings a period of quiet and apparent victory. Neither revolt is characterized by the excesses so common, for example, in France; the 1953 revolutionaries in particular labored to see that no stain should fall on their movement, and isolated lynchings of AVO men are the one understandable blot on their record. Pleas for the support of Western nations were addressed in both cases, but though sympathy for Hungary existed, no tangible help was forthcoming. In 1849, in words strangely apropos for 1956, Daniel Webster remarked, "We have had our sympathies much enlisted in the Hungarian effort for liberty. We have all wept at its failure." In both instances, however, tears were the only contribution of the nations.

Both revolts were betrayed, that of 1848 by the secret machinations of Austria and the repudiation of her promises, that of 1956 by the ruse of negotiation followed by the surprise attack on Budapest. Russian armies, sent respectively by Czar Nicholas I and Khrushchev, crushed all resistance, though it is interesting to note that the czar later recommended mercy toward the defeated Hungarians—a recommendation that the Austrians disregarded.

The 1956 revolt, because of its spontaneous nature and the rapidity of its progress, did not develop outstanding leaders, men of the stature of Kossuth, Deak, and Gorgy. Imre Nagy was a somewhat reluctant tool of the revolt, and was accepted as the best man in the circumstances, but was hardly the ideal leader. Nor did Cardinal Mindzenty, upon his release, significantly affect the course of events. The one exception was Pal Maleter, the strategist of Budapest, who accomplished marvels in the defense of the Kilian barracks. The Russians made sure of his capture before attacking the city on the morning of November 4.

Can we now venture to compare the results of the two revolutions? Hungary returned to despotism in 1848, a number of executions took place, and only in 1867 was a compromise solution worked out. Liberalism and democracy did not triumph as a result of the revolt. Again in 1956, the country returned to tyranny and despotism and reprisals were taken, and are still being taken, against the people. The final solution of this rebellion is a thing no one would dare to predict.

The similarities between these revolts have meaning for free men at this time. They prove that people are basically alike, that in 1956 as in 1848 they were concerned with personal and political liberty and economic well-being; that the Communist state has no magic power over the minds of men and that George Orwell's "1984" is no more than a nightmare. The similarity of tyrannical governments, regardless of time and place, is shown most clearly. The importance of nationalism and the danger of discounting it as a force in the world today are shown by the fact that it played as important a role in the 20th century revolution as in the one a century before. We see this in the rise of the new nations of Africa and in the disasterous consequences that have attended the attempted suppression of nationalism. Finally these similarities demonstrate that people of any age will fight for liberty—a lesson many were in danger of forgetting until the 1956 revolt proved it once again.

Federal Aid To Education

(By Louis A. Gallo)

Federal aid to education has become a most controversial issue in our time. It is not the purpose of this discourse, however, to make a stand for or against such a proposal. Instead, by giving the historical background of the subject, by stating the problems that make it an issue * * * the way to the solution may be better perceived. It would be well at this time to recall the recent words of former President Hoover who said that a nation that does not know its history will be forced to live it again.

The first major instance of assistance by our National Government occurred in 1785, 4 years before the Constitution of the United States had even been ratified. It was effected by the land ordinance of that year which provided that 1 square mile of every township be set aside "for the maintenance of public schools within said township." This policy was restated 2 years later in the ordinance of 1787 which referred to the Northwest Territory, an area represented today by the States of Ohio, Indiana, Illinois, Michigan, Wisconsin, and part of Minnesota. article 3 of this northwest ordinance reads: "Religion, morality, and knowledge, being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged."

After 1800, this education assistance policy was extended further when the Federal Government would set aside certain lands in almost every new State for educational purposes. Indirect financial assistance was realized under the Jackson administration when the Surplus Revenue Deposit Act of 1836 provided for the distribution of a $28 million surplus in Federal funds to the State governments, the major portion of which was utilized for educational purposes. During this middle period of our history, it was apparent that a healthy republic required higher education in order to produce the necessary qualities of leadership in its citizenry. Therefore, between the end of the Revolution and the beginning of the Civil War, 21 public universities were established throughout the 28 States. Although these institutions of higher learning evolved from State grants in the original Eastern States, the universities founded in the new States were largely aided by Federal grants in the form of public land.

Another example of financial assistance was achieved during the Lincoln administration when the Morrill Act was passed in 1862. Although this same bill was vetoed by President Buchanan in 1857 on the grounds that it violated States rights and set up dangerous precedents of Federal aid to education, it nevertheless received the signature of Presdent Lincoln 5 years later. By its provisions, each State was granted 30,000 acres of public land for each of its Congressmen. Upon the sale of these lands, the proceeds were to be devoted to the establishment of colleges of agriculture and mechanic arts. In some States where no university had yet been established, these land-grant colleges were the first examples of higher education.

After the Federal Department of Education had been created in 1867, it seemed that Federal aid in the post Civil War era would be increased. However, after the Civil War, there were several proposals for Federal aid which never left the halls of Congress. At this time the necessity of assistance was obvious because of the following factors:

1. The war had lain waste the educational facilities of the South.
2. Four million slaves had been liberated.
3. And a great desire for national unity had been stimulated.

The first attempt to enact legislation was made by Representative George F. Hoar of Massachusetts on February 25, 1870. In short, it was "to establish a national system of education". Such a proposal met opposition, not only from public opinion, but also from the professional educators of the time, led by the National Education Association. In speaking before the NEA in 1871, James P. Wickersham (superintendent of common schools of Pennsylvania) condemned the proposal on the grounds of dubious constitutionality and contrary to the views of the Founding Fathers and leading statesmen of the Nation. This bill never came to a vote in either house of Congress.

The remainder of the 1870's had two more proposals of Federal aid—the Perce bill of 1872 and the Burnside bill which was introduced in 1879, both of which contained

provisions which were similar to the Morrill Act; i.e., the land-grant system. Neither could gain the approval of both Houses of Congress.

The 1880's saw the crystallization of the varying arguments for and against Federal aid. The cause of this crystallization was the Blair bills which were constantly proposed in the Senate by Senator Henry W. Blair of New Hampshire. Basically, he proposed aid in the establishment and temporary support of common schools. The only cause of defeat to be found was that the farm and labor groups of that time were too preoccupied with immediate economic problems to give extensive attention to educational matters. However, this era of 1870–1890 did have successful proposals of limited Federal aid. I refer to the Hatch Experiment Station Act of 1887, and the second Morrill Act which was passed in 1890. Both rendered direct financial assistance to higher education, particularly the land-grant colleges. Thus the 19th century came to a close within which were contained many examples of Federal aid to education.

In recent years numerous examples of Federal aid may be cited: in 1914, the Smith-Lever Act, the ultimate purpose of which was to raise the level of American rural life, was the spark which caused a $41 million expenditure through the Department of Agriculture for more cooperative extension work in agriculture and home economics.

Legislation which provided for school lunches for nonpublic as well as public schools was at first a depression measure of the thirties and was made permanent by legislation in 1946 and 1948.

Federal aid to vocational education had its inception with the Smith-Hughes Act in 1917 which distributed Federal funds to promote the teaching of agriculture, home economics, and the trades in secondary schools. This was bolstered by the George-Reed, George-Ellzey, and George-Deen Acts in 1929, 1934, and 1936 respectively. In 1949, vocational education received an expenditure of $27 million from the Office of Education.

The depression years contained numerous examples of Federal aid to education. To cite a few: The Civilian Conservation Corps and the National Youth Administration were to give relief and vocational training to unemployed youths—the latter organization actually assisting students to continue their schooling and college education. The Public Works Administration gave funds for school and college building construction; and the Works Projects Administration promoted activities in adult, worker, vocational, and immigrant education.

War and defense training was the stimulus between 1940 and 1945 when approximately $500 million was spent for war work. Also during these war years, the Lanham Act gave Federal funds to aid the financing of public school buildings and services in regions that experienced undue hardships during the war-boom days.

By far the greatest expenditure to date by our Government was the Servicemen's Readjustment Act of 1944, otherwise known as the GI bill of rights. This act provided tuition, subsistence, books, and supplies, equipment, and counseling services for veterans to continue their school or college education. By the deadline year of 1951, some 8 million veterans received benefits totaling $14 billion. These benefits were renewed in 1952, nonprofit colleges and universities received $300 million from the Federal Government to promote fundamental research and the training of personnel of vital importance to the general welfare.

Student exchange programs received their impetus from the Smith-Mundt and Fulbright Acts. The Federal Government is also credited for giving well over $3 million to the U.N. Educational, Scientific, and Cultural Organization in 1949.

And more recently, the National Defense Education Act of 1958 provides loans to students, financial aid to strengthen instruction, fellowships, guidance counseling, language development, research in the various media of communication, area vocational education, science information service, the improvement of statistical services.

You have heard a brief sketch of the history of Federal Aid to education. It is sufficient to prove that there is ample historical precedent for it should also be perceived that every generation of Americans has been cognizant of a most important fact: That for a mature electorate, more than a basic education is a most essential ingredient in order to maintain a republic based on democratic principles. It is my contention that this same important fact is being ignored today. The issue in our time is not one of whether the Government should merely aid private as well as public education. The professor of political philosophy and historical jurisprudence in the Fordham University Graduate School, Father Joseph F. Costanzo, S.J., states the problem quite succinctly:

Summarily and cumulatively the objections which have frustrated the passage of a Federal aid bill for general education are as follows:

1. The express or effective exclusion of religious schools from the benefits of Federal aid programs or the exclusion of even auxiliary aids for parochial school children.

2. Fear of Federal control of education incident to or, if provided against by the terms of the legislation, inherently potential in the power of the purse which court intrepretation might uphold as legitimate jurisdictional supervision and direction.

3. Opposition to "creeping socialism" in Government.

4. Suspicion of Federal encroachments in a domain traditionally entrusted to local communities and the States.

5. The dread of increased taxation.

6. And, most recently, the stipulation that Federal funds be available only to such States as manifest concrete evidence of a gradual and effective cooperation with the desegregation decision.

Thus Federal aid to education has evolved into a most complex problem. The solution does not seem imminent. One can rest assured that the true solution lies in the American tradition of compromise. Such a means will require much wisdom. In his inaugural address, our own university president stated:

"If I may indulge in prophecy and run the hazards attendant to prediction, I foresee a day when the American people will have reached that measure of cultural maturity and that depth of social wisdom that will endorse Government support of private as well as public education."

Let us, therefore, educators and students alike, strive as never before to acquire this cultural maturity and social wisdom * * * in order that this problem and any others which may confront us will achieve the proper solution. It would be well to conclude with the appropriate words of former President Truman which were uttered on November 11, 1949:

"The beliefs on which we have founded our form of government are under attack. It is only the people of religious faith throughout the world who have the power to overcome the force of tyranny. Their religious concepts are the only sure foundation of the democratic ideal."

Thank you.

Merchant Marine a Line of Defense

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1960

Mr. BUTLER. Mr. President, in 1933 the Congress established May 22 as National Maritime Day in commemoration of the first crossing of the Atlantic Ocean by an American-flag steamship. The name of the vessel, by the way, was the *Savannah*, also the name of this Nation's, and the world's, first nuclear-powered merchant ship launched last year.

Since the beginning of this Republic, Americans have been going down to the sea in ships because of the long coastlines and excellent harbors with which this country is blessed and because our leaders have always understood that to be a great world power a nation must be a great naval power.

On May 24 the Baltimore News-Post, which won awards for its editorials, its typography, and its news pictures in 1959, published a most persuasive editorial entitled "Merchant Marine—A Line of Defense." Its concluding sentence read:

Whatever the combined costs [of a merchant marine program], they will be billions of dollars less than the cost of losing a war—or of losing a peace.

Those are words, Mr. President, that have the ring of convincing truth. I ask unanimous consent that the editorial of the Baltimore News-Post, entitled "Merchant Marine—A Line of Defense," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MERCHANT MARINE A LINE OF DEFENSE

It is axiomatic that an American merchant marine is necessary for our national independence and, in time of war, for our national survival.

In peace, we must have merchant ships to transport raw materials to our industries from oversea areas, to distribute our products abroad, and to convey at least a share of our tourist travel. It has been argued that we could profitably rely on other seafaring nations for these services, but experience has proved otherwise.

In war, the Armed Forces must have a marine auxiliary. Two world wars have demonstrated that we cannot borrow nor hire one from other lands. In both wars, we had to improvise a merchant marine, at great cost, after the wars began.

The solution is a permanent merchant marine to serve our peacetime trade routes and to be immediately available for war requirements. This in turn necessitates shipyards on our own shores.

Congress has provided for our needs in a Merchant Marine Act. Under the law, the Federal Government subsidizes both the construction and operation of cargo and passenger ships. Other maritime countries do likewise, but the subsidy method is especially essential for us beacuse of lower construction and maintenance costs paid by our foreign competitors.

And the subsidy plan, over a long term of years, is far less costly to us than the emergency construction of ships during war.

The Merchant Marine Act calls for a consistent program for maintaining a merchant fleet, including replacements as vessels grow old.

Unfortunately, however, Congress has not been appropriating sufficient funds, and consequently our merchant marine is growing obsolete and even dwindling away while rival powers—including Soviet Russia—are forging ahead on the high seas.

To eliminate this danger to our security—and in observance of Maritime Day (today)—Senator WARREN MAGNUSON, Democrat, of Washington, is sponsoring a double legislative program, calling for increased shipbuilding and a 10-year oceanography study plan.

The oceanography work, in which we lag seriously, would require about a billion dollars in all. Merchant marine requirements would be financed on a basis of needs. Whatever the combined costs, they will be billions of dollars less than the cost of losing a war—or of losing a peace.

Federal Salary Increases

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. HALPERN. Mr. Speaker, with the question of action this year on pay raises for Federal employees coming to a head, we need not go any further than an advertisement in a recent issue of the popular Roll Call, the newspaper of Capitol Hill, to find a comprehensive presentation supporting such legislation.

I refer to a full back-page advertisement sponsored by WQMR, "The Radio Voice of Government People in the Nation's Capital," which was presented in the April 11 issue of Roll Call as a public service.

In a concise, hard-hitting, factual report directed to the attention of Members of Congress, the ad sets forth a most convincing case for the passage of pay raise legislation.

I fully support H.R. 9883 and am privileged to be among the sponsors of companion legislation. I have studied the various arguments pro and con on the subject and am firmly convinced of the vital need for this justifiable legislation.

Mr. Speaker, the case is so well put in the advertisement by WQMR, that I ask unanimous consent that it be included in the RECORD as a part of my remarks:

TO MEMBERS OF CONGRESS: PLEASE READ THESE FACTS CONCERNING H.R. 9883 PROVIDING MODEST SALARY INCREASES FOR FEDERAL EMPLOYEES

FACT

1. In private industry, salaries have risen in proportion to both the cost of living index and the worker's increased productivity. While more extensive statistics are available on private industry workers' increased productivity, a highly credited study on this subject in respect to Federal employees already exists. This was made by Henry D. Lytton, an economic consultant who has served both Government and industry. Mr. Lytton's study, in condensed form, appeared as a lead article in November 1959 issue of the Review of Economics and Statistics, published by Harvard University. The findings, based on 67 percent of the 1958 total of 1,182,711 nondefense Federal employees, arrive at this conclusion:

Federal employee productivity increased 17 percent in a period of 12 fiscal years, through June 30, 1958.

The above conclusion is reasonable in the light of the trend per man-hour in the private economy. Hence a Federal pay increase is justified on the basis of productivity.

FACT

2. Despite such salary increases as have been granted, classified Federal employees now have less purchasing power than provided by 1939 salaries.

Salaries in terms of purchasing power

[Based on CPI for August 1939 and January 1960]

General schedule grade	1939 salary	1960 salary		Percent increase needed to restore 1939 purchasing power
		Amount	In 1939 dollars	
5	$2,000	$4,040	$1,900	5.2
7	2,600	4,980	2,343	11.0
9	3,200	5,985	2,815	13.6
11	3,800	7,030	3,307	14.9
13	5,600	9,890	4,653	20.3

Source: Official statistics of the Civil Service Commission and the Bureau of Labor Statistics.

FACT

3. The above-indicated loss of purchasing power, plus the disparity between Government and industry pay rates, for comparable work, has produced acute recruiting and retention problems which have certainly not increased the efficiency of Federal Government operation.

Below are two typical examples of pay rates for specific work in private industry in 10 key cities, compared with Government salaries for the same work:

	Average Government pay	Average private industry pay for same work
Senior draftsman, GS-5	$4,560	$5,504-$6,860
Tabulating machine operator, GS-3	3,814	4,225-5,321

Sumner H. Slichter, professor of economics, Harvard, offers these two significant facts in the course of a study of private industry pay:

(a) For the entire period (1948-58) the rise in compensation per man-hour was 63.3 percent.

(b) In every one of these 10 years, without exception, average hourly compensation of all employees in private industry rose more than the Consumer Price Index.

Compare Dr. Slichter's findings with the plight of a top-grade letter carrier. In 1948 such a 25-year veteran received $3,850. Today's top-grade letter carrier receives $5,175. This is but a 34-percent increase compared to Dr. Slichter's statistic of a 63.3-percent increase for workers in private industry, during the same 10-year period.

FACT

4. H.R. 9883 would raise classified Federal salaries an approximate average of 9 percent. Certainly this is a modest proposal in view of the rise in the cost of living and increased productivity. Passage of the bill would have the further advantage of reducing the cost to the taxpayer imposed by the present high rate of personnel turnover in Federal employment.

Certainly a pay increase will help reduce personnel turnover which is so costly and wasteful of Federal funds. The Government is losing a large proportion of its personnel during the first 5 to 10 years of service. As any businessman can testify, training, and retraining persons for the same job due to turnover can be an expensive process. Passage of H.R. 9883 would definitely contribute toward a reduction in personnel turnover and its accompanying high cost to the Government and ultimately to the taxpayer.

We respectfully urge your careful consideration of this bill as a means of helping to raise the earnings of the Federal worker toward the level of his counterpart in private industry and as an incentive to still greater productivity.

(Presented as a public service by WQMR, "The Radio Voice of Government People in the Nation's Capital.")

Saluting the Salvation Army

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, June 2, 1960

Mr. WILEY. Mr. President, recently, the Salvation Army celebrated its 80th anniversary.

For eight decades, the Army—symbolic not of destruction, but of dedication to bettering human life—has magnificently performed individual and community services for our people. These have included: family emergency relief; disaster aid; social welfare; and a wide variety of other activities—including providing houses of worship and spiritual guidance for millions of people.

The Nation, I believe, owes a real debt of gratitude to the dedicated individuals who have carried on the splendid work of the Army.

Recently, the La Crosse Tribune published a splendid editorial reviewing the 80 years of service.

Reflecting the work of this dedicated organization in creating a better world, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the La Crosse Tribune, May 28, 1960]

WE SALUTE SALVATION ARMY, CELEBRATING 80 YEARS OF SERVICE IN UNITED STATES

This week has been designated National Salvation Army Week in tribute to its 80 years of service in the United States.

The Salvation Army became active in La Crosse soon after the turn of the century. During these years it has offered its spiritual guidance and way of life to those who have no church affiliation and who are in need of help. This newspaper is proud to join with others in our area in honoring it.

From a pioneer band of one man and seven women, who landed at the Battery in New York City 80 years ago, the Salvation Army has grown to a force in this country of more than 5,000 officers, assisted by 12,000 helpers.

This great organization has 1,109 corps, 165 outposts and 7,275 other centers of operation, including 6,337 extension units.

Its community services have included family emergency relief, transient assistance, disaster aid and a social store.

The Salvation Army is more than a house of worship. It is also a neighborhood center, where boys and girls, adults and senior citizens participate in constructive recreational activities and receive spiritual guidance.

In 118 centers across the country homeless men with alcoholic and other problems are returned to useful living through the Salvation Army's well-planned care and treatment program.

Underprivileged children are given weeks of health-giving activities at Salvation Army camps. All this and more make up the Salvation Army's program of selfless service.

An outstanding characteristic of the organization through the years has been its vigorous effort to alleviate the miseries of mankind.

Its approach was thought novel and while its methods have often changed through the years, it continues to feed the hungry, care for the poor, clothe the naked, befriend the friendless and strengthen man's faith in himself and his God.

For we know that if the earthly tent we live in is destroyed, we have a building from God, a house not made with hands, eternal in the heavens.—II Corinthians 5: 1.

Wanda May Wood of Shamrock, Tex., Elected to Scholastic Honor Society of Gallaudet College

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. ROGERS of Texas. Mr. Speaker, it gives me great personal pleasure to announce that Miss Wanda May Wood of Shamrock, Tex., has been elected to the scholastic honor society of Gallaudet College, the world's only college for the deaf. She is the first student from Texas ever to be accorded such a distinct honor.

This young lady, the daughter of Mrs. J. E. Wood of Shamrock, not only achieved membership in the Phi Alpha Pi Society of the college, but also received the Thomas S. Marr Award for outstanding academic achievement and scholarship. A senior at the college, Miss Wood will graduate this month with the highest average in her class. She was also a dean's list student during her studies.

Outstanding as they are, the accomplishments of this Texas coed have by no means been limited to the scholastic field. She just recently reigned as Sweetheart of Alpha Sigma Pi Fraternity during its 11th annual carnival held at Gallaudet. Members of the fraternity named Miss Wood their sweetheart in honor of her leadership, scholarship, and character.

Miss Wood, truly outstanding both as a scholar and as an individual, is a credit not only to the city of Shamrock and the State of Texas, but to the entire Nation as well. For her determination and many achievements, Miss Wood certainly deserves the best wishes and earnest praise of us all.

Should Service Hospitals Be Merged?

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1960

Mr. LAUSCHE. Mr. President, the high cost of duplicity in some branches of our Federal Government accentuated by tradition is well described in an editorial which appeared in a recent issue of the Cleveland (Ohio) Plain Dealer.

This editorial refers in particular to Government operated and maintained hospitals for the military.

In order that the contents of this editorial may be made available for reading by other Members of Congress, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHOULD SERVICE HOSPITALS BE MERGED?

Esprit de corps is a most valuable intangible which every serviceman should possess to do his best in our Armed Forces. A uniform common to all branches of the service has been discussed, with few takers. There is precious little individuality left for a man in the Armed Forces, and certainly he deserves whatever distinction his peculiar uniform gives him.

But when he is ill and in a hospital he does not wear a uniform. He wears pajamas or a hospital gown. The uniform is no longer a factor. And there is no appreciable difference between a competent Army, Navy, or Air Force physician or nurse.

Thus, we do not believe that a merger of military hospitals in the interests of economy and realistic use of bed space would harm esprit de corps in the slightest, and for this reason we are most interested in the report of Phil G. Goulding of the Plain Dealer's Washington bureau, which presents such facts as the following:

Two military hospitals in Virginia, within 6 miles of each other, have a combined capacity of 358 beds. A recent check showed they had 82 patients.

The Army hospital at Carlisle Barracks and the Olmstead Air Force Base Hospital, 30 minutes apart by automobile, have a combined capacity of 96 beds, yet only 36 were being used when the check was made.

The Air Force hospital at Denver has 350 beds and the Fitzsimons Army Hospital, 6 miles away, has 900 beds and could handle 2,078. Yet the 350-bed hospital had only 51 patients and the 900-bed hospital only 684.

In and around San Francisco the 3 services have 4 hospitals with a total capacity of 5,235 beds. Yet only 2,250 were being used.

All told, some 275 hospitals are operated by the military, two-thirds of them being in the United States, the rest overseas. Total bed capacity is around 105,000—but the average patient load is only 40,000—less than 40 percent of capacity.

Certainly, one can never be sure exactly what the hospital load will be, and sufficient hospital space should be immediately available for an emergency. But until such an emergency arises, a great deal of money could be saved if the services would double up, and temporarily close the hospitals which are not needed.

Since the staff of such a combined hospital would contain physicians and nurses from all three services, this would seem to answer the criticism that the morale of the patient is higher when he is being cared for by his own people.

Since the medical program of the Armed Forces costs taxpayers nearly half a billion dollars a year, a merger of military hospitals is certainly worth close examination.

Israel and Egypt

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. STRATTON. Mr. Speaker, many of us in this body have been deeply concerned with the campaign now being waged by the Arab countries against the independence and the survival of Israel. Egypt, in pursuit of this campaign, is carrying on even now an economic boycott against Israel.

Mr. Speaker, surely this great Nation of ours, which believes so strongly in the principles of freedom, and which played such a vital role in the original establishment of Israel as an oasis of American ideals of peace and freedom in the critical Middle East, should never in any way, either indirectly or directly, do anything to support or assist in this vicious kind of campaign.

Under leave to extend my remarks, I include on that important subject a thoughtful editorial from the Rochester Democrat and Chronicle of May 2, 1960. The editorial follows:

ISRAEL AND EGYPT

Senator FULBRIGHT, chairman of the Senate Foreign Relations Committee, recently voted against a majority of his colleagues in their refusal to vote funds to help Egypt carry on its economic boycott against Israel, and thus put himself in a curiously contradictory position. A majority from both political parties saw no reason why the United States should continue sending mutual security funds to Egypt while the latter seeks to destroy the economy of Israel.

Senator FULBRIGHT thus sides with Nasser, Senator KEATING says the United States is weary of Nasser's use of the Suez Canal as a political pawn. The Nasser view is that: Egypt won't open the canal to Israeli shipping because a state of war exists between the two countries. Nasser has repeatedly flouted requests of the U.N. and President Eisenhower to reopen the canal.

Israel, after the war of 1956, withdrew its forces from the battle zone of Egypt. Partly upon assurance that it would have access to the canal and at a time when some military experts say its army could have pushed on to Cairo. Thus Senator FULBRIGHT, in his position, becomes a partisan in a war against a country which also receives funds from America.

No less disturbing an inconsistency is the World Bank's $56 million loan to Egypt to widen and improve the Suez, which is closed to not only Israeli ships but any ships which touch Israel's shores. The World Bank, an arm of the U.N., thus sides for a war to help one of the belligerents.

Woodrow Wilson Centennial in Monmouth

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1960

Mr. WILLIAMS of New Jersey. Mr. President, national interest in a proposed memorial to Woodrow Wilson was indicated a few months ago when many distinguished Americans gave their views on the form such a memorial could take. This interest is encouraging to all who believe that an appropriate memorial should arise in Washington, D.C., to honor the great American who spoke so eloquently on national and international purpose.

It is heartening, also, to receive indications that New Jersey citizens have a lively interest in the man who served as Governor of that State before assuming the responsibilities of the Presidency. Benjamin Boisseau Bobbitt, editor of the Monmouth American, Long Branch, N.J., expressed that interest on May 19 in an editorial which proposed that local Wilson memorial markers should be located within New Jersey.

Mr. President, during the Woodrow Wilson centennial observances of 1956 and 1957, and in the years following, Americans demonstrated that they have a lasting admiration for Wilson. Memorials in Washington, D.C., and elsewhere would give expression to that admiration.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WOODROW WILSON CENTENNIAL IN MONMOUTH

Senator HARRISON WILLIAMS has been doing a nice job for a centennial memorial to Woodrow Wilson in Washington, D.C., also, might well have some memorial markers at spots which there were notable events connected with the career of the man, head of the Nation, was the sole Jerseyman to go from our statehouse to the White House.

Should not Monmouth County also have markers at several places at which the late President was a figure? The Sea Girt encampment witnessed the notification of the presidential nomination and long waiting hours during the convention battle which was climaxed by the nomination.

Press Plaza at Asbury Park, it seems, should have a marker to remind that the presidential executive offices were in the bank building next to the Press, where White House correspondents waited two nights and a day for the decision as to who had won the presidential contest of 1916.

West Long Branch should have a marker at Monmouth College, where the President conducted his campaign for reelection in 1916 and Long Branch one at the West End station site where the President was met and welcomed by Mayor Marshall Woolley and party and where delegations debarked from special trains and marched with bands and banners to Shadow Lawn, the summer White House to hear the President speak.

In September 1915, President Wilson named this committee to secure for and offer to him the place: J. Lyle Kinmonth, John W. Slocum, Benjamin B. Bobbitt, Congressman Thomas J. Scully, and Charles F. McDonald. On the Washington trip later that fall Harrison Hurley was pressed in as committee secretary and shore official invited to witness the ceremony in the White House the next morning. Isn't it worthwhile to have reminders that a President selected the Jersey shore here for his national campaign?

A Salute to the Foreign Agricultural Service

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. NATCHER. Mr. Speaker, on June 5, 1960, we will celebrate the 30th anniversary of the Foreign Agricultural Service and it is appropriate at this time to pay tribute to this all-important operation of the Department of Agriculture.

The Foreign Agricultural Service is responsible for developing plans and policies related to the administration of the foreign affairs and interests of U.S. agriculture. This responsibility covers a wide range of activities and the health and strength of our domestic agricultural programs depend in large measure on the success of the work being done by the FAS. The Service is directly concerned with the development of foreign markets with emphasis placed on proper and efficient disposition of our surplus agricultural commodities. Trade programs are analyzed as to the effect restrictive trade policies have on American farm products, and FAS also develops, directs, and coordinates basic policies for the encouragement of world trade in American agricultural products. The FAS maintains an agricultural attaché in most of our embassies and consulates, and it is the primary responsibility of these persons to report on marketing and trade activities in the country to which they are assigned. The Foreign Agricultural Service then disseminates to the American farmer the information obtained by these attachés and others which is essential to the aggressive foreign marketing of our agricultural products. This service also cooperates with ICA in the administration of the agricultural portion of the foreign assistance program. This work includes training foreign agricultural leaders and providing technical assistance to cooperating foreign countries.

Historically, our farmers produce more than domestic consumption requires, and the excess goes to foreign markets. Although our export market is relatively smaller than our domestic market, it provides us with additional agricultural income and also gives a more complete outlet for our total production. During the war and postwar years, foreign demand for our farm products was unusually high and, consequently, American agriculture expanded its production plant to a size considerably greater than it might have done had there not been a war. However, since 1952 foreign demand for our agricultural products has fallen off appreciably, and today we are faced with the very real problem of what to do with the full capacity of our agricultural plant. The present surplus commodity situation is traceable in great degree to insufficient movement to foreign markets.

For the first time in history, we must actively develop foreign markets for our farm products, and it is only recently that we have become aware of this necessity. It is essential that we acquire knowledge of what is taking place in the rest of the world as it affects our own agriculture, and that we take proper steps to overcome obstacles in marketing our farm products abroad if we are to maintain a sound and prosperous agriculture in the United States.

The many well-qualified, well-trained persons involved in the numerous activities of the Foreign Agricultural Service insure the continued effectiveness of the Service. They are loyal, dedicated employees, experts in their field, and possess the ability to cooperate fully with Foreign Service officers in our Embassies, and also with foreign agricultural officials.

Mr. Speaker, the Department of Agriculture is to be commended upon the outstanding work being carried on by the Foreign Agricultural Service, and it is, indeed, a pleasure to offer my personal congratulations on the fine job they are doing.

Israel's First Dozen

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Paterson Morning Call of May 28 contained an editorial which commented on the 12th anniversary of the State of Israel. The editorial succinctly expresses the good wishes of everyone who believes that the anniversary is a significant event in the Middle East today.

Mr. President, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ISRAEL'S FIRST DOZEN

As the State of Israel celebrates its 12th year of independence this month, Israelis look forward to a future of both promise and challenge. In Israel, 2 million people have performed one miracle after the other in transforming their section of Palestine into a modern state.

In a land where, as a recent visitor remarked, the offer of a cup of water is still the most hospitable act toward the traveler, water is a big business. The limitation of the water supply is one of the elements of serious doubt in the Israeli future. If the country continues to grow as it has, the Negev desert must be cultivated. To do this

requires the diversion of the river Jordan, and the Arab nations have sworn this will never be permitted.

Nor is water the only thing the Arabs refuse to give Israel. They refuse to acknowledge its very existence, calling the Jewish state an anomaly which should be blotted out. Few problems are knottier than the Arab-Israeli question. But one thing surely deserves recognition—the energy and initiative of this small state in the first dozen years of existence. It has become a bright spot in the otherwise benighted Middle East.

Some Post Offices Pay

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. CANFIELD. Mr. Speaker, the following article appeared in the Herald-News of Passaic, N.J., on Friday, May 27, 1960:

SOME POST OFFICES PAY—MOST OTHER COUNTIES REPORT PROFITS ON POSTAL SERVICES, SOME HAVE SMALL DEFICITS

(By Donald R. Shanor)

NEW YORK.—Selling stamps and delivering letters has never made any nation rich, but a surprising number of European countries produce a net profit each year from their post offices.

And no nation in the world racks up postal deficits like those of the United States.

The U.S. deficit, which ranges from $200 million to $900 million annually, is more than the total budgets of most other postal systems.

But the postmasters general of many nations control a moneymaker that their American counterpart, Arthur Summerfield, does not have. The telephone, telegraph, and even bus systems of much of Europe are under the postal departments. Their profits often go to cover losses in the mail divisions.

Switzerland, for example lost $17 million last year in its postal services.

But the government-owned telephone and telegraph company covered the deficit and still showed a $7 million overall profit for the postal department.

FINGER IN MANY PIES

The West German Ministry of Posts' other businesses turned a $25 million mail loss into a $9,600,000 gain last year. The German post office not only runs the telephone and telegraph system but operates big yellow commuter buses, transmitters for all radio and television stations, and a multi-million-dollar banking business.

Italy's post office is engaged in the same fields, but the entire operation loses money and must be helped by a subsidy. Exact figures are not available.

Monaco, Liechtenstein, and San Marino probably earn more per citizen than any other nation from the sales of stamps. Called postage stamp republics as much for their mail business as their size, they send new issues out regularly to collectors all over the world.

Liechtenstein, which is so small that most residents are within yodeling distance of each other, earned $372,000 last year from the sale of stamps—16 percent of the state budget.

San Marino, entirely surrounded by Italy's mountains and Italy's money-losing postal system, earns similar profits selling stamps printed in Italy.

The Vatican City has its own post office and an annual income from stamp sales estimated in the millions of dollars.

Luxembourg's postal department paid for a complete modernization of the nation's telephone system and still shows a profit.

Monaco, whose Princess Grace has disappeared from movie screens and posters, still sends her picture all over the world on its postage stamps. France runs Monaco's post office but gives Prince Ranier's government its share of the profits.

Other countries which make money on their postal system include:

SOUND CONDITION

Britain, $8,400,000 last year, exclusive of telephone and telegraph revenues, and "facing the future in a sound financial condition."

France, a $10 million profit, including other business.

Denmark, $5 million earnings from all sources.

Holland and Norway, $2,300,000 and $3,600,000 respectively from the mail service alone.

Belgium put through a 20 percent rate increase and broke even last year for the first time. Japan reports expenses and revenues are balanced.

Canada nearly balances the books with annual deficits of about $3 million on income of $165 million. The taxpayers make up the difference.

But none of the nations are facing money-losing problems on the scale of the U.S. Post Office Department's, where the deficits are of such size that Summerfield warns they "weaken our economic strength."

Youth Appreciation Week Objectives

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Thursday, June 2, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we have heard much within recent months about the youth of the United States. A White House Conference has explored many of the questions with affect our younger citizens. Newspapers are constantly telling us of their problems and achievements.

A new publication, distributed this week by Optimist Clubs of America, describes one dramatic effort to keep our interest in youth in the proper perspective. It describes the preparations for this year's Youth Appreciation Week from November 9 through 15.

Mr. President, an article in the publication, together with the list of Youth Appreciation Week objectives, gives all Americans much to think about. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OBJECTIVES

1. To recognize the accomplishments of youth in the home, school, church, and community.

2. To promote more active participation by families in family affairs.

3. To encourage organizations and other groups to publicly show their respect for youth.

4. To encourage newspapers to devote more space to the news of the 95 percent of youth who are good citizens.

5. To encourage radio and television stations to recognize youth through special as well as regular programs.

6. To encourage national magazines to recognize the accomplishments and contributions of youth.

7. To provide the proper environment, recreation, and social activities for youth.

8. To encourage parents to rededicate themselves to the responsibilities of parenthood.

9. To illustrate the great influence religion has on the lives of youth and to encourage their active participation in religious activities.

10. To encourage a greater interchange of ideas between adults and youth, leading to a broader understanding of each other's problems.

A little more than 40 years ago, a group of men gathered in Louisville, Ky. to create an organization for reciprocal trade and friendship. They called themselves Optimists.

Shortly after the founding of this organization, the members discovered that community needs went far beyond the problems of commerce and camaraderie and the Optimists adopted the slogan, "Friend of the Delinquent Boy." A national program of boys' work was developed, and as the scope of the program expanded to include boys of all ages and backgrounds, the word "delinquent" was dropped. Optimists felt the negative connotation of a word like delinquent was not in keeping with the organization's optimistic philosophy. Throughout the ensuing years the organization has maintained this positive approach to community needs and problems.

Five years ago, a group of Optimists in Charlotte, N.C. conceived a plan to take up the banners of optimism and the positive approach with regard to our Nation's teenagers. They found, through research, that only 5 percent of our youth come in contact with the law, yet from every front we are beseiged with "delinquent," "hoodlum," and "incorrigible" as synonyms for the term "teenager." These careless accusations have caused a flood tide of public opinion against the 95 percent of our youth who are leading respectable, responsible lives. The plan these Optimists devised to turn public opinion from protest to praise for the worthy 95 percent was called Youth Appreciation Week.

A journey to the State capitol brought Governor Luther Hodges into full agreement with the idea of youth appreciation and, following his enthusiastic endorsement, newspapers, radio stations, civic and community organiations joined in the program. Youth Appreciation Week was a success in North Carolina.

Enthused with their successful venture, the Optimists of Charlotte approached Optimist International for assistance in promoting the program on an international basis. To gain more experience, it was decided to schedule the activity on a pilot project basis in 1956. In conjunction with this second celebration, Representative CHARLES R. JONAS read a résumé of the activity and a salute to the founder, T. Earl Yarborough, into the CONGRESSIONAL RECORD.

The pilot projects provided enough information for Optimist International to launch the first International Youth Appreciation Week program in 1957. To our knowledge, this was the first activity of this kind ever carried out in the history of man. The results were astounding. More than 1,000 Optimist clubs throughout North

America sponsored the program. Government officials from community to national status lauded the program. Radio and TV stations devoted more than 810 hours of air time to the "Pat 'em on the Back" theme and newspaper editors joined the appreciation drive by contributing more than 308,000 column inches of newsprint.

The program continued last year on an ever-widening basis. Radio and TV air time increases 637 hours over the previous year. Expenditures increased from $73,496 (1957) to $114,671 (1958), and the youth contacted increased from 709,333 in 1957 to 17,134,547 last year.

The future of the Americas depends upon the youngsters we have labeled "delinquent." Yet it has been proven that 95 percent of these youngsters are willing to cooperate in community, home and school projects, to take a steady, intelligent look at the future and plan ahead with the bold determination to conquer. As a sponsor of Youth Appreciation Week, Optimist International invites you to join in this salute to the younger generation. Join us as we take a good look at the inherent good in our future generation of citizens. Make a conscious effort to demonstrate to these youth that "you don't have to be bad to be noticed." Stick to the positive approach of a brighter tomorrow.

The Republic of Italy—Its 14th Anniversary

EXTENSION OF REMARKS
OF
HON. DOMINICK V. DANIELS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. DANIELS. Mr. Speaker, the last war was not only the most destructive event in known and recorded history, but it was, in many respects, the most revolutionary of all wars. In Europe its shocking and terrifying effects in many spheres of human activity will not be easily forgotten. But in certain countries there, as a result of that war, certain powerful and dictatorial regimes were overthrown and popular democratic governments were substituted. Germany and Italy are, of course, two cases in point.

The Fascist government never seemed to have had popular support in Italy. It was dictatorial pure and simple, and its inability to lead the people of Italy in war showed its bankruptcy and lack of support. When the Anglo-American forces helped the Italian people to overthrow the Fascist regime, they also encouraged the people in their task of forming a democratic government. Very early in June, 14 years ago, the people of Italy voted for a republican type of government, and thus they voluntarily established the Republic of Italy.

Since those anxious and hopeful days, in the course of a mere 14 years, the people of Italy have gone far in strengthening their publicly supported republican government, and in establishing firmly democratic institutions in Italy. As the result of their devotion of these institutions, and also as the result of the help they received from the other democracies in the West, they have made Italy a source of strength of democracy against totalitarianism, a seedbed of the arts and a home for creative thought and innovation. On this 14th anniversary celebration of Italian Independence Day I greet the proud people of Italy and join them in this celebration.

Tales of Hawaii

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1960

Mr. LONG of Hawaii. Mr. President, the Voice of America has been beaming to the Far East a series of radio broadcasts about the new State of Hawaii. The latest program in the "Tales of Hawaii" series tells about the reaction of Asians who have been to Hawaii for technical training. I believe this broadcast is particularly pertinent at this time in view of the recent action of Congress to authorize the East-West Cultural and Technical Exchange Center in Hawaii.

I therefore ask unanimous consent that the script, prepared by Miss Gene Sawyer of the Voice of America, be printed in the Appendix of the CONGRESSIONAL RECORD as an example of the excellent work which the Voice of America is doing and as an illustration of how Hawaii is uniquely qualified as the site for cultural and technical training for our friends from the Far East.

Without objection, the script was ordered printed, as follows:

TALES OF HAWAII—TECHNICAL TRAINING PROGRAMS IN HAWAII

Music: "Paradise Isle."

ANNOUNCER. The music of Hawaii—introducing another program of Hawaii—to bring you interesting stories about the 50th State in the United States. Today our program is about technical training in Hawaii.

NARRATOR. You, and many others, think of Hawaii as a lush tropical island, the crossroads of the Pacific, a healthy, happy American community, a land of dreams and legends. But even more, Hawaii is a modern, energetic, expanding business community. It is concerned with steady growth and progress. Its civic, social and technological development equals that of other American cities and States. And it thrives on the same American traditions of free enterprise and democratic institutions. In recent years, thousands of Asians have come to Hawaii to participate in technological and cultural programs. Several agencies administer these programs. The University of Hawaii conducts programs for Fulbright and Smith-Mundt scholars. The International Cooperation Administration conducts programs that cover all major areas of technical training. To date, Hawaii has shared its knowledge and experience with more than 3,000 program participants.

Asians are deeply impressed by the technical know-how of the people of Hawaii. They are impressed by their hospitality, and by the sight of so many racial groups living and working together in a single friendly society.

A welfare worker from Thailand remarked:

VOICE. Hawaii has much to offer people from Asia. Asians and Westerners work together in harmony, and the organizations are small enough for visitors to understand.

NARRATOR. An extension worker from the Philippines said:

VOICE. The Hawaiian technique of farm operations is highly adaptable to the problems I face at home.

NARRATOR. An entomologist from India commented:

VOICE. I think the true spirit of the United Nations is being practiced in the Hawaiian Islands.

NARRATOR. Among these visitors there are, of course, quite a number from Indonesia. Last year, for example, some 200 Indonesians participated in technical training programs, and many others in academic and cultural programs.

Suppose we tell you about one group of five young ladies who studied for 2 weeks with the University of Hawaii Agricultural Extension Service. Are you listening, Miss Noe'aini, Miss Rochani, Miss Blantan, Miss Hadju, Miss Sianturi? And do you remember the day you arrived in Hawaii?

Do you remember flying over the vast blue Pacific; the first glimpse of the island that grew into a warm golden land; the plane touching down; the greetings of friends; the fragrant garlands of island flowers? And driving into Honolulu; the reception center; meeting hostesses and officials; and learning about Hawaii? And the next day you discussed program plans, and made arrangements at the university.

There followed 2 weeks of training with the Agricultural Extension Service at the University of Hawaii. There were seminars and group meetings on modern methods and techniques suitable in Asia; 4–H Club work under tropical conditions; educational problems in home demonstration work; lectures by home economics specialists; field trips to rural centers and farm homes. And during free time on evenings and weekends, there were new experiences such as Hawaiian food and beach picnics; island hospitality, and meeting Americans who are descendants of people who came from Asia as well as Western countries.

What were some of the impressions of the five young ladies from Indonesia? We can tell you in their own words. Miss Sianturi said:

VOICE. My visit in Hawaii was very interesting. I enjoyed their State and the way people live there. The food and markets are similar to our food and markets in Indonesia; I have many ideas to take home that will help my people.

NARRATOR. Miss Blanton said:

VOICE. Hawaii is different from other places we visited and I like the difference. The climate is like our country and plants grow the whole year. The houses are like our houses. The farmers in Hawaii are real farmers, not dairy farmers. I suggest that other students in agricultural work from Indonesia spend more time in Hawaii.

NARRATOR. Miss Rachani said:

VOICE. I like Hawaii very much because the climate, the food, and the housing are almost like in Indonesia. They use rice as a basic food, too. So studying nutrition and food preparation is more helpful to us than in the other States. I attended 4-H Club meetings and homemaking meetings. The home visits were a wonderful experience; I saw beautiful gardens and orchids that I've never seen before. There are so many good and clever ideas for home improvement and garden improvement that I saw in Hawaii.

ANNOUNCER. Friends, we have told you briefly about 5 of the more that 200 Indonesians who visited Hawaii last year to participate in training and cultural programs. For in getting acquainted with the new 50th State, this aspect is also important: That Hawaii's civic, social, and technological de-

velopment equals that of other American States, and that Hawaii is sharing its knowledge and experience with students and trainees from Asia.

And now, as they say farewell in the islands, we say to you—Aloha.

The American Woman Commemorative Stamp

EXTENSION OF REMARKS
OF
HON. CATHERINE MAY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mrs. MAY. Mr. Speaker, today the Nation pays tribute to an important segment of our population by issuing, through the Post Office Department, a special stamp honoring the American woman. I freely admit that mine is a prejudiced position in calling this event to your attention. However I should appreciate a moment of your time to express, on behalf of American women everywhere, gratitude for the recognition this stamp represents.

Incidentally this is a 4-cent stamp—the variety employed daily in the transaction of more important bits of American business than any other single element in our national life, except, of course, the women it commemorates.

There have been many pioneers in the progress of women toward their present status since Abigail Adams first looked to new horizons. Some of these, Susan B. Anthony, Jane Addams, Clara Barton, Carrie Catt, Elizabeth Stanton, and Lucretia Mott already have been honored either individually or collectively on stamps previously issued. Certainly there are others who could symbolize the spirit of American woman. But appropriately enough this stamp features a composite image of the thousands of American women who, through continuing contribution to family, church, and country, have arrived in mid-20th century to full partnership in the development, preservation, and extension of the American way of life.

That American woman takes her partnership position seriously is reflected in her growing participation in human, public, and even corporate affairs.

It has been said that, by sheer weight of numbers, American women control a majority of the Nation's votes and a majority of its wealth. Actually, the answer to their advanced position in the politics and economy of the country is not one of statistics but of sincere and intelligent interest; of desire to fulfill the responsibilities that come with full partnership in any undertaking. If there is a preponderance of women sitting in town meetings, school meetings, or in stockholders' meetings, it is because they believe that the living strength of our Republic—in principle and in practice—requires the active, informed support of each citizen.

The advancement of American women to their present partnership status has been a cooperative effort, appreciably aided by the men and other women who have sat where you are now sitting—thoughtful citizens who gave and who continue to give enthusiastic support to the expanded role which women have proved themselves well able to assume.

This expanded role has many facets, as the commemorative stamp issued today indicates. It embraces the home, civic affairs, education, the arts and sciences, and industry. In all of these women are making major and lasting contributions—sharing responsibility on an equal basis with their associates. They recognize that equal rights and equal responsibility go hand in hand—as privilege is acquired, accountability must be assumed.

By recognizing her capabilities—by giving her the opportunity to put these capabilities to maximum use for the public good, the Nation has encouraged the American woman to develop to her full stature. In exchange, her endeavors to advance the welfare of family, community, and her Nation reflect the highest tradition of responsible citizenship.

Known But to God

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we have, within the past few days, again remembered those men who have given their lives while in the military service of the United States. We were reminded once more that sacrifice often is the price for freedom.

Another reminder was given in an article by Edward J. Reardon, reporter for the Passaic (N.J.) Herald-News, which appeared on May 28. He told in that article of the constant vigilance given to the American soldiers, "known but to God," at the Tomb of the Unknowns in Arlington National Cemetery.

Mr. President, Mr. Reardon's description of the guard at the tomb is of interest and comfort to all Americans. I ask that unanimous consent be given to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATION'S HEROES NEVER ALONE
(By Edward J. Reardon)

WASHINGTON.—On a grassy knoll in Arlington National Cemetery, with the Potomac River and the city of Washington forming a shimmering backdrop, stands the Tomb of the Unknowns.

It is a simply designed monument of white marble, quarried in Colorado and carved in Vermont. It bears a 12-word inscription: "Here rests in honored glory an American soldier known but to God."

The majestic shaft was first unveiled to public view on April 9, 1932. Its original occupant was an American doughboy who gave his life in the cause of freedom on a battlefield in France during World War I. On Memorial Day, May 30, 1959, he was joined by two more comrades-in-arms, unknown heroes of World War II and the Korean conflict.

Their names could be Jones or Kelly, Kwasnik, Schneider, or Kinsberg. No one knows or cares. It is enough that these honored dead have given their lives for their country. For that, they have earned our everlasting respect and gratitude.

Although unknown but to God, they are never alone. A continuous guard is maintained at their tomb by specially selected soldiers of the Third ("Old Guard") Infantry Regiment, U.S. Army, from Fort Myer, Va. Sentinels relieve one another during a simple guard-changing ceremony every hour on the hour.

PROUD RECORD OF SERVICE

The guard begins his vigil at one end of a narrow rubber mat stretching 65 feet in front of the tomb. Keeping his rifle on the shoulder away from the tomb, he marches briskly to the other end. He does a right face, looking out over Washington, stands motionless for a count of 30, then does another right face, shifting his rifle over to the opposite shoulder. He stands motionless for another count of 30, then strides to the other end of his post, faces left, and begins the cycle again.

It is appropriate that soldiers of the Old Guard should be selected for sentry duty at the tomb. For no infantry regiment has a prouder record of service. Older than the Constitution, it fought with Gen. George Washington at Valley Forge and Yorktown, and at the Battle of the Bulge in Germany in World War II. It earned its "Old Guard" designation from Gen. Winfield Scott by storming the heights of Chapultepec with fixed bayonets and participating in the capture of Mexico City in the war with Mexico in 1847.

Its 32 battle streamers attest to its magnificent record of bravery in every war in which this country has participated.

But for sentry duty assignment at the Tomb of the Unknowns, the "Old Guard" selects only the finest of the fine. The Honor Guard Company gets first choice of the soldiers arriving at Fort Myer to join the Third Infantry. These men must have certain height and weight qualifications. They must be unmarried, hold a rank no higher than corporal, and maintain an unblemished record.

FOUR THOUSAND FIVE HUNDRED VISITORS EACH DAY

The Honor Guard detail is comprised of four sergeants and 12 enlisted men, headed by a master sergeant. They are assigned to the tomb detail for six months. Night and day, regardless of weather, the tomb is guarded. Throughout the 24-hour tour of duty, each sentry marches post 1 hour and rests three. Guards cannot relax a single instant while on post.

The Tomb of the Unknowns is the most visited of any of the shrines in Arlington National Cemetery. Some 4,500 persons a day come to pay homage to the sleeping heroes. Presidents, kings, queens, heads of state, ambassadors, and patriotic and service organizations have placed countless wreaths at its base.

Facing the tomb is a white-columned building called the Trophy Room. Here on display are the many decorations conferred on the Unknowns by our own and foreign governments. Among them are the Medal of Honor and Distinguished Service Cross awarded by the United States, the Croix de Guerre of Belgium, Medaile Militaire and Croix de Guerre of France, Victoria Cross of England, Czechoslovakia War Cross, the Italian Gold Medal for bravery, Virtuti Militari of Poland, and many others.

RESTING PLACE FOR 92,000

Arlington National Cemetery in which the tomb is located is comprised of some 420 acres, of which 318 acres already have been developed.

Its modest headstones, stretching row on row, mark the burial places of more than 92,000 men and women who served our country in all its wars from the Revolution to the Korean conflict. Eligible for burial there are members of the U.S. Armed Forces dying in active service, or former members whose last active service terminated honorably. Also eligible are those who served with any government allied with this country in wartime, provided he was a U.S. citizen at the time of that service and it terminated honorably.

The first Arlington funeral did not take place until 1864 when the first of the Civil War dead were buried. Since then, remains of casualties of other wars were brought to Arlington and interred. This year, funerals have averaged 20 a day.

Fort Myer, which provides the Honor Guard at the Tomb of the Unknowns, is part of the Army command charged with the responsibility of guarding the Nation's Capital and surrounding areas. The command, known as the Military District of Washington, has under its jurisdiction, besides Fort Myer, Fort Lesley J. McNair, Washington, D.C.; Cameron Station, Alexandria, Va., and Davison U.S. Army Airfield.

In peacetime, the 3d Infantry at Fort Myer furnishes the military escort for such important functions as the Presidential inaugural, state funerals, parades, and official arrivals and departures of visiting heads of state and foreign dignataries.

PERSHING, A SIMPLE MARKER

Among its recent responsibilities, for instance, were arranging for the arrivals of Gen. Charles de Gaulle, of France, and Premier Nikita Khrushchev, of the Soviet Union, and for the burial of John Foster Dulles, late Secretary of State.

Many of the Nation's most famous sons are buried in Arlington National Cemetery. One is Gen. John J. Pershing, who died in 1948. The general has the largest plot in Arlington. But he rests under a simple granite marker similar to thousands of others surrounding him. There is no shrubbery on the plot. General Pershing wanted it that way.

Another monument marks the grave of Abner Doubleday, best remembered as "the father of baseball." Few knew, perhaps, that Doubleday is credited with firing the first defense shot of the Civil War—at Fort Sumter.

Arlington Cemetery is rich in historic background. It is part of an 1,100-acre tract purchased on Christmas Day, 1778, by John Parke Custis, stepson of George Washington.

A descendant, Mary Custis, inherited the estate. She married Robert E. Lee, who later was to become the famous Confederate general of the Civil War. They moved from the estate in 1861 when General Lee assumed command of the Confederate Army. It was seized by the Government for taxes, but later won back by the Lee family through a lawsuit. George Washington Custis Lee sold it back to the Government for $150,000 on March 31, 1883. Arlington House, the Lee family mansion, was restored to its former grandeur by an act of Congress on March 4, 1925. It is now open to the public.

Memorial Day in Arlington National Cemetery wil be one to remember. Before each white headstone a blood-red poppy will nod and a small American flag will flutter in the warm May breeze. And Arlington's 60,000 trees will whisper a te deum for those three up there on the hill, beloved by an entire Nation—but known only to God.

Lyndon Johnson: The Age of the Principled Man

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. McGOVERN. Mr. Speaker, on Sunday, May 29, a large crowd of South Dakota citizens gathered to break ground for the construction of Big Bend Dam, the final in a chain of great multiple-purpose dams on the Missouri River projected under the Flood Control Act of 1944.

The principal speaker for this historic ceremony was the distinguished majority leader of the Senate, LYNDON JOHNSON. In sharing the platform with Senator JOHNSON, I told my fellow South Dakotans that speaking, not simply as a member of his political party but as a student of American history, I regard LYNDON JOHNSON as the most masterful Senate leader in our national history. I further stated that if events should bring Senator JOHNSON into the White House, he would go down in history as one of our greatest Presidents.

We could not have picked a more appropriate speaker for the dedication of a great new multiple-purpose dam. Senator JOHNSON has been a vigorous champion of river and resource development. He, for example, led the fight that produced Senate approval of public development of the Hells Canyon project. His concern for human as well as physical resources is evidenced by the fact that through the joint leadership of our distinguished Speaker and Senator JOHNSON, the first major civil rights legislation since the Civil War was enacted. Likewise, he paved the way for the passage of the strongest legislation to assist our schools that has ever cleared the Senate. His concern for responsible conduct by America both at home and abroad, his determination to build peace through strength—are well known.

LYNDON JOHNSON is a man of principle. It is thus appropriate that he took for his theme at the Big Bend Dam ceremony, "The Age of the Principled Man." I ask unanimous consent that this splendid address be included at this point in the RECORD:

ADDRESS BY SENATOR LYNDON B. JOHNSON AT DEDICATION OF BIG BEND DAM, PIERRE, S. DAK.

AGE OF THE PRINCIPLED MAN

Few moments are ever so inspiring as a moment such as this, when we come to dedicate the power of nature to the strength of freedom.

In the weeks and months ahead, great changes will appear on this scene we see.

But we know—and we are glad—that this work will find its ultimate worth in changes the eye cannot see: the changes for good which will be wrought in the lives and souls of America's families here—and, most especially, in the hope and promise for our young.

What we are doing here—what we are doing all along this great Missouri River and the other rivers of America—is to harness the rivers so that we may unharness the high potential of the generations who come after us.

PEOPLES' WORK

When I say, "we," I do not refer to those of us who serve in Washington, for this is not Washington's work. This is not the work of what we call our Government—this is the work of the people, all of the people, for the good of all the people.

Between the people and their Government there must never be a distinction. The purposes must always be the same—and, above all, the faith must be the same. The people of America—whether in the Dakotas or in Texas—believe in themselves. Their Government must share that belief and be, always, a Government of confidence, never a Government of doubt.

VOICES OF DOUBT

Down through the ages, we have heard again and again the loud voices of doubt and despair.

Two hundred years ago, eminent men were sounding the alarm that the human race would perish because the population would use up the nitrogen in the air.

Not long after, the cry was raised—and widely believed—that the world was doomed because the supplies of coal would be exhausted and everyone would soon die of the cold.

In our own land, within the last 100 years, men have predicted with complete assurance that our timber and our oil and many of our other basic essentials soon would be exhausted and gone.

Some even foresaw that we would run out of land. And it might have happened. If today we had to use horses and mules to meet our needs for horsepower, we would need 30 times more farmland than we now have just to raise feed for the animals.

THE ART OF SELF-GOVERNMENT

These cries of alarm are always with us—even today.

We have learned in these times much that men have not known before concerning the nature of our world and its elements—and now men are less ready to predict the end of our natural wealth and assets. But, through the years as we have learned of the world around us, we have devoted much less study to our system and our Government and our people—and, as a result, the voices of doubt today are raised to tell us what we cannot do in the realm of governing ourselves.

We hear it said that we cannot afford our future—we cannot afford our freedom—we cannot afford education for our young—we cannot afford dignity for our aged—we cannot afford to harness our rivers or conserve our soil or engage in any of these other enterprises which build the basics of our strength.

LUXURY OF WASTE

Luxuries and indulgences we can never afford and do not want to afford them, for the American people are far too realistic and practical to be enticed by such follies.

But ours is—above all else—a responsible system, a responsible system with a high and noble morality. And out of that responsibility and that morality there is one rule by which we live: America can always—and America must always—afford to root out waste.

The most offensive luxury—the most corrupting indulgence—is waste, and the toleration of waste strikes against the very foundation of a responsible system such as ours.

I say this, mindful that within our lifetimes there once was a great and stirring cry that this would be the century of the common man. There was talk of how, in this century, the common man would rise to a new dignity and a new freedom.

THE OBSOLESCENT COMMON MAN

In less than a generation, though, that term and that expression has become obsolete. We don't hear it any more because—given his freedom, given opportunity, given justice—the common man has proved himself to be capable of many uncommon things. And we no longer can think of God's children as common men.

In the years since that cry of common man was raised we in America have moved to a new level of achievement and abundance which—not to long back—voices of doubt were saying could not be attained.

We have demonstrated—to ourselves and to our neighbors in the world—what can be achieved under a system such as ours. We have exercised great leadership and dramatic leadership in the physical and tangible things. Today, I believe, the world requires—the century requires—that Americans exercise a new leadership: a leadership of goals and aspirations for the inspiration of the world.

CENTURY OF PRINCIPLES

I am not a phrasemaker, but if I were to put this into a simple statement, I would express the wish that we might set ourselves to make this remembered as the century of the principled man.

What we have done—or tried to do—throughout the course of our existence is to fashion a government of principle, rather than a government of power. Toward our own people, we expect the conduct of our Government to be principled—with honor and ethics and values and conscience. In world affairs, this, too, has been the work of the American leadership: to establish principles by which nations shall live rather than by raw power alone.

Today there is opportunity for us to lead by extending these principles—this whole concept of responsible principles—far beyond the realms of the past.

BILLIONS OF POOR

The world today is a world of billions of poor and only a few millions who live with much self-respect.

The world is a world of injustice, oppression, want, frustration—and all of these things flow from one thing: waste. Everywhere there is potential—just as there is such great potential here. But men live less well than we because the potential is allowed to waste.

If this is to be, as it ought to be, a century in which the principled man prevails against the principled men and doctrines of communism, we need to make it our work to end such waste.

Let us set our course to the task of leading the world to end the waste of resources, to end the waste of lives, to end the waste of man's opportunity to be free of poverty, disease, and ignorance.

POWER IS DUTY

We reject the concept of an America concerned only with power, for we believe, as it has been said, that "power is, to the last particle, duty."

Principled men seek duty and perform its tasks—and the power and strength of America today only places upon us all more responsibility to seek and exercise our duty.

Our duty as men of principle cannot be met alone by sending into the world America's dollars. The world little knows the difference between the American dollar and the Russian ruble. But the world will know—and the world will understand—the difference between the principles of freedom and the lack of principles of Communist doctrine and Communist leadership.

CHANGE OF APPROACH

Fundamental changes must come in America's approach to the world and America's approach to the tasks and challenges of this century.

We must—as a people—turn to the way of principle in our affairs and turn away from the old ways of power by which despots of the age have lived. We do not seek to sit down at the conference table and divide the world between West and East for, if we do this, our principles are indistinguishable from those whom we oppose.

There is work to do at the summits of diplomacy, but there is also much work for free men—principled men—to do in the valleys of the earth's great rivers. This is the work we must do—leading the world not by our power but by our principles.

SHIELD OF POWER

Power we must keep: beyond question, beyond compare, so that behind that shield, the principles we carry will have the chance to grow. But power must never be America's only work, for we have a greater task as a nation devoted to making this a world of principle in which the waste of human lives and resources is brought to an end.

I say these things here with the feeling that can come only to those who have lived their lives close to work such as we do here. I was born in Texas on the banks of the Pedernales River and knew throughout my early years the season of its flood and drought. My proudest year—and my most satisfying work—was to have the opportunity when I came into public office to lead the way in bringing to the lower Colorado rivershed the great dams which brought light and hope and opportunity to the hills where I was born. I saw the darkness of 100 years rolled away and the drudgery of the ages ended for the wives and mothers and fathers of that region.

Such work as this is—and will always be to me—the work of a principled land and it is the work of principle which must become America's basis of new leadership in the world.

The Economy of Arkansas

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, June 2, 1960

Mr. FULBRIGHT. Mr. President, an excellent article by Mr. Marvin W. Melton appears in the spring issue of the Arkansas Economist, a publication of the University of Arkansas. Mr. Melton is the president of the Arkansas State Chamber of Commerce, and is now engaged in an extensive campaign to build up the economy of Arkansas. He has stimulated the imagination of citizens throughout the State as to the tremendous potential for progress in the State.

I am proud to call Marvin Melton my friend, and I wish to take this opportunity to congratulate him on the excellent job he is doing in stimulating greater interest in what can be done to build a better Arkansas. The article by him appearing in the Arkansas Economist is only one example of his imaginative approach to solving Arkansas' economic problems. His comments concerning the need for supplying the missing links in the farm-to-consumer chain are sound and I hope that they will result in increased activity within the State to supply the missing links. I commend this article to my colleagues from States which are faced with similar problems. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARM PRODUCT PROCESSING: SOME NEW DIRECTIONS

(By Marvin W. Melton)

Arkansas has made rapid industrial progress in the past 5 years, and I am confident that this trend will continue in the years immediately ahead. Yet, I am concerned that our agricultural incomes are not keeping pace with the gains in other sectors of the economy. I believe our farm incomes will continue to lag unless we shift our emphasis to placing a higher finish on farm products. This additional feeding or processing in Arkansas of Arkansas farm products can be the key to higher agricultural income.

In my experience as an Arkansas farmer and as an officer of various farm and business organizations, I have had an opportunity to observe the Arkansas farm scene from many viewpoints. Much progress has been made in farming techniques and many adjustments have been made to national market conditions. Still the problems are great, and great tasks lie ahead of us if we are to keep abreast of our changing economy.

I am concerned that business leaders, as well as farm leaders, give adequate attention to the adjustments that we face. For unless we make further adjustments in our thinking and our emphasis, low farm incomes will continue to be a drag upon the State's progress in the future.

ARKAKSAS: A FARM STATE

Historically, Arkansas' economy has been based primarily on farming and secondarily on timber and mineral resources. Only recently have all nonfarm jobs together even equaled farm employment in the State.

I am heartily in favor of getting all the new manufacturing plants that we can attract or build. We need the additional jobs to employ young people and to absorb those no longer employed in farming.

But I am also in favor of making the most of what we have. We must utilize to the highest degree the agricultural and physical resources already at the base of our economy. The land, the forests, the minerals—these are our basic sources of wealth. Another asset is our people, especially their ingenuity and resourcefulness. Utilized fully, these spell advancement for Arkansas.

Progress and problems

Arkansas has come a long way in recent years in improving farming methods. For example, the average yield per acre for rice was 2,192 pounds in the 1941–50 decade. For the past 3 years the average has been 3,217 pounds—an increase of about 50 percent. The same holds true for soybeans, 16 bushels then against 24 bushels now. The average yield for cotton was 339 pounds per acre; now it is closer to 475 pounds—a 40 percent increase.

But success on the farm has brought many new problems—problems that require further adjustments in old patterns of our production and marketing. Take our higher yields, for example. The rising capacity to produce on farms nationwide has outrun the rising consumer demands for farm products. The near-bursting bins of surplus farm products purchased by the U.S. Government artificially to support farm prices are silent reminders of a problem created by our own success.

Or, take our success in mechanization, which has raised the productivity of farm workers faster than the rise in productivity of factory workers. By reducing the need for farm workers, this has contributed to our loss of population in Arkansas' rural counties. Workers unable to find sufficient

work on farms tend to move to cities, frequently cities outside of the State. Our success has created a people surplus as well as a product surplus.

On the other hand, who benefits most from this success? Not the farmers as a group. With a surplus of farm products to sell on the market, the farmer tends to be faced with declining prices, so that the benefits of our farm success have tended to be passed on to the nonfarm sectors of the economy. Likewise, with a surplus of farmworkers, wages in rural areas tend to lag behind rises elsewhere.

Cost-price squeeze

But the farmer is not allowed to stand still. He must run ever harder to keep up with a cost-price squeeze, a squeeze intensified by his very success. To offset declining prices, the individual farmer tries to increase the quantity he sells. His efforts to increase yields—mechanization, fertilization, insect control, improved feeds, etc.—all bring about added costs. Furthermore, competing demands for labor and materials elsewhere in the economy bring rising prices for the things farmers must buy. Wages, machinery prices, and other costs are rising.

Because grocery-store prices have remained high, the consumer today gets the misleading impression that, economically speaking, the farmer is well off. He assumes that these ever-increasing dollars which he spends for food go to the farmer. But the truth is that the farmer often gets little or none of the increased dollars which the consumer spends for food.

The farmer's share of the retail price of food actually is declining. For example, during 1947–49, the farmer received 67 cents of the consumer's dollar spent for meat products, in 1959, he received only 52 cents. For dairy products he received 45 cents, a 9-cent drop; poultry and eggs, 58 cents, an 11-cent drop; cereal products, 17 cents, a 12-cent drop; and fruits and vegetables, 29 cents, a 4-cent drop.

Where does this money go? The increase in retail price goes to the food processers, handlers, and merchandisers. A lot of it goes to the Government in the form of taxes. To a large extent the consumer simply is demanding a higher quality of food, more processing more precooking, more packaging, and more services and variety of all kinds.

New directions: Processing

It appears, then, that further technological improvements in our ability to produce ever greater quantities will not solve our farm income problem. What further adjustments, then, must the Arkansas farmer and farm-businessman make? It seems to me that we must capture a higher percentage of the consumer dollar. We must make all manner of adjustments that will enable us to provide the new services and quality that the consumer is now demanding and is willing to pay for. We must coordinate our production and marketing patterns to meet these changing demands.

One direction of adjustment that this suggests is that we must put a higher finish on farm products before they are finally shipped from Arkansas. Unfortunately, we now bring back into the State as finished products many of the very same products we ship out as raw materials. If we only look around us at what we have at hand we find many opportunities and challenges for processing and manufacturing more food and agricultural products in the State. To do, this would mean large farm market receipts and more nonfarm payrolls in small rural communities.

The broiler industry offers a good example of what can be done. Not many years ago broilers were raised in Arkansas and the live birds were shipped to other States for processing. Modern refrigeration made possible processing closer to the farm. Soon Arkansas processing plants created more jobs and incomes for Arkansas people. Furthermore, since these processing plants tended to cluster around those sections where broilers were raised, the new industries afforded opportunities for the farmer and the members of his family to increase their own incomes by working either full-time or part-time in the processing plants.

While the broiler industry is an example of past experiences, feeds, livestock, vegetables, cotton, and cottonseed offer opportunities for the future.

For instance, during the period July 1, 1958, through June 30, 1959, Arkansas consumed 884,943 tons of poultry feeds of all kinds.[1] Of this amount, 445,768 tons were produced in Arkansas and 439,175 tons were produced outside the State. These 439,175 tons which were produced outside the State represent a lost opportunity by feed growers to put a higher finish on their product.

The same holds true for many other feed grains. During the same 1958–59 year, 1,350,886 tons of feeds were used in Arkansas. Of this amount, 647,940 tons came from sources within the State; 702,946 tons were produced outside of Arkansas and shipped in.

Two changes

The two significant changes which have occurred in livestock production in the past 30 years have affected feed production to a great extent. One is the great increase in the number of broilers produced. The other is the decrease in the number of horses and mules kept on farms.

Since 1925, grain-consuming livestock has been replacing roughage-consuming livestock. This has necessitated greater feed grain production in the State and importation of what Arkansas didn't or couldn't supply.

Each year livestock producers have come to depend on out-of-State sources for a larger portion of their grain supply. This is not necessarily bad because in many instances grains can be imported more cheaply than they can be secured in Arkansas. But there are still many instances where imported grains could have been home produced—and being home produced they could have contributed more to the State's economy.

A great opportunity in the feed producing segment of Arkansas agriculture lies in the expansion of the soybean meal industry so that a greater finish can be placed on soybeans within Arkansas' borders. From a small beginning in 1925, soybeans have moved into second position as a field crop. One new soybean processing mill was recently constructed at Stuttgart. Opportunities exist for others.

Improved cattle feeding

The problem of putting a higher finish on feeds is largely one of balancing the crops which can be grown in Arkansas at low cost with the livestock for which it is best suited. In this respect a better finish could be put on many feeds through improved feeder calf operations.

The 2 million acres of land which were once required to support over half a million horses and mules in Arkansas 35 years ago is now available for other purposes because the horse and mule population is now less than 100,000 Much of this land has been put to crops, but some is now idle or unimproved pasture going to waste because it is not utilized as it could be. And as wasteland it is not earning dollars for the farmer.

There is little doubt that the feed which could be grown on these lands could spell success for more feeder calf operations through increased yields and quality of hay which could be produced on these acres. They could be restored to proper use through invention of ways to overcome the inherent disadvantages and through increased skill in farm management.

The University of Arkansas is undertaking much needed research along this line at the Marianna Branch Experiment Station. It is hoped that they will find the answers to how homegrown feedstuffs can be used profitably to feed Arkansas calves so that the requirements of Arkansas consumers for beef can be filled.

The livestock chain

Several missing links exist in the farm-to-consumer chain of livestock growing in Arkansas. One is created by uneven rain distribution. In certain seasons of abundant rainfall we have luxuriant pastures—in some instances more than can be utilized. Then the rains diminish and in the late summer and fall there is a shortage of good pastures. To cope with this problem the present practice is to reduce cow numbers seasonally, and oftentimes these underfed drought cattle sell at very low prices and at a loss to the producers. Of necessity cattle must be sold out of the State and then brought back as finished beef for local consumption.

Current research and developments in preservation of forage should aid in the establishment of a satisfactory farm-to-feedlot-to-processor-to-consumer chain which is needed so badly to put a higher finish on feeds and livestock.

Encouraging developments are the recent announcement by the U.S. Department of Agriculture of the discovery of a new antioxidant which preserves the vitamin A and E content in alfalfa meal for as long as 6 months, and the recent announcement by the University of Arkansas that steers can be fed profitably by using selected grain ration with pellets containing alfalfa meal spread over it, or finely ground alfalfa pellets mixed in with it.

Tremendous improvement is being made in the quality and resultant feed conversion efficiency of Arkansas forage growths by using hay conditioners or stem crushers. There are reports that pellet machines are being adapted to small factory and even field operations. This should help Arkansas farmers save high-quality hay and forage for dry periods by reducing the time required to prepare them for safe storage. The risk of spoilage from rain or storing too green would be almost eliminated.

Supplying missing links to the farm-to-consumer chain would allow the establishment of feeder lots in the State and this would alter the traditional pattern of shipping calves out of the State and then buying back the finished beef for local consumption.

Cotton: Another area

Another raw agricultural material which could be processed in Arkansas to advantage for the economy is cotton and cottonseed. Arkansas ranks third or fourth among cotton-producing States and usually produces about 10 percent of the U.S. crop. Yet very little actual processing of cotton fiber or cottonseed is found in the State. There is only one small cotton yarn plant in the State. Arkansas crushes cottonseed, but ships most of the product out of the State for further finish.

Meanwhile, the development of wash-and-wear fabrics has boosted the consumption of cotton by more than 800,000 bales per year and other new developments are likely to raise the figure still higher—possibly to 1 million bales. And the opportunity for Arkansans to put a finish on their cotton crop in slipping away.

In recent months many industrial plants have found it desirable to move to Arkansas. This would indicate that Arkansas does offer something to the manufacturer and any

[1] Arkansas State Plant Board, Miscellaneous Feed Bulletin 24.

new plant designed to finish agricultural products to a higher degree would have a good chance for survival. Nevertheless, Arkansas plants will be competing with similar plants in other States, many of them well established; so each plant should be given every encouragement. We should be on guard that our taxes, labor regulations, and business climate do not place undue burdens which might add to the risks that might discourage new investment.

New directions: Products

The development of new crops provides another avenue for the farmer in his efforts to push apart the jaws of the cost-price squeeze. Some new crops which may offer opportunities for the Arkansas farmer are cape-marigold seeds, safflowers, carrot seeds, mustard plants, and others.

Dr. George O. Kohler, crop research director at the U.S. Department of Agriculture western regional laboratories located at Albany, Calif., heads some interesting work on cape-marigold seeds. The oil derived from these seeds is different from any heretofore known. It adapts with other chemicals in such a way that it is extremely valuable in the production of plastic items.

The safflower is a thistlelike plant which has been grown in the dry areas of Asia, Africa, and Europe for centuries. Its seeds produce a rich oil which can be used in paints and varnishes. In 1960 there will be some 300,000 acres planted to this crop, up 50 percent from 1959.

Carrot seeds have been used to produce an oil which can be used in making nylon and detergents. Further experiments are proceeding to find possibilities in seeds of the plants of the mustard family as well as other wild and domestic plants.

These are but a few examples of new product opportunities that might be investigated. Here is an area in which we might use ingenuity and enterprise to raise incomes in the vital farm sector of our State economy.

Put a higher finish on agricultural products within Arkansas and develop new crops: these offer opportunities for the Arkansas farmer. Coupled with a steady and dependable supply of agricultural products, a good business climate, and encouragement to new undertakings so that they might realize their full potential, Arkansas can prosper.

For farm incomes to keep pace with the rest of the economy in the future, the State must capture a larger share of the consumer's dollar. To do this, our farm and business leaders need to work together to increase the processing of agricultural products in Arkansas, to improve quality, and to diversify our products.

Our Antiquated Electoral College

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. RAINS. Mr. Speaker, I am honored that one of my alma maters, Snead College, at Boaz, Ala., has instituted an annual Albert Rains Speech Award and that participation in this contest has directed student interest to the subject of "Our Antiquated Electoral College."

The speeches were presented on May 19. The three winners were Billy Stamps, of Boaz, first place; Ronald Gray, of Fyffe, second place; and Richard Land, of Rainsville, third place.

These young men devoted considerable study and effort to these speeches and I believe that their conclusions merit the consideration of the Congress. They represent the new generation's thinking on a subject of great importance to us all.

Following are the speeches of the winners of the Albert Rains Speech Award at Snead College, Boaz, Ala.:

THE ANTIQUATED ELECTORAL COLLEGE

(By Billy Stamps)

It is testimony to traditionalism that so much difficulty is encountered in attempting to revamp the archaic system of the electoral college. The system used today for selecting the President and Vice President is obsolete, needlessly complex, and totally inadequate for present conditions. As it operates now, it is a bad fitting fifth wheel to the coach of democracy.

Under the system presently used in the United States, the President and Vice President are elected by electoral votes. These votes are divided among the States with each State having as many electoral votes as it has Representatives and Senators in the U.S. Congress.

Each electoral vote is delegated to an elector, a person who is chosen by the people in a manner prescribed by the State. In December of each Presidential election year, the victorious electors meet in some part of the State and vote for a candidate for President and a candidate for Vice President. These votes are then sent to Washington by mail, and at the opening of the new session of Congress in January, the Senate and the House meet in joint session to count the votes. If one person receives a majority of the votes cast, he is declared President. If not, the House votes on the top three candidates with each State getting one vote. The same method applies in the case of a tie for Vice President, except the Senate selects him with each Senator allowed one vote.

This antiquated and complicated system of electing the highest officers of our country was devised by the Founding Fathers at the Constitutional Convention of 1787. The members of the convention felt a distrust toward the discretion of the people in choosing their own leaders. Roger Sherman, of Connecticut, said that, "The people would never be sufficiently informed of the character of the men to vote intelligently for the canadidates that might be presented."

The theory of the electoral college was that the electors, chosen for superior talents, emancipated from the subtle intrigue of party, should make in Olympian serenity a choice based solely on merit. This plan failed utterly and miserably within 12 years after it was put into effect.

The first dispute under the electoral system arose in the election of 1800. Thomas Jefferson and Aaron Burr, both supported by the Democratic-Republicans, received a tie vote. This threw the election into the House of Representatives. Although Jefferson was the party's choice for President, he was almost defeated by forces in the House. The furor that arose brought about the 12th amendment to the Constitution. This provided for designation of candidates as either presidential candidates or vice presidential candidates and required that separate ballots be used.

In the turbulent election of 1876 Samuel Tilden outran Rutherford B. Hayes by a popular vote of 258,000. The electoral vote was close with the outcome hinging on 21 disputed electoral votes from three Southern States. Each State had sent in double returns; one set for Tilden and one set for Hayes. Not knowing exactly what to do, Congress provided for an Electoral Commission of 15 members. Congress tried to balance the Commission politically, but when unable to select an independent, they appointed a Republican. By a strict party vote of 8 to 7 the Commission gave Hayes all 21 votes, thus making him President by an electoral vote of 185 to 184. Ten years later Congress passed the Electoral Count Act which provided that each State should determine its correct electoral votes.

One of the major points of attack against the electoral college is the possibility of electing another President by a minority of the people. This occurred in 1876, 1884, 1888, and to a lesser degree in other elections. The election of 1876 when Tilden with a 250,000 vote majority, was defeated by Hayes, has already been pointed out. In 1888 Grover Cleveland led Benjamin Harrison by 90,000 popular votes. Despite this lead, Harrison won the election by an electoral vote of 233 to 168. This discrepancy in the electoral college has not been corrected. It is possible for another minority President to be elected.

The founders of our Constitution either did not foresee the rise of political parties, or failed to realize the control they could and would have over the election of President. By overlooking this fact, they left the way open for the nullification and complete change of the electoral system they had incorporated into the Constitution.

This change was not long in coming. By the election of 1800 the parties had already gained a strong hold on the Nation. In this election the electors merely registered the results of the popular vote. The succeeding elections followed this pattern and with Andrew Jackson's election in 1828 the subserviency of the electoral machinery to popular control was finally established. By this method the electoral college was divested of its original functions without any change in the letter of the law.

As could be expected, the change in the electoral system and the control by political parties brought about changes in the States in respect to the electors and the electoral votes. With the electors running on a party ticket or with announced intentions of the candidate for whom they would vote, the people ceased to be interested in the elector as an individual. The people voted by party or candidate, merely selecting the electors pledged to a particular candidate. This meant that in a one-party State, the stronger party could count on all of that State's votes without a hard campaign.

The effect in States where no party dominated was exactly opposite. It caused the parties to campaign heavily in these States and gave these States a more influential voice in party policies.

These are but a few of the many reasons why the present system is antiquated and no longer able to perform its function. The needed reform of the system is twofold: abolition of the electoral college, and some provision for making the Federal count a simple process in addition.

The electoral college has outlived its usefulness. Modern methods of communication and rapid tabulation of votes have given a definite advantage to the importance of letting the public see and know that the vote that they have cast has counted directly for the candidate of their choice. The electoral college as it now functions, serves as a millstone about the neck of democracy, defeating the will of the people and depreciating the individual's vote.

THE ANTIQUATED ELECTORAL COLLEGE

(By Ronald Gray)

Last week this headline appeared in the newspapers, "Khrushchev Threatens Rockets Within the First Few Minutes." This is the threat that Russia's leader offered to the

United States if she should start a war. Also it is a typical example of one of America's external dangers. However, America has other difficulties that are much nearer home. One of these is in her system of electing her highest officers, the President and the Vice President.

When the framers of the Constitution of the United States met to decide by what method a President and Vice President could be elected, they had a difficult task to accomplish. They did not wish to give full control of the election to the people, because, in that age, the people were not well enough informed. On the other hand, they did not want Congress to elect the President, since that would have violated the principle of separation of powers. Consequently, they adopted after much debate, an indirect method of election, which was an entirely new system compared to any means of election used beforehand. This indirect method was to be accomplished through a so-called electoral college.

The electoral college is made up of a number of presidential electors from every State, the method of election of these electors being determined by the individual States. However, in all of the States today the popular election of the electors is used. This is held on the first Tuesday after the first Monday in November of every fourth year. At these elections the people as a whole vote for presidential electors. Then on the first Monday after the second Wednesday in December of the same year, the electors meet in their respective States and cast their votes separately for President and Vice President. After the electors cast their votes, the ballots are then sealed and sent to Washington, D.C., where they are opened in the presence of both Houses of Congress by the President of the Senate, and counted.

The candidate receiving the majority of electoral votes for President is then named President. The candidate receiving the majority of electoral votes for Vice President is named Vice President. In the event that no one has a majority of votes, the House of Representatives selects a President from the candidates, not exceeding three, who have the highest number of electoral votes. If there is no majority of votes for Vice President, the Senate appoints him from the two candidates for Vice President who have the largest number of electoral votes. Under this system the President and Vice President of the United States are elected to office.

Upon hearing this description of the electoral system of voting, one would without careful consideration think that a system such as this would have few weak points. However, this is not true, as can be determined by a careful analysis.

In the first place, the constitutional makers devised what they thought would be a nonpolitical scheme for the choosing of a President and Vice President, when they set up the electoral college. Under this nonpartisan system, it was thought that the people would elect a President and Vice President, who would be the choice of the majority of the Nation. Too, it was thought that the State legislatures would select methods of appointing presidential electors which would enable the people to choose the most capable men for the job, and this proved to be so in the first and second presidential elections, in which Washington received every electoral vote. However, by 1800 two political parties were distinctly in evidence, because all of the electors in that election either voted for Jefferson and Burr or for Adams and Pinckney.

This rise in political parties was unforeseen by the framers of the Constitution and the original purpose of the electoral college, which was to reduce politics to a minimum, was already defeated.

In order to be sure of controlling the Government, a political party had to control the office of President and in order to be certain of that, it had to gain the upper hand in the electoral college. This was a ridiculously easy task, since all that was necessary was to put up slates of candidates for presidential electors, who were pledged in advance to vote for the party's candidates, and then to help get them elected. Consequently, a party with votes enough to carry the legislature of a State could always succeed in doing this, and thus gain control of their respective State's electoral votes. Too, this very act is one of the main defects of the electoral system. It is a defect which is based primarily on the law, which Congress passed in 1887, when the electoral vote of one of the States was disputed. Under this law all of a State's electoral votes go to the political party that has a plurality of the State's popular vote. In this way, a State which is about equally made up of members of two parties, may be swayed in favor of one party or the other just because of a few hundred popular votes. Thus during a presidential campaign the political parties only concentrate their efforts in thase States where their political party is weak, knowing that they can carry the States where they already have a plurality. Therefore, in the period of time which has elapsed since the electoral college was founded, it has become an entirely politically controlled organ of the Government. It could not withstand the pressure of organized politics.

Secondly, under the present electoral system, a President may be selected who has a minority of the Nation's popular vote. Out of the last 16 Presidents elected, only 10 have been chosen by a majority vote. Six of these 16 were appointed Presidents with a minority of the electoral votes, because no one person had a majority. Consequently they, receiving a minority of the electoral votes, received a minority of the people's vote in the whole Nation. When situations such as this occur, the electoral college is criticized as being undemocratic and not abiding by the principle of "the majority rule."

The electoral system has one more main weakness. This weakness is the inability to determine equally throughout the United States exactly who the people's choice for President is. Moreover, this handicap is due to the fact that the States with the larger populations have a larger electoral vote, since the electoral vote is determined according to the population of a State. Thus the more densely populated States like New York, which has 47 electoral votes, will definitely have greater weight in a presidential election than would Alabama, which has only 11 electoral votes. Consequently, the electoral system offers an unequal basis for the election of a President in respect to the whole Nation.

These are some of the reasons why the electoral college as it exists today has become outdated. It has been perverted from its original purpose and transmuted into a strictly political mechanism.

THE ANTIQUITY OF THE ELECTORAL COLLEGE

(By Richard Land)

"Constitutions are not made but grow." Our electoral college procedure of electing the President and Vice President was originated in 1789, 171 years ago. Yet it has been altered to a limited extent and has come to mean right opposite to the way it was meant to function.

I would like to begin in the year 1789, and relate to you the history of the electoral college procedure and point out the falicies it contains, up to the present time.

When Alexander Hamilton in 1789 proposed the method of using the electoral college for electing the President and Vice President, he never visioned the effect it would have years later. It seemed then to be the necessary proposal. After the electors were chosen they were to meet and each cast a ballot for two persons, at least one of whom must be a resident of a different State. The votes from all the States were assembled and counted, the persons receiving the largest and second largest numbers, if in each case a majority, should be declared President and Vice President. If no one received a majority, or if there was a tie, the President was to be elected by the House, each State delegation having one vote. The people, it was assumed, would conscientiously weigh the qualifications of persons available for the Presidency and having made up their minds, would cast their ballots as absolutely free agents.

For a short time the plan worked as its authors had intended. In 1789, and again in 1792, every elector wrote the name of Washington on his ballot, but the second votes were scattered according to individual preference. In 1796, 13 men received votes, betokening as yet a great deal of independence on the part of the electors. But in 1800 every elector except one wrote the names of either Jefferson and Burr or Adams and Pinckney. The reason was that by this time two distinct political parties had come into the field, and each had taken steps in advance of the popular election to designate its candidates for the Presidency and Vice Presidency and also put before the voters of several States lists of men who, it was understood, would, if chosen by the people, cast their ballots in all cases for the recognized candidates of the party to which the given electors belonged.

The effect, of course, was to defeat the main purpose for which the electoral college existed. Instead of exercising independent judgment, based on a superior knowledge, the electors now became merely a body to register in a formal and perfunctory way the will of the voters who had chosen them.

The rise of political parties, entirely unforeseen by the constitutionmakers, thus wrought a silent revolution within a decade; without a change in a letter of the fundamental law, indirect popular election became, to all intents and purposes, direct election.

The election of 1800 brought a new situation in still another respect. Jefferson and Burr received not only the largest number of votes, but the same number, and the House was called upon to break the tie. This precipitated a political crisis of wholly unlooked-for proportions, for the Federalists were with difficulty restrained from deliberately frustrating the will of their opponents by throwing the election to Burr. The effect was that before another election came around, the Constitution was amended so as to provide that the electors should in all cases name in their ballots the person voted for as President and, in district ballots, the person voted for as Vice President to be members of different parties.

A national law of 1845 requires that the presidential electors be chosen in all States on the Tuesday following the first Monday in November. As for the method of choice, the Constitution has only a simple provision that it shall be determined in each State legislature thereof. At the outset, the legislature itself elected in a majority of States and the people took no direct part at all, but as democratic sentiment grew, however, popular election was substituted in one State after another with the result that from 1832 onward the legislature elected no longer.

It is quite possible for a candidate to be elected by a minority of the popular vote. I will explain. A majority in the electoral college is necessary to a victory unless it is achieved through the House. But if a candidate's support is so distributed as to yield him a majority in the right combination of States, he may roll up an electoral majority without polling as many popular votes as an opponent whose strength is not so favorably concentrated, as a result we have had several minority presidents. Lincoln in 1860 ob-

tained only a plurality, not a majority of the popular vote. Wilson in 1912 received 2 million more popular votes than the nearest competitor, Roosevelt; yet he lacked a majority. In both of these cases, the opposition was unusually divided, but the same thing can happen if there are only two tickets in the field. Hayes was elected over Tilden in 1876, although his popular vote was smaller. Harrison triumphed over Cleveland in 1888 although he had fewer votes.

The fact that the entire electoral vote of a State falls to the candidate who polls a mere plurality of the popular vote leads the parties to concentrate their campaign efforts upon doubtful States especially those which have a large electoral vote. New York is such a State and party managers are not likely to forget that in 1884 fewer than 600 popular votes swung that State's 36 electoral votes to Grover Cleveland. It was these votes that made him victor over the Republican candidate. The intensification of party activity in pivotal States is unfortunate in that it presents a special temptation to party workers to resort to vote buying and other corrupt or dubious practices.

Proposals for altering the method of electing the President and Vice President have been discussed from time to time through our entire national history. The 12th amendment remedied certain defects, and various statutes, the Electoral Count Act dealt with others. But the chief anomaly remains, namely the electoral college, and the question is often asked why not abolish this institution and permit people to choose the President in form as well as in fact.

The suggestion is plausible, yet it raises a question of some difficulty. Should the people of a country as a whole without reference to State or other interior lines elect by simple plurality of majority vote? Or should they vote by States or districts? The proposal to throw the whole into one grand constituency and elect by a majority or a plurality of the total vote has met with small favor. If any change is ever made it is likely to preserve to the States as such, some definite role in the electoral process. Two main possibilities suggest themselves; (1) direct popular election for the President and Vice President, voting to be by perhaps a popular plurality in a majority of States, (2) direct popular vote to be converted automatically without the intermediation of the present electors into an electoral vote and election to be by a majority or a plurality of the electoral vote. The first plan is objectionable because it would enable a number of the smaller States to swing the election by means of only a minority of the total popular vote; although it is not to be forgotten that we have minority Presidents under the existing system.

Furthermore, the second plan offers no assured gain, except under one condition: If the electoral vote of the State were to be determined on a district basis rather than on a general ticket basis, a way would be open for some degree of proportional representation, and it would not happen, as it does now, that an entire State's electoral vote would go to a given candidate notwithstanding that the popular vote was almost evenly divided. Considerations of State pride and party advantage which originally caused the district system to be abandoned are, however, no less potent in our time than formally. Only by a constitutional amendment could the plan be put into uniform use throughout the country; and not withstanding its manifest advantages over the present system, its advocates can hardly hope for its adoption. The one obvious disadvantage would be the increased temptation to party majorities in the several States to gerrymander the electoral districts.

In conclusion, I would like to say that from the standpoint of the present day, a more cumbersome procedure could hardly be imagined or consciously devised for electing the President and Vice President of the United States. The electoral college system is frequently condemned, seldom praised, yet it made good sense to our Founding Fathers and to so astute political scientists as Alexander Hamilton it appeared to be "at least excellent" if not "perfect." Designed originally to bear an awesome political burden, the electoral college procedure has been amended by usage into a meaningless anachronism and preserved by the inertia that surrounds all things constitutional. Its only function now is to perform the essentially simple administrative duty of translating popular votes into electoral vote. Thus it remains as one more instance of the profundity of Burke's observation that "Constitutions are not made, but grow."

Assistance to a Million Migrants

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks I include herein the full text of an article by Mr. Marcus Daly, Director of the Intergovernmental Committee for European Migration, printed in the May-June 1960 issue of the Migration News published by the International Catholic Migration Committee in Geneva, Switzerland:

ASSISTANCE TO A MILLION MIGRANTS

(By Marcus Daly)

One million emigrants. It is not so easy to picture to oneself the amount of work represented by this figure. One million is the total population of French-speaking Switzerland—four times the population of the Canton of Geneva—the whole population of cities like Copenhagen, Naples, Munich, or Montreal.

One million emigrants, this is the product of the work accomplished by the Intergovernmental Committee for European Migration (ICEM) in little more than 8 years at a cost of $250 million contributed by 29 member States.

Let us cast our minds back to November 1951 when the Belgian Government, in response to a United States request invited a certain number of countries particularly concerned with migration to meet in Brussels. What was the picture at that time?

The International Refugee Organization (IRO) was about to come to an end, after moving 1 million refugees overseas in the space of 5 years.

Now, not only were there still many refugees left in the European camps, but in addition a new problem was thrusting itself with increasing urgency upon the attention of the Western governments; that of a surplus population in various European countries wishful but unable to emigrate, whereas numerous countries overseas were in sore need of manpower for the development of their economy.

As early as May 13, 1959, when they met in London, the Foreign Ministers of the three great Western Powers, Mr. Dean Acheson, Mr. Ernest Bevin, Mr. Robert Schuman, had published a joint statement saying:

"The surplus population in several European countries is one of the main factors in the difficult and unbalanced state of world affairs. A systematic study of emigration possibilities can greatly contribute to the solution of this problem."

This systematic study was undertaken simultaneously by various international organizations and by several governments. It became plain that although comments and conclusions might vary, all the experts agreed that the number of surplus persons in Europe amounted to about 5 million.

The committee of experts dealing with the problem of refugees and surplus populations within the Council of Europe stressed the importance of restoring the normal flow of European emigration toward Western oversea countries—a flow which had been practically cut off since the First World War—and pointed out that the absorptive capacity of these countries exceeded the possibilities of European emigration and would continue to do so unless means could be procured to promote the latter by providing financial aid for emigrant transport.

THE SETTING UP OF PICMME

On December 5, 1951, at the Brussels Conference in which 27 states took part, the Provisional Intergovernmental Committee for the Movement of Migrants from Europe (PICMME) was created. The Committee was set up for a trial period of 1 year.

The final resolution of the Brussels Conference stressed the fact that "the problem of economic development is closely connected with that of immigration." It pointed out that "international financing of European emigration will not only help to solve the demographic problem in Europe, but will likewise promote new economic activity in countries that are short of manpower."

The dual task of the new committee was to relieve the pressure of surplus populations in Europe and of manpower shortage overseas. For the first time in the history of international organizations, it was to attempt, through intergovernmental cooperation, to assist those demographic and manpower movements which for centuries past had been taking place more or less freely between Europe and the other continents.

PICMME started its work on February 1, 1952, having set up its office in Geneva on the premises of the former International Refugee Organization the day after the latter ceased to operate, and took over the chartering of part of the IRO fleet and a sum of $2,737,096 for the transport of 12,000 refugees still covered by the IRO mandate. It retained some of the IRO staff and had the benefit of their experience in the carrying out of numerous operations connected with the organization of mass emigration.

In June 1952, the representatives of the member states of the Migration Committee (as PICMME was usually called) elected as director of the organization Mr. Hugh Gibson, former U.S. Ambassador to Belgium and Brazil, who had been one of President Herbert Hoover's close collaborators in the work of European aid after the devastations of World War I. During the German occupation of Belgium in 1914, Gibson, as a neutral diplomant, distinguished himself by his courageous attempts to save the life of Edith Cavell, a martyr for the sake of her duty as a nurse.

The new director enjoyed the full confidence of the United States and he brought with him to the Migration Committee his wide experience of Latin America and Europe and a broad view of the problems, which proved to be in perfect harmony with that of his deputy, Pierre Jacobsen, which was based on outstanding practical experience.

At the close of the 12-month-trial period, PICMME's work had convinced most of the governments concerned of the irreplaceable value of an international institution, founded on the multilateral principle of a triangle the base of which is formed by two governments bound by common though

opposing interests—those of the emigration and the immigration areas—and the apex is an imparital administrative body devoted to the cause of both parties and at pains to find a common denominator in all matters concerning them.

THE SETTING UP OF ICEM, A TEMPORARY ORGANIZATION

At the Committee's fourth session, which took place from October 13 to 21, 1952, it was decided to continue the work for a further year. However, the word "Provisional" was to be deleted from the name of the organization and likewise the original stress on "movements." In other words the member states had become aware that there were other problems at least as important as those of transportation, and that longer term planning was essential.

So PICMME was replaced by the Intergovernmental Committee for European Migration, or ICEM. At the same time, work began on the drafting of the new organization's constitution. The draft constitution was completed in 1953 and the text was submitted to the governments concerned for ratification.

On November 30, 1954, the 16th ratification of the constitution, that of Norway, was received in Geneva. A two-thirds majority of the member states (there were 24 at the time and there are now 29), representing more than 75 percent of the contributions to ICEM's administrative budget, having thereby ratified it, the constitution came into force and the assembly of delegates, in accordance with the new constitution, became the Council of Intergovernmental Committee for European Migration.

On December 12, 1954, Ambassador Hugh Gibson died suddenly at his post. The member states unanimously elected in his stead the former U.S. Ambassador Harold H. Tittmann. Like his predecessor, Mr. Tittmann had wide experience in Latin America and Europe and was intimately acquainted with American diplomatic practice.

On July 1, 1957, Deputy Director Pierre Jacobsen met his death in a motoring accident. He was replaced by Mr. Barthélemy G. Epinat, of France, in October 1957.

On May 13, 1958, Mr. Harold H. Tittmann went into well-earned retirement. On May 14, 1958, the council entrusted the directorship of ICEM to the writer.

THE MACHINERY OF ICEM

Under the provisions of the Constitution, the purposes and functions of ICEM are as follows:

"(a) to make arrangements for the transport of migrants for whom existing facilities are inadequate and who could not otherwise be moved, from European countries having surplus population to countries overseas which offer opportunities for orderly immigration.

"(b) to promote the increase of the volume of migration from Europe by providing, at the request of and in agreement with the Governments concerned, services in the processing, reception, first placement and settlement of migrants which other international organizations are not in a position to supply, and such other assistance to this purpose as is in accord with the aims of the Committee.

After defining the organization's competence—in accordance with the interests and policy of each member government, the constitution then lays down the conditions for membership. It is not enough for governments to be interested in the principle of free movement of people in theory; proof of practical concern must be provided.

Paragraph (b) of the second article establishes ICEM as a purely Western international organization, emanating from the free world, and thereby guarantees its working efficiency and creates a barrier to its incorporation in the system of the United Nations organization with its universal basis. This means that ICEM can have only a limited number of members—and therefore its active members must be prepared to met heavier financial obligations—but it can do practical work and progress dynamically without fear of friction, or sabotage, or distortion for the sake of propaganda or agitation, or, above all, the swamping of its aims in a flood of words and criticism and inquiries and commissions such as has been known to frustrate the efforts of so many international agencies whose interests are not safeguarded in this manner.

In short, the Migration Committee is the perfect example of an intergovernmental operational organization wherein the sovereign rights of the members are carefully preserved against any attempt or temptation to impose upon them supranational doctrines, but wherein likewise the desired field of action is clearly defined and the number of members to be admitted is strictly limited.

ICEM's program and achievements vary from year to year according to circumstances.

From 77,600 in 1952, the annual total of movements rose to 87,500 in 1953, then settled at about 120,000 in 1954 and 1955. The Hungarian exodus after the suppression of the Budapest revolution, and the Suez crisis, sent the figures up to 172,200 in 1956 and even 194,200 in 1957. A return to more normal times brought us back to 94,300 in 1958 and 105,900 in 1959.

One million emigrants. This total, which was marked by a white stone at the ICEM conference held in Naples, in May 1960, can be analyzed as follows:

	Total	Of which refugees
Countries of immigration:		
Argentina	104,000	3,000
Australia	290,000	74,000
Brazil	84,000	14,000
Canada	152,000	75,000
Chile	6,000	2,000
Colombia	2,000	1,000
Rhodesia and Nyasaland	6,000	
Israel	59,000	58,000
New Zealand	9,000	2,000
Union of South Africa	10,000	2,000
United States of America	179,000	165,000
Uruguay	10,000	
Venezuela	46,000	3,000
Others	43,000	42,000
	1,000,000	441,000
Areas of emigration:		
Austria	150,000	130,000
Germany	214,000	126,000
Greece	66,000	10,000
Italy	278,000	41,000
Netherlands	82,000	1,000
Spain	38,000	
Hong Kong	15,000	15,000
Others	157,000	118,000
Total	1,000,000	441,000

Having come thus far, ICEM's administration continues confidently on the road to the second million.

This confidence is based not only on the conviction that the work of ICEM is highly valuable to the peace of the world, but also on the knowledge that ICEM can rely on the close cooperation of other international organizations—the Office of the United Nations High Commissioner for Refugees in particular—and, above all, on the voluntary organizations whose admirable devotion can never be sufficiently stressed.

The Changing Face of American Cities—No. 2

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. IRWIN. Mr. Speaker, in yesterday's RECORD I began a series of insertions pinpointing the new urban complexion of American cities, based on a two-part survey in Forum magazine entitled "The New Urbanites."

Except No. 2 from the survey follows:

In the last 2 years migration from rural areas has noticeably slackened. William Wheaton of the University of Pennsylvania estimates that in-migration to Philadelphia has dropped 50 percent, because sources are beginning to dry up. Irene Taeuber of the office of population research, Princeton University, confirms this: "The great reservoirs of Negroes in southern agriculture are so reduced that they can furnish only a fraction of the migrants of the future." Hence the tide has probably passed its peak.

But even if rural sources were to dry up completely tomorrow, cities would still have the gigantic problem of assimilating the nearly 2 million persons, largely low-income Negroes, who have moved into northern cities in the past two decades.

MICHIGAN WATER

Many factors impelled the great migration. A folk song favored by Negro pianist "Jelly-Roll" Morton runs:

"Mississippi water tastes like turpentine—
But Michigan water tastes jes' like sherry wine."

And to the sharecroppers in the collapsing farm economy of the South, Michigan water has indeed looked like sherry wine, though once in Detroit or some other industrial metropolis, that old turpentine taste may return. A great magnet to the dispossessed was the wartime and postwar prosperity in the great industrial cities of the North and Midwest, where the southern Negro found a measure of economic security he has not known since he was forced off the plantation. Here also, though it weighed less than economic factors, was a chance for a greater degree of social acceptance than the South would ever afford. Though many migrants are aware that not all northern white society will accept them as brothers, at least there is the chance for some measure of equality. More important, there is a first fumbling step toward freedom.

The background of these new urbanites is vital to an understanding of the challenge they pose for cities. Like any large mass of people, they form a heterogeneous group. As Robert Weaver, consultant to the Ford Foundation and member of New York's Housing and Redevelopment Board, points out: "Some are new arrivals; some have urban backgrounds; some are financially secure; many are low income; many are in the process of economic, social, and educational mobility. Census figures on migration, valuable as they are, do not tell the whole story. Dependence upon such restricted data is bound to give a distorted picture and blind us to the elements which offer the most promising avenues to solution." The largest problem lies in the vast majority of new-

comers, white and nonwhite, who have no familiarity with city life and are frequently unwilling to bend to its inexorable demands.

East of the Mississippi, the new urbanites come from two groups: (1) the Negro sharecroppers, mostly from Georgia, the Carolinas, and the Deep South; and (2) white, low-income families from the hill country of Tennessee and Kentucky. On the west coast—where Los Angeles' nonwhite population has been increasing twice as fast as its white in the past decade—the great source of migrants is the Middle South and border States. California still draws a large influx of Mexicans from the Southwest.

White or colored, the new urbanites are usually young (a majority are in the 15-to-29 age group) and generally have several children. They are rural or smalltown oriented, with social life centered on the family. They are often incredibly impoverished, by urban standards. Their values frequently lead to difficult adjustment. Housing is likely to be less important to them than other things. Saving means little to them, for they have long been used to living from hand to mouth on an uncertain future. Thus, they are easy prey for the dollar-a-week installment sellers who load them up with the glittering toys of urban society—television, automatic dishwashers, hi-fi phonographs, and automobiles. In their original homes, religion was generally wrapped in a revival meeting atmosphere, and the decorous, quiet nature of urban religious experience is likely to seem tame by comparison. White or colored, the new urbanites are, as Ely Aaron, chairman of Chicago's Mayor's Committee on New Residents, says, "proud, clannish, sensitive about their lack of education. They are suspicious and they don't know this business of working with other people."

The Status of Berlin

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. BOSCH. Mr. Speaker, we are all very much interested in the situation in Berlin and the entire country of Germany. The Soviet attitude should be studied very carefully.

Under leave to extend my remarks, I include an article written by Dr. Walter Becher, a member of the Bavarian Landtag, which I commend to the attention of my colleagues:

THE STATUS OF BERLIN—MOSCOW'S ATTEMPTED CHANGE MUST BE REJECTED

Soviet argumentation centers on the claim that the entire city belongs to the territory of the so-called "DDR" (German Democratic Republic). Inasmuch as Berlin's original four power administration has long ceased to exist, it is asserted that the western powers, 15 years after the end of the war, have forfeited the right to stay in their Berlin sectors.

Aside from the fact that the Soviet representative has prevented the Allied commanders from continuing their work, and the communist SED (Soviet Zone German Communist Party) has split Greater Berlin's administrative unity by unilateral arbitrary action, life in the whole of Berlin is determined by the four power status of the city still today.

Without that status, solemnly agreed upon by all partners at the New York conference of May 1949 after cessation of the blockade, partitioned Berlin during the past 12 years would most probably have developed internal conditions quite similar to those now existing in partitioned Germany. However, whereas the Iron Curtain has changed our country politically and in almost all other aspects into two separate spheres, Berlin despite its administrative division remained that organic unity, the prerequisites and consequences of which have so far manifestly been respected by the Soviet partner.

The sector boundary, though splitting the city in half, has remained up to now a demarcation line; it has not become an Iron Curtain, still less a state frontier. As always, the subway and elevated traffic system connects all parts of Greater Berlin. The inhabitants of both city segments cross the sector boundary daily by the tens of thousands, normally without any particular difficulties. Many Berlin citizens still are living in the east sector and working in the west sector or vice versa. Annually many east sector residents participate in cultural affairs taking place in the other part of the city.

A too little observed political consequence of the four power status, still valid for Greater Berlin, is the circumstance that the SPD (Social Democratic Party of Germany), despite some hindrances, is legally permitted to operate in the city's east sector. In the west sector the Communist SED enjoys the freedom of action denied to the SPD in East Berlin. The situation in Berlin is a singular one in Germany characterizing the city as a special territory conditioned solely by the four power status.

The Soviet attempt to divert attention from this fact and to revamp only West Berlin's status must be rejected. It amounts to a basic change of the realities as still existing in the whole of Berlin today. If materialized, the design would bring about a new division of the city, turn the sector boundary into a state boundary and create an internationally founded jurisdictional pretext for making the east sector, though still under special law, a legal part of the Soviet Zone. Such a development would also mean for the more than 1 million east sector residents, and their liberty to move within the whole city, a factor that could only lead to an aggravation of the situation.

H.R. 870, To Abolish Capital Punishment

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which was broadcast by Washington Station WTOP on May 27, 1960:

Congressman MULTER's bill to abolish the death sentence for most Federal crimes appears to have virtually no chance of passage because of opposition from several quarters, including District commissioners.

Yet the legislation will serve a most valuable purpose, if only to touch off informed debate on the subject of capital punishment and related issues.

This station is not yet wholly persuaded that capital punishment in the District should be ended permanently. We do believe, however, that a moratorium, perhaps for 5 years, would provide information as to whether permanent abolition would harm or benefit the public welfare.

We are led to this position by a variety of evidence, much of which is summed up by the Reverend Peter Raible in an article in the Unitarian Register.

Reverend Raible points out that statistics appear to show that capital punishment is no deterrent to murder; that the few States without the death sentence have no more homicides than those which retain it.

Furthermore, as he writes, the very great majority of those put to death are the "poor, the berefts, the ne'er-do-wells of society." He charges that "in no place in our society do we discriminate more forcefully against the outcast than in earmarking men for death at the hands of the State."

Why, then, does capital punishment retain so much support?

Reverend Raible offers the explanation that—in his words—"the real reason for capital punishment exists within ourselves"; and he quotes Clarence Darrow's famous plea in the Loeb-Leopold trial when he said, "I am pleading for a time when hatred and cruelty will not control the hearts of men, when we can learn by reason and judgment and understanding and faith that all life is worth saving."

Sentiments like these will be dismissed by some as soft-headed; and perhaps there are more prosaic arguments both for and against capital punishment. But the fact remains that many of those who know most about the subject—including the warden of the prison where Caryl Chessman was executed—believe the death sentence is wrong. We think Congress—and the District—should pay attention to their arguments.

The Port Authority and the Lemon

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. FRELINGHUYSEN. Mr. Speaker, in the New Jersey-New York area there has been increasing interest in the vital question of providing and maintaining adequate transportation. Some feel that the Port of New York Authority has not been assuming sufficient responsibility in this area.

In this connection, I should like to include the following editorial from the May 31 edition of the New York Herald Tribune:

THE PORT AUTHORITY AND THE LEMON

As everybody who has been around New York very long knows, the port authority is highly selective of the projects it undertakes. This, of course, is why the port authority has been so successful.

It tackles only that which will pay its own way or shows reasonable prospects thereof. The profits from one enterprise go on to the next, and so on. Thus, we have port development, airports, bridges, tunnels, all part of the regional well-being. And undoubtedly the New York-New Jersey community couldn't have become what it is without the nonpolitical efficiency of the public authority.

But in the current Harper's magazine Mr. Edward T. Chase, whose avocation is mass transportation, whacks the port au-

thority (and the Triborough as well) for this policy of economic selectivity.

There ought to be, he says, an integrated, comprehensive approach to the transportation problem. But for all its desirability, this is blocked by "self-righteous rigidity," which is the mark of "an almost transcendental sense of obligation" to authority bondholders.

Mr. Chase complains that this isn't true responsibility. Why? Because an integrated system, recognizing the importance of railroads and subways as well as the automobile, would be good.

Obviously, though, you can't integrate transportation without pooling revenues, and here the moneymaking facilities are the port authority fief. And if more automobiles require more facilities and produce more congestion, with other transport systems declining in the squeeze, well, who is to be blamed?

Well, it seems to us that the authorities are not entirely guiltless. True, they can and do say—and quite properly—that first-line credit must not be impaired for fear of wrecking all their good works for the future. Yet the criterion that progress comes only where profit can be shown is also a deprivation of the public interest.

Surely the mission of the authorities—and particularly in the case of such a vast complex of activities as the port authority—is to serve public necessity.

It's silly, of course, to suggest that the busted railroads and red-ink subways ought to be dumped into the port authority's lap. But we do believe that it should take a more comprehensive and cooperative view of what's needed in mass transportation. That's what the port authority is for—to solve the tough problems.

As Julius Henry Cohen, one of its guiding geniuses in the early days, said, "Handed a lemon, we'll make lemonade out of it."

Can Dief Tell Ike Some Hard Truths?

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. DENT. Mr. Speaker, I want to point out that I did not say what appears following my few remarks.

In fact, I doubt if any American could say it without getting his political block knocked off editorially.

However, it is nice to know someone can say what so many are thinking. This is from the Financial Post, Toronto, Canada:

CAN DIEF TELL IKE SOME HARD TRUTHS?

"We're ready to go, boy."

Those were the actual words used recently by Gen. Nathan Twining, Chairman of the U.S. Joint Chiefs of Staff. And they are typical of the kind of language coming from the Pentagon these days.

The "tough talk" boys and the McCarthyities have been revitalized by the summit failure and the cold war freeze-up. President Eisenhower and the U.S. public are listening much more now to the loudmouthed generals; to scientists like Dr. Edward Teller who prides himself on being "the father of the H-bomb," and to Atomic Energy Commission Chairman John McCone, who wants to resume nuclear weapons testing.

In this bully-boy atmosphere now sweeping the United States, a lucky and golden opportunity has been given to Prime Minister Diefenbaker. The question is: Will he take it?

Next week Mr. Diefenbaker meets with President Eisenhower in Washington. Certainly they'll talk about our mutual economic problems and about our joint defense problems.

But perhaps the biggest service Mr. Diefenbaker can do for Canadians—and for the rest of the world—is to put some of the ugly facts of cold war life directly to Mr. Eisenhower—facts from which he is sheltered by his mother hen staff.

The official U.S. attitude right now is to brush off any criticism of American diplomacy and the spy flights either as dirty politics by the Democrats or as Communist and fellow-traveling propaganda. Prime Minister Diefenbaker could not be so dismissed.

In any event, Mr. Diefenbaker should take Ike aside and tell him to get off his high horse, stem the rising tide of anti-Russian feeling in the United States (which only encourages the equally itchy fingered Kremlin Stalinists) and start all over again to melt some of that cold war ice.

The President has heard little but sirupy claptrap about the injured honor of the United States since his well-organized welcome home a week ago. He simply does not know that the world out there beyond the U.S. border does not necessarily take Washington's word as all wise and all gospel.

If Mr. Diefenbaker would only gently tell him so, and if he would plead for an intensification of the tension-easing policies of Secretary of State Herter and a knock in the head for the reviving hard-nose Dulles line (either John Foster or Allen), the Canadian PM would be making a major contribution toward insuring that we will not soon be all blasted off this earth.

Liquor on Airliners

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. HOSMER. Mr. Speaker, the following editorial by Larry Collins, Sr., indicates why Congress should take action to ban the serving of liquor on airliners:

LIQUOR ON PLANES

(By Larry Collins, Sr.)

A brawling drunk is a menace wherever he is located. But when he is on an airplane he can be a catastrophe. Often the mildest type of citizen when sober becomes a slugging maniac when he has a few drinks. On the ground he may beat up a few people, break some furniture, and assault a policeman. But in a jetplane his truculence could cause the death of all passengers and the crew.

There have recently been several incidents reported where a drunken passenger had to be subdued. The most recent case was when eight passengers were arrested in Montreal, Canada. They were charged with creating a drunken brawl abroad a plane bound from New York to Montreal. The pilot had radioed ahead that there was trouble on board.

The question is raised as to service by the airlines of liquor on their planes. It is difficult to restrict drinking in excess when it is served with meals. One drink is enough to unbalance one person whereas many may not affect the attitude of another. Drinks affect people differently at changed altitudes—and drinks affect the same person differently according to their physical and mental condition at different times.

With the many hazards of air transportation this is one that should be eliminated. With the rapid speed of air travel there are few times when a passenger is in the air more than 5 hours. No one is going to be greatly inconvenienced if deprived of drinks for this period. It may take away some of the glamour for some. But it would be a safeguard for all. The one or two drinks served by the airline may be just the added amount that changed an individual into a brawling menace.

We realize these are controversial views. But when we read of the great concentration needed by members of the crew when landing or navigating through storms, fog and sometimes mechanical failure we realize the danger of any disruptive influences that might occur on the plane. A drunken passenger insisting he wanted to get in the cockpit would probably be subdued. But during the period of subduing him everyone on the plan has his life endangered.

A recent book, "The Cone of Silence," is one of the most dramatic portrayals of what goes on in the cockpit of a jet liner we have ever read. It makes one appreciate how great is the responsibility of the pilot and crew in taking off, landing, and handling of a plane in bad weather. All the passengers and crews safety is dependent on split-second timing ability and knowledge of the man at the controls. Any disturbance such as drunken passengers should be guarded against. This writer is not a prohibitionist and is not critical of people taking their drinks at home or in bars on the ground. But he is concerned about the repeated incidents of brawling drunks on planes where so many lives are involved.

The Crisis of the Commuter Railroads—No. 9

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. IRWIN. Mr. Speaker, at a meeting in New York City yesterday, Boyd T. Barnard, president of the Urban Land Institute, made a noteworthy comment on metropolitan population declines indicated by preliminary 1960 census data. He asserted that big cities are losing population because of traffic strangulation and that this will continue until the cities develop integrated mass transportation systems. I concur in the opinion. This is good, solid evidence that the time has come to do something about the need for mass transportation improvements in urban areas. Under permission previously granted, I include an article from this morning's New York Times which describes the meeting in New York City. The article:

LOSSES IN CENSUS LINKED TO TRAFFIC—EXPERTS ASSERT CITIES MUST ACT ON TRANSIT PROBLEMS TO END STRANGULATION—JOINT PROGRAMS URGED—SOLUTION SEEN IN PROJECTS ON METROPOLITAN SCALE—CUT IN CAR USE ASKED

(By Charles Grutzner)

The loss of population in several cities was viewed yesterday as a warning of decay that

might ruin the cores of metropolitan areas that fail to end traffic strangulation.

Boyd T. Barnard, president of the Urban Land Institute, who sounded the warning, said, however, that some shrinkage of population in large central cities might not be a bad thing if it aroused cities to solve their problems of mass rapid transit. In that event, he said, it would be a question of how the cities redeveloped the spaces deserted by the migrants to suburbia.

Mr. Barnard expressed these views in commenting on early results of the 1960 census. The reports so far show population losses in Philadelphia, Detroit, Cleveland, Newark, Rochester, and other cities, especially in the Eastern States. New York City also has been losing population in recent years.

SOLUTIONS PROPOSED

Mr. Barnard and Fred J. Borch, vice president of General Electric Co., offered approaches to the metropolitan transportation problem at a press interview in the Waldorf-Astoria Hotel. The session was arranged by General Electric, which in 1954 helped organize Action, Inc., a national council for good cities.

Mr. Barnard described public transportation as the No. 1 problem of big cities. He said it could be solved only with coordinated programs for entire metropolitan areas, entailing use of the family car only to drive to the suburban station and the use of rapid transit the rest of the way. But the major difficulty, he said, was in getting coordinated action by local governmental bodies. Progress is being made in some metropolitan areas to set up authorities that overlap political boundaries, he explained.

The development of coordinated rapid transit systems, he observed, would require some city or State subsidies for mass transportation and would probably bring pressure from some quarters for Federal subsidies.

SUBSIDY HELD ONLY WAY

"We are already subsidizing the motorist," he said, "and the total subsidy on a coordinated transportation system is likely to be no more than our present subsidy cost. There is no alternative. Private automobiles on public highways can never carry the people.

"While it is unpopular to mention anything about our 'cold war' adversary, Soviet Russia, I am impressed with the Moscow subway system, which makes it possible for every citizen of that city to reach a subway station within 15 minutes' walk from his living quarters."

As hopeful signs at home, Mr. Barnard said, San Francisco will vote soon on financing a regional transit system and Los Angeles is "considering how it can get back its commuter lines which have been abandoned."

Jobs After 40

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. HOSMER. Mr. Speaker, several of the States have enacted legislation against discrimination in hiring employees by reason of age. This kind of discrimination has been found senseless and uneconomic by study after study. Yet it continues to persist, largely because of lack of information relative to the merits of hiring older workers. A model bill for consideration of State legislatures which have not yet acted on this important subject has been distributed by the Fraternal Order of Eagles as part of its campaign against job discrimination on account of age.

The model bill is as follows:

A BILL TO PROHIBIT UNJUST DISCRIMINATION IN EMPLOYMENT BECAUSE OF AGE

SHORT TITLE

SECTION 1. This Act may be cited as the "—Against Age Discrimination in Employment".

FINDINGS AND DECLARATION OF POLICY

SEC. 2. (a) The Legislature hereby finds that the practice of discriminating in employment against properly qualified persons because of their age is contrary to American principles of liberty and equality of opportunity, is incompatible with the Constitution, deprives the State of ——— of the fullest utilization of its capacities for production, and endangers the general welfare.

(b) Hiring bias generally against workers over forty-five years of age deprives the State of ——— of its most important resource of experienced employees, adds to the number of persons receiving public assistance, and deprives older people of the dignity and status of self-support.

(c) The right to employment otherwise lawful without discrimination because of age, where the reasonable demands of the position do not require such an age distinction, is hereby recognized as and declared to be a right of all the people of the State of ——— which should be protected as provided herein.

(d) It is hereby declared to be the policy of the State of ——— to protect the right recognized and declared in subdivision (c) hereof and to eliminate all such discrimination to the fullest extent permitted. This Act shall be construed to effectuate such policy.

DEFINITIONS

SEC. 3. As used in this Act unless the context otherwise requires:

(a) The term "person" includes one or more individuals, partnerships, associations or corporations.

(b) The term "employer" means a person in this State having in his employ one or more individuals; and any person acting in the interest of an employer, directly or indirectly.

(c) The term "labor organization" means any organization of employees which exists for the purpose, in whole or in part, of collective bargaining or of dealing with employers concerning grievances, terms, or conditions of employment, or for other mutual aid or protection in connection with employment.

EXEMPTIONS

SEC. 4. This Act shall not apply to any religious, charitable, fraternal, social, educational, or sectarian corporation or association, not organized for private profit, other than labor organizations. Nothing herein shall affect the retirement policy or system of any employer where such policy or system is not merely a subterfuge to evade the purposes of that Act.

UNLAWFUL EMPLOYMENT PRACTICES DEFINED

SEC. 5. It shall be an unlawful employment practice for an employer—

(1) to refuse to hire, to discharge, or otherwise to discriminate against any individual with respect to his terms, conditions, or privileges of employment, otherwise lawful, because of such individual's age, when the reasonable demands of the position do not require such an age distinction; and,

(2) to utilize in the hiring or recruitment of individuals for employment otherwise lawful, any employment agency, placement service, training school or center, labor organization, or any other source which so discriminates against such individuals because of their age.

(b) It shall be an unlawful employment practice for any labor organization to so discriminate against any individual or to limit, segregate, or classify its membership in any way which would deprive or tend to deprive such individual of otherwise lawful employment opportunities, or would limit such employment opportunities or otherwise adversely affect his status as such an employee or as such an applicant for employment, or would affect adversely his wages, hours, or employment conditions, because of such individual's age.

(c) It shall be an unlawful employment practice for any employer or labor organization to discharge, expel, or otherwise discriminate against any person, because he opposed any unlawful employment practice specified in this Act or has filed a charge, testified, participated, or assisted in any proceeding under this Act.

SEC. 6. (a) The ——— shall at the close of each fiscal year report to the legislature and to the Governor under this Act concerning the cases it has heard; the decisions it has rendered; the names, salaries, and duties of all individuals in his employ and the moneys it has disbursed; and shall make such further reports on the cause of and means of eliminating discrimination and such recommendations for further legislation as may appear desirable.

(b) The ——— may by such duly authorized representative as it may designate, conduct any investigation, proceeding, or hearing necessary to his functions in any part of the State.

(c) The ——— shall have power—

(1) to appoint such agents and employees as he deems necessary to assist him in the performance of his functions under this Act,

(2) to pay to witnesses whose depositions are taken or who are summoned before the ——— or any of its duly authorized representatives the same witness and mileage fees as are paid to witnesses in the courts of the State of ———,

(3) to furnish to persons subject to this Act such technical assistance as they may request to further their compliance with this Act or any order issued thereunder,

(4) upon the request of any employer, whose employees or some of them refuse or threaten to refuse to cooperate in effectuating the provisions of this Act, to assist in such effectuation by conciliation or other remedial action,

(5) to make such technical studies as are appropriate to effectuate the purposes and policies of this Act and to make the results of such studies available to interested governmental and nongovernmental agencies.

PREVENTION OF UNLAWFUL EMPLOYMENT PRACTICES

SEC. 7. (a) Whenever a sworn written charge has been filed by or on behalf of any person claiming to be aggrieved, or a written charge has been filed by a duly authorized representative of the ——— that any person subject to the Act has engaged in any unlawful employment practice defined in this Act, the ——— shall investigate such charge and if it shall determine after such preliminary investigation that probable cause exists for crediting such written charge, it shall endeavor to eliminate any unlawful employment practice by informal methods of conference, conciliation, and persuasion. Nothing said or done during such endeavors may be used as evidence in any subsequent proceeding.

(b) If the ——— fails to effect the elimination of such unlawful employment practice and to obtain voluntary compliance with this Act or in advance there of if circumstances so warrant, it shall cause a copy of such written charge to be served upon such person who has allegedly committed any unlawful employment practice, hereinafter called the respondent, together with a notice of hearing before the ———, or before its duly authorized representative, at a place therein fixed, not less than ten days after the service of such charge.

(c) All testimony shall be taken under oath.

(d) The respondent shall have the right to file a verified answer to such written charge and to appear at such hearing in person or otherwise, with or without counsel, to present evidence and to examine and cross-examine witnesses.

(e) The ——— or its duly authorized representative conducting such hearing shall have the power reasonably and fairly to amend any written charge, and the respondent shall have like power to amend its answer.

(f) Any written charge filed pursuant to this section must be filed within one year after the commission of the alleged unlawful employment practice.

(g) At the conclusion of a hearing before a duly authorized representative of the ——— the entire record thereof shall be transferred to the ——— to hear on such record the parties at a time and place to be specified upon reasonable notice.

(h) If upon the record, including all the testimony taken the ——— shall find that any person named in the written charge has engaged in any unlawful employment practice, the ——— shall state its findings of fact and shall issue and cause to be served on such person an order requiring him to cease and desist from such unlawful employment practice and to take such affirmative action, including reinstatement or hiring of employees, with or without back pay, as will effectuate the policies of the Act. If upon the record, including all the testimony taken the ——— shall find that no person named in the written charge has engaged or is engaging in any unlawful employment practice, the ——— shall state his findings of fact and shall issue an order dismissing the said complaint.

(i) Until a transcript of the record in a case shall have been filed in a court, as hereinafter provided, the ——— may at any time, upon reasonable notice and in such manner as it shall deem proper, modify or set aside, in whole or in part, any finding or order made or issued by it.

JUDICIAL REVIEW

SEC. 8. (a) The ——— shall have power to petition the circuit court for the district wherein the unlawful employment practice in question occurred, for the enforcement of such order and for appropriate temporary relief or restraining order, and shall certify and file in the court to which petition is made a transcript of the entire record in the proceeding, including the pleadings and testimony upon which such order was entered and the findings and the order of the ———.

(b) Upon such filing, the court shall cause notice thereof to be served upon such respondent and thereupon shall have jurisdiction of the proceeding and of the question determined therein and shall have power to grant such temporary relief or restraining order as it deems just and proper and to make and enter upon the pleadings, testimony, and proceedings set forth in such transcript a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part the order of the ———.

(c) No objection that has not been urged before the ——— or his duly authorized representative shall be considered by the court, unless the failure or neglect to urge such objection shall be excused because of extraordinary circumstances.

(d) If either party shall apply to the court for leave to adduce additional evidence and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the hearing before the ——— or its duly authorized representative, the court may order such additional evidence to be taken before the ——— or its duly authorized representative and to be made a part of the transcript.

(e) The ——— may modify his findings as to the facts, or make new findings, by reason of additional evidence so taken and filed, and it shall file such modified or new findings and its recommendations, if any, for the modification or setting aside of its original order.

(f) The jurisdiction of the court shall be exclusive and its judgment and decree shall be final, except that the same shall be subject to review by the Supreme Court of the State of ———.

(g) Any person aggrieved by a final order of the ——— may obtain a review of such order in any circuit court for the district wherein the unlawful employment practice in question was alleged to have been engaged in by filing in such court a written petition praying that the order of the ——— be modified or set aside. A copy of such petition shall be forthwith served upon the ——— and thereupon the aggrieved party shall file in the court a transcript of the entire record in the proceeding certified by the ———, including the pleadings and testimony upon which the order complained of was entered and the findings and order of the ———. Upon such filing, the court shall proceed in the same manner as in the case of a application by the ——— under subsection (a), and shall have the same exclusive jurisdiction to grant to the petitioner or the ——— such temporary relief or restraining order as it deems just and proper, and in like manner to make and enter a decree enforcing, modifying and enforcing as so modified, or setting aside in whole or in part the order of the ———.

(h) The commencement of proceedings under subsection (a) or (g) of this section shall not, unless specifically ordered by the court, operate as a stay of the ——— order.

INVESTIGATORY POWERS

SEC. 9. (a) For the purpose of all investigations, proceedings, or hearings which the ——— deems necessary or proper for the exercise of the powers vested in it by this Act, the ——— or his duly authorized representative shall have power to issue subpenas requiring the attendance and testimony of witnesses and the production of any evidence relating to any investigation, proceeding, or hearing before the ——— or its duly authorized representative conducting such investigation, proceeding, or hearing.

(b) The ——— or its duly authorized representative for such purposes, may administer oaths, examine witnesses, and receive evidence.

(c) Such attendance of witnesses and the production of such evidence may be required, from any place in the State of any designated place of hearing.

(d) In case of contumacy or refusal to obey a subpena issued to any person under this Act, any circuit court for the district in which said person guilty of contumacy or refusal to obey is found or resides upon application by the ——— shall have jurisdiction to issue to such person an order requiring him to appear before the ——— or its duly authorized representative, there to produce evidence if so ordered, or there to give testimony relating to the investigation, proceeding, or hearing.

RULES AND REGULATIONS

SEC. 10. (a) The ——— shall have authority from time to time to issue, amend, or rescind suitable regulations to carry out the provisions of this Act.

FORCIBLY RESISTING THE ADMINISTRATOR OR HIS DULY AUTHORIZED REPRESENTATIVE

SEC. 11. Whoever shall forcibly resist, oppose, impede, intimidate or interfere with a duly authorized representative of the ——— while engaged in the performance of duties under this Act, or because of such performance, shall be punished by a fine of not more than $500 or by imprisonment for not more than one year, or by both.

SEPARABILITY CLAUSE

SEC. 12. If any provision of this Act or the application of such provision to any person or circumstance shall be held invalid, the remainder of this Act or the application of such provision to persons or circumstances other than those to which it is held invalid shall not be affected thereby.

EFFECTIVE DATE

SEC. 13. This Act shall become effective sixty days after enactment.

Experience in the State of New York after enactment of a similar law was described in the following article from the Schenectady Gazette for August 3, 1959:

BIAS DUE TO AGE REPORTED ON DECLINE; STATE PLACING MORE WORKERS OVER 45

Dramatic changes in the attitudes of employers toward the employment of older workers appear to have occurred since the enactment of the provision of the law against discrimination barring discrimination because of age, Elmer A. Carter, chairman of State commission against discrimination, has reported.

His report was a summing up of a year's operation of this section of the law which became effective on July 1, 1958.

A review of the operations of the State employment service showed that the placement of workers over 45 rose from 21 percent of the total in the first 6 months of 1958, to 29 percent in the same period in 1958 and to 30 percent in the first 6 months of 1959.

The report pointed out that New York State, through its employment service, continued to find employment for a larger number of older workers than any other State in the Nation.

Carter said one of the many effects of the law had been the virtual disappearance of employment advertising in which age qualifications were specified.

SCAD received 148 complaints based upon discrimination because of age on the first year of the law, Carter reported. These complaints constitute nearly 16 percent of the total number of complaints—928—involving employment received by SCAD during the period. The complainants ranged in age from 22 to 86.

Carter said as a further index to effectiveness of the law the State employment service reported that in June 1959 it had received only 210 job orders containing age specifications at all of its offices.

A spot check of the Hempstead, Long Island, office of the employment service revealed even more impressive changes. From 1955 to 1956 nearly every fourth order contained an age specification, but in the 1958–59 period such requests occurred in only 3 out of every 1,000 job orders.

SCAD had closed 54 of the 148 complaints received involving age at the end of the first year's operations, the report said. Charges of discrimination were sustained in nine of the cases. Twenty-eight were dismissed for lack of jurisdiction, 2 were withdrawn by

the complainants and no evidence of discrimination was found in the remaining 15.

Eighty-two percent of the complaints came from the New York City area. Employers were charged with discrimination in 73 percent of the cases, employment agencies in 17 percent, and labor unions in 10 percent.

Nearly two of every three complaints related to professional, sales, and kindred positions, while only 13 percent involved craftsmen.

A Tribute to Thomas S. Gates, Our Dedicated Secretary of Defense

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. DAGUE. Mr. Speaker, the distinguished minority whip, the Honorable LESLIE ARENDS, of Illinois, is also the ranking minority member of the Committee on Armed Services, House of Representatives. Those of our Members who serve on that committee are well aware of his deep and continuing interest in national security matters, and his many contributions toward a stronger national defense.

While his continuing efforts and knowledge of national defense problems are well recognized both in the committee and in Congress as a whole, it is particularly pleasant to note that LES ARENDS' ability and authoritative opinion in defense matters have been widely recognized by the public and in the press.

One of the more recent tributes to our distinguished colleague appeared in the San Diego Union of Saturday, May 14, 1960. On that occasion, the Union's editorial referred to Representative ARENDS' recent comments as to the importance of Secretary of Defense Gates' policy of personally meeting with the Joint Chiefs of Staff. I unreservedly endorse the observations of the editorial in complimenting Secretary Gates for his Joint Chiefs of Staff policy, and I invite the attention of the House to complimentary references in the editorial to the distinguished minority whip, LES ARENDS.

I recommend the editorial to the attention of the Members of this House:

NEW POLICY PAYS

There are critics of U.S. defense policy who would abandon the Joint Chiefs of Staff and supplant this concept with some version of a supreme high command. Representative LESLIE ARENDS, Republican, Illinois, House minority whip, has submitted to Congress a refutation of all the arguments in favor of the latter and against junking a system which worked so well during the last two wars in which the United States was involved.

As Representative ARENDS pointed out to Congress, Defense Secretary Thomas S. Gates, Jr.'s new policy of sitting down with the JCS when they disagree "demonstrates the truism that there is very little in governmental organization problems that intelligence, determination, hard work, and leadership will not cure."

Representative ARENDS is a veteran member of the House Armed Services Committee, which has subscribed to continuation of the JCS concept and rejected the supreme command idea.

The organization charts which blueprint the JCS never will take the place of a defense secretary who helps make the system function. This Secretary Gates has done since he took over direction of the Defense Department. And the success of his efforts have undercut the critics of JCS.

William S. Peterson Wins American Public Power Association Distinguished Service Award

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. LIPSCOMB. Mr. Speaker, Mr. William S. Peterson, a resident of the congressional district I represent, recently won the Distinguished Service Award presented by the American Public Power Association.

The award was given to Mr. Peterson "in recognition of his long and outstanding public service, devotion to duty, and contribution to the welfare of his community and the Nation, exemplifying the highest ideals and finest traditions in management of a municipal electric utility."

Mr. Peterson is general manager and chief engineer of the Los Angeles Department of Water and Power. He received this honor at the association's 17th annual convention held recently in Washington, D.C.

It is interesting to note that a previous winner of the APPA Distinguished Service Award was Mr. Samuel B. Morris, former general manager and chief engineer of the Los Angeles Department of Water and Power. Mr. Morris is also a resident of the congressional district I represent.

Under leave to extend my remarks, I submit for inclusion in the RECORD an editorial which appeared in the May 19, 1960 Los Angeles Herald and Express, complimenting Mr. Peterson on receiving this honor, and also a copy of the nomination which won the award for Mr. Peterson:

[From the Los Angeles Herald & Express, May 19, 1960]

FOR A JOB WELL DONE

William S. Peterson, general manager and chief engineer of the Los Angeles Department of Water and Power, has received the highest award of achievement from the American Public Power Association, that body's annual distinguished service award.

Mr. Peterson, who will retire in December after more than 35 years of service with the Los Angeles department, is especially well known for his designing of the 287,500-volt Boulder transmission line, which brings power to Los Angeles over a distance of more than 300 miles from Hoover Dam.

It also is notable that Mr. Peterson became the sixth public power leader to be so honored during the association's long history. Also exceptional is the fact that two officials of the Los Angeles Department of Water and Power have received awards in the list of six men. The other was Samuel B. Morris, former general manager and chief engineer.

We congratulate Mr. Peterson on his honor received and we commend the local department in its wise selection of top engineers and managers of the department.

DISTINGUISHED SERVICE AWARD—WILLIAM S. PETERSON, GENERAL MANAGER AND CHIEF ENGINEER, DEPARTMENT OF WATER AND POWER, LOS ANGELES, CALIF.

Mr. Peterson is a past president of the American Public Power Association and has made many significant contributions to the work of the association.

A distinguished enginer, Mr. Peterson is well known for his work in connection with the design of the 287,500-volt Boulder transmission line, which brings power from Hoover Dam to Los Angeles, a distance of almost 300 miles. From 1926 through completion in 1940 of the third circuit of the three-circuit line, he was engaged in technical research work on high voltage, conductor vibration, and line stability problems, as well as general transmission line design.

Following completion of the Boulder transmission line, Mr. Peterson was assigned the duties of technical administrative assistant to the chief electrical engineer of the department of water and power and represented the Department in Washington, D.C., during the early years of World War II on priority matters and large power contracts. He also was power consultant without compensation to the War Production Board.

In December 1943, Mr. Peterson was appointed to head the power system's design and construction division, and in 1945 he became assistant chief electrical engineer of the department. While in this position he served as an occasional consultant to the National Security Resources Board. On November 9, 1951, he was appointed chief electrical engineer and assistant manager, and on April 1, 1953, he became assistant general manager and chief engineer of the department of water and power. He was appointed to his present position on October 1, 1955.

In addition to his responsibilities with the Nation's largest municipally owned electric utility, Mr. Peterson served as consultant on the early stages of design of the Tennessee Valley Authority system and as consultant to the Federal Government in the Southwest power pooling operation. Early in his career, he served as technical aide to the late E. F. Scattergood, of the Los Angeles department, in the development of many of the presentations made by Mr. Scattergood at the World Power Conference, before congressional committees, and in connection with the organization and development of the American Public Power Association, of which Mr. Scattergood was a founder.

He has contributed numerous papers which advanced the art and understanding of system stability and high-voltage transmission. As a member of the CIGRE Committee and as the U.S. representative on the Towers and Conductors Subcommittee, he has contributed over a number of years to the international development of high-voltage transmission.

In his own right, Mr. Peterson has made many presentations to legislative committees on water and power development, and has made a number of such presentation in behalf of APPA.

Under Mr. Peterson's leadership, the Department of Water and Power is moving ahead in the atomic energy field, both through staff studies and through development of a proposal for an atomic energy installation in the Los Angeles area.

Mr. Peterson has served as president of the Los Angeles Engineering Council, as

chairman of the Los Angeles Section of the American Institute of Electric Engineers, and on the National Committee of CIGRE. He is a member of Sigma Xi, Tau Beta Pi, and Eta Kappa Nu.

Memorial Day, Larchmont, N.Y.

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. DOOLEY. Mr. Speaker, under the leadership of Commander Ben McGrath of Larchmont, N.Y., Memorial Day for a number of years in that community has been a very unusual and memorable occasion.

Through careful planning, meticulous attention to details and much civic cooperation, Commander McGrath was able to evoke an attendance at the 1960 Memorial Day service which is entirely out of keeping with the size of the community.

It seems literally as though all of Larchmont turns out to hear the speeches and see the parade. The police and fire department cooperate thoroughly, as do the Boy Scouts and Girl Scouts and the Cubs and Brownies, and the parade is an unusually splendid affair.

It has been my privilege to talk before the Larchmont Memorial Day gathering for several years, and my remarks given on this past May 30 follow:

Once again I stand before my neighbors and friends on this important day to speak a message—a message primarily in tribute to those who were once among us, but who were swept away by an irresistible tide of arms. Their passing brought deep sorrow to their parents, their spouses, and their children. A number of those among us know the pangs that service-connected losses brough them through personal bereavement.

We know only this—that as civilized human beings it is proper and fitting that we honor our departed comrades here today. And that in their memory we pause to take inventory of the heritage they left us. That the world—our world—was better when they left it cannot be denied.

There was not the sword of Damocles hanging over all of us in the form of the nuclear bomb, threatening us with fiery extinction in one dreadful moment of scorching flame. There was not the rash of rioting on the international scene, in Korea, Turkey, South America, and the Antilles—rioting which bespeaks terrifying impatience with the status quo and indicates a pressing need for social and political change in farflung areas.

There was not the phenomena of oppressed people everywhere rising in forceful numbers to overthrow ancient systems of tyranny and colonialism.

There was not in the bright days of our departed comrades the multitude of juvenile delinquency crimes—which cry out loudly that something is amiss with our social patterns. And there was not, I truly believe, the frightful emphasis on inconsequential things which today are given importance entirely inconsistent with their pragmatic value.

These are the disappointing facts of our inventory.

What is there on the hopeful side? Much indeed.

People—our people and other people—today are shattering the impediments that have long stood in the way of man's progress. The interchange of scientific knowledge on an international scale has made it possible for nations to provide the power, the industrial knowledge, and the resources, to give their peoples the necessities of life, the jobs, the homes, and the necessary raiment.

Disease is gradually yielding its enigmas to the penetrating explorations of the electric microscope. Ignorance and illiteracy are being wiped out. Food and shelter will soon be available to a world which for centuries saw a large percentage of its inhabitants in dire want and painful penury.

What, may I ask, is the stumbling block to achieving these world goals, to world progress, to peace and prosperity, which would permit man to attack the social problems that beset us?

The answer is Russia.

If we did not have to spend $40 billion on arms to give us deterrent military strength, to give us a voice at the international bargaining table, we could do much for the sick, the mentally ill, the poorly housed, the oppressed.

Russia, however, prefers to pursue its course of attempted world domination, to spread its evil doctrine of communism by every devious means available to it.

Its record is one of deceit and infamy.

Russia has repudiated every agreement she has made with her former allies.

She has seized and impounded behind the Iron Curtain, Lithuania, Estonia, Latvia, Poland, Armenia, Hungary, Yugoslavia, and a host of other smaller national entities.

But of this we can be certain—politically, Russia is a giant with feet of clay. Of the 200 million people in the Soviet's immediate orbit, 56 percent are not dedicated by conditioning or heritage to the Union of Soviet Socialist Republics.

There are, in fact, only 96 million Russians compared with 114 million non-Russians in the U.S.S.R. Idel-Ural has 15 million, Uzbek has 8 million, the Ukraine has 42 million, and the other segments of the Soviet Union have 35 million non-Russians.

I mention these facts to show that instead of a tightly knit coalition of states, Russia is a loosely formed composite of divergent nations, each proud of its own heritage and chafing under Communist domination.

So much for Russia—which, we must not forget, for all its inherent problems, still has intercontinental missile opeartional capabilities sufficient to destroy us.

I think that on the brighter side of life today is the widespread awakening on the part of our citizens to the importance of the part government plays in the life of our people.

More than ever our citizens are beginning to appreciate that it is not how much a man earns for himself that is the criterion of his true worth so much as it is the contribution he is making to the welfare of others, to his community, and to his country.

All over this land of ours businessmen are learning the rudiments of politics. They are finally realizing that it is important to them that they have a voice in the legislative processes of our country. It is they who should help make the laws which govern them, rather than leave it to a few self-appointed professional policymakers.

Let us in memory of our departed comrades determine now that henceforth we will make every effort to prove that this is not a world governed by the anarchy of chance, but rather a purposeful, God-fearing world of order and law, and one which we cherish and endeavor to improve.

Let us keep faith with the dead who died gallantly and with the conviction that those who had the gift of life would not fail them nor their children, nor their children's children.

As Father Keller, the founder of the Christophers, said so eloquently and humbly, "Better to light a candle than curse the darkness."

Mistaken Identity

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. MOELLER. Mr. Speaker, several months ago, a constituent of mine, Mr. Charles E. Hutsler, wage administrator, International Association of Bridge, Structural and Ornamental Iron Workers, made a phone call to the Board of Parole, Department of Justice, in behalf of someone else to find out the procedure to be followed for hearings under section 504 of the Labor-Management Reporting and Disclosure Act of 1959. The act prohibits a person from holding certain positions in a labor union if they have been convicted or indicted for certain crimes. It further provides exemption from its provisions after a hearing before the Board of Parole. Mr. Hutsler requested the staff director to send to him the regulations governing these hearings. The staff director replied that the regulations had not been written at that time and that he would send them upon their completion. The name of the person on whose behalf the call was made was not divulged at that time because it was felt it was not necessary to do so.

Later, the attention of Mr. Hutsler was called to page AA-4 of the Daily Labor Reporter of February 6, 1960, published by the Bureau of National Affairs. In that article it was stated that additional cases before the Board on which no hearings had been scheduled involved Mr. Hutsler and several others. When the Bureau of National Affairs was advised of the circumstances which actually existed, they immediately printed a 2½ page explanation and clarification of the matter.

The memorandum which started the events which led up to the news item being published in the Bureau of National Affairs publication was filed with the Congress, apparently to justify a request for funds to implement the Labor-Management Reporting and Disclosure Act. It was entered into the record of the hearing by the subcommittee, and when it was called to their attention later, the record of the hearings had been closed and no correction was possible. I am therefore taking this only remaining opportunity in an attempt to clear the record of this damaging testimony.

It appears from the correspondence available to me that there is, to say the least, an inconsistency in the statements made by the Staff Director of the Board of Parole and the Chairman of the Board. The Chairman, in a letter dated April 26, 1960, addressed to the Honorable ALBERT THOMAS, chairman, Subcom-

mittee on Deficiencies Appropriations, House of Representatives, states that—

I am informed by a member of the Board's staff that Mr. Hutsler called the Board and discussed at some length, without identifying himself, the prohibitive clauses of the new Labor Act as relates to an employee of the Iron Workers of America. This staff member informs me that he had no reason to know that Mr. Hutsler was an attorney or that he was calling for information regarding a second party. At that time Mr. Hutsler identified no one else.

The Staff Director for the Board, in a letter dated March 4, 1960, addressed to Mr. Charles E. Hutsler, wage administrator, International Association of Bridge, Structural, and Ornamental Iron Workers, stated that—

The only name our records showed was your name. We did not in our records show you, however, as the person who might be barred from employment pursuant to the Labor-Management Act, but merely as the person with whom the case could be identified.

Mr. Reed's letter of April 26, 1960, to the Honorable ALBERT THOMAS tends to leave the impression that they had reason to believe that Mr. Hutsler was actually involved, whereas the letter of March 4, 1960, from the Staff Director clearly indicates that they were merely using Mr. Hutsler's name as the person with whom the case could be identified. In other words, it was clear to the Department of Justice that Mr. Hutsler was not involved in a case before the Board of Parole, although such a conclusion was drawn by the Bureau of National Affairs, based upon the memorandum of February 12, 1960, mentioned above.

If the Bureau of National Affairs had read the testimony in connection with the memorandum in the record, it is my belief they would not have published the news item as they did. It is also my belief that the Department of Justice would not have written the memorandum of February 12, 1960, in the manner in which it appeared in the record if they had suspected the repercussions which actually resulted from the memorandum.

This is a regrettable situation which could have been avoided by more precise consideration by both the Department of Justice and the Bureau of National Affairs. It is my sincere wish that this matter will encourage more thoughtful and precise memorandums by the Department of Justice in substantiating their request for appropriations and more accurate and factual reporting by national publications when a person's reputation and integrity are involved.

A Prayer for the Middle Aged

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. TOLL. Mr. Speaker, the chaplain who participated in the Memorial Day parade in the Germantown section of my district, Rev. W. Hamilton Aulenbach, of Christ Church and St. Michael's distributed a prayer memorandum, which is very interesting. I have attached it to my remarks, because I believe it may have some value for the Members in their daily activities:

A PRAYER FOR THE MIDDLE AGED

Lord Thou knowest better than I know myself that I am growing older and will some day be old. Keep me from the fatal habit of thinking I must say something on every subject and on every occasion. Release me from craving to straighten out everybody's affairs. Make me thoughtful but not moody; helpful but not bossy. With my vast store of wisdom, it seems a pity not to use it all, but Thou knowest, Lord, that I want a few friends at the end.

Keep my mind free from the recital of endless details; give me wings to get to the point. Seal my lips on my aches and pains. They are increasing and love of rehearsing them is becoming sweeter as the years go by. I dare not ask for grace enough to enjoy the tales of others' pains but help me to endure them with patience.

I dare not ask for improved memory, but for a growing humility and a lessening cocksureness when my memory seems to clash with the memories of others. Teach me the glorious lesson that occasionally I may be mistaken.

Keep me reasonably sweet; I do not want to be a saint—some of them are so hard to live with—but a sour old person is one of the crowning works of the Devil. Give me the ability to see good things in unexpected places and talents in unexpected people. Give me the grace to tell them so. Amen.

Surrogate John J. Dillon Honored—Conference of Christians and Jews Presents Award to One of Westchester's Leading Jurists

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. DOOLEY. Mr. Speaker, John J. Dillon, surrogate of Westchester County, N.Y., one of the most beloved and respected men in the community, and Regent Carl H. Pforzheimer, Jr., of Purchase, N.Y., and Dr. Clara M. Tead, of Briarcliff Manor, president of Briarcliff College, were honored recently by the National Conference of Christians and Jews for the advancement of brotherhood.

The awards were presented at a dinner attended by 300 at the Pines Ridge Golf Club, Ossining, N.Y., a dinner which contributed greatly toward the eventual chapter of the national conference in Westchester County.

NOT "FACELESS THEOLOGY"

Keynote speaker was Robert Greene, president of the International Brotherhood of Electrical Workers Local 1783, with offices in White Plains. He said:

"Interfaith is not a sort of superreligion, with a faceless theology. It is rather the recognition on the part of those who have remained steadfast in their faith, that underlying their own particular beliefs there is that historical common preamble of faith. Interfaith does not mean to bury convictions; it rather means to bury the hatchet. It does not mean to demolish boundaries; it rather means to remove barriers and to establish a sort of intellectual free trade between religions."

Greene noted that the "cornerstone of the free American labor movement was built and continues to flourish on the basic premise of brotherhood. This was recognized right in the beginning by men like Samuel Gompers, Philip Murray, and William Green, who were only by coincidence a Jew, a Catholic, and a Protestant."

RECIPIENTS PRAISED

Greene called Dr. Tead a "distinguished personality in the academic world and a renowned educator," Pforzheimer "the distinguished son of a most distinguished father, richly endowed with rare humanitarian instinct," and Dillon "an eminent jurist in America."

In accepting the award—a framed scroll—Dr. Tead said:

"Frankly, I don't feel that I merit this award. Because I have never really worked for better Christian-Jewish relationships—I have simply believed in them, lived them, and enjoyed them."

She said that folks working together toward a common goal develop a sense of unity. "My work at Briarcliff—with girls selected from many racial backgrounds, from many religious groups, has reenforced this belief."

PFORZHEIMER FLATTERED

Her award was presented by Dr. Lewis Webster Jones, president of the national conference. He called the activity of his unit in Westchester as a great new beginning. He praised Dr. Tead, stating: "Liberal education has no meaning unless you are concerned with the destiny of man."

Pforzheimer, an investment banker, said he was deeply flattered. "Upon reflection I realize that in reality this honor is for something not only in which I have always believed, but, more strikingly, for an approach to living which was an integral part of the early training and educational background which both my wife and I were fortunate to enjoy." He added: "* * * I feel that this occasion helped me to bring into sharper focus some of the basic reasons why I have had such joy and keen stimulation while working with various groups in and out of business."

Pforzheimer noted that the New York State Board of Regents has and is composed of persons of every major religious belief. "The Board of Regents is proud to be a governmental body whose deliberations and policies informed citizens accept as color-blind, race-blind and religion-blind."

UNPURCHASABLE GIFT

He was given the award by fellow Regent Everett J. Penny of White Plains who hailed Pforzheimer for his sense of responsibility, desire to be a good neighbor and to improve his community.

Dillon said: "I am very grateful I am conscious again tonight that both the good Lord and my fellow men have been good to me. He noted that when he first came to Westchester "I met so many people who held out to me the unpurchasable gift of friendship and I see so many of them here tonight." He called the conference one of the vital movements of our times.

Dillon suggested that there was much work to be done. "It's a melancholy fact that we've seen in the 20th century an organized attempt to exterminate races" and an attempt to supress whole religions. There are parts of the world today, he declared "where the lights of Judaism and Christianity are very nearly out."

On a personal note, Dillon alluded to last summer when a son was stricken with polio. He said it warmed our hearts when prayers were said for his son in his church but it even warmed his heart more when the same petitions to the same God were raised in other sanctuaries. That to my mind was brotherhood.

PRAYERS OFFERED

His presentation was by Justice Elbert T. Gallagher who said Dillon exalts those concepts upon which this National Conference is founded. He cited Dillon for his profound faith in God.

Prayers were offered by Msgr. Joseph C. Krug of White Plains, Rabbi Irving Koslowe of Mamaroneck, and the Reverend Junius W. Cofield of Ossining.

Lester J. Bradshaw of White Plains was dinner chairman and master of ceremonies. Among those introduced was Mrs. Richard Schwarz of Briarcliff Manor, Westchester director of the National Conference of Christians and Jews.

Soviet Espionage Activities

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD a summary of various Soviet espionage activities. The summary was prepared by the Bureau of Public Affairs, Department of State, and was furnished to me at my request.

I believe that this information will be of interest to the membership of the House in connection with the U–2 incident since it serves to further highlight the deadly nature of the Communist zeal for world domination as it describes Soviet worldwide espionage activities which are dedicated to furthering this grim mission.

The summary follows:

SUMMARY OF SOVIET ESPIONAGE ACTIVITIES

I. ESPIONAGE ACTIVITIES WITHIN THE UNITED STATES

The Soviet Union has carried out espionage against the United States since the early days of the regime. Considering both direct Soviet spies and persons recruited in this country, the roster of individuals revealed as Soviet agents is long. Soviet efforts to procure information on American atomic research during the war and postwar period are well known. Given below are two selected cases, those of Colonel Abel and Julius and Ethel Rosenberg—one where a Soviet spy is the main agent, the other where American nationals committed acts of espionage for the benefit of the Soviet Union.

The Abel case

Col. Rudolph Abel, 55, of Soviet intelligence was convicted by a Federal jury in New York on October 25, 1957, for conspiring to steal U.S. defense secrets for the Soviet Union.

He was found guilty on a three-count indictment charging: (1) conspiracy to transmit U.S. defense and atomic secrets to the U.S.S.R., (2) conspiracy to gather the secrets, and (3) failure to register as a foreign agent. On November 15, 1957, he was sentenced to 30 years in prison and a fine of $3,000. His sentence was confirmed by the U.S. Supreme Court on March 28, 1960.

The chief witness against Abel was ex-Lt. Col. Reino Hayhanen, 37, confessed ex-Soviet spy who identified him as the U.S.S.R.'s resident officer for espionage" in the United States. Hayhanen testified that he and Abel had been ordered by Moscow to give $10,000 in two payments to Mrs. Helen Sobell, wife of Morton Sobell, who was serving a 30-year sentence for his conviction in the Rosenberg atomic spy case, and to recruit Mrs. Sobell as an agent. Hayhanen indicated that he had not fulfilled this assignment.

The Rosenberg case

Julius Rosenberg, of New York, was a devoted Communist. A member of a cell of Communist engineers reporting to Jacob Golos, he first engaged in industrial espionage and was later elevated to political and atomic intelligence. With the help of his wife Ethel, he recruited his brother-in-law, David Greenglass, who was working at Los Alamos on highly confidential matters. Greenglass, shortly before the first atom bomb test explosion, transmitted a highly important report to the Soviet agents. It was not until the confessions of Fuchs in England and Harry Gold in the United States that Greenglass was pointed out, and he in turn pointed to the Rosenbergs.

Rosenberg and his wife were arrested in the summer of 1950. At the time of their arrest, Abraham Brothman, Miriam Koskowitz, and Morton Sobell were also uncovered, arrested, and tried. The Rosenbergs were sentenced to death; Gold and Sobell were sentenced to 30 years' imprisonment, David Greenglass to 15, Abraham Brothman to 7, and Miriam Moskowitz to 2.

Along with Harry Gold, two other persons were indicted—"John Doe," alias "John," actually Anatoli Yakovlev, and "Richard Roe," alias "Sam," actually Semion Semionov—both professional Soviet intelligence agents. The indictment of the two Soviet chiefs was purely a formality, since they had long since left American soil.

Soviet diplomatic espionage

In the last 10 years a substantial number of officers of the Soviet Embassy in Washington have been expelled by the U.S. Government for espionage activities and a number of members of the Soviet mission to the United Nations and employees of the United Nations Secretariat have also been expelled.

In 1950, Valentin Gubitchev, a United Nations Secretariat employee, was expelled for having received classified documents from Judith Coplon. In 1953 Yuri Novikov, a Second Secretary of the Soviet Embassy at Washington, was declared persona non grata for having conspired with two American citizens to procure and transmit Army, Air Force, and aircraft plant data to the Soviet Union. In 1954 Igor A. Amosov and Leonid E. Pivnev, assistant naval attachés, and Alexander P. Kovalev, a secretary of the Soviet United Nations delegation, were expelled for espionage.

In 1956, Col. Ivan A. Bubchikov, a Soviet assistant military attaché, was expelled for espionage. During the same year, Boris F. Gladkov, a member of the Soviet delegation to the United Nations, and Viktor I. Petrov, a United Nations Secretariat employee, were expelled for espionage.

In 1957, Yuri P. Krylov, an assistant military attaché at the Soviet Embassy, was declared persona non grata for having improperly purchased quantities of electronic equipment through American intermediaries and having attempted to purchase classified military information. In the same year, Vasili M. Molev, an employee of the Soviet Embassy at Washington, was expelled after having been implicated in espionage activities for which Jack Soble, Myra Soble, and Jacob Albam were convicted in 1957.

In 1958, Nikolai I. Kurochkin, a third secretary of the Soviet Embassy at Washington, was expelled for having paid hundreds of dollars to an American citizen for the improper procurement of U.S. army manuals and other materials.

In 1959, Vadim Kirilyuk, a Soviet employee of the United Nations attempted to have a U.S. citizen furnish him with classified information. When his efforts were brought to the attention of his employers at the United Nations, he was asked to resign and leave the country. He left in January 1960.

II. SOVIET ESPIONAGE ACTIVITIES ELSEWHERE IN THE FREE WORLD

The existence of Soviet secret police and intelligence-gathering organizations in foreign countries is well known from the accounts of numerous defecting agents and from trials of Soviet agents were were caught. The activities of these organizations range from pure espionage to acts of terrorism, including kidnapping and murder.

(*a*) *Selected espionage cases*

Gouzenko in Canada

The admissions of Igor Gouzenko, the cipher clerk in the Soviet Embassy in Canada, who took home from the office of the Soviet military attaché eloquent letters and documents relating to Fred Rose and his spy services and the exchange of secret messages between the Canadian Department of External Affairs and the Canadian Ambassador in Moscow (available through the services of Emma Woikin, Soviet spy in that Canadian Department) led in 1945 to the establishment of a Royal Commission and the documented exposure of the Soviet spy network in Canada.

Petrov in Australia

The admissions of Vladimir Petrov, a Soviet diplomat who defected in Canberra in 1954, similarly led to the creation of an Australian Royal Commission and the exposure of Soviet spy activities in that country.

Espionage in Sweden

The trial of Ernst Hilding Andersson, a petty officer in the Swedish Navy, showed the extent of a Soviet Embassy's active participation in the direction of espionage activities. Andersson, a Communist since 1929, was communicated with by Vinogradov, first secretary of the Soviet Embassy in Stockholm, and instructed to procure and supply information on the Swedish Navy, coastal defense installation, secret waterlanes, and suitable invasion areas along the coast of northern Sweden. He was convicted by a Swedish court on November 14, 1951, for espionage.

Rastvorov in Japan

Under cover of his position as second secretary of the Soviet Embassy in Japan from 1950 to 1954, Yuri A. Rastvorov, on his own admission, served as a Soviet military intelligence operative in the Far East. Rastvorov has resided in the United States since his defection in 1954.

Walter G. Krivitsky

Before the war, one of the U.S.S.R.'s foremost intelligence officers was Krivitsky—alias Samuel Ginsberg. Krivitsky worked for Soviet military intelligence and later for the Soviet state security apparatus in Western Europe during the twenties and thirties, and finally as chief of Soviet military intelligence in Western Europe, with headquarters at The Hague. Krivitsky defected in 1937 and published a full account of his activities as an agent.

(*b*) *Terroristic activities*

Murder in Germany

The employment of the Soviet Union's secret police organization as an instrument for carrying out terroristic acts in foreign countries was convincingly documented by MVD Capt. Nikolai Khokhlov, who defected

to the West while on a murder mission in Germany.

In October 1953 Khokhlov, a veteran of 13 years' service in the NKVD and MVD, received the assignment of murdering Georgi Okolovich, chief of the anti-Communist Russian refugees NTS (the Solidarists). Khokhlov and two agents, Kurt Weber and Hans Kikowitch, who accompanied him, were equipped by the MVD laboratories with specially designed murder weapons smuggled into Germany hidden in an automobile battery. Concealed in cigarette cases, the electrically operated assassination weapons fired poison dumdum bullets and were fitted with unique silencers. Refusing to participate in the murder of an innocent man, Khokhlov called Okolovich on February 18, 1954, at the latter's apartment in Frankfurt and revealed the plot.

Kidnaping: The Linse Case in Berlin

Dr. Walter Linse, an official of the Investigating Committee of Free Jurists, was kidnaped on the morning of July 8, 1952, by agents of the East German State Security Service. The kidnaping occurred on a main street in West Berlin during the morning rush hour, only a short distance from Dr. Linse's home. He was attacked by two agents, knocked down with a sack of sand and thrown into a waiting car. Dr. Linse was shot in the leg during this brief scuffle, which was witnessed by a number of persons. A delivery truck attempted to follow the kidnapers, but the agents in the escape car tossed out nails and iron claws in its path and shot at its tires. In response to a sharp allied protest, the Soviet authorities in East Berlin stated that they knew nothing about the affair and that Dr. Linse was not in their custody. Later, however, it became known that Linse had been turned over to the Soviet Union several days after the kidnaping; he was held in Soviet military prisons in Berlin until sometime during the summer of 1953, then sentenced to 25 years' penal servitude and transported to the Soviet Union. Nothing more is known of his fate with any certainty, although returning German prisoners of war reported meeting him in the Vorkuta area.

Kidnaping: The Trushnovich Case in Berlin

Dr. A. R. Trushnovich, head of the Russian Rescue Committee in West Berlin, was kidnaped by Soviet agents on April 13, 1954. When his wife and daughter returned from a theater to find their apartment wrecked, neighbors reported seeing several men carrying another man down the stairs and being told the man was sick and being taken to the hospital. The following day the East Berlin radio claimed that Trushnovich had voluntarily defected. Nothing has been heard of him since.

Suppressing the Truth

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. KING of California. Mr. Speaker, shocking as it may seem, I am advised that some savings and loan associations are pooling their efforts to suppress the truth.

On May 19, 1960, under the heading "False Confidence in Federal Savings and Loan Insurance Corporation," I exposed in the CONGRESSIONAL RECORD, the incompetent management of the Federal Savings and Loan Insurance Corporation and its far reaching disastrous effect upon the public welfare.

Instead of the savings and loan associations pooling their resources to correct this evil, a group is combining to suppress the facts. Is it because this group fears intimidation by the crushing autocratic powers of the Federal Savings and Loan Insurance Corporation, including the power of seizure under the false guise of an "emergency," just as they seized the sound and solvent Long Beach Savings & Loan Association?

These Associations borrow huge sums from the Federal Home Loan Bank System, as their annual reports show, and are therefore subject to immediate economic reprisals. This may account for their efforts to suppress the truth and their hesitancy to stand forthright for the principles of justice and clean up the management of the Federal Savings and Loan Insurance Corporation.

In any event the public welfare must be considered first, and it is imperative that an immediate cleanup of the incompetent management of the Federal Savings and Loan Insurance Corporation be undertaken. Now is not the time for the savings and loan associations to say all is well.

The truth is that all is not well.

As Congressman, I have found it necessary before to investigate corrupt governmental bureaus. With my committee and staff, we exposed the laxity, malfeasance, and corruption that infested that vital governmental agency—the Bureau of Internal Revenue.

As a direct result of such investigation, the entire Federal system of tax administration was completely overhauled.

The committee's job was done in spite of the threats, intimidations, delaying tactics, and the frantic behind-the-scenes maneuvering of men in high places, and the pooling of efforts of racketeers from all parts of the Nation.

Among those taking part in hindering and impeding the work of this committee were paid agents of the Federal Home Loan Bank of San Francisco, an arm of the Federal Home Loan Bank Board, the alter ego of the Federal Savings and Loan Insurance Corporation.

These facts are documented in the congressional committee records.

In recent court proceedings it was disclosed that the Home Loan Bank Board refused to give receipts for much of the $114 million in cash, U.S. bonds, notes, and other assets it seized from the Long Beach Association. The refusal of receipts is an utter disregard for the law, and in fact a direct violation of the law.

Evidence disclosed that before an inventory was made more than 74 Board agents and personnel from competing savings associations had access, over a period of weeks, to books, records, documents and assets of the seized Long Beach Association.

Further evidence of the incompetent management of the Federal Home Loan Bank Board was revealed in sworn testimony in the U.S. district court at Los Angeles.

At the court hearings, one of the witnesses called was Home Loan Bank Board examiner, Robert T. Keith, who, under interrogation, stated that the inventory of the Long Beach Association's assets since the seizure, had been prepared under his supervision. When asked whether the inventory included a trust deed for $7,980,000, which was among the association's documents seized by Mr. Ault, the supervisory authority, he stated, "to my knowledge it is not included in the inventory." He added, "he didn't know the reason for the omission."

Then the association's attorney wondered about 44 documents listed in the inventory as missing. Documents which were alleged to total in value $863,212. The Home Loan Bank Board's examiner said, "he didn't recall whether he had asked deposed association officials where the documents were." He was then asked if he had reported them to the bonding company, and the examiner said, "No." On being questioned further, he was asked if he had told Mr. Ault, the supervisory authority, of the missing documents, he stated, "I don't believe so. It was in the inventory."

Further questions were posed:

Question. Who do you think you should report anything missing to?

Answer. I don't know.

Question. Do you know the difference between a mortgage and a trust deed?

Answer. I don't think I could explain it.

Question. Do you know what a collateral pledge agreement is as used by the association?

Answer. No, I don't.

This is an example of the incompetency of the individuals that the bureaucratic Home Loan Bank Board has placed in charge of the seized Long Beach Association, and yet one of the charges against the Long Beach Association was incompetent management. The deposed management had built the association from $7,500 to $114 million.

It is interesting to note that the Home Loan Bank Board has enacted its own regulations, one of which provides the following:

Such Board may declare its own emergency, seize an association, place their agent in charge, refuse receipts or an accounting to the shareholders and their elected management. Such seizure places all rights and powers of the association officers, directors, and shareholders in the hands of the Board's agent.

Thus, without any judicial process of law, and without the consent of the shareholders, the control of their savings is transferred to this incompetent management.

The Federal Home Loan Bank Board has repeatedly told the U.S. courts that the courts have no jurisdiction. This leaves the citizen without recourse or protection against the unrestrained power of this bureaucratic Board.

Like the European totalitarian "isms," the Federal Home Loan Bank Board has set up its own administrative hearings, to adjudicate before itself its own mis-

conduct, a process of whitewashing its own incompetency and deceit.

Attempts at justice by this so-called administrative process, reminds one of a confessed felon being permitted to place himself as judge and thereby adjudicate his own misconduct.

How any savings and loan association manager can face the public and assure the investor that the conduct of the management of the Federal Savings and Loan Insurance Corporation is a safeguard to their savings is beyond my comprehension.

The savings and loan associations as individual institutions have been a remarkably fine example of honest, capable management, and as such have rendered valuable and able service to their respective communities.

The time is here to clean up the management of the Federal Savings and Loan Insurance Corporation and its alter ego the Home Loan Bank Board, before the citizens lose confidence in this great and important industry.

The Evidence Mounts

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. IRWIN. Mr. Speaker, in the New York Times this morning there was a report of another clash in Poland over a religious issue. As in the case of similar conflict in the past, the latest incident furnishes evidence that the faith of the Polish people will continue to withstand suppression. The report that the Communist Party officials took a serious view of the situation, however, may well indicate that there will be increased pressure on the peoples of Poland by their dictatorial overlords. I believe we have the evidence to feel confident that the Polish peoples will not permit their faith and ideals to be crushed by the Communists, but it is my fervent hope as with all of us that moral support from us will help them bear their suffering. Pursuant to permission previously granted, I include the article:

POLES RIOT ANEW ON CHURCH ISSUE—REINFORCED POLICE USE GAS TO QUIET WESTERN TOWN

WARSAW, June 1.—The police used tear gas and nightsticks Monday to disperse a crowd of about 5,000 demonstrating at Zielona Gora in Western Poland over a religious issue, usually reliable sources here reported tonight.

Police reinforcements were summoned from Poznan, more than 60 miles away, to quell the crowd. The police and the demonstrators were involved in a fierce street clash and an unknown number of arrests were made, the report said.

The demonstrators burned two police cars the sources said. The crowd tried to storm the police headquarters of the textile-manufacturing city of Lower Silesia.

This was the second time in a little more than a month that a religious dispute has erupted into a serious street demonstration.

The first came April 27 at Nowa Huta, a model steel town in southern Poland, a crowd of 2,000 to 3,000 persons fought a pitched battle in the streets with the police there after the municipal authorities had ordered the removal of the cross.

According to incomplete reports from Zielona Gora available here tonight, the trouble flared up following the failure of the Roman Catholic and the municipal authorities to agree over the status of a building the church had used for parish purposes since World War II.

The sources said the building formerly belonged to the German Evangelical Church—church and state in Poland are disputing ownership of such property. In many instances, the Roman Catholic Church has taken over the property of both the German Catholic and Evangelical churches in former German territories.

(Zielona Gora is the former German town of Gruenberg, prewar population about 26,000.)

The Zielona Gora authorities wanted to use the disputed building for concerts. The sources said that when a truckload of workmen arrived Monday morning to begin removing furniture and other goods, they were expelled by a group of angry Catholic women.

Policemen were sent to the scene. By this time word of the trouble had spread and a large crowd began to gather. The police, greatly outnumbered withdrew.

The growing crowd then marched down to the local police headquarters and hurled stones at it and shouted insults.

The police reinforcements were called from Poznan. On their arrival toward nightfall, the real clash began.

A police official, answering a telephone inquiry from Warsaw tonight, refused to give any information other than that "all is quiet now."

Exactly how serious was Monday's clash was not clear, but sources in Warsaw said Communist Party authorities took a serious view of it, especially following the Nowa Huta trouble.

Migratory Labor

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. ROGERS of Florida. Mr. Speaker, the Senate Subcommittee on Migratory Labor visited Florida recently for 2 days of hearings and 1 day of field trips to farms and workers' camps in the southern area of the State.

The subcommittee's distinguished chairman, Senator HARRISON A. WILLIAMS, of New Jersey, and the subcommittee staff members were welcome guests. As the Senator said in his opening statement, the subcommittee did not go to Florida with preconceived solutions to problems of migratory labor; the subcommittee went there to receive advice and information from persons directly affected by the difficulties posed by the unresolved problems facing the migrants and those whose lives are affected by the migrant farmworker system.

The subcommittee received much valuable testimony. As one of the sponsors of a bill to improve migratory worker housing, I was particularly impressed by the almost unanimously favorable reaction given to that bill.

Mr. Speaker, the newspapers of Florida offered many accounts of the subcommittee's visit. I should like to have printed in the RECORD for the information of the many persons who are concerned about this problem, the following articles:

[From the Miami News, May 17, 1960]

SENATE PROBE PRAISES DADE

(By Howard Van Smith)

The head of the Senate Subcommittee on Migratory Labor today praised Dade Countians for their support of proposed migrant reform bills.

"What we heard from the witnesses at Homestead was the most positive and favorable testimony that has come before the subcommittee," said Senator HARRISON WILLIAMS, Democrat, of New Jersey.

Mr. WILLIAMS and his staff today toured the migrant camps around Lake Okeechobee and at Immokalee. A final hearing will be held tomorrow at Clewiston.

Previously, the group had held 10 meetings in northern farming areas and in Washington. The one here was the first in the South.

NO DOUBT

Senator WILLIAMS said the Dade hearing left no doubt that Federal aid in housing and education of migrant children was strongly favored, as was the abolition of child labor. But repeated suggestings were made by grower interests and others to drop the age when a migrant child may work from 16 to 12.

Senator WILLIAMS said he believed Federal legislation on the registration of crew leaders will go before them this session of Congress for a vote.

HE ATTACKED

Grower interests attacked the crew leader bill as being unrealistic. Others suggested changes which would simplify the measure.

Senator WILLIAMS praised the Reverend Isaac Henderson, Negro minister and representative of the Christian Ministry to Migrants at the South Dade labor camp, who was the sole witness favoring all the bills.

The main attack on the legislation was made by Kenneth R. Morefield of Orlando, spokesman for the Florida Fruit and Vegetable Association.

He said the setting of a minimum wage would benefit only the poor workers and guarantee them more money whether on a piece basis or a time basis of working. He also attacked crew leader registration.

THE BEST

The Reverend Paul Cassen, director of the Florida Christian Ministry to Migrants, and the Reverend Bryan O. Walsh of Homestead, representing the Catholic Welfare Bureau of Miami, agreed the child labor bill should be amended to allow children to work at a younger age, especially in summer and after school.

Senator WILLIAMS, though unable to make a full tour of Dade migrant camps, said those he saw were some of the best in the United States.

[From the Miami Herald, May 17, 1960]

REACTION MIXED ON SENATOR'S MIGRANT PLAN—IMPROVED HOUSING SUPPORTED

(By Juanita Greene)

A Senator with some ideas about how to solve the farm migrants' plight threw them up for challenge in Homestead Monday. He got some resounding reaction.

Almost all the witnesses rushed to the support of Senator HARRISON WILLIAMS' plans for better education and housing.

But he ran into opposition from farmers and even some State officials on a third major issue—regulation of the crew leader. The crew leaders are middlemen between the farmers and the workers.

Here to learn more about the situation and sentiment in south Florida, the Democratic Senator from New Jersey spent the day in a drafty recreation hall listening to government officials, social workers, and ministers in summer suits and farmers in shirtsleeves.

Only one builder, George Winston, opposed WILLIAMS' bill which would provide Government backing to public bodies or farmers for building migrant housing. He wanted the backing extended to other groups.

Everyone spoke favorably of the proposals to give extra money to school systems overloaded with migrant children.

And there was outright enthusiasm for another education plan because it deals with very basic adult education. The workers and their families would be taught such things as the rudimentary elements of sanitation.

Many witnesses, including health department experts, testified that an education program must go hand in hand with any housing program or the new quarters would soon become slums.

There was strong opposition from the farm groups against bringing migrants under the minimum wage and child labor laws. WILLIAMS' committee is hearing testimony on these laws, but he did not propose them.

In their fight against the regulation of crew leaders, the farmers were joined by the State's own chief of the farm labor department.

Monday's hearing established that the crew leader is a vital part of the migrant picture.

Ralph Moss, of the State labor department, testified that the proposed law regulating them was too stiff. He predicted it would eliminate at least 75 percent of the crew leaders who customarily lead a work force out of Florida each spring."

This, he said, would lead to confusion.

But Moss is not happy with the status quo.

"Certainly," he said, "there are known abuses to workers and employers under the crew leader system."

Vigorously in support of that measure, and all others, was the Reverend Paul M. Cassen, director of the Florida Christian Ministry to Migrants; the Reverend Bryan O. Walsh of the Catholic Welfare Bureau; Isaac Henderson, who has done church work with the migrants for 13 years, and Wendell Rollason of the Inter-American Affairs Commission of Miami.

The farmers' position was explained by J. Abney Cox, South Dade vegetable grower, and John Frederick of the Dade County Farm Bureau.

Putting the migrant under the minimum wage, said Cox, would "work an injustice on the growers" because they can't control agricultural prices.

Frederick defended the system of paying by piecework. Under it, he said, the industrious workers make more than the minimum wage.

As for children, said Cox, the farmers feel they are sufficiently protected under present laws.

State and county health representatives hammered away at the need for better housing and education. They noted that Dade County has made a lot of progress. In this, Senator WILLIAMS agreed. His subcommittee on Migratory Labor of the Senate Committee on Labor and Public Welfare has held hearings all along the eastern seaboard.

Senator WILLIAMS and his staff will tour the Lake Okeechobee region today and hold its last hearing in Clewiston Wednesday.

School Construction Assistance Act

SPEECH

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 10128) to authorize Federal financial assistance to the States to be used for constructing school facilities.

Mr. O'HARA of Illinois. Mr. Chairman, I have been sitting comfortably in my seat all through this great debate. I have listened with rapt attention to my good friends in opposition to this bill so fervently trying to argue their way out of picking up part of the check for educating the Nation's children, and I have been thinking of my grandfather.

My grandfather as a young man taught school in Wisconsin all year. They didn't have many school books in those days. My grandfather managed to dig up a few, and if they didn't have school books on certain subjects he improvised the lessons and in long hand wrote them out for distribution to his pupils. They had no pretentious school houses, and it was my grandfather's job to find some farmer friend of education to loan the use of his barn, if it was cold in winter, or his orchard of it was spring or summer.

My grandfather put in a year of 12 months just teaching school and when his brother, who made an honest living by farming, heard that he had accepted $50 for doing nothing but teaching school for a year he felt disgraced in the community, the proud name of O'Hara despoiled, his very own brother cheating the taxpayers by taking $50 of their money for a year of teaching school.

I calculate, Mr. Chairman, that people do not change very much. When I listened to my good friends trying to orate themselves out of picking up part of the check for educating the Nation's children I could not escape the suspicion that there are some prototypes of my grandfather's brother right here among us in this historic Chamber.

MADDEN HITS BULL'S EYE

The distinguished statesman from Indiana [Mr. MADDEN], with his clarity in expression we have come so much to admire, presented the issue in its right light. As usual, he hit the target square in the heart. It is a matter of being for or against universal popular education. The issue is just as simple as that.

Doubtless some of my colleagues honestly believe that education should be limited and restricted to those whose families have the money and to those who by the circumstance of birth happen to grow up in richer communities. They honestly believe, as did the early Americans who grouped behind Alexander Hamilton, that participation in government should be confined to those of property and of education and, needless to say, those without property could not have the means of acquiring education. If that is the philosophy of some of my colleagues they will be true to themselves and to their philosophy by voting against the bill we have under consideration.

I know of no better way for them to slit the throat of popular education.

FIGHT OF THREE DECADES AGO

I have been a long time in the fight to preserve, protect, and strengthen popular education because my faith is that the hope of mankind is in democratic government and democracy cannot endure in a climate of ignorance.

During the great depression of the late 1920's, when there was little money and the schoolteachers of Chicago remained at their posts of duty for months unpaid, there was a very serious effort made to reduce popular education to the elvel of the teaching only of reading, writing, and arithmetic, all this in the name of economy. There were at that time, as there are today, some persons who wish to maintain a working class and who fear that as young men and women are given the advantage of a broad education they will not be content to do the hard work.

So there was a great drive on during the depression in the late 1920's, all in the name of economy, to destroy the very structure of popular education upon which our country had been built to greatness.

It was my privilege at that time to lead the people of Chicago in a fight to save popular education. The climax of that fight was reached when the gentleman from Illinois with John Fewkes, now the distinguished head of the Chicago Teachers Union, led through the Loop of Chicago the largest parade of men and women and children in the history of Chicago. That was some three decades ago.

POPPYCOCK AS CAMOUFLAGE

Today popular education again is under attack. Let no one be deceived as to the nature of hidden motivations. All this talk about State and local control, all this talk about the obligation being upon local taxpayers, all this talk about the danger of Federal control over curriculums, is poppycock used as a camouflage.

Everyone who takes the trouble to look around, everyone who is not a slave to status quo, knows that this is a changed world. This is not the United States of the horse and buggy era, when people lived in the communities where they were born and very seldom got any farther from home than a horse and buggy would carry them on a day's drive. People then pretty much lived and died in the community where they were born. In that period, considering their means, they made great sacrifices to furnish the best schools and teachers they could to give to their children that which they themselves had been denied.

FROM ARKANSAS TO MICHIGAN

Today all this is changed. I could cite one instance of many that now come to mind. In Berrien County in Mich-

igan, where I was born and raised and in the district now represented by my good friend, the gentleman from Michigan, Congressman CLARE HOFFMAN, we had a community pretty closely knit. People lived together and never got any farther away than an occasional long journey to Chicago across the lake. Some years ago, in this modern world of ours there came to Berrien County, I am told, several thousand families from Arkansas. Here was an instance where it was of vital concern to Berrien County in Michigan that the newcomers from Arkansas had had the same educational advantages enjoyed by those born in Berrien County and with whom henceforth they were to be fellow workers and neighbors.

In my own city of Chicago we have had great migrations of men and women from the Southern States. It is important to us that the people coming from other States to become henceforth our fellow workers and our neighbors should have had the same educational advantages enjoyed by our own people.

It also is true that annually many thousands of persons leave Chicago to find employment in other States, and it is important to these other States that when Chicagoans go there they should have enjoyed the same educational advantages that the children of the States to which they have migrated. I trust I have made by these illustrations my point that education has changed from a local to a national base.

Mr. Chairman, this is a changed world and we in the Congress of the United States cannot make laws for this new and changed world on the pattern of the laws we made for the horse and buggy days.

FAITH IN EDUCATION SURVIVES

In those days we believed in popular education, it was the faith of our democratic heritage. We provided for popular education willingly and at a sacrifice and on the local level because everything in that period was on a local level. Today the great majority of our people believe in popular education. They do not wish the public schools limited to the teaching of the rudiments. They wish every American child to have an equal opportunity for a broad and an enriching education.

We are now engaged in a fight for economic if not indeed physical survival with the Soviet Union. The Soviet Union has accepted education as a natinoal responsibility. It is going very much further than we ever contemplated in the support of education as a national responsibility.

Education that we owe our children has passed the capability of local taxpayers. More and more it will become the responsibility of the Federal Government, and more and more we will realize that wherever in the United States is one child without a school to attend and without a good teacher, is a spot of weakness that, multiplied, will bring about the downfall of our democracy.

Memorial Day in the Village of Mamaroneck

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. DOOLEY. Mr. Speaker, Memorial Day in the village of Mamaroneck, N.Y., is a special occasion. The dignitaries of the community, Boy Scouts and Girl Scouts, the fire department members, and persons from other organizations turn out for a huge parade which is paced by the high school band. Much preparation and thought goes into the arrangements and the entire line of march gathers, together with other citizens, at the beautiful Village Hall where speeches are made and the dead are remembered.

It was my privilege to address the gathering this year on May 30, and my remarks follow:

Mr. Chairman, as your congressional representative, I take pride in participating in this memorial service here today—standing as I do among neighbors and friends.

This year, it seems to me, Memorial Day has a special significance. Honoring as it does all those who have died to keep America a free and undivided Nation, I see it as a symbol of the liberty we still enjoy as part of the free world.

We all know that today there is a threat to that liberty—a threat greater than ever before. Only because we are strong is the world outside the Iron Curtain still unconquered. Only because our military muscles are flexed and our heart undaunted is communism contained within the borders of the Russian-dominated half of the world.

On this day, therefore, let us give thanks to God that this is so, and let us pray for continued strength and courage that those whom we honor will not have died needlessly.

Memorial Day was established to honor those who died in the War Between the States, but today it is an occasion upon which we revere the dead of all our wars.

It is a day when a humble and grateful people gather across America for simple programs of reverence and patriotism; a day when we bow our heads and ask divine help to keep ours "the land of the free and the home of the brave."

And it is a day when "liberty" and "freedom" are spoken openly and unashamedly; when good old-fashioned patriotism wells up inside us and sometimes overflows. It is a day when we recapture the courage and determination that steeled our wills through times of bitter internal strife and fierce international struggle.

It is a day, too, when bands play and bright flags whip in the breeze and we boast to each other, perhaps, of the victories America has won. But it is a day also when "Taps" and the staccato crack of rifle fire give solemnity to our national mood, as they blend in echo across the graves of those who gave their lives for their country.

On this day, the epic voices of the past live again.

"To be prepared for war is one of the most effective means of preserving peace." So spoke George Washington, Father of our Country.

How apt are these words today. How alive. How true. We should thank God that our leaders in the Nation's Capital have not forgotten those words of advice and warning.

"We shall nobly save or meanly lose the last best hope of earth." Those are the words of Abraham Lincoln, defining the issue of his time. They might, indeed, have been spoken today as Mr. Khrushchev rattles his atomic weapons and blows his propaganda trumpet.

"Damn the torpedoes. Full speed ahead." These words of Admiral Farragut in Mobile Bay have given dramatic substance to the determination of all Americans who prefer liberty to death.

"Speak softly and carry a big stick," warned Teddy Roosevelt, paraphrasing George Washington's original advice.

I think those words must be echoing today in the heart of President Eisenhower as he lets the bellicose Khrushchev rant, rave, and make menacing gestures. For our President knows just how big an atomic stick we carry. He does not have to bluff and shout in the Russian manner to make his international points. He carries his big stick with quiet dignity. There is no need for him to brandish it and roar defiance.

In closing, let me quote some of Ike's own words. In a few short sentences, they clarify today's great issues for all the world to see and understand:

"We march in the noblest cause of all—human freedom. If we make ourselves worthy of America's ideals, if we do not forget that our Nation was founded on the premise that all men are creatures of God's making, the world will come to know that it is free men who carry forward the true promise of human progress and dignity."

Let us then on this Memorial Day rededicate ourselves individually and as a nation to "march in the noblest cause of all—human freedom."

Let us not be ashamed of showing our patriotism, our love of country—God's country, as it has been called. Let us show the world that we believe deeply and sincerely that it is the finest, the happiest, the freest of all the world's nations and that no sacrifice will be too great for Americans to keep it so.

Senate Look at Summit Mistakes Gives No Aid to the Adversary

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. COHELAN. Mr. Speaker, in the following article, Columnist Walter Lippmann points out that Senator FULBRIGHT's committee inquiry into the U–2 affair and the breakdown of the summit conference shows that "it is possible in this democracy to conduct an inquiry into the causes of a national fiasco without giving aid and comfort to the adversary." Mr. Lippmann's further analysis of the committee's findings is important and I submit the article in its entirety for the RECORD:

TODAY AND TOMORROW—THE FULBRIGHT INQUIRY

(By Walter Lippmann)

The Senate inquiry into the U–2 affair has now done its main work. Thanks to the highmindedness, and experience and the sagacity of the committee's chairman, Sena-

tor FULBRIGHT, the work has been well done. It has brought out the relevant facts and the Senator has pointed out their significance.

The inquiry has shown that the Nervous Nellies among us were wrong. It is possible in this democracy to conduct an inquiry into the causes of a national fiasco without giving aid and comfort to the adversary. We have been spared the humiliation of distrusting ourselves so much that we dared not inquire into our own mistakes.

In digesting the results, we must begin with the fact that the inquiry dealt with a question which has never before been investigated in this country, or in any other country. The question was the competence of the President and his principal advisers in dealing with an entirely illegal and inherently clandestine operation which is, nevertheless, necessary to the security of the country.

Mr. FULBRIGHT defined the question accurately and sharply by declaring after Mr. Dulles had testified in executive session that in this affair the issue was not the clandestine work of the CIA but the overt decisions of the President and his advisers who make the policy which governs both the CIA and our diplomacy.

The inquiry has established the responsibility of the President and his advisers for the timing of the flight. They did not order the flight on May 1. But they had failed to cancel their orders, given previously, which authorized the flight that did take place on May 1. This flight was, as General de Gaulle said in his television address on Tuesday, "certainly and at the least ill timed."

The inquiry has established, too, that the critical period was the weekend from Friday afternoon, May 6, to Monday, May 9. During this weekend the administration issued two statements. One was on Saturday admitting that the U–2 was a spy plane but saying that "insofar as the authorities in Washington are concerned, there was no authorization of any such flight as described by Mr. Khrushchev." The second statement was on Monday saying that such flights were done under Presidential order, and implying—as all the world understood it—that they would be continued.

This was the lost weekend. These were the days when the U.S. Government not only avowed responsibility for spying, which was indubitably a violation of international law, but proclaimed that spying was a national policy which, so it was universally understood, would be adhered to. These two statements combined were not only altogether unprecedented in the history of international relations but they were altogether untenable, as is shown by the fact that the President had to renounce the policy publicly in the presence of Mr. Khrushchev at the tragic meeting in Paris.

It is important to take note of the human circumstances of this calamitous weekend. Secretary Herter had returned to Washington on Friday evening after 10 days of conferences in Iran, Turkey, and Greece. The U–2 affair was already in a very considerable mess when he returned, owing to the false cover statements issued by press agents who did not know what was going on.

Having returned on Friday evening, Mr. Herter had to deal with the mess on Saturday. Younger and stronger men than he who have been on long transatlantic air flights are not in prime condition the next morning.

Moreover, as the Secretary of State was returning to Washington, the President was leaving it. He was leaving for a weekend in Gettysburg. The two men did not meet face to face until the President returned to Washington on Sunday. The momentous decision to avow that the overflights were a national policy was taken after talks on the telephone to Gettysburg. Thus a Secretary of State, inevitably tired and rushed by events which happened in his absence, had to deal with a President who was absent in Gettysburg, and in no position to hear the whole argument which preceded the recommendation from Washington.

This is, I think, the crux of what the inquiry has established. The practical lessons of it are clear enough. On the bad timing of the flight, the President and the Secretary of State allowed the CIA too much leeway and thus forced upon it a responsibility which it was not competent to exercise. If we were going to go to the summit, there should have been no more flights, once the date of the conference was fixed. To be sure, there were a lot of things we would like to have known during the suspension of the flights. But now we have no summit meeting and also we have no flights.

On the handling of the accident, the first lesson is that all publicity and all cover statements and the like should always be retained rigorously in the hands of high officials who know what is going on. Spying is deception. But you cannot use dupes to deceive others and not risk bad results.

The second lesson is that the high officials should have been thoroughly indoctrinated long ago in the conventions and the practices which have always surrounded the black art of espionage. Manifestly the high officials, beginning with the President himself, were not indoctrinated. They were caught off balance and they improvised in a panic.

It will now be important to see whether or not various candidates show that they have learned something from this very expensive fiasco.

The Forand Bill and Its Enemies

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the RECORD a speech by the Honorable Herbert H. Lehman of New York, the distinguished former Senator and devoted public servant of many years.

His remarks on the subject of "The Forand Bill and Its Enemies" are most cogent and timely.

I hope my colleagues will find time to read these words of one of the great men of our time on one of the issues most desperately and vitally affecting the aged of this country:

THE FORAND BILL AND ITS ENEMIES

(Remarks of Herbert H. Lehman at Senior Citizens Rally sponsored by Senior Citizens Golden Ring Club, Madison Square Garden, May 18, 1960)

I am glad to be here today. I thought I was going to be talking to my contemporaries, but relatively speaking, I see that this is a meeting of the younger fellows. I am probably the most senior of the senior citizens here.

But age is truly a relative thing. When I was 78 and a Member of the U.S. Senate, the majority leader, LYNDON JOHNSON, used to come to me on days when there was going to be a late night or an all-night session, and say, "Herbert, I would like you to stay on the floor tonight, so that we can let the older fellows go home and get a little sleep."

Yes, age is a relative matter. But the question we have gathered to discuss today—the need for the Forand bill—is not a relative matter. It is an absolute need—one that the lawmakers in Washington and the politicians in both political parties must consider now, and must act upon. This issue must not be dodged or ducked any longer.

The Forand bill has been before the Congress for quite a few years now, but because of the opposition of the American Medical Association and other reactionary forces, there has been no action.

Meanwhile year by year, almost month by month, the cost of medical care has risen, astronomically. This cost has gone up faster and higher than any other cost in the category of the people's needs.

The group on whom this cost increase rests most heavily and unbearably are the older people, who need medical care the most, but who, of all the groups in the population, are the most completely straitjacketed by fixed income.

Workers organized in labor unions can strike for higher wages, professional men can raise their fees, and business men their prices, but older people living on pensions, savings and remittances are up against the wall when confronted by the problem of rising costs.

This is the intolerable paradox of the situation: that those who need medical care the most can least afford it. I should add that the cost of medical care for prolonged illness is beyond almost anybody's capacity to pay.

The Forand bill is a desirable step in the right direction. It is not a perfect piece of legislation, by any means. It could be strengthened. It should, in my opinion, contain some provision for establishing standards for hospital care, so as to prevent the exploitation of this program, as the GI educational program was exploited by shoddy establishments already in existence and fly-by-night institutions set up to catch the windfall of hospital care payments from the Federal Government.

But I suppose I am wasting my breath talking about the need for strengthening the Forand bill. The problem now isn't how to strengthen it, but how to save it. Its enemies are and have been hot for its total destruction or, in the case of the administration, its total dilution.

This must not be allowed to happen. You can and must prevent it from happening. This year—in this election year—the lawmakers and the political leaders will listen to you. I am not so sure how carefully they will listen next year, after the election is over. Of course they are listening to the American Medical Association this year too. The sources of the greatest danger to this legislation are the governing body of the AMA, and the Eisenhower administration.

Yes, these prime defenders of so-called private enterprise and the balanced budget will do their best to see to it that the Forand bill does not pass in recognizable and workable form. It is up to groups like this one, and rallies like this one, to see that it does pass in effective form, so that it does the job it is supposed to do.

The AMA has used its powerful weight to block this legislation for these many years; and to block any legislation aimed at resolving the problem of the high and mounting cost of medical care.

Has the AMA come up with any alternative solutions to this problem? No, in all the dozen years since the Murray-Dingell bill for national health insurance was shelved, the AMA has come up with nothing in the way of an answer to the underlying problem. The only answer given has been opposition to any step in the direction of an answer.

Against the background of this record, I believe that the AMA has just about forfeited

its moral right to be listened to with any respect on this issue.

In 1949, when I first ran for the Senate, I said, in the course of my campaign, that I was opposed to compulsory national health insurance; I said that other methods of meeting the problem must be explored and followed. Eleven years have gone by since then. During 8 of those years, I served in the U.S. Senate, and most of that time I was chairman of the Senate Health Subcommittee. I drafted and introduced scores of bills designed to follow alternative approaches to the goal of providing better medical care at costs people can afford to pay.

The AMA and the other reactionary forces opposed every one of those bills just as hard as they opposed national health insurance, and just as hard as they are opposing the Forand bill today.

And so none of the major measures I proposed were passed.

I must tell you today—and this is the first time I have ever said this publicly—that if I knew in 1949 what I know today, I would not have made those campaign speeches against national health insurance in 1949. Of course, I never had a chance actually to consider or vote on the legislation. It was dead—deader than the proverbial doornail—by the time I first took my seat in the U.S. Senate.

The background of the legislative struggle involving the Forand bill presents an almost unbelievable paradox.

The progress of medical science has been spectacular, and in no respect more so than in increasing the average lifespan. But here is the AMA opposing legislation to place the benefits of medical science within the practical reach of those who need those benefits the most.

I can't understand it. It is almost as if the Carpenters Union were to oppose Federal housing legislation on the foolish ground that for the Government to help people acquire housing will result eventually in socializing the carpenter trade.

The Forand bill must pass, this year. If you, and the millions like you—like us, I should say—will stand up on our hind legs and demand this legislation, which is so important for the welfare not just of the older people but of our entire country, the Forand bill will surely pass.

Need for Farm Legislation

EXTENSION OF REMARKS
OF
HON. JOHN KYL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. KYL. Mr. Speaker, the communication printed herewith is a vivid illustration of the problem facing the Midwest farmers. Written by a respected farmer who is in position to see the situation first hand, it is further testimony that we need agricultural legislation now:

JOHN KYL,
House of Representatives,
Washington, D.C.

DEAR SIR: I own 350 acres in Wayne County and have farmed all my life, having farmed in Wapello County until coming here in 1940. I started farming in 1930 and went through the depression and know what it means to sell hogs at $2.50 to $4 and cows at $35, eggs at 10 cents, etc. I bought my first new tractor in 1936 for $925. I bought my last new tractor in 1955 for $3,200 and, if I bought my tractor today, it would cost me $5,000. When I moved to Wayne County my taxes on 170 acres was $90 a year. Now my taxes on 350 acres plus my personal is over $850. When I moved to Wayne County help was $1.50 to $2 per day. Now the cheapest labor is $1 per hour. In the thirties we had no light bill. Our telephone cost $5 per year, but today we spend $300 per year for electricity and $80 for telephone.

Statistics will prove that we are worse off today than we were in the worst of the thirties. The only reason I can see that the farmer can even start to pay his bills is the fact that he is using up any surplus he may have had. We need a farm program to give the farmer cost of production plus a reasonable profit, whatever it is—whether it be subsidy, crop controls, two-price system, or what have you.

We are certainly at the crossroads and something will have to be done or corporation farming will take over and then the consumer will pay by the nose. I am a member of the FHA committee in our county and have first-hand information on the financial condition of a number of farmers in the county. It is certainly pathetic and unless something is done, I believe one-fourth of the farmers will be gone within another year.

Just what kind of a Government program it will take, I cannot say, but one thing I am sure, the farmer is not getting his fair share of the economy.

The farmer is willing to pay his share of the taxes, but he has to have an income to do it.

Catholic Bishop's Statement on Freedom and Peace

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, a statement on "Freedom and Peace" was issued by the Roman Catholic bishops of the United States last November at the close of their annual meeting in Washington.

The Congress was not then in session, and it has not been printed in the CONGRESSIONAL RECORD. It is as timely and stimulating today as it was when issued, and should be brought to the attention of Members and others.

Indeed it is especially pertinent right now because of the strong support which it gives to mutual security, notably in the passage which states:

The social and economic problems of the world, and particularly those of Asia, Africa, and some areas in Latin America pose a twofold challenge that can be met. In the first place, our Christian sense of justice and mercy impels us to do all that we can to help those who suffer from avoidable poverty, ignorance, and disease. Secondly, we know that tensions engendered by these conditions tend to foment, both militant nationalism and Communist infiltration. Hungry and desperate people may grasp at short-range solutions in the effort to compress within a few decades a progress that elsewhere took centuries.

Programs of education, technical assistance, and developmental aid, now being carried out both by individual governments and by international bodies, can do much to build the foundations for prosperity and peace in nations suffering from poverty and hunger.

The statement is an inspiring one in other respects. One of the signers is an esteemed constituent, Richard Cardinal Cushing, archbishop of Boston. I include it as part of my remarks:

TEXT OF CATHOLIC BISHOPS' STATEMENT ON "FREEDOM AND PEACE"

All the world craves peace. Without freedom under God for every man and for every nation there can be no peace.

On his recent visit to our country the Communist spokesman took every opportunity to compare unfavorably, capitalism with communism in their economic aspects. This is not the basic issue. The choice that men and nations must make today is between freedom and coercion.

Such words as "democracy," "republic," "peace," and "friendship" are words to which the Western World is long accustomed. These words have been taken into their current vocabulary by the proponents of communism. But while we may use the same words, we are not speaking the same language. By "peace" the Communist means submission to his program. By "friendship" he means the acceptance on the part of others of his formula for coexistence.

Freedom is not the product of any political or social system; it is man's natural birthright, and in the words of Pope Leo XIII, "the highest of man's natural endowments."

This freedom under God permits man to use his faculties for his own just benefit and for the service of his fellow man in accordance with law of God. Furthermore, to protect the freedom and rights of its citizens, each nation has the right to be free.

FREEDOM—THE AMERICAN IDEAL

Our country was "conceived in liberty and dedicated to the proposition that all men are created equal." This recognition of the dignity of every citizen, endowed with inalienable rights that are God-given is indelibly woven into the origin and history of the American Republic.

Ours is a tradition of freedom under God with justice and charity for all. It seems opportune to emphasize the importance of this heritage of freedom. In it lies the moral strength that makes the contribution of America to the world's rebuilding unique and distinctive.

Above and beyond the material aid that we distribute so generously around the globe to those in need, we should be equally concerned in sharing our ideals of liberty and justice. Proper standards of living and material prosperity are not enough. These are but means to an end and not in themselves the goal we would attain, if world peace is, as it should be, the aim of all our efforts.

PRESENT OBSTACLES TO PEACE AND FREEDOM

We would recognize that the chief obstacles to peace are the obstacles to real freedom. First among the main obstacles to peace and freedom in our present world is obviously world communism. Communists do indeed preach peace and freedom and preach it incessantly; their actions, however, belie their word. They stir up hatred and mistrust. They reopen the old wounds of people who had real grievances in the days when they were subject to alien rule. While they themselves enslave whole nations over whom they have no shadow of claim, they seize, wherever possible, upon economic and racial injustice to incite class warfare and violent revolution.

Thus the Communist world poses a twofold threat to peace: First, that of military aggression of which the more recent instances continue to exemplify both ruthlessness and perfidy; secondly, the wide-

spread sowing of the seed of hatred within nations and among nations. To meet this constant threat to peace is the free world's greatest problem.

THE FOUNDATIONS OF PEACE

Peace, as demonstrated by our Nation's experience, rests on disciplined freedom with its attendant virtues. True peace for nations as well as for individuals comes from justice, from charity, from the faithful observance of the moral law. The might of arms can do no more for peace than to discourage aggressors that are belligerent. Pacts and treaties can bring at best an uneasy truce, restraining an open hostility without achieving friendship or understanding. Not even international organizations and international law, essential as they are for order in the world, can bring about world peace. Fundamentally, that peace depends on the acceptance by men and nations of a fixed, unchangeable, universal moral law.

There is no need to retell the noble efforts that have been made in behalf of peace since the dawn of the present century. Nor is there need to retell the disappointments that have laid low the hopes of men. The two most destructive wars in history have left their indelible mark on the first half of our century. Now, well into the second half, men live under the threat of a third world war that would be immeasurably more destructive.

NATIONALISM IS CITED

A second obstacle to peace and freedom, personal and national, is the spirit of excessive nationalism. The worldwide movement toward independence is in itself good and laudable, and we rejoice that many nations formerly subjected to external control now guide their own destinies. But all too often a morbid preoccupation with past grievances arouses a spirit of revenge that defrauds certain minorities of freedom and obstructs the clear vision of the constructive and peaceful paths that lead to national greatness.

A third obstacle to freedom and peace is found in the inhuman conditions that prevail among so many millions of the world's population. Poverty, hunger, disease, and the bitterness engendered by social injustice is their common lot. Embittered by the contrast between their own wretchedness and the wealth of the rich and powerful in their own lands, and between the nations, they are ripe for exploitation by both the Communists and the extreme nationalists.

Nor can we be unmindful of the plight of the millions of refugees whose present status is a challenge to all who believe in freedom and peace. Victims of totalitarian tyranny, deprived of family, of homeland, of liberty itself, they pose no threat to the peace and security of any land that may be their haven. But continued apathy to the problem of their resettlement is a reproach to the conscience of the free world.

OBSTACLES TO PEACE—AT HOME

We must also recognize that conditions at home which threaten our moral integrity seriously threaten the cause of freedom and peace.

Our attention is directed to the subversive and evil forces that may undermine the moral strength of the Nation. Chief among these currently are racial injustice, laxity in home life and discipline, preoccupation with sensual, selfishness and self-seeking in economic life, and the excessive desire for wealth and ease.

The forces of religion in this country face no problem more pressing than the restoration within our people of respect for the moral law as God's law, and the inculcation of those virtues on which the soundness of family and civic life depends. Reverence for God's law, the keeping of His Commandments, the practice of self-restraint, of justice and clarity will contribute beyond measure to the strength and unity of our country, which are so essential for effective leadership in the cause of freedom and of peace.

ROADS TO PEACE AND FREEDOM

Although communism is the overriding danger to peace and freedom, our preoccupation with communism should not deter us from seeking to solve other problems that may endanger peace and freedom. The social and economic problems of the world, and particularly those of Asia, Africa, and some areas in Latin America pose a twofold challenge that can be met. In the first place, our Christian sense of justice and mercy impels us to do all that we can to help those who suffer from avoidable poverty, ignorance, and disease. Secondly, we know that tensions engendered by these conditions tend to foment, both militant nationalism and Communist infiltration. Hungry and desperate people may grasp at short-range solutions in the effort to compress within a few decades a progress that elsewhere took centuries.

Our people have been generous in responding to the appeals of the afflicted victims of war and famine. But the needs of the world will not be met by charitable aid alone. The greater charity is to help people to help themsives. Programs of education, technical assistance, and developmental aid, now being carried out both by individual governments and by international bodies, can do much to build the foundations for prosperity and peace in nations suffering from poverty and hunger.

In the long run, at least, the cause of peace and freeedom so intimately connected with the independence of nations would be better served if we could rely less upon programs of governmental aid and more on private investment and international trade adequately regulated for the good of all nations. In view of such serious problems as the pressure of population in some areas upon resources, the world needs every element of cooperation and good will to step up production and distribution of food and fibers. The potential abundance made possible by modern technology should be made a reality, as a result of programs inspired by our love of our fellow man and the quest for peace and freedom.

In regard to communism, our goal is nothing less than the conversion of the Communist world. Our moral judgment is absolute: Communism is godless, it is aggressive and belligerant, it is unbelievably cruel. Witness the commune system in China. Hungary and Tibet are but the more recent manifestations of its total disregard for human rights and human dignity. Nevertheless, conscious of Christ's example and the infinite power of grace, we pray for the Red persecutors and for the persecuted. We wish no conquest except that of the spirit. We wish those who constructed the Iron Curtain to tear down the barbed wire and the machinegun posts and to join us in the enjoyment of God's freedom and peace.

Even today there are signs that the tyranny of communism is not the same in every nation under its sway. There are indications that the spirit of man will not stay crushed. We should storm Heaven with prayer and penace, knowing that what to man seems impossible. God will grant to those who pray to Him with humble hearts, free of hatred and a spirit of revenge. As the early Christians converted their persecutors, we can seek to move those whose hearts seem hardened by blasphemous contempt for God and inhuman disregard for their fellow men.

A rule of law

In this spirit, statesmen of the world must continue their often disheartening quest for peace, reductions in armament, and the introduction of the rule of law into the society of nations. They must be firm in upholding principle and justice, knowing that appeasement in such matters leads only to the peace of the conquered. It is a delusion to place hope in seeking real understanding when the true problem is a conflict of essential principles, not lack of understanding.

While negotiating unceasingly for better relations with the Communist regimes, we must never forget that their system and ours are as basically different as slavery and freedom. To palliate the difference is to subvert the cause of freedom and peace. Recently the Communists have been cleverly veiling the sharp differences between the systems, as witnessed by the statement of a member of the Russian press group, "our systems are different but there is not a single obstacle which would deny us peace of friendship or corporation." In other words, Red slavery is only different, not opposed to our system of peace and freedom under God.

Ultimately, the problem of communism as a threat to peace and freedom will be met only when we exemplify the principles that we proclaim as Christian members of a nation dedicated to God's law. There must be a searching reappraisal of our devotion to the principles we proclaim. We cannot live as materialists and expect to convert others to our system of freedom and peace under God.

Materialism decried

Instead of upholding bodily the principles of peace and freedom under God we have emphasized the material fruits of our freedom, material wealth from industrialization and education. Instead of proclaiming freedom under God as we did in a more robust time in our history, we have so praised a program of supplying machines and calories and pleasure that these fruits of freedom and peace are made its substitutes. Today throughout the world, too often it is thought that when we speak of our American way of life we are speaking only of a high standard of living.

We have often acted in our international relations as if the products of industry and methods of production were our only contribution to the welfare of our neighbors. We have given the impression that material progress is our sovereign if not our exclusive concern. In particular, we have fostered industrialization and education as the ends and not the means of elevating nations. Insofar as we have done this, we have tacitly accepted the materialistic philosophy of communism as our way of life. We have aimed our efforts at satisfying the body, and, paradoxically, have allowed the Communists to capture the minds of men.

We must convince the world that our industry, our education, our technology are made not only to serve the body but the free spirit of man, that the grandeur of our heritage and extent of our contribution to the world is not measured in dollars and machines, but in the spirit of God's freedom and the dignity of the human person. Our motive in gladly pouring out our resources is not simply a natural pity for the misery of our fellow man or a damper to conflict, but recognition of his dignity as an equal son of God endowed with freedom.

To accomplish this we must be totally dedicated to our beliefs in God, the source of freedom and peace. We must be ready to give our country's principles the same unlimited measure of devotion that led to the birth of our Nation. Mankind will follow only those who give it a higher cause and the leadership of their dedication. It is up to us to give that leadership to mankind in the cause of God's freedom and peace.

Signed by members of the administrative board, National Catholic Welfare Conference, in the name of the bishops of the United

States: Francis Cardinal Spellman, archbishop of New York; James Francis Cardinal McIntyre, archbishop of Los Angeles; John Cardinal O'Hara, archbishop of Philadelphia; Richard Cardinal Cushing, archbishop of Boston; Alois Muench, cardinal designate, bishop of Fargo, N. Dak.; Albert Meyer, cardinal designate, archbishop of Chicago; Karl J. Alter, archbishop of Cincinnati; William O. Brady, archbishop of St. Paul; Patrick A. O'Boyle, archbishop of Washington; Leo Binz, archbishop of Dubuque; Emmet M. Walsh, bishop of Youngstown; Joseph M. Gilmore, bishop of Helena; Albert R. Zuroweste, bishop of Belleville; Joseph T. McGucken, bishop of Sacramento; Allen J. Babcock, bishop of Grand Rapids; and Lawrence J. Shehan, bishop of Bridgeport.

A Sane Nuclear Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. AVERY. Mr. Speaker, the following is an addressed delivered by the Honorable Alf M. Landon entitled "A Sane Nuclear Policy" which was delivered at a meeting in Madison Square Garden, New York, on May 19, 1960.

I heartly recommend that all Members of Congress take a moment and read Mr. Landon's remarks:

A SANE NUCLEAR POLICY

I want to try, tonight, to make some sense out of something where sense has been strangely lacking. I want to try to find a quiet and careful way toward the commonsensical and truthful heart of the crazy dilemma we find ourselves in.

Here is our problem.

There is confusion and division in the determinattion of our crucial and vital nuclear policy in many influential places.

It exists within the Pentagon; within the Congress; within other Government circles; among scientists. The American people, as a whole, I am afraid are confused and divided on this issue.

Out of what does the confusion grow?

There is complete agreement about these things:

Atomic tests produce radioactive byproducts. It is agreed that these are not particularly good for human beings. Nobody has claimed that they serve a useful or a healthy function.

In addition, there is complete agreement that radiation can cause marked physical deformation, sterility, various forms of cancer and God only knows what other undiscovered consequences.

The only possible area of disagreement involves: How much? How much radiation can mankind stand and how can you prove it with absolute assurance?

The truth of the matter, in fact, is that no living scientist knows the exact amount of radiation mankind can stand—and what's more it will take more than one generation to find out. By that time it will be too late.

We start with the sure knowledge that we run the risk of producing deformed or sterile grandchildren and generations of grandchildren.

Then why should there be any problem?

For years now we have been faced by the problem of an avowed and implacable enemy. The Government has been rightfully concerned with a continuing and unrelenting program for our defense. The Pentagon, as a consequence, developed and properly emphasizes retaliatory power.

Out of this has grown the first nuclear, and the most destructive arms race in all history.

In that race, America, for its own survival and that of the free world, must not be second. As long as that race continues it means unlimited atomic tests. And that in turn means unlimited horrors for future generations—come peace or war. May I emphasize this last point again—come peace or war.

Here it is. This is our real problem. There must be no letdown in keeping our great and beloved Republic in the strongest military position until satisfactory international treaties are signed on disarmament. But that—as I say—can eventually poison humanity in the continuing atomic testing required by all nations in the race to keep ahead of other nations in the development of nuclear power.

Just look at the dilemma. The more nations that get into the act—the more chances for blowing up the world by blundering into a nuclear war—or—and this is the irony—more radiation to ruin humanity—from mere preparation to fight a war that might never occur. Without a nuclear war—civilization could survive. But the impact of radiation poisoning on children yet to be born would make it a nightmare.

But the dangers are further compounded. In a world cluttered with nuclear weapons—atomic tests and dictators—a struggle of intensity can be turned into a world holocaust—by one hair triggered dictator—or—for that matter—by one jittery free world soldier. Therefore, we not only have to be alert about the enemy—but about what might happen on our own side. Despite all the precautions we have taken to avoid a ghastly mistake by some free world general—we are not immune from his misinterpretation of a tactical situation.

Now assume the worst—if you can—atomic war.

These are the clear facts.

There is no adequate way of surviving an atomic war.

Underground shelters—"fraid holes" to westerners—afford security in a twister. But they are woefully inadequate for national survival in an atomic war. Neither do land mass and population density furnish national security.

If Chou En Lai believes that a country of 600 million people can survive a nuclear war when a country of 180 million people cannot—he is making the same mistake as those who think underground shelters are a means of national survival.

The sands of the deserts and the growth of the jungles cover civilizations lost by war.

The Old Testament records the complete obliteration of Jericho:

"And they utterly destroyed all that was in the city, both man and woman, young and old, and ox and sheep, and ass, with the edge of the sword."

There is nothing new in the blotting out of populations by war—except the ease—the quickness—and the astounding magnitude of the destructive force of atomic weapons.

But, as I have already indicated, there is something new under the sun—despite all the old saws to the contrary.

That is the real possibility of mass mutilation of coming generations as a result of the present generation's military preparations for an atomic war that is never fought.

In short—the world may well be becoming a chamber of horrors for future generations merely by preparing for nuclear war by atomic testing—and that in an ever-expanding number of nations.

I have tried to state the problem as simply, as directly, as truthfully as possible.

Now, under existing circumstances, which are not simple, what is the answer and what is the way out?

There is no way out for civilization except one—to seek and agree upon a realistic nuclear policy relationship between nations by definite treaties controlling atomic tests and the employment of nuclear energy as a blessing instead of a curse to mankind.

Let me get a little more technical for a moment and make what I just said crystal clear.

The United States—for itself and the free world—must not and cannot weaken its defenses. If change is to come and hope, it must be in the form of a specific treaty. And all other nations are in the same position.

We must not delude ourselves. The fateful need for a universal sound nuclear policy agreement is as plain as black and white. Its solution is not. Public opinion must be aroused to the dire necessity for solving that problem. But we must not create the impression that America will not fight to defend herself if need be.

Unilateral action by the United States would be the height of folly. Multilateral action with questionable controls would be absurd. Equally ridiculous is the thinking that if the free world alone lays down its atomic weapons—others will automatically do likewise. In the pursuit of a workable world nuclear policy peoples must be both persistent and patient.

Our urgent, our historical, our critical task is to find the way for universal banning of atomic testing. That calls for a complete reexamination of our international relations and foreign policies.

We Americans must face what is really going on in the world. To do that—we must keep our eyes on any weasel wording the proposals that are projected and rejected by the heads of state—both the negative as well as the positive.

Apparently negotiations over a satisfactory disarmament agreement are going to continue for a while and we cannot in the meantime permit ourselves to accept the fatalistic thinking that world war is inevitable—or because there can be no victor in a nuclear war—that war will never occur—or that new defenses will checkmate new weapons.

Such meetings as this tonight are not merely tinkling cymbals and sounding brass amid crashing changes in scientific concepts and accomplishments.

Such discussions as these serve the highly useful purpose of focusing the attention of all peoples on the dire necessity of reaching a speedy and constructive decision on a sane nuclear policy if a high standard of civilization is to be maintained.

We have raised and discussed the heart of the problem. I wish I could now provide the elaborated and final answer. But I do not have the expert knowledge required for a discussion of the details of a disarmament agreement that would at the same time be the basis of a boon to all mankind—and protect mankind's freedom to work out the solution of the climactic, economic, and political explosive forces now yeasting throughout the world.

Nor do I know—as our Secretary of State does—how if you pull one string it specifically affects other strings of America's interest and the free world's interests in world affairs.

But I do know that the disarmament question must be constantly raised and steadily pressed on heads of states by aroused public opinion aware of the wide areas of massed destruction developed by science in the past decade—that are being constantly increased and expanded by new discoveries.

Now, I am afraid I must make a small comment on the obvious developments in the last 72 hours and their relation to our problem.

I, for one, am neither as fatalistic as some about the crucial failure of the heads of government meeting at Paris, nor as optimistic as some, that it was simply Khrushchev's tactics maneuvering to get world public opinion on the Soviet's side. That remains to be seen.

I did not expect any dramatic achievement and agreement at the Paris summit meeting by the participating countries.

I felt about that meeting as I do when I stake a location for a wildcat oil well. I hope for a gusher, but am prepared for a duster. But I did not expect that meeting of the Big Four to end on such a fateful note.

Now, more than ever, world opinion must be aroused to demand that the attempts to ban atomic tests continue in energetic good faith and that sufficient progress be made toward reaching a definite settlement to warrant further moratoria on atomic testing while the negotiations continue.

Mr. Khrushchev is a cagey dictator and a hard trader. He is quick to take advantage of any opening we give him. But even so, as a dedicated Communist, he has political pressures to contend with, both abroad and at home. Furthermore, he is proud of the new factories, dams, schools built in the U.S.S.R. in the past 10 years at great human cost. He would not happily see them destroyed overnight. I am also sure that even Khrushchev, or at least Mrs. Khrushchev, would recoil at the thought of deformed or sterile great-grandchildren.

The Soviet Premier can either be a second Sampson, and pull down the temple of civilization, or he can light the whole world with the peaceful uses of these new magic elements of nature by agreeing to a reasonable treaty of control and inspection of atomic tests.

Another summit meeting in the near future of the heads of France, England, Russia, and the United States is the place for decision. Their combined efforts and clearheaded serious discussion and constructive solutions of controlling atomic tests will build either for greater enjoyment or for mutilation of coming generations.

The Berlin Question: An American View

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, June 2, 1960

Mr. BUTLER. Mr. President, Berlin is the beacon of the free world. It must not be allowed to go out either through indifference by the West or intransigence by the East. In a recent article in the Free World Forum, a bimonthly journal on foreign affairs, Christopher Emmet discusses "The Berlin Question: An American View." I believe Mr. Emmet's concluding paragraph to be particularly applicable in these days when there is so much talk about accommodating the Soviets:

If we stand absolutely firm against the Communist threat we will not only check Russian advances, but gain a great political and psychological victory which could change the trend of recent history. Nothing would so advance the cause of really inspected disarmament as to prove to the U.S.S.R. that its military threats cannot frighten us, even in the exposed outpost of Berlin.

Mr. President, I ask unanimous consent to have the article entitled, "The Berlin Question: An American View," by Christopher Emmet, in the April-May issue of the Free World Forum, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BERLIN QUESTION: AN AMERICAN VIEW

(By Christopher Emmet)

Since the first announcement of Mr. Khrushchev's Berlin ultimatum in November 1958 American policy toward Berlin has been both ambivalent and ambiguous.

On the one hand, President Eisenhower has firmly rejected the Soviet Union's claim that Western rights in Berlin could be abrogated by a peace treaty of the U.S.S.R. with the so-called German Democratic Republic, and stated firmly that we would neither yield nor negotiate under the threat of force. On the other hand, the President and his Secretaries of State have evaded this latter promise by cooperating with Mr. Khrushchev in pretending that his ultimatum has been withdrawn. To save the President's face Premier Khrushchev asserted blandly that there had never been any ultimatum on appropriate occasions. The most recent repetitions occurred in Indonesia 2 months ago and on April 25, 1960 at Baku. There he said:

"If, despite all our efforts, the Western Powers refuse to seek jointly with the Soviet Union a concerted solution of the problem of the peace treaty * * * we, of course, will go our own way and sign a peace treaty with the German Democratic Republic.

"It is common knowledge that the signing of a peace treaty puts an end to all terms stemming from the surrender of a country. Therefore, when a peace treaty is signed with the German Democratic Republic, the terms stemming from the surrender will lose their force on the entire territory controlled by the government of that state. Consequently, the rights which the Western Powers obtained as a result of the surrender of Hitler Germany, including the right for further preservation of the occupation status in West Berlin, will also lose their force with regard to this territory.

"Therefore, if the Western Powers refuse to sign a peace treaty with the German Republic * * * they naturally will forfeit the right of access to West Berlin by land, water, and air."

In this same speech Khrushchev also specifically threatened the use of force if the West should attempt to break a blockade imposed by his East German allies; and though the threat was couched in Aesopian language, its meaning was brutally clear. President Eisenhower's response to this reassertion of Premier Khrushchev's threat was equally typical. At his April 27, 1960 press conference he said he was positive that Mr. Khrushchev does not intend to repeat his ultimatum at Baku, but that if Mr. Khrushchev means to threaten the use of force to get us out of Berlin, then the President will not attend the summit conference. This kind of interchange has been going on ever since Mr. Khrushchev's first threat 18 months ago.

It is true that he made one concession. After their meeting at Camp David he permitted the President to announce that there was no time limit on the Berlin negotiations. In other words, Premier Khrushchev promised not to use force in Berlin as long as negotiations continued. But at the same time he warned that these negotiations could not be indefinitely prolonged. Thus the threat to force the West from Berlin has been postponed, but not withdrawn, and the only real concession has been to lift the original deadline of May 1959—and he exacted a high price for that.

It should be noted that before Premier Khrushchev made this relatively minor concession on Berlin, the President had first made two major concessions which he had long sought from us. First, was the invitation to visit America; second, the President's promise to attend a summit conference and to visit the Soviet Union. In short, Premier Khrushchev only withdrew the time limit on his Berlin ultimatum at Camp David in exchange for the President's promise to go to the summit and negotiate about Berlin.

In view of all this, it seems clear that the West has been negotiating under the threat of the ultimatum and will be doing so at the summit conference itself. In fact, we negotiated about Berlin for 3 months at Geneva last year before Premier Khrushchev had even made his Camp David promise.

The basic weakness of the President's policy in the face of the Berlin ultimatum was further illustrated by his famous press conference last summer, where he said, in effect, that we could not defend our rights in Berlin except by launching a nuclear war, and that such a war was "unthinkable." The defeatist implications of this remark were clear to the German press and to Chancellor Adenauer, and we may be sure they were equally clear to Premier Khrushchev.

WHAT WERE THE PRESIDENT'S MOTIVES?

In fairness to the President it must be pointed out that these and subsequent concessions described in this article were probably not based on American fear of the Soviet Russian ultimatum but rather on its effect in Britain. The approaching British elections, and the uneasy prospect of Nye Bevan as British Foreign Minister if the Labor Party won, made the President and Secretary Dulles peculiarly sensitive to British opinion at that time. It was thought that concessions to Premier Khrushchev would help Mr. Macmillan but, as it turned out, that help proved unnecessary. However, if the President's original weakness on the Berlin issue was mainly due to his fear of the results of the British elections, it would appear that his more recent retreats have been at least partly (and perhaps unconsciously) motivated by the interests of his own party in the American elections. Once having embarked on a policy of visits and negotiations the electoral fortunes of the President's party were tied to this policy's success—real or apparent. As Premier Khrushchev is a tough bargainer, it was necessary to make some concessions to keep the negotiations going—or else openly confess failure and face a new showdown on Berlin. In this sense he has been able to exercise a kind of electoral blackmail both in Britain and in America, in addition to the brutal physical blackmail of his original Berlin ultimatum.

So much for our agreement to negotiate on Berlin under Russian guns. To make matters worse, there were similar immediate concessions on the terms of the negotiations. The first of these changes was announced by Mr. Dulles himself before he was incapacitated by his tragic illness, by his press conference statement that the West might be willing to treat with the East German puppets as Soviet "agents." This suggested a degree of de facto recognition of the Pankow Government which aroused consternation in Germany.

Next Mr. Dulles said that the West no longer insisted on free elections in the early stages of German unification, though they would ultimately have to take place. The third concession came in the arrangements for the Geneva Foreign Ministers Conference itself, after Mr. Herter became Acting Secretary, when it was agreed that the East German puppet government should partici-

pate in the negotiations on the same basis as the West German Government, though neither would have the status of major parties in the conference. Taken together, these three changes in the Western position involved a very substantial retreat.

But this was not all. At Geneva the West broke up its original package proposal despite the announcement that this would not be done. The package consisted of a temporary interim settlement of the Berlin problem, as part of a complicated step-by-step process which would lead to German unification by free elections, after a maximum delay of 3 years. When the U.S.S.R. rejected this proposal the West made a new offer at the second Geneva Conference for a special interim settlement on Berlin alone, divorced from German unification.

This last offer hinted at slight reductions in the already tiny West Berlin garrison, promised not to reenforce the Berlin garrison or to strengthen its armaments in any way, and proposed to reduce allied propaganda and intelligence activities in West Berlin, in return for a similar promise on the Communist side in regard to East Berlin. Fortunately for the West the U.S.S.R. rejected this offer.

Both Mayor Willy Brandt of Berlin and Chancellor Adenauer had grave misgivings about this offer, and since then Chancellor Adenauer has made strenuous efforts to get the American and British Governments to promise to withdraw it and go back to the original Geneva package plan when negotiations are resumed at the summit. With General De Gaulle's support, the Chancellor succeeded in getting an agreement at Paris last December that the Western position at the summit would start with the package plan and not with the Berlin interim proposal. However, the British have always made it clear that if the U.S.S.R. rejects the package then the West must renew its offer of the interim agreement.

All the news available both on and off the record indicates that the President and the British have pledged Chancellor Adenauer not to go beyond the terms of this interim agreement offer, which Lord Mayor Willy Brandt has described as the extreme limit of the possible, if the freedom of Berlin is to survive. The reasons for the fears of Mayor Brandt and the Chancellor are clear. Since Berlin has no army of its own and no West German troops can be stationed there, its defense depends on the allied garrison alone. This garrison of only 10,000 men must protect a vast sprawling city of 2 million people from invasion by organized East German mobs or other subversive devices, plus any military threats which the East German Army involves. And East German troops are already present in East Berlin.

Just as serious as the question of the size of the garrisons is the question of the proposed restrictions on propaganda and intelligence activities. For the West, Berlin is the only listening post behind the Iron Curtain. Radio RIAS is the only Western radio station whose broadcasts cannot be jammed. On the other hand, the Soviets through their Communist Parties in every country, have propaganda and espionage agents throughout the free world and none of their broadcasts is jammed by our side. Hence, Berlin is indispensable for Western propaganda and intelligence while the similar Communist activities from East Berlin are not indispensable at all. The allied interim offer, therefore, would amount to a very real surrender, in fact if not in name, to Premier Khrushchev's Berlin ultimatum.

INDIRECT RESULTS OF THE BERLIN ULTIMATUM

However, much more is involved than Berlin alone. In an article published by the New Leader on April 10, 1959, the writer warned that there was grave danger that the West might eventually make concessions to that ultimatum, not perhaps in Berlin itself but in apparently remote areas. The questions of disarmament and atomic test inspection were mentioned among the areas where such concessions should be looked for, and resisted, by American public opinion.

Unfortunately, this prediction has been fulfilled. We have already mentioned the invitation to Premier Khrushchev to visit the United States, which immensely increased his prestige behind the Iron Curtain and in neutral capitals. Before the Berlin ultimatum Mr. Dulles, with the backing of the President, had always opposed such an invitation, just as they had both opposed a summit conference unless real progress were first made at lower level negotiations. But now the leaders are about to meet at the summit with no progress from the Western point of view anywhere except a softening of the terms of Premier Khrushchev's Berlin ultimatum itself. In other words, by making a threat and then partially withdrawing it, he pressured the President into the summit.

Perhaps even more serious among the indirect concessions to the ultimatum has been in the field of nuclear tests, the field which was forecast in the New Leader article as the most likely area for such retreats.

It has escaped notice that the U.S.S.R.'s Berlin ultimatum in November 1958 was immediately followed by the ending of all U.S. atomic tests. This, too, has long been one of Premier Khrushchev's priority objectives. Only a few months before the President had written Prime Minister Nehru of India and Prime Minister Kishi of Japan that further tests were essential to develop the cleaner and more flexible atomic weapons which were essential to the defense of the free world and Chinese ground troops. But after the Berlin ultimatum the President agreed to suspend all American testing negotiations on inspection at Geneva.

Even after the discussions at Geneva began in January 1959, the President still maintained that any test ban agreement must be tied in with definite progress toward an agreement for inspected disarmament, because ending tests does not involve either disarmament or the destruction of a single nuclear weapon. But in April 1959 the President abandoned this position by agreeing to seek a test ban in isolation from disarmament, just as later we agreed to seek an interim solution for Berlin isolated from the problem of German reunification.

A third American concession in this area soon followed. The original American and British position had been that any test ban inspection must obviously involve the right of international inspection teams to investigate any suspicious event immediately and wherever it occurred. But on his visit to Russia Premier Macmillan, without consulting the United States, proposed to Khrushchev that there might be only a fixed number of such on-the-spot inspections. In other words, there would be a political decision that only so and so many inspections could be made, regardless of how many suspicious events might occur. Late in the spring of 1959 the President also agreed to this principle.

It is true that the U.S.S.R. and the Western Allies have not yet agreed on the actual number of on-the-spot inspections. Nevertheless, agreement to any fixed quota is in itself a departure from a fundamental principle of disarmament inspection.

However, the President's greatest concession in the nuclear testing field took place at his meeting with Prime Minister Macmillan at Camp David. Before Mr. Macmillan came here the U.S.S.R. had agreed, in principle but not in detail, to accept the Western terms for inspection of aboveground tests, provided the West would agree to a voluntary ban on small underground tests, which at present cannot be detected or identified by inspection. These are tests which the U.S. defense forces are most anxious to continue in order to perfect the small defensive nuclear weapons which could pinpoint military targets, avoid the slaughter of civilian populations and help to neutralize the vast Sino-Soviet preponderance in manpower. Such continued underground testing offers the only hope of developing a Western deterrent against small wars, or Soviet Russian attacks on the ground in Germany or elsewhere, without resorting to the suicidal use of massive retaliation. In short, the military dilemma which the President mentioned in his press conference about Berlin can only be solved by the increase of NATO ground forces plus the continuation of nuclear testing. Moreover, underground tests are wholly free from fallout, so that the fear of fallout which produced the worldwide clamor for ending tests, does not apply to underground testing. Thus the only valid excuse for American failure to continue such tests would be the conclusion of a satisfactory disarmament agreement, which would make the improvement of our defensive nuclear weapons unnecessary.

Yet the President has yielded on this issue also. At Camp David Mr. Macmillan and he agreed to continue the present voluntary test ban, including underground tests, pending the invention of new inspection techniques which might make underground tests detectable. The only proviso is that the Soviet Union eventually agrees to the inspection of aboveground tests, which are no longer essential or important.

What this really amounts to is an agreement to ban further underground testing without inspection as long as the U.S.S.R. is willing to negotiate. And why should they not negotiate when they are getting what they want—an uninspected test ban which they are free to violate with impunity, and with the absolute certainty that the West will honorably keep its agreement. For even if the Western Governments were willing to break their pledges it would be impossible to conceal the violation in a free country with a free press.

The test ban has already lasted 18 months. The negotiations will certainly continue throughout President Eisenhower's term, which will extend the ban to 27 months by next January. And all the presidential candidates have offered to continue any agreement the President makes beyond the 1st of next January.

Even if an agreement on inspection of aboveground tests is reached, and even if new methods of inspecting underground tests could be invented by next January, which scientists believe to be impossible, it is estimated that it will take a minimum of 2 years and probably much longer to set up the international inspection machinery.

Secretary Herter has said that while the Chinese would not be brought into the original test-ban agreement they would have to be brought in at some stage or it would not work. Thus, beyond the minimum 2 years from the date when a test agreement is signed, the moratorium on testing would be indefinitely prolonged while trying to reach an agreement with the Chinese.

The prospects, therefore, are that on top of the present period of 18 months there will be a minimum of 3 years more of an uninspected test ban, even if agreement should finally be reached, making a total of 4½ years during which the Communists can take advantage of the voluntary test suspension.

This will not only be more than enough time to wreck the continuity and to break up all the scientific teams involved in the development of U.S. nuclear weapons by testing. It will also be more than enough time for the U.S.S.R. to overtake and surpass our persent superiority in the scope and flexibility of nuclear weapons, and for this

Khrushchev can largely thank the effectiveness of his Berlin ultimatum, regardless of what happens in Berlin itself.

Let me close by outlining what I believe the Western policy on Berlin at the summit should be and still could be.

WHAT AMERICA CAN DO IN BERLIN

Returning to Berlin itself, this must be remembered: despite the long series of minor concessions noted, nothing fundamental has yet been given away and there is still time to turn the Russian Berlin ultimatum into another victory for freedom as in 1948. Berlin is prosperous now in contrast to the austerity that preceded the airlift, but that has not undermined the spirit of the people; it has only given Berlin a far greater physical reserve with which to withstand new pressures or blockades. Another difference is that Berliners now have even more to lose by a Communist victory.

Defeatists in the West talk about the vulnerability of Berlin's position, and, of course, it is physically vulnerable. However, if war comes today it will be nuclear war, so Berlin is basically no more vulnerable than New York, Paris, London, or Moscow. So long as we convince the Soviet Union that the ultimate price they must pay for Berlin is nuclear war, Berlin is as safe as any other city, for the U.S.S.R. has no more interest in going to war than we. It hopes to conquer the West without war and Berlin could be the West's greatest asset in defeating those hopes.

For it is more than just another free city. It is a refuge and a citadel of freedom deep in Communist territory—a symbol of hope for the ultimate triumph of liberty in eastern Europe. It was the scene of the West's greatest political victory in the cold war during the airlift and it is the showcase of the West's economic triumph. It is the only place where the free world and the slave world can be compared face to face; where, like Hamlet, people can "look on this picture and on that." No wonder Premier Khrushchev told Senator HUMPHREY that the city was a thorn in his side.

Premier Khrushchev is not acting in Berlin from strength as he pretends. He is acting from weakness as the tremendous new flow of refugees, over 7,000 in 1 week, indicates. That explains the violence of his new Baku ultimatum. As long as West Berlin is free, East Germany and all of eastern Europe remain political time bombs which could explode at any moment. This spirit of resistance along Russian lines of communication in Eastern Europe would be bound to flare up as it did in Hungary and Poland in 1956, if Khrushchev went to war; and Communist fear of this resistance is one of the greatest deterrents against aggression, in the opinion of Gen. Maxwell D. Taylor.

The Kremlin knows it cannot trust either the captive people or their satellite armies as long as hope for eventual freedom remains alive; but if West Berlin were turned over to the East German puppet regime, the one gap in the Iron Curtain would be closed, the tottering Pankow government would achieve legitimacy and hence stability, and the people of eastern Europe might lose all hope. That is why Berlin is so important to Khrushchev and to us, and why present negotiations constitute a supreme test for the Western alliance. We should welcome that test for it could not come at a place where our rights are clearer, our moral position stronger, our honor and national interest more deeply involved.

For all these reasons the Communists may be willing to go to the very brink of war over Berlin in the hope that we will yield something fundamental, either there or elsewhere. Our system of alliances with more than 40 nations is based on faith in the strength, honor, and courage of the United States. That faith will not survive a Berlin surrender even if it is disguised or delayed and carried out on the installment plan. To resist Soviet Russians probings we have to be willing to fight somewhere, if we must, and if we do not convince them in advance that we are willing to fight somewhere, we may have to fight everywhere. What better place can we find to make this clear, before it is too late, than in the city of Berlin?

If we stand absolutely firm against the Communist threat we will not only check Russian advances, but gain a great political and psychological victory which could change the trend of recent history. Nothing would so advance the cause of really inspected disarmament as to prove to the U.S.S.R. that its military threats cannot frighten us, even in the exposed outpost of Berlin.

Citizenship in a Free Society

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1960

Mr. WILEY. Mr. President, it was my privilege and pleasure last night to attend the 50th anniversary commemorative dinner of the Boy Scouts of America. The President was there and did a grand job of ad-libbing. There was a pageant highlighting 50 years of scouting contribution to the Nation. The scouts themselves put that on and they did a grand job.

Ellsworth H. Augustus, president of the Boy Scouts of America, presided, and the U.S. Marine Corps orchestra rendered some very beautiful music.

The Secretary of Commerce, Frederick H. Mueller, delivered a very wonderful 50th anniversary talk. The title of the speech was "Citizenship in a Free Society." I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CITIZENSHIP IN A FREE SOCIETY

(Text of address by Secretary of Commerce Frederick H. Mueller, prepared for delivery at the 50th anniversary commemorative dinner, Boy Scouts of America, Sheraton-Park Hotel, Washington, D.C., June 1, 1960)

Mr. President, President Augustus, members of the diplomatic corps, friends and supporters of the Boy Scouts of America, it is an honor and an inspiration to have been privileged to participate in these ceremonies.

In paying tribute to a half century of distinguished service by the Boy Scouts of America we are also wishing them continuing success in the years to come.

For we shall have even greater need of the principles of the Boy Scout movement as the demands upon citizenship in a free society become even broader.

An associate of mine, hearing that I was to address this meeting, asked the highly flattering question as to whether I had been a Boy Scout.

My answer was that I graduated from high school the year the Boy Scouts of America was founded—just 50 years ago this month. Can you think of a better reason for not having been a member?

I did have an exceptional opportunity as a youngster to have the friendship and inspiration of a man who, after the founding of the Boy Scout organization, became very active in its work.

I refer to Capt. Charles Belknap, a Civil War captain at the age of 20, who was the grandfather of one of my boyhood friends.

He spent much of his time teaching us the lore of the woods, especially Indian lore, on which he was an expert and instilled in us the same basic appreciation of the principles and activity later embodied in the Boy Scout movement.

Needless to say, however, that I have maintained an active interest in an organization which has been such a powerful force for good—not only for its generations of individual members and leaders, but also for the communities fortunate enough to have Scout troops and councils.

In this audience, and all over America, are dedicated men who deserve special tribute tonight.

I refer to members of Boy Scout councils and troop committees, to Scoutmasters and their adult assistants, and to other business and professional men who devote so many hours to active guidance of this magnificent Scout movement.

I know that they have had their reward many times over.

But all of us, in or out of scouting, are the beneficiaries of one of the greatest and most successful experiments in youth development in world history.

The principles upon which the Boy Scout movement was founded, and which have been responsible for its growth, are derived from the finest of American traditions.

Its emphasis on physical, mental, moral and spiritual development, its teaching of fairplay and self-reliance in every endeavor—these are the ingredients which have made this Nation great, and assure the future of our free democratic society.

Each year, since 1951, there has been awarded by the President of the United States, pursuant to an act of Congress, the Young American Medal for Bravery.

It is awarded to one who has exhibited exceptional courage in an effort to save—or has successfully saved—the life of a person in actual and imminent danger.

It is most significant that, of the eight such awards made to date, six of the recipients were Boy Scouts at the time of their act of heroism and a seventh had been a member of the Scouts.

There is another fact about the Scouts which is of particular significance to law enforcement officers.

Attorney General Rogers, whose place I am honored to take tonight, informs me that those best informed in the Federal prison system—the Director, wardens, and the people working at the National Training School for Boys and other youth correction centers—have stated that, of all the men and boys who are received in our various detention facilities, less than one in a thousand has ever had any connection with the Boy Scouts of America.

The facts should not surprise anyone familiar with the Scout oath and the Scout law.

For our legal system and the legal systems of the entire free world have a moral basis.

Lenin described the Communist ideal when he said, "All is moral that serves to strengthen the Soviet system."

How different is the constantly expressed determination—throughout the Cub Scout promise, the Boy Scout oath, and the explorer code—to do one's best to serve God in the spirit of good will and fairness to all men everywhere.

I recently had occasion to write a message for Fitness In Action, the publication of the President's Council on Youth Fitness.

I there stated that fitness must always be defined in terms of its purpose.

The kind of fitness which we seek is the development of free and responsible indi-

viduals for life and service in a free society.

Our strength grows out of our high dedication to opportunities for every individual to realize his best potential and highest destiny.

Thus we do not seek mere survival, but the enlargement of the dignity and moral worth of humanity.

To preserve and extend these basic traditions and ideals, we shall require the best will—and the greatest variety of talents, intelligence, and judgment—which a free people can muster.

This is why the program of the Boy Scouts of America, and of their fellow Scouts all over the world, is so basic to our common task.

That task is to realize the joy and fulfillment which freedom alone can win for a troubled world.

Scouting is an ideal workshop for voluntary citizenship in a worldwide community dedicated to freedom for all.

Scouts learn the lesson inscribed on the Department of Justice building: "Justice in the life and conduct of the State is possible only as first it resides in the hearts and souls of the citizens."

Scouts learn that freedom and justice are inseparable, and that justice involves respect for the rights of others.

Scouting breeds not only the will to cooperate, but also the will to think for one's self.

In providing constructive outlets for the restless and surging energies of youth, Scouting builds character through practical experience in living, learning, playing and working with others.

Scouting makes another basic contribution to the way of life of a free society and the broadest requirements of citizenship.

I refer to experience in leadership.

We adults have had occasion to witness many perversions of that word "leadership."

It has been used to cover a multitude of sins.

In a strictly scientific and objective sense, the qualities making for leadership are amoral.

They can exist regardless of how they are used.

A man is a leader to the extent that he can successfully rationalize the sentiments, attitudes, aspirations—or even the fears and hatreds—of a group.

Thus the leader may or may not lead in a sound or healthy direction.

Leadership can exploit the worst or bring out the best in a whole people.

But this vital point is often overlooked: the quality of the leader is conditioned and determined by the quality of those he leads.

In this sense people get the kind of leaders they want—and deserve.

There is leadership by default, when the rank and file are indifferent and willing—as we say—to "let George do it."

There is leadership by force when opposition to the ruling clique is discouraged or even coerced until it is no longer vocal and effective.

There is leadership by personal ambition where there is rivalry based upon prestige and personality factors regardless of the needs of the group.

And finally there is responsible leadership, which emerges when the group is made up of responsible and interested people free to express ways of accomplishing common objectives.

Here leadership does not come by default, force, or personal ambition.

It is won through the character and capacity to achieve acceptance in the free market of ideas.

The Boy Scouts produce that kind of leaders because they produce that kind of boys who grow into that kind of men.

And behind the whole process is a set of ideals, principles, goals which set in motion a chain reaction between leaders and led which preserves, strengthens, and motivates the whole group.

As Secretary of Commerce, I have achieved new insight into what has made American free enterprise so strong and productive.

In industry, as in Government, he profits most who best serves the long-run interests of the people.

Freemen, as citizens or as customers, can't be pushed around.

They must be persuaded.

And persuasion requires three qualities with which the Boy Scouts of America have been enriching our land for a half century—to be respected as a person; to have a sense of direction; and to make that direction the highest of human aspirations.

Citizenship in a free society is thus based, in the final analysis, upon more than knowledge.

Science and technology have opened new vistas to a better life of which our forefathers could only dream.

But we are all too aware that such knowledge can destroy us.

We may have reached the turning point, the moment of truth.

The coming decade will test our faith in God and man.

But we in America can face that future with great confidence in knowing that since 1910 over 35 million men and boys have taken that beautiful Scout oath:

"On my honor, I will do my best to do my duty to God and my country."

Competitive Private Enterprise in Space

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, as an aftermath to Russia's launching of Sputnik I, much has been said and written on the ability of a free society—with its divergent views and directives—to meet the pact set by a regimented state.

Speaking at Los Angeles on May 4, Mr. Ralph J. Cordiner, chairman of the board of the General Electric Co., reviewed the challenge inherent in the two systems as they compete for supremacy in the exploration and economic development of space. Perhaps of special interest to us as Members of Congress are his recommendations for changes in existing laws which would encourage the maximum contribution of competitive private enterprise. Mr. Cordiner's address was one of a series of 12 sponsored by the University of California on "Peacetime Uses of Space." It was my privilege to address the same group on April 13.

Mr. Speaker, since, in my opinion, all of us can benefit from Mr. Cordiner's very able analysis of space-age developments as viewed from the standpoint of private industry, I am presenting the text of his address for inclusion in the RECORD:

COMPETITIVE PRIVATE ENTERPRISE IN SPACE

(By Ralph J. Cordiner)

There are two basic forms of human organization: The free societies, such as the United States, and the regimented societies, such as the Soviet Union. In free societies, the government is the servant of the people. In regimented societies, the people are the servants of the government.

No society is completely free or completely regimented, but the distinction is real, and it is profoundly important to the quality of human life. The two systems are now engaged in a protracted struggle for the future of the world. They are competing in every field of human endeavor, including the field of economic development.

A distinguishing feature of the free societies, as opposed to Communist and other socialist systems, is the use of competitive private enterprise as the primary means of economic development. The citizens of the United States have both philosophical and practical reasons for preferring business enterprise to government enterprise. Philosophically, the competitive private-enterprise approach is more appropriate to a free society than government-owned or government-controlled industry, which is one of the characteristic features of a regimented society. And practically speaking, the system of competitive private enterprise has enabled this country to produce a level of living that is unmatched anywhere, anytime.

Even the rulers of Russia and China cannot think of a more effective incentive for their regimented people than the hope that someday they may attain the standards of the people of the United States. Communism and socialism may claim to be the revolutionary systems of our times, but for almost every human being outside the free world, the most successful imaginable revolution would be one that would enable him to live like the average U.S. citizen.

SPACE RAISES QUESTIONS

Now, the two contending systems are beginning to compete in a new area: in the exploration and economic development of space. This will be a vast and expensive undertaking, and is poses some fundamental questions for the citizens of the United States.

How can we utilize our dynamic system of competitive private enterprise in space, as on earth, to make newly discovered resources useful to man?

How can private enterprise and private capital make their maximum contribution? What projects will necessarily require Government chairmanship and support for their execution?

What must be done to preserve a free society while competing in an international race for space? How can we assure that when the space frontier is developed, it will be an area of freedom rather than regimentation?

My assignment in this series of lectures is to discuss some of these questions. Specifically, here is my objective:

First, I will submit for your consideration some deeply important impacts of the space challenge on this country's free society and its system of competitive private enterprise. Many will be highly beneficial. Others have chilling implications. And some are ambiguous at present. All of them will affect the life of the individual citizen and his children, and are therefore worthy of his informed interest and concern.

Next, we will examine some of the underlying principles of the U.S. political and economic system—principles that must be recognized in the formulation of national space policy.

On this basis of principles, I will then suggest the specific roles of industry and Government in the exploration and economic development of space.

Then finally, I will suggest some changes in the legal framework that would encourage the maximum contribution of competitive private enterprise.

Let us begin by looking at the future impact of space activities on the free society and private enterprise.

There will be many effects that are primarily beneficial.

A NEW FRONTIER

The advanced industrial nations can now send objects off the planet into space. This new capability opens a whole new frontier to human exploration, development, and use. At this stage, the new frontier does not look very promising to the profit-minded businessman, or to the tax-minded citizen. But then, so it must have seemed to the Greeks, when Jason returned from his exploratory trip into the Black Sea; or to the Phoenicians, when their first explorers returned from the wild and savage shores of the western Mediterranean. Most of the Greek and Phoenican traders, in 1000 B.C., probably preferred to invest their money in a good safe cargo of grain or wine, shipped over familiar sea lanes to familiar markets. But apparently a few traders, and later colonists, had the vision to see possibilities where other men saw nothing, because in a few centuries the Black Sea and the western Mediterranean became familiar and profitable regions, enlarging the resources available to civilized man.

Every new frontier presents the same problem of vision and risk. According to Herodotus, the Pharaoh Necho of Egypt sent a crew sailing around the continent of Africa about 600 B.C. If Egypt had followed through with further exploration and economic development, Africa today might be a highly developed continent. But the vision was lacking, and no civilized man again saw South Africa for 2,000 years. Leif Ericson discovered America 500 years before Columbus, but apparently the Vikings did not have the vision to see anything worthwhile on that vast, empty continent, and so history waited for another half millenium.

Even our own Western frontier seemed so unpromising just 157 years ago that the Emperor Napoleon, hard pressed for money, sold all the land from the Mississippi River to the Continental Divide to the young United States for only $23 million, including interest. With that one purchase of the unknown Louisiana Territory, President Jefferson doubled the size of the United States and changed the course of history. Thomas Jefferson did not know what he bought, but he sent Lewis and Clark to find out, and private traders, homesteaders, and businessmen followed in their path to turn the empty wilderness into the heartland of a great nation.

Even in our own time, we have had prominent men who stated that airplanes would never fly faster than sound, that intercontinental missiles could not be developed, and that space flight is nothing more than a comic-strip fantasy.

I am reciting this ancient and recent history to be sure that we have the right perspective. When a new frontier is opened, the new territory always looks vast, empty, hostile, and unrewarding. It is always dangerous to go there, and almost impossible to live there in loneliness and peril. The technological capacities of the time are always taxed to the utmost in dealing with the new environment. The explorations require huge investments of both public and private funds, and the returns are always hazardous at first. A few enterprises succeed fabulously, but many fail through inadequate planning or bad timing. The organization, capital, and equipment required for the first exploratory efforts are so large that people tend at first to think only in terms of governmental and military action; and only later do they conceive the new territory as simply an extension of their present territory and their present economy.

It takes an immense effort of imagination for the citizens to see beyond these initial difficulties of opening a new frontier. No one would pretend to foresee all the economic, political, social, and cultural changes that will follow in the wake of the first exploratory shots into space, any more than the people in the days of Columbus could foresee the 20th century world. But such an effort at prophetic imagination is what is required of us as citizens, so that we will not, like Leif Ericson, leave the making of the future to others.

The most important long-term impact of the new space capabilities, therefore, is that they open up a new frontier for exploration and economic development. From the businessman's viewpoint, this spells risk and opportunity. But there will be other effects on the Nation's business life.

ACCELERATING TECHNICAL PROGRESS

The effort to explore space, and to keep from falling behind other nations in this area, will accelerate the progress of many present-day industrial technologies. The discoveries made in the race for space will have many applications outside the space program. At the same time we must remember that the space technologies are not being made out of whole cloth; they are for the most part extensions of industrial technologies developed for commercial and military purposes.

Electronics, for example, is a technology that has been under constant development and use for four or five decades; but the needs of the space program have put extra pressure on the drive for miniaturization. This will be valuable in such important commercial fields as communications, data processing, automation, and even home appliances.

The space program will also help to accelerate the development of new or unusual power sources, such as the fuel cell, thermionic converters, the MHD (magnetohydrodynamic) process, and vastly improved nuclear power sources. It will undoubtedly help to overcome some of the limitations in materials that are now hindering progress in many industries, by forcing the development of high-temperature, high-strength materials.

The work on rocket engines is bringing in new knowledge about chemistry and combustion. Cryogenics, the study of what happens to matter and energy under conditions of extreme cold, will unquestionably move more rapidly because of the space program. Medical and biological research are being accelerated by the need to know how to sustain life in the airless, weightless, cold, and hostile conditions of space. This listing of the various technologies that will benefit from the space effort could go on for a long time. But the examples I have cited show that many early and practical gains will be made by putting to work in industry the knowledge gained in space-oriented research.

In Philadelphia, General Electric conducts two different businesses. One of them is the development and production of switchgear for the electric utilities and industrial customers. The other is the missile and space vehicle department. The two would seem to be unrelated, but in some instances they are mutually supporting operations. In the switchgear laboratory we have costly special facilities for producing very large electric arcs. The missile and space vehicle department arranged to use this same equipment to generate the plasma conditions that are necessary to test nose cones and other reentry vehicles. In the course of their work on reentry vehicles, the scientists of the missile and space vehicle department have come up with some rather unorthodox approaches to the control and use of arc phenomena—which is at the very heart of electric power control technology. Thus space research and industrial research mutually support each other.

IMPACT ON BUSINESS THINKING

Another beneficial impact of the space adventure will be its impact on the habits of thought in business and elsewhere. It will encourage bold, systematic planning of a long-range nature by forcing men to envision the means of coping with a completely new and hostile environment. It will likewise force long-range speculation and planning in the political, economic, military, technological, and social areas to anticipate future applications and effects of space technologies. Already we are seeing the growth of novel planning organizations made up of physical and social scientists, engineers, financial experts, and professional managers. Their whole output consists of ideas, forecasts, and evaluations of future possibilities. Such planning organizations are already in being in other companies besides General Electric.

The space frontier will inevitably increase the scale of thinking and risk taking by business. When we are dealing with space, we are dealing with a technology that requires a planetary scale to stage it; decades of time to develop it; and much bigger investments to get across the threshold of economic return than is customary in business today. Business must now think in international terms, and in terms of the next business generation. It must step up to the big risks with the same vision that enabled an earlier generation of builders to push railroad tracks out across the wilderness and lay the foundations of our modern economy.

Another beneficial impact of the space adventure, already visible, is that it is encouraging the creation of more businesses of all sizes. To those who insist that small business is declining, I only ask that you leaf through the advertisements in the technical magazines to see how many thousands of new businesses have sprung up to handle the requirements of modern technology. Most of them are suppliers of specialty equipment for the larger concerns that have responsibility for major components and systems. For, in addition to more small businesses, the space adventure also creates the need for much larger enterprises than are in existence today, with financial and technical resources commensurate with the tasks ahead.

Unquestionably, this need for much bigger companies and groups of companies will run head on into the prejudice of those who cherish an irriational suspicion of any business larger than a family grocery store. But such prejudice will not survive very long in the space age. The space challenge will, in fact, force government and business to reassess their relationships, in view of their inevitable partnerships in a lengthy enterprise. This is good, because it will force us to face the need for new relationships in a new world.

Thus far I have dwelt on the effects that will be primarily beneficial. But the venture into space has its negative side, too, and all of us as citizens should be aware of it.

A DANGER: GOVERNMENT DOMINATION OF INDUSTRY

It appears that the exploration of space is going to depend, for many years, primarily on Government financing and hence Government direction and control. That will be true because the exploration of space offers relatively little commercial opportunity for private business, in the years immediately ahead.

If the space effort were only a minor activity, the dependence on Government financing and control would have less economic impact. But the fact is that the military and peaceful needs of the space program are already employing a significant percentage of the industrial work force, and will make up an even larger proportion of total em-

ployment and production of the country as the years go by. The aircraft industry, for example, is broadening its scope to include missile and space technologies. Much of the electronics industry is devoted to missile and space needs. The communications, chemical, and metallurgical industries are increasingly involved. These industries are already among the largest employers in the United States, and they are the major employers of the Nation's technical manpower. Hence we are not speaking of a minor element in the national economy, but of its leading growth industries. These industries are subject to ever-increasing Government influence by way of Government contracts. And the space age is only beginning.

Research and development are also drifting under Government control. For reasons of defense and space exploration, the Federal Government has become the Nation's primary sponsor of research and development in practically all of the new technologies. The area of independent research and development by private industry and private universities is becoming proportionately smaller. This means that the pace and direction of progress in most of the leading technologies are substantially under the control of Government agencies.

The situation is made worse by the fact that, under the National Space Act, any inventions first applied in connection with a Federal space project, regardless of how they were developed, automatically become the exclusive property of the Government. This greatly reduces the incentive for the company that made the invention to develop it for the benefit of consumers and industrial customers. It does not take a prophet to see the long-term effect of this situation on the future independence of the universities and the future vitality of private enterprise.

The patent provisions of the National Space Act are based on the unusual patent provisions of the Atomic Energy Act. But it is important to realize the vast difference between the development and production of nuclear material and that involved in the exploration of space. The development of nuclear material is a relatively clearly defined, closely integrated area of technology. On the other hand, space exploration involves the utilization of nearly every field of science and technology known to man. In the case of atomic energy it has been possible to erect certain reasonable boundaries around the Government's research and development activities, while in the area of the so-called space sciences, this is totally impossible. It is the confusion of these two types of technologies which has led to the National Aeronautics and Space Administration patent clause, which is so unworkable and poses such a threat to the independence of private enterprise.

GOVERNMENT FACILITIES EXPANDING

An even more disturbing effect of the growth of Government-sponsored research and development is the temptation for the Federal Government to build its own facilities and personnel in the technical fields, or to establish so-called nonprofit organizations which are totally dependent on Government contracts. However generous their motives, these nonprofit organizations are usurping a field traditionally served by private consulting firms and producer companies, and hence are little more than a blind for nationalized industry competing directly with private enterprise—on a subsidized, nontax-paying basis. Since the space effort will, for a long time, be primarily a research and development effort, this tendency could lead to an unexpected, and perhaps undesirable, buildup of Government-controlled facilities. Looking to the future, when the space frontier has been explored and is ready for economic development, we might well find the area preempted by the Government, which would then have most of the personnel and facilities available. This would leave the Nation almost no choice except to settle for nationalized industry in space.

Please understand me. I am not saying that the people who work in Government arsenals and laboratories or nonprofit organizations are any less competent or dedicated than those who work in private industry. I am not saying that Government laboratories should be dismantled, because many of them serve a useful function. The Government needs a certain number of experienced technical men to help make realistic choices as to future missions, to set high standards of performance, and to provide technically sound policy guidance. That cannot be done by men who are not actively engaged in space research and development. Hence a certain percentage—perhaps as much as 5 percent—of the technical work of the space program is best done in Government laboratories. They should be well staffed and well financed.

But we must recognize that there are growth tendencies in these Government agencies that could overexpand under the pressures of the space program, unless proper safeguards are established. As we step up our activities on the space frontier, many companies, universities, and individual citizens will become increasingly dependent on the political whims and necessities of the Federal Government. And if that drift continues without check, the United States may find itself becoming the very kind of society that it is struggling against—a regimented society whose people and institutions are dominated by a central government.

To some of you, and perhaps most of you, this may appear to be an alarmist position. In my preparations for this lecture, I was surprised to learn how many people have simply taken for granted that space is a natural domain of the Government. Almost no one had looked forward to the time when space has been explored, to ask whether its development shall be under our traditional competitive enterprise system, or whether—unlike the rest of the economy—space shall be preempted for Government enterprise. And practically no one saw the relationship of these assumptions to the world struggle between free societies and those that are government-controlled.

PRINCIPLES OF A FREE SOCIETY

It is important, as we undertake this long and expensive race into space, that we as citizens bear in mind the kind of society we wish to maintain and develop. As I stated at the beginning of this lecture, we in the United States have a political and economic system that, in spite of its imperfections, is the most productive and admired system in the world. It not only preserves, but utilizes human freedom as the key to social and economic progress. We want to maintain this free society in a world where many factors are pushing the nations toward statist systems.

One of the basic principles of the American system is the principle of decentralized power. This country has what is known as a pluralistic society. There is not just one basic source of initiative and decision here, as in the government-controlled societies. Rather, in the United States, there are many competing points of initiative, risk, and decision—and that is the secret of this Nation's drive and creativity.

There are millions of private institutions—colleges, churches, business firms, and associations of all kinds—who do not report to a common center of decision, but operate independently and competitively, trying to excel in their own limited areas of interest. In the government area, there are many governmental units at State and local levels that do not report in a chain of command up to the Federal executive, but rather have their own limited areas of authority. Even our National Government is a government of limited constitutional powers, which, for further protection of the individual, is divided into separate executive, legislative, and judicial branches.

And in our society, final authority for nearly all decisions rests with the individual citizens. Through the political system, citizens elect and remove their government representatives. Through the market system, individuals make personal economic decisions as to what to buy, where to work, how much to save, and where to invest. By this intricate system of decentralized personal decisions, the people direct—with a precision that no centralized system could ever hope to match—the course of the economy, the allocation of resources, and the character of national life in accordance with their own personal wishes. The people, not some self-selected government elite, decide the course of the Nation. This decentralization of power is the strength of the free society, and it must be preserved.

THE COMPETITIVE SYSTEM

In the economic sphere, the principle of decentralized power expresses itself in the system of competitive private enterprise, operating in a basically free market. The competitive system offers many advantages that are not available to centrally controlled economies—and these advantages should be utilized in the space effort and the defense program, as well as the rest of the economy.

The competitive system, with its profit-and-loss disciples, puts men and companies to the test as no other system does. It rewards the creative and the efficient. It penalizes the unimaginative and the inefficient. It provides an incentive for risk not only on the obvious ideas, but also on the long shots. It provides a natural and effective system for the elimination of failure, complacency, and delay. At its best, the competitive economy has a vigor, diversity, creativity, and efficiency that no controlled economy can match.

What is the proper role of the Government in relation to the economy? Basically, it should provide an orderly political setting that encourages individual initiative and competitive private enterprise. It should provide the regulation necessary to keep the economic system competitive—as it does through vigorous enforcement of antitrust laws and other trade regulations. Government should do for the citizens, at their expense, only those things that the citizens cannot do for themselves through their private institutions. Thus, governments provide certain community services—locally, if possible; federally, if necessary.

National defense is necessarily one of the services provided by government, but in an age when military power depends less on standing armies than on technological maneuver, the role of private industry is vital. The exploration of space is a project that proceeds from a mixture of strategic motives, including military, political, economic, and ideological. It, like the national defense, will necessarily require a close partnership between the Federal Government and private industry. Each of these partners must perform its appropriate role and the problems and delays occur where government tries to do the managerial and technical work for which industry is best qualified, or industry tries to take on the functions of government.

MEETING THE SOVIET CHALLENGE

The rapid progress of the Soviet Union in missile and space technology demonstrates how a controlled economy can ruthlessly concentrate major resources in a particular field of technology, and achieve rapid results—while neglecting other fields and keeping the population at a low level of living. Some have taken this to mean that the

United States, in order to move out ahead of the Soviet Union in space technology, must adopt something like the Soviet method of strict Government control of that technology. In my opinion, such an imitative procedure is doomed to fail.

The United States has its own more effective way of concentrating efficient effort on a technical project of importance to the national security. And that is for the people, through Government, to determine the objectives to be attained, and then to turn most of the technical work of achieving those objectives over to the private firms that have the managerial and technical capacity to get the work done—using competition and profit-or-loss incentives to the maximum.

It has become the fashion, since the launching of the first sputniks, to exaggerate the Soviet achievements in space technology. Admittedly, the United States got off to a late start, particularly in the drive for high-thrust rockets. But once we were aroused to the potentialities of space, and recovered from the panic that produced the first series of propaganda failures, the true resources of the United States began to tell. The acceleration of the Atlas and Polaris programs astonished even ourselves, and showed that short lead times are not a Russian monopoly. The United States—even without high-thrust rockets—already has more scientific satellites in orbit, sending back more useful information, than the Soviet Union. When the national need is clear, the partnership of Government and industry in the United States can work technical miracles.

But we have no reason to feel complacent. Our present system of defense and space activities still suffers from half-hearted incentives and excessive bureaucracy. This country can surpass the Soviet Union in any technology it selects—if it will use, rather than suppress, its basic strength.

Therefore, it is my view that national economic and military progress will be faster and more solid, and the freedoms we cherish will be preserved, if competitive private enterprise does just as much of the Nation's scientific and technical work as possible—and Government provides the legal and policy framework to stimulate outstanding technical performance.

THREE STAGES OF DEVELOPMENT ON THE SPACE FRONTIER

On the basis of these principles, let us now attempt to foresee the general outlines of the venture into space, and try to determine the specific roles of the Government and private enterprise.

The exploration and use of space, like any other exploitation of a new frontier, will probably proceed in three main stages: the stage of exploration; the stage of economic development; and the stage of mature economic operation.

I do not mean that these will be entirely separate periods, or that after—say—40 years, exploration will end and economic development will begin. Rather, it will be an expanding picture.

First, the area of space near the earth will be explored until it becomes sufficiently familiar, and apparatus becomes sufficiently reliable, for such first industries as satellite communication to be established. We are already well into this phase, and several companies—including General Electric—are already exploring the feasibility of establishing a commercial satellite system for long-distance communications.

Exploration does not stop but moves outward to the inner solar system, which includes the Moon and the nearby planets, Mars, Venus, and Mercury. Economic development follows in the wake of exploration.

Before long there may be three phases operating simultaneously. The major area of exploration by that time, will probably be in the outer solar system, including the less dense planets Jupiter, Saturn, Uranus, Neptune, and Pluto. Preliminary economic development may be starting in the area of the Moon and the nearby planets. And space immediately around the earth—where most of the present satellites are in orbit—will be entering into mature, systematic economic operation with such commercial industries as long-distance communication on a large scale, private weather forecasting and modification, and terrestrial rocket transport.

Generally speaking, the exploratory stage is likely to be Government-directed, with substantial industry participation; the stage of economic development will be marked by Government phasing out and commercial industry phasing in; and the stage of mature economic operation will—if private enterprise is to survive in the space industries—be primarily based on private ownership and operation under suitable Government regulation, including some form of international law or agreements.

Now let us look at each of these three stages in some detail.

STAGE 1: EXPLORATION

The first era, already launched, is the exploratory period of sending out satellites and other space vehicles, at first unmanned, then manned, to see what is in space. Basically this is the stage of scientific research, bringing back as much scientific data as possible. It will not offer many opportunities for commercial (as opposed to governmental) business for private firms.

The scale and character of this exploratory space activity is indicated in the 10-year program recently submitted to the Congress by the National Aeronautics and Space Administration. This program envisions the launching of 263 exploratory space vehicles in the next decade, at a cost of about $15 billion. That is the estimated launching cost, and it is not clear whether the estimate includes expenditures for constructing and equipping laboratories and bases, for manning such facilities, and for research and development costs of newer space vehicles and propulsion systems in preparation for the following decade. It appears that the annual budget of the National Aeronautics and Space Administration, approaching a billion dollars in fiscal 1961, could in a very few years run over $3 billion a year if its program is approved.

The scale of this exploratory work, the cost of it, the lack of any financial return for a long time, and the extra expense of hurrying because of international power politics, almost necessarily makes the exploration of space primarily a Government-sponsored and Government-financed operation. It is useful to remember that the voyages of exploration in the 15th and 16th centuries, opening up the Americas and the Orient to European development, were also government-sponsored. But the successful economic development was done in the follow-through period by private traders and colonists—at first with direct government support and sponsorship, and later with the governments serving only to maintain order and provide military and naval protection. On the space frontier, the scientific voyages of exploration will also be government-sponsored and financed.

However, the management and operation of these exploratory operations should be done primarily through Government contract by private firms, with competitive incentives for superior performance and penalties for failure. Private firms and private universities should design and produce most of the apparatus required to get there and do the exploratory work.

This approach will not only utilize the most experienced scientific and technical organizations in the country, but will also accomplish the objective faster and more economically, and will help prepare the companies for the day when commercial business can be conducted utilizing space technologies.

PRIVATE SPACE FACILITIES?

Even in the exploratory phase, must we necessarily assume that all the major facilities should be Government owned? As the years pass by, and space apparatus becomes more reliable, and the work of obtaining scientific data from space acquires a more routine character—certainly many of the necessary operating facilities could be put on a self-liquidating, private industry basis.

Probably the first opportunities for private investment will come in the commercial use of satellites. I have already indicated the interest of private companies in the development of a satellite communication system.

Looking even farther into the future of space exploration, perhaps there would be economic justification for a privately owned launching service that would put objects into space for the peaceful purposes of friendly governments, international agencies, industry, and the universities. The private company would put so many pounds of payload into such-and-such an orbit, at an agreed price. At present, the idea has little appeal, since the Government's Scout program will for a time offer this service free to other nations. But as the number and variety of scientific space launchings increases, and other nations no longer wish to be dependent on the U.S. Government, the possibility may be worth exploring. Perhaps the other nations will not wish to invest in duplicate facilities for what is, after all, an operation of planetary scientific significance. This commercially operated launching service would, of course, be strictly for nonmilitary purposes.

It might be objected that foreign governments would feel uneasy about centering their peaceful space programs around launching facilities owned by an American company, for reasons of national pride and national security. But that question could easily be resolved by having the service owned and operated by an international group of companies—including companies from most of the countries likely to use its services.

The base itself, from which the commercial launching service would operate, might be modeled after a port authority. Such a nonmilitary, international space port could develop as a center for many private enterprises related to space operations. These might include service and maintenance facilities, data-processing services, space communication centers, laboratory facilities, standardized equipment for satellites and other space vehicles, fuel supplies, medical services, biological services, and general supplies.

Moving away from the idea of a commercial space port, must all future tracking stations, observatories, and data-processing stations be Government owned? How about experimental stations for the simulation of space environments? How about laboratories and stations actually constructed in space? Or will privately owned facilities one day offer these services on an international basis to governments, industries, universities, and international agencies?

In a preliminary way, General Electric and other companies are indicating their answers. General Electric in 1960 will build a new space technology center near Valley Forge, Pa. It will be built entirely with private funds. These facilities will be expanded as the needs become apparent. Even before the laboratory is built, for example, the company is studying the feasibility of constructing a space environment simulator, duplicating in one 30-foot sphere many of the

conditions of extreme cold, vacuum, and radiation that will be encountered in space. The need for a number of such space simulation facilities is not only predictable, but increasingly urgent. There is no reason why the taxpayers should have to build all of them if private industry is willing to make an investment, and the Government is willing to use private facilities as the major customer in the years immediately ahead.

The Valley Forge facilities, although they will cost several millions, are only a small investment compared with the space facilities and launching services I was suggesting as possibilities a few moments ago. But they are a start in the direction of private investment in the economic development of space.

THE MONOPOLY QUESTION

One of the standard criticisms of the entry of private business into fields requiring such high capital investments, and depending so much in the beginning on Government business, is that the Government may actually be helping to establish a private monopoly. For example, some years from now there may be enough business for one commercially operated launching service, but not for several competing facilities. In this case, it is argued, you do not get the advantages of competition, so why not establish a Government facility in the first place?

There are three good answers to this argument. One is that the private facility, even if it is temporarily a monopoly, still has to meet the discipline of earning a profit and avoiding a loss, and hence would be more efficient than a Government facility; two, the Government would in effect regulate this monopoly because it would be the major customer for some time; three, the monopoly would only be temporary. It would serve the important function of laying the groundwork for competitive private enterprise in the particular field, and keep it from being pre-empted by Government enterprise.

The story of transoceanic air transportation is an illuminating example. In the early 1930's, there were no transoceanic airlines. But it was obvious, technologically, that scheduled transatlantic and transpacific air traffic would someday be possible. To assure leadership for the United States in this important field, Pan American Airways explored the routes and established scheduled transoceanic service. At that time there was no American flag competition in transoceanic air travel, and Government airmail contracts were granted to help make the business possible in the early years. This proved to be a wise policy, because U.S. leadership in international air transportation is now a fact. And Pan American has long since ceased to be the only transoceanic service. International air travel is now a vigorously competitive business, providing reliable, low-cost service for millions of passengers every year.

Surely this instructive example shows how industry and Government can cooperate to assure that U.S. leadership will be established in the peaceful uses of space, on the competitive private enterprise basis that assures efficient low-cost service for the public.

The challenge, of course, is primarily to industry itself. Private enterprise must have the vision and courage to encompass its emerging opportunities, invest the capital, and work for the legal and policy changes essential for success.

STAGE 2: ECONOMIC DEVELOPMENT

As the exploration of space pushes farther and farther out, the "inner space" near the earth becomes sufficiently familiar for the next stage to begin: the stage of economic development.

This stage is a prelude to the time when space will be as familiar as land, and mature commercial businesses can be conducted. The developmental period will be a period of infant industries and expensive risks.

Most likely the first businesses suitable for commercial operation, using space technologies, will be worldwide communication by satellite, private weather forecasting, and high-speed earth transport by rocket. Each of these possibilities is being discussed in detail by other lecturers, and therefore I will not describe them here. Instead, I will suggest the appropriate roles of Government and private enterprise in their development.

Businessmen who believe in the competitive private enterprise system are generally opposed to subsidies, with two classical exceptions: defense industries and infant industries of national importance. Most of the early space businesses will qualify on both counts.

Here, in my opinion, are the appropriate roles of Government and private enterprise in starting these early commercial businesses in space.

The preponderance of the research and developmental work and special facilities should at first be financed by Government, because of the national interest in establishing U.S. leadership. But the companies concerned—in their own interests—should also invest in appropriate facilities and manpower to conduct research and development. As an area of space becomes familiar, Government-financed research and development should be shifted outward or to other projects of national interest, and private capital should complete the developmental work.

In these areas with commercial potential, the Government should avoid the temptation to build operating facilities (under the guise of demonstration units) that will tend to preempt the field for tax-subsidized Government enterprise, and prevent the establishment of private facilities. For example, if in the 1930's the United States had established a nationalized airline instead of helping Pan American to lay the groundwork for international air travel, it is likely that international air travel, would still be a Government monopoly as far as the United States is concerned. The public then would not have the advantage of many private airlines competing for their transoceanic business.

Private industry should move as fast as possible to establish these early space businesses, so that the Government can shift its efforts to the many other areas of exploratory work.

STAGE 3: MATURE ECONOMIC OPERATION

Finally, we come to the stage of mature economic operations in space. As areas of space become familiar, and businesses become established, the Government should phase itself out of this area of economic and technical work, and do all it can to encourage the growth of a vigorous competitive private enterprise economy utilizing space resources.

What these commercial businesses in space may be, no one really can say because we know so little about the potentials. Usually one of the first commercial operations in a new frontier area is to bring back raw materials not available in the homeland. It is entirely possible—although many experts now think otherwise—that new or rare minerals and chemicals will be found on the moon and planets, and among the asteroids, that will be unexpectedly useful here on earth. As space transportation becomes more reliable and less costly, and the means of sustaining life in space are developed, it may become economically feasible to mine and bring back these rare metals and chemicals, just as it was worthwhile to haul incense and silk halfway around the world in slow sailing ships 500 years ago. Some have suggested that, as techniques advance, it might be possible to mount rockets on an asteroid of pure iron or pure nickel—if such exist—and orbit the huge mass of metal down to earth. With high-grade earth sources of metal becoming scarcer with each passing decade, the idea of bringing in a new Mesabi from outer space may be less fantastic in 30 or 40 years than it is now. Perhaps the radiant energy of space can somehow be controlled and made useful. Perhaps new medical resources, or new food resources, can be found on other planets. It does not seem probable, but who is to say? Space travel itself, at first for research and then for commercial purposes, may well develop into an economically profitable competitive business. No one can predict how, or even whether, outer space will offer resources that are useful to man; but some very unpromising frontiers in the past have ultimately been tamed.

As the economic resources of space are developed, we must realize that our private enterprises will be competing with the state-operated systems of other nations. But that competition between Socialist and Capitalist economies already exists here on earth. By the time a mature economy has evolved in space, wholly new forms of economic organization may have evolved on earth—hopefully in a free rather than a regimented context. International laws and treaties with respect to space will be developed at the same time, and we must see that they are compatible with the efficient operation of competitive private enterprise in space.

LEGAL AND POLICY CHANGES

Now finally, your chairman suggested that I outline what changes should be made in the Government's legal and policy framework, to enable private enterprise to make its maximum contribution in the space venture. I am not, of course, prepared with a comprehensive legislative program for the space age. In fact, one important principle is that we must not regard space as a completely different area that will require a major break from our established legal and political traditions. The space program must not be used as an excuse for debasing, distorting, or fundamentally changing the Nation's distinctive political and economic institutions; as a means, for example, of breaking down the patent system, or of building up a nationalized industry, or of increasing political control over economic life. Instead, we must recognize that the existing system of business regulations and traditions provides a sound basis for the extension of our economy into space for the benefit of all the citizens, as it has already been extended into the atmosphere by way of airlines, broadcasting, communications, and other industries.

To accelerate that proper extension of our economy into space, and also realize the military and ideological advantages of leadership in space, there are some legal changes that should be made.

NASA PATENT PROVISIONS

The patent provisions of the National Aeronautics and Space Act of 1958 may prove to be a substantial deterrent to progress in space. Furthermore, they could weaken and ultimately destroy the long-established patent system which has proved to be a key factor in the growth of the Nation's economy.

The present provisions of the Space Act, like the patent provisions of the Atomic Energy Act, depart radically from the patent policies of the Defense Department and of industry generally by requiring that the Government receive title to all contractor inventions, subject only to a possible waiver at the discretion of the administrative authorities. From our own experience in General Electric we know that such hasty decisions that violate well-tested practices to meet alleged emergencies or special circumstances usually end up doing more harm than good.

Testimony before Congress indicates that under the policy of uncertain patent protection, companies have been hesitant even to accept contracts for space projects that have interesting commercial possibilities. The witnesses made this point: If a company has invested much of its time and money in developing a certain technology, is it realistic to expect the company to liquidate this investment by turning its knowledge over to its competitors by way of the space agency?

As it is, only the most readily adaptable inventions made under space agency contracts will be developed for consumer and industrial use. Many other inventions requiring greater pioneering effort will lie undeveloped because the inventor company has no incentive to invest in the development of a commercial market; his competitors could easily put a copy on the market just by getting a free license from the Government.

We must ask ourselves: can this country accept the loss of the historic patent incentive and yet win the space race?

Fortunately, a subcommittee of the House Committee on Science and Astronautics has recognized the problem, and has developed what appears to be a sensible legal and administrative solution. The Congress should correct the situation as quickly as possible.

INCENTIVES FOR PERFORMANCE

Since so much of the intial work in the exploration of space must be done under Government contract, the Government should realistically offer economic as well as patriotic incentives for outstanding performance in the public interest. Under the Government's customary cost-plus-fixed-fee approach, outstanding performance or economy offers little immediate reward. For highly complicated research and development projects, competitive bidding on a straight price basis does not provide the answer. Too often, a contractor would be tempted to submit a very low price and then devote himself to doing the minimum necessary to fufill the contract. Instead, contracts must be negotiated that offer exciting incentives for exceeding agreed standards of performance, economy, and speed—and sizable reductions in fees in case of failure.

For example, General Electric's Missile and Space Vehicle Department has a contract with the AMC Ballistic Missiles Center that moves in the right direction. It is a contract to come up with the next generation of nose cones, a 2-year research and development contract. The target fee for performing the work was negotiated with incentive provisions that provide a substantial increase in fee for exceeding certain measured performance standards, time schedules, and cost targets. And its fee can be reduced by the same amount by failure to meet these standards. Thus General Electric has a real incentive for technically bold, high-quality performance.

Contracts like this will gradually separate the efficient from the inefficient among the contractors. This is real competition. Such profit incentives will not replace, but supplement the motives of duty that encourage leading companies to accept contracts and invest in their own research and development facilities.

INDEMNITY PROBLEMS

The Congress must also accept the indemnity problems that may be too big for private companies to carry, on some future projects. For example, space vehicles propelled by nuclear power are a future possibility. There is an extremely remote possibility that one of these might fall in a city and do widespread damage to life and property. The ensuing liability suits could wipe out or profoundly cripple any private company that was in some way legally liable for such an accident, even though it could do nothing to prevent it. The Government will have to develop some system to limit the private liabilities in the case of these highly improbable accidents, or companies will be unwilling to risk their entire existence by taking such contracts and the public would have no real way to recover damages. The Congress has already recognized the indemnity problem in the atomic energy area and in connection with international air travel.

ANTITRUST LIMITATIONS

The antitrust laws are a vital bulwark of the competitive system, and must be vigorously enforced. At the same time, the large and expensive projects that will win space leadership for the United States will require much larger companies, or even teams of companies, perhaps on an international scale, to carry them out successfully. The law should encourage, rather than inhibit, such large-scale undertakings. Section 708 of the Defense Production Act of 1950 already allows exemptions from the antitrust laws for certain voluntary agreements and programs among companies in furthering the national defense. This points the way toward recognizing the need for larger financial and technical aggregations in the space age.

INTERNATIONAL LAW

Any frontier must be subject to law and order. Earth boundaries obviously mean very little in space, and hence a structure of international law and treaties must be developed. The maintenance of order in space will have to be the function of an international agency—most likely the United Nations.

REGULATION AND LICENSING

Because of the international and defense complications, it will probably be necessary to have a system of regulation and licensing for private uses of space. The duties of the regulatory agency should be clearly defined, to be sure that the regulatory powers will be used only to assure public safety and necessary technical standards. Such regulatory powers should not be so broad that they can be used to control and shape industry in accordance with the personal preconceptions of the staff of the agency.

POLICY DIRECTION

The need for speed and efficiency in the exploration of space requires more coherent policy direction from the Federal Government. The individuals who hold responsibility in the various agencies appear to be doing their best to bring order out of chaos, but their efforts in some areas of the space program seem to be frustrated by a confused and top-heavy administrative arrangement.

I have not studied the organization in detail. I would only suggest that the number of reviewing committees be kept to a minimum because they can become devices for evading responsibility and postponing decisions; that responsibility and authority for decisions rest clearly with the men held accountable for results; and that any incentives to build empires among the agencies be removed by relying primarily on private laboratories for technical work.

CONGRESSIONAL STATEMENT OF INTENT

Finally, to assure that the public and the Government agencies involved have no misconceptions of national policy, it would be worthwhile to have a congressional statement of intent to use competitive private enterprise to the maximum in the management and execution of Government technical projects; and to encourage private investment in space-oriented technologies and businesses wherever possible.

OUR CHILDREN'S WORLD

To sum up, then, the world is extending its boundaries out from the planet into space; a tremendous enlargement of the area in which man will find resources for living. To explore and tame the new space frontier will require a great technological effort. The very effort will force many new inventions that will not only be useful to us in space, but can greatly advance industrial productivity and levels of living in the United States and the rest of the world.

Yet the ultimate question that faces the citizens at the threshold of the space age is not whether the technical achievements will be made, but how they will affect human life. Will the drive for space push mankind into a steel trap of regimentation, or will it open up new vistas of creativity and freedom? Will the new, larger world of the future, with its boundaries moving out to the other planets and beyond, be a free world or a regimented world?

The answer to this question, the heritage we leave our children, will be determined to a large degree by how the United States—the world's leading industrial nation—goes about the exploration and development of space. If we go at it by the route of regimentation and government enterprise, if we allow the Communist powers to establish our course, patterns will be set that will be almost impossible to break. On the other hand, if we use the strength of competitive private enterprise, we will not only advance faster, but will help to assure that the world of our children will be a free world, honoring the dignity and creativity of man.

The Awesome Decision

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. MULTER. Mr. Speaker. I am pleased to commend to the attention of our colleagues the following article by the Honorable David L. Bazelon, circuit judge, U.S. court of appeals.

As a member of the U.S. court of appeals in Washington, D.C., since 1949, the Honorable David L. Bazelon has written more than 25 opinions on the insanity defense in criminal cases, highlighted by his formulation of a broadened test of criminal responsibility in Durham against United States in 1954. For these opinions, which have evoked worldwide discussion, the American Psychiatric Association awarded him a certificate of commendation, proclaiming that "he has removed massive barriers between the psychiatric and legal professions and opened pathways wherein together they may search for better ways of reconciling human values with social safety." Dr. Karl Menninger of the famed Menninger Clinic in Topeka, Kans., describes the Durham decision as "more revolutionary in its total effect than the Supreme Court decision regarding segregation."

Judge Bazelon's article, as it appeared in the Saturday Evening Post of January 23, 1960, follows:

THE AWESOME DECISION

(By David L. Bazelon, circuit judge, U.S. court of appeals)

The administration of criminal justice and the extent of individual moral responsibility are among the crucial problems of a civilized society. They are indissolubly linked, and together they involve our deepest

personal emotions. We often find it hard to forgive ourselves for our own moral failures. All of us, at some time or other, have faced the painful dilemma of when to punish and when to forgive those we love—our children, our friends. How much harder it is, then, to deal with the stranger who transgresses.

Few of us view punishment realistically. Whether applied to criminals or to our own flesh and blood, we are profoundly confused about punishment. We waver between feeling "he deserves it" and "it will do him good." The first reaction is our immediate emotional response, the second our rationalization after the fact. "It will do him good" can be proved or disproved; it lies within an area of practicality. "He deserves it" is unprovable, a proposition derived from absolutist morality. The latter reflects the retributive theory of justice, whereby appropriate penalties are necessary if only to uphold the moral law. But many people cannot accept this view. They argue that, though punishment may not be defensible in all cases, it cannot be dispensed with because social balance requires the gratification of the need for vengeance. Or they assert that we must punish to deter potential criminals.

Nowhere is the social attitude toward individual moral responsibility more sharply focused and more dramatic than in a criminal court. Here, in the whole process of justice—symbolized by the trial—the full weight of society's official force, moral and physical, is arrayed against a single human being. More often than not, this defendant is one of life's failures—part of the human debris of civilization. Thus, the considerations which govern the determination of his responsibility are a measure of man's humanity to man, or lack of it.

We pride ourselves, and in many respects justly so, on our efforts to insure a fair trial, and so manifest the advanced state of our civilization. Yet in an essential aspect of criminal justice we remain backward. We remain backward in the way we deal with the question of responsibility as it relates to mental disease, personality disorganization, and the nature of antisocial behavior. Our criminal courts do not generally welcome the psychiatrist with his greatly expanded knowledge of unconscious motivations and environmental conditioning. Instead they cling doggedly to an age-old rule of criminal responsibility which makes modern science irrelevant to the critical question of the defendant's psychic state. In effect, our courts still ask a 19th-century question and insist on a 19th-century answer.

I refer to the famous formulation of the insanity defense which resulted from the trial of Daniel McNaghten in 1843. This rule—the prevailing law both here and in England for more than a century—requires a jury to consider only whether the defendant knew what he was doing or knew that it was wrong. In relying exclusively on the rational capacity of the mind, this so-called right-wrong test reveals its ancient lineage. It is based on the prescientific view of the human psyche and behavior, wherein the whole story is the eternal conflict between reason and passion. As long as any capacity to know or to reason remains intact, so the theory goes, failure to use it to control the passions constitutes choice, and is therefore culpable. The accused should be punished because he chose to do wrong.

But today we know that a choice of behavior involves the whole functioning human, not just reason alone. We are all painfully familiar with examples of behavior in which the accompanying thought process is only rationalization. Psychiatrists continually come across mentally sick patients who retain substantial reasoning powers. Indeed, one of the commonest symptoms of serious mental disorder is such a dissociation between the rational top of the mind and the emotional underpinnings of the personality.

On January 20, 1843, Daniel McNaghten, a Scottish wood turner, fatally shot Edward Drummond, secretary to the Prime Minister, Sir Robert Peel, as Drummond was entering a government office in London. The assassin had mistaken the secretary for the Premier. "The Tories in my native city have compelled me to do this," he explained later. "They follow and persecute me wherever I go and have entirely destroyed my peace of mind."

The sole issue of McNaghten's trial was insanity. His counsel, Alexander Cockburn, called nine physicians and surgeons to the stand. All testified that the accused was insane. The prosecution entering no medical testimony in opposition, the presiding Lord Chief Justice Tindal directed a verdict of not guilty, on the ground of insanity. McNaghten spent the rest of his life in mental institutions.

The public reaction was indignant; many people ascribed the shooting to a political plot. Queen Victoria herself protested the verdict. As a result, the House of Lords put several questions to the 15 judges of England. Their answers have governed the insanity defense ever since throughout most of the English-speaking world. Lord Chief Justice Tindal set forth the McNaghten rules as follows:

"The jurors ought to be told in all cases * * * that to establish a defense on the ground of insanity, it must be clearly proved that, at the time of the committing of the act, the party accused was laboring under such a defect of reason, from disease of the mind, as not to know the nature and quality of the act he was doing; or, if he did know it, that he did not know he was doing what was wrong."

The insanity defense had a long history prior to Tindal's formulation. As early as the 13th century, British law recognized that "a madman does not know what he is doing." In 1724 Judge Tracy held that insanity was exculpatory if the defendant "doth not know what he is doing, no more than * * * a wild beast." Thirty-six years later the "wild beast test" was abandoned in favor of the defendant's capacity to distinguish between "right and wrong"—the precursor of the McNaghten rules.

The insanity defense reflects a concept that has pervaded the entire history of the criminal law. We call it the doctrine of mens rea, sometimes described as "guilty mind," or "evil intent." It can be traced back to Deuteronomy 19: 4–6, "Whoso killeth his neighbor ignorantly, whom he hated not in time past * * * shall * * * live." Mens rea is a capsule phrase used, in connection with most crimes, to describe a state of mind which makes the offender blameworthy and so subject to criminal sanctions. Whether this state of mind is a deliberate intent to commit the prohibited act, or some form of negligence, it usually involves ability to anticipate consequences and guard against them. The insanity defense is designed to relieve from criminal liability pefsons who are incapable of such a state of mind.

The concept of insanity—conceived by lawyers, not by doctors—is rooted in this requirement. Originally the insane defendant was thought of as one so obviously bereft of reason that, on the basis of common experience alone, all men could agree that he was incapable of entertaining an evil intent. Through early legal history only total insanity was recognized as a defense, probably because no scientific knowledge existed to differentiate the shadings and gradations of mental disease.

It is ironical that at the very time when psychiatry was beginning to emerge as a distinct medical discipline, antiquated, nonmedical ideas about insanity were frozen into the McNaghten rules. The law closed the door in psychiatry's face.

It was in 1838 that the American psychiatrist, Dr. Isaac Ray, published his classic "Treatise on the Medical Jurisprudence of Insanity," attacking the concepts upon which, 5 years later, the rules were based. In fact, McNaghten's counsel cited Dr. Ray. Other psychiatrists soon joined Dr. Ray in the attack. In this century the chorus of protest has become deafening. Some of the world's leading psychiatrists have refused to testify in court under the distorting limitations of the McNaghten rules. In a poll taken a few years ago, 80 percent of 300 American psychiatrists pronounced those rules unsatisfactory, and numerous jurists have agreed .Justice Cardozo flatly stated, "Everyone concedes that the present definition of insanity has little relation to the truths of mental life."

The main criticisms of the right-wrong test are fourfold: First, it misses the point entirely, because whatever "insanity" means, the term refers to abnormal conditions of mind that cannot all be gathered together under the rubrics "know" and "wrong." Second, the test is based on an outmoded theory of faculty psychology—derived from phrenology—that divided the topography of the mind into separate compartments. Modern psychology views a man as an integrated personality, and reason as only one element of that personality and not the sole determinant of conduct. Third, the test poses to the expert an ultimate question involving legal and moral as well as medical issues. Fourth, the test has so straitjacketed psychiatric testimony that insanity is defined exclusively in terms of extreme psychosis and patent organic deterioration.

What arguments favor the right-wrong test? Chiefly that it reflects traditional morality governing the conduct of normal persons, that it persists historically, that alternative tests are inadequate and, perhaps most important, that many courts ignore the test as often as they apply it. From the juridical point of view, what all this controversy adds up to practically is whether we are to have more and freer psychiatric testimony. With it stated this way, I myself have no hesitance in taking a position solidly in favor of freer and fuller expert testimony.

This is exactly what we did in the District of Columbia 5 years ago when the U.S. court of appeals adopted the Durham rule. Under this new, more liberal rule, a modern and comprehensive body of law governing the administration of the insanity defense is being slowly built up on the basis of continuing experience. At the same time the community's fears that great numbers of dangerous persons would be freed to attack again are being put to rest. Nothing of this sort has happened. Defendants acquitted under the Durham rule have been sent to mental hospitals, many of them for longer periods than they would have served in prison. And they appear to get into less trouble after release than prison convicts.

Although no other court has yet adopted the District of Columbia precedent, it is not an eccentric backwash of American jurisprudence. For one thing, it is an adaptation of a broadened test that the Supreme Court of New Hampshire adopted in 1870. This test, which allowed the insanity plea if the unlawful act arose from mental disease, was fashioned largely under the influence of Dr. Isaac Ray. For another, the Durham rule reflects a widespread movement among the legal, psychiatric and allied professions to work out alternatives to the rigid spirit of the McNaghten rules. For example, in 1955 a new test designed to liberalize McNaghten was proposed by the American Law Institute, a leading body of distinguished lawyers, judges, and scholars.

To recount the Durham case, on July 13, 1951, 23-year-old Monte Durham broke into

a Georgetown home and was caught pilfering clothes. Since the age of 16, Durham had been charged with passing bad checks, embezzlement, parole violation, car theft, and attempted suicide. Three times he had been committed to mental institutions. Psychiatrists had variously diagnosed him as "psychotic with psychopathic personality" and, oddly, "without mental disorder but with a psychopathic personality."

Following his indictment for housebreaking, he was adjudged of unsound mind and again sent to a mental hospital. Sixteen months later the hospital's superintendent certified that "prolonged psychiatric study has established that [Durham] suffers from psychological illness, but is mentally competent to stand trial."

As in the McNaghten trial, the sole issue was the mental condition of the defendant. The only medical witness was the Government psychiatrist who had originally found Durham incompetent to stand trial, and his testimony "was unequivocal that Durham was of unsound mind at the time of the crime." The trial judge, who heard the case without a jury, strictly applied the McNaghten test and rejected the psychiatric testimony because the Government doctor declined to answer categorically the ultimate question—did Durham know the difference between right and wrong?

On appeal, Judges Henry W. Edgerton, George T. Washington, and I held this was error and, in reversing the conviction, we announced a broader test to be applied in all subsequent cases. We stated that the new rule "is simply that an accused is not criminally responsible if his unlawful act was the product of mental disease or mental defect." Under this test the question would be "whether the accused acted because of a mental disorder, and not whether he displayed particular symptoms which medical science has long recognized do not necessarily, or even typically, accompany even the most serious mental disorder."

Our underlying purpose was to unfreeze the expanding knowledge of psychiatry, as it could be applied to the law, in order to free the psychiatrist from having to make the moral and legal determinations required by the right-wrong test for which he has no special qualifications, and to allow him to address himself to the problems of mental disease and defect, for which he is qualified.

Finally, it was our purpose to restore to the jury its traditional function of applying "our inherited ideas of moral responsibility to individuals prosecuted for crime" under the historically sanctioned precept that "our collective conscience does not allow punishment where it cannot impose blame." But in making the awesome decision as to criminal responsibility, the jury "will be guided by wider horizons of knowledge concerning mental life."

According to the opponents of the new rule, it creates more problems than it solves. If this statement be amended to read "uncovers" instead of "creates," I would agree. I think that any realistic revision of the insanity formula is bound to reveal difficult problems which have been ignored or suppressed under the McNaghten test. Many psychiatrists, for example, who admit their inability to answer the right-wrong question, follow the mechanical practice of testifying that a psychotic cannot distinguish right from wrong, while an individual suffering from a nonpsychotic mental illness can. They so testify even though such an artificial demarcation has neither a medical nor a legal basis. Under Durham, or any broader test, there will not be the same compulsion to dispose of the issue by means so deviously mechanical—a practice that also wrongly relieves the jury of its duty to decide the case.

I agree with one of the more widespread criticisms of the Durham rule, that the term "mental disease" cannot be rigidly defined. But that is because it is a dynamic concept undergoing continual redefinition in the course of clinical experience. It is strange logic, however, to conclude from this fact that the complexities behind the term should therefore be ignored or that lawyers should arrive at a definition a priori. We must instead seek out the best current scientific explanations.

Another frequent criticism of the Durham test holds that any serious investigation of the nature of mental illness and its effect on criminal conduct will lead to the conclusion that all criminals are mentally ill. If that is so, then it is high time we found it out. I am flabbergasted that some of the most dogmatic defenders of McNaghten actually believe that all criminals are ill. If true, would this not require a complete reconstruction of our criminal law? At the very least, it would require us to abandon the special defense of insanity and the corollary concept of mens rea, thereby overturning our historic system.

A third objection to the new rule is that the resources of psychiatry are not up to the task. This may or may not be valid, but we do know psychiatry has more to give than the law now receives. Until we accept what it has to offer, we cannot discover the actual limitations of psychiatry.

The fourth objection to the Durham formulation is that it is difficult to determine whether a criminal act is the product of mental illness. This is true, but I think unavoidable. Other formulations involve the same difficulties—the American Law Institute proposal uses the phrase "as a result of." Moreover, juries solve a similarly difficult problem of causation every day when they decide in personal-injury cases whether it was the defendant's negligence that caused the plaintiff's injury.

But the overriding objection to Durham undoubtedly derives from our deepest feelings about punishment. In the traditional mode of thinking we, the good citizens, feel that they, the criminals, should be punished. So, the argument proceeds, it is just as well that only "slobbering idiots" should be excused, as under the McNaghten rules. A broader rule is bad just because more criminals would get off.

This objection, based on the felt need to punish, brings us to an issue that transcends legalisms and all merely professional considerations—an issue embracing the whole of society. Here are involved the mutual demands of society and the individual upon each other. Here, within the democratic framework, lies the grand context of criminal responsibility.

Practically speaking, the legal term "insanity" can be defined by the consequences of its use. When pronounced "not insane," the accused is sentenced to prison as a punishment. When held insane, he goes to a mental institution for treatment. This is the practical aspect, what all the theoretical discussion boils down to—punishment or treatment.

Prisons and mental hospitals fulfill a similar function to the extent that both segregate undesirable persons from society. In this sense, both protect society. According to ideal penological theory, punishment reforms; after release the prisoner will behave acceptably, and society will be protected. But in reality the rate of recidivism is high—more than 60 percent among Federal convicts. Now, it is majestically simple that, since punishment so often fails of its purpose, something else is needed. And this something else is treatment.

Punishment as such, remember, is supposed to fit the crime, not the criminal. When the sentence has been served, the warden of the penitentiary signs a certificate to that effect, and the prisoner rejoins society—even though it may be obvious that the punishment has worked no cure and indeed may have intensified the prisoner's criminal impulses. On the other hand, an inmate of a mental hospital is released only when certified by the staff as cured, or at least not dangerous to himself or others. No psychiatrist, to be sure, is infallible. He may err in his prognosis and recommend release prematurely, with disastrous results to the community. Many State hospitals, moreover, are too overcrowded and understaffed to provide optimum care. But at least the effort is made, to exercise responsible medical judgment, whereas the prison warden is called upon to enter no judgment at all except as to parole. Is it not evident that treatment rather than punitive incarceration offers society better protection? So much for the practical aspects.

But as I have pointed out, society tends to waver between the ideas, "he deserves it" and "it will do him good." A somewhat more sophisticated attitude is reflected by the so-called deterrence theory which attempts to merge "he deserves it" and "it will do him good" under the synthetic proposition, "it will do us all good." This theory not only underlies the usual learned arguments against broadening the insanity defense but forms the central theoretical problem of the entire criminal law.

The deterrence theory, like its less sophisticated antecedents, seeks to justify the existing amount of punishment meted out as a means of preserving public order. By imprisoning the criminal, it is contended, we deter others from committing crimes. The prisoner thus becomes a scapegoat. In a free society such use of an individual cannot be justified except by a survival of the "he deserves it" feeling as well as the sanguine belief that his incarceration both serves as a beneficial example to all and does the prisoner good. Thus, the ancient views of retribution persist in the deterrence theory.

It seems to me that this theory begs the entire question of justice for the individual. Unlike the retributive theory, it assumes that, though punishment may not be right, may be purposeless, or downright destructive to the individual, yet it protects society, and so is justified. Hence, even the mentally ill and hopelessly psychopathic recidivist are sacrificed for the purported social benefit. Thus, the individual is degraded—contrary to our democratic ethos.

Unarguably, the maintenance of public order must be backed up by a system of sanctions. Neither law nor morality can sustain itself from generation to generation without the threat of some penalties. Many of us do not steal, not because of a fear imposed from without, but because of an internal control system generated by our mores and traditional beliefs. For most of those who require external controls it is the threat of going to jail, not actual time spent there, that keeps them from stealing. We need sanctions to give substance to the threat. How much actual punishment is required in order to sustain the threat of punishment at an effective level? That is the real problem posed by the deterrence theory. Many of its supporters seem to answer, "Exactly as much as we now have." This strikes me as both too easy and antihistorical. After all, it was not so long ago that whippings and executions, carried out as public spectacles, were considered essential to the preservation of order.

In our society the essential aim of the criminal law should not be to induce mass fear of punishment, but to reaffirm the value of each individual by due process in his conviction and purposeful treatment thereafter. Too often, in our eagerness to protect society, we forget that society is composed of individuals. In a democracy, society or the state is no more than the sum of its individual components. The state exists for

the benefit of the individual, not vice versa, as in Nazi Germany or Soviet Russia. Consequently, repressive law can be justified only as an accommodation of the mutual liberties of two or more individuals. The real difference is not always apparent, and at times we may favor one group of individuals over another in the interests of those liberties. But the basic theory does not change. It remains transcendently important. It is perhaps the central thread of continuity in our law.

If we now consider the issue of criminal responsibility on spiritual rather than practical or ideological grounds, we discover an ancient philosophical conflict at the heart of the problem—free will versus determinism. I am not equipped to deal with this great problem as a philosopher or theologian would, but I want to venture one or two observations.

If the question is whether we make real choices, two things are clear—we obviously seem to do so, and some people seem to have a wider choice of action than others. Intellectual, physical, and emotional capacity, wealth, social status, all extend or limit the area of choice. Yet, in the eyes of the law, for example, the poor and the rich face the same responsibility to resist the temptation to steal, even though the poor may be overwhelmingly tempted and the rich not at all.

Surprisingly, this freewill-determinism issue is seldom discussed in the practical context of actual choice, but usually on the level of abstract theory. On that level the argument often revolves around the old issue of science versus religion. Freudianism has carried the banner of scientific determinism into the inner sanctum of theology—the human soul. Darwin placed the human animal in nature, and Freud attempted to explain what had occurred inside this human animal. His success has been substantial. Freud's concept of the unconscious as a source of motivation, as part of the great revolution it is working in modern thought, has compelled us to reconsider the question of criminal responsibility.

As a result, an expanded category of disease has supplemented or displaced the diminished category of "evil." Evil is not a scientific word. Madmen were once thought to be possessed by evil spirits, and the means of exorcising the devil included torture. If we are not yet prepared to view every juvenile car thief as ill, many of us do feel that his social and economic background may be out of joint and may itself be "ill." The notion of a perfectly personal evil no longer suffices to explain all the events in a human career.

Evil, of course, can only be punished or forgiven. But illness is supposed to be ameliorated or cured. Thus the name we put to our failures makes a difference. We all tend to believe in free will when we entertain hopes for the future, but switch to determinism when recalling our past failures. I suggest we extend the same consideration to the failures of others.

As Hollingshead and Redlich suggested in their study, "Social Class and Mental Illness," neurosis is something of a class privilege. It is less common in the lower social strata. There the number of psychotics and psychopaths appears to be greater. According to the Hollingshead-Redlich findings, the neurotic containment of conflict requires certain amenities of life, especially the possession of social values to be preserved. The mentally ill of the poor classes, including many criminals, lack the leisure for inner neurotic torture, and have less to lose by "acting out" their conflicts. Though no conclusive scientific proof exists, the indications are strong that a good deal of criminal behavior should be viewed as a pathological function of marginal socioeconomic status. Some 90 percent of the criminal cases which come before our U.S. court of appeals involving the insanity plea concern indigent defendants. For many people it takes certain minimum advantages in life to learn how to be good. With those who have clearly failed to learn, it may be that part of the burden of social responsibility shifts from them to us, calling for something better than punishment.

The law is neither a scientific instrument nor an adjunct to any absolute moral doctrine. Our legal system is the way we conduct our business of mediating conflicts, preserving the peace, and furthering orderly social development. It thus stands between all opposing forces or conflicting ideologies. In the criminal law and in the administration of the insanity defense the wisdom of the past, including the free-will postulate, meets modern scientific views, including the postulate of causal determinism. The legal process differs from religion in that, being concerned with factual decisions, it cannot utter moral imperatives. It differs from science in that it cannot choose its experimental subject matter, it cannot plead ignorance and it cannot select its hypotheses freely. A court must resolve all conflicts presented to it, with or without adequate knowledge.

The chief inhabitants in the house of the law are the members of the jury. This much maligned body carries the final burden of redressing the social balance. In shouldering the awful responsibility of assessing the degree of another person's responsibility under the law, the jury—that sample of all of us—needs all the help available. When considering the insanity defense, obviously it needs the help of psychiatric and other scientific experts, given fully and freely. Only then, on the basis of all possible relevant facts and scientific insight, can the jury make its moral judgment, its awesome decision.

In the Durham case we said, "The legal and moral traditions of the western world require that those who, of their own free will and with evil intent * * * commit acts which violate the law, shall be criminally responsible for those acts. Our traditions also require that where such acts stem from and are the product of mental disease or defect * * * moral blame shall not attach, and hence there will not be criminal responsibility."

Thus, within our traditions, the case goes to the jury.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Brunsdale.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park. Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Nikita Khrushchev: Master Architect of Blueprints for Destruction

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 3, 1960

Mr. MUNDT. Mr. President, recent world events lead us to believe, with unequivocal firmness, that the Dictator of the Union of Soviet Socialist Republics, Mr. Nikita Khrushchev—a practitioner of a philosophy characterized by a basic attitude of uncompromising hostility to all noncommunistic societies and the ideas held in them—is indeed a master architect in drawing up blueprints for destruction.

It is no secret that our Government has advocated an open-skies policy with the Russian people since the summit meeting at Geneva, Switzerland, in 1955, in order to prove to the Soviets that we—here in America—will do anything within reason to avert an international incident which would cancel out world peace.

As a result, and backed up with the record of over 40 years of historically documented brutality, subversion, subjugation and ruthless, godless oppression illustrated in communism's insatiable and unquenchable thirst to crush freedom and human dignity in a relentless, never-curving road to world domination without detours, our Government has found it necessary to carry on top secret intelligence operations such as the recent U–2 plane flight which will prevent another Pearl Harbor; another Korea. In this modern atomic and hydrogen age, we could not take the risk of carnage and national devastation which could all too realistically include the destruction of every American city and hamlet. We could not take the risk of consequences which would follow a similar attack as happened at Pearl Harbor and as happened at the 38th parallel in Korea; an attack that could come across the Russian borders.

And since the Russian Government consistently continues to refuse to cooperate in our efforts to establish permanent peace, we have had no other recourse than to undertake highly dangerous, but much needed, intelligence work in order to protect our Nation and our people through the age-old methods of defense so long in use by the Communists themselves, lest we do not wake up one day from our failure to know in time what our opponents in lasting freedom had been planning against us.

Thus, the latest demonstration of the Soviet's failure to cooperate in maintaining world peace took place at the Paris summit conference some weeks ago. It is no secret any longer that Mr. Khrushchev used the U–2 plane incident only as a well-timed and calculated pretext to wreck the high-level discussions of our world leaders at that meeting. For many months, Mr. Khrushchev has been talking, agitating and propagandizing for a summit conference. Finally, when it did come about, what did he do but wreck it? I believe, as do many of my other fellow Americans believe, that this was a well-timed, well-planned and organized move on the Soviet part to foster their greedy desires of world domination.

It has been encouraging to me, Mr. President, as it has to many of us, to note the way our American citizens and the rest of the free world—with the exception of the usual number of misguided who are always disgruntled and have nothing to offer except to brag how they would handle things—are 100 percent behind our President and his actions in Paris.

In anger, our people resent the statements made by Khrushchev in Paris, along with his latest comment that he believes President Eisenhower desires peace, but the "road to hell is paved with good intentions and he will really get there."

President Eisenhower's welcome-home demonstration here in our Nation's Capital at which literally thousands and thousands of Americans from all walks of life waited and stood along the streets and street corners to greet him, proved to me that for the most part, the American citizen resents these remarks against his leaders and that he is behind the international policy of our administration and our country.

I am pleased to note also, from my own conversations with the good folks back in South Dakota, that they, too, are among those millions who are strongly backing the President on his actions at the summit. They have reacted like the rest of us who did not condone nor appreciate the bigoted approach used by the Soviet Union at those ill-fated talks. Nor do they believe in appeasement with Soviet Russia in order to maintain world peace. Nor do they believe in those individuals who are trying desperately to make the summit breakdown a case for petty partisan political debate and open criticism of the President and the present administration.

In effect, it appears to me that as a cold war maneuver, Khrushchev's performance in Paris may have done more to unite the free world against Communist aggression than anything since the most unfortunate bloody and brutal attack on the freedom-loving citizens of Hungary.

I have noted from one of the leading newspapers in western South Dakota that Mr. Andrei A. Gromyko, Foreign Minister of the Soviet Union, has charged that the United States is an enemy of peace, is dedicated to aggravating world tensions, is not to be trusted in diplomatic negotiations, and that U.S. spy efforts proved the United States is planning an aggressive war against Russia.

At this point, Mr. President, it would only be just to remind the men who turn tensions on and off like they cork and uncork a bottle of vodka, that more than 65 Russian spy cases have been recorded in our American archives since 1946. Significantly, the day Mr. Khrushchev shattered the summit meetings, the U.S. Supreme Court reaffirmed and upheld the conviction and sentencing of Rudolf Ivanovich Abel, colonel in the Russian Intelligence Corps, for his spy activities in New York City.

Mr. President, one of my very fine friends, my fellow colleague from the Second Congressional District of South Dakota, has prepared and distributed an outstanding report on these latest world and national problems which I believe pretty well sums up the opinion of most Americans. I thereby ask unanimous consent to have Representative BERRY'S letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 26, 1960.

DEAR FRIEND: The reception of a returning hero was awarded President Eisenhower upon his return from the Paris summit meeting. The leaders of both political parties and tens of thousands of just plain "Americans" not only met him at the airport, but thronged both sides of the streets from the airport to the White House.

It was an American demonstration of support for their President, after Khrushchev had wrecked the conference by using the U–2 reconnaissance plane incident as an excuse to do what he would have done anyway under some other guise, had this incident not occurred. The incident simply provided the big bully with an opportunity to rant and roar and to pick up his marbles and go home like the spoiled kid from across the street who has always had his own way.

RECONNAISSANCE

Ever since sputnik, people in this country have been demanding, "What's the matter with our intelligence?" Allen Dulles of CIA indicated that we know a bit more than we are credited with knowing, but his reply had to be most guarded. CIA must be and is highly secret. Even the office wastepaper is classified, bagged, and burned under surveillance. The question is now answered. Not only have we been patrolling the edge of the Iron Curtain with every delicate instrument known to science, but for 4 years our U–2 planes have been flying Russian skies taking pictures. We have not been asleep.

The incident proved to Mr. Khrushchev's consternation and the surprise of his people that our alleged "scientific lag" does not extend to photography. We have shots of

launching pads and bases taken from 70,000 feet, and when blown up show every detail including telephone poles and clothing on the wash line.

It should be comforting to Americans to now know that Smithsonian's satellite tracking station has relayed pictures of small objects taken 1,200 miles above the earth. This is equal to photographing a golf ball in San Francisco from the airbase at Rapid City. Incidentally, spy planes are probably nearing the end of their usefulness. Two of our satellites will soon be doing the job—Midas, an infrared missile attack warning system, and Samos, a picture-taking surveillance satellite whose photo from 300 miles up will look like it was taken at 100 feet.

To those who wonder why Mr. Khrushchev put on his "storm and stampede" act, I would suggest that so long as he could keep his people convinced that their borders were invincible, that their weapons could detect and destroy any craft or missile destined for that country, he gave his people a feeling of security and superiority. With that sense of security, and from an understandable sense of pride, they tolerated and probably enjoyed his boasts of world domination and influence.

With this announcement, however, and the certain knowledge even in Russia with its strict censorship of news that a one-man, unarmed espionage plane has penetrated 1,400 miles into their country and perhaps made an emergency landing, they undoubtedly must become insistent that at least some of the cold war controversies be resolved.

Khrushchev was on a spot before his people. He was forced to do something and he did the thing that is entirely normal for all human beings when their failures are discovered. We remember the story of Adam, the first man. When his sins were discovered and the Lord sought him out, Adam hid behind a tree and then confessed, "I heard Thy voice in the Garden, and I was afraid because I was naked; and I hid myself."

Khrushchev found himself exposed and naked before his own people. He was afraid. He hid himself behind the tree he had set up for himself—the bluster of his own pent-up wrath.

Certainly the incident is regrettable, but we must not permit ourselves to shrink from it. We know that our country and its military installations can be observed from a seat in almost any commercial airliner. This being true, we must be vigilant, and we must take some serious risks to prevent, if possible, a surprise attack such as Pearl Harbor or the crossing of the 38th parallel in Korea.

INTERNATIONAL COMMUNISM

It is difficult for us to remember that communism is not Russia—it is an international conspiracy which breeds easily in socialist states and which now controls the U.S.S.R. and several other so-called Iron Curtain countries.

People have accepted it on the theory that it is an ideology which has for its purpose the improvement of man's existence, the distribution of wealth, and the giving to each according to his need.

The fact is, communism is a godless program for the ruthless enslavement of the entire world. Its purpose is to concentrate all wealth and all power in the hands of the state. When this is accomplished, ruthless dictatorship follows as the day follows the night. Enslavement under Communist tyranny means the complete destruction of liberty and all human dignity.

It should be kept clearly in mind that the enemy is not the U.S.S.R. but international communism. It should also be remembered that communism is not contained on the other side of the so-called Iron Curtain. There are literally thousands of Communists, fellow travelers, and members of the Communist front organizations in America today who are patiently working to gain control of Government here.

The fear of every thinking American must be the serious truth that each step we take toward socialism and every action we take which would further destroy the value of our currency or in any way weaken our economic and financial strength takes us one step closer to the destruction of our way of life and enslavement through their way of life.

They know that it cannot be done in a day. They have plenty of time. Mr. Khrushchev told the world last week that there is no great hurry—he could wait for the next President of the United States or the next one after that. Of course, he was talking about a summit conference, but in the back of his mind was something more important.

As long as we remain so strong militarily that to strike us would mean their own immediate destruction, the Kremlin can wait until we destroy ourselves economically. That time may not be too far distant unless the voters of America decide to continue responsible Government in the White House and send a responsible majority to Congress. As Vice President NIXON said, we can win the horse race with the Soviet Union, providing we don't try to ride their horse.

BIG GOVERNMENT ADVOCATES

The history of the big government advocates in this country during the past 30 years has been coupled with big government spending. First, it was to defeat the depression. Then it was to win the war. Next, to beat the recession. Now it is to make sure we are ahead of Russia in everything.

Their current argument is the most seductive of all. Since strong central Government stepped up our economic pace during World War II, they say we can do it again by empowering the Federal Government to run the economy. They say we can tell industry what to produce and where they should move to produce it; control agricultural production, prices and output; control the mineral resources and power output of the Nation; control the educational system through financing education from Washington; finance housing, health, hospitalization, and everything at public expense, even though to do so means adding the cost onto the national debt which in turn means adding fuel on the fires of inflation.

The following excerpt from U.S. News & World Report should be carefully studied by any American who thinks there is no limit to U.S. spending and the inflation it causes: "Prices no longer can be raised without adding to the flood of imports. Goods from abroad everywhere are becoming a challenge to the U.S. wage rises in United States, as a result, where those rises add to costs, cannot be made without (1) squeezing profits, or (2) reducing markets and jobs.

"The meaning? * * * Simply this: United States has lost some of the freedom of action it has had since the war. Unions will go on forcing a wage-price spiral only at the cost of a recession in business activity and employment * * * Foreign goods are penetrating U.S. markets more and more deeply. Foreign capacity to produce at prices below U.S. prices will go on growing fast. * * * There's more to it than that. Dollars owned abroad total $19 billion. Inflation threats, evidences of policies affecting the dollar value—and foreign owners can demand gold for their dollars. A run from the dollar, potentially, will remain something to consider.

"Inflation, in other words, has to be resisted. Government finances have to be kept in order. A sound dollar is the alternative to new problems."

With my kindest regards and best wishes, I am

Sincerely yours,

E. Y. BERRY.

Maine Needs Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. OLIVER. Mr. Speaker, in the passage of the school construction bill last week, the House recognized for the first time that direct Federal aid to education is a major national problem. This represents progress to some extent. I am concerned, however, that our action may be and, in my opinion, definitely is too little. I sincerely hope that it is not too late.

Education always has been and always will be the cornerstone of the progress and survival of our Nation. Too little and too late implementation of the educational requirements of our free society can only mean a second-rate America. In the face of increasing challenges from the regimented societies of the world, we must do more, not less, if we are to compete and, yes, to survive.

In my own State of Maine the crying need for Federal aid to education, far beyond what the House enacted last week, becomes obvious when we note the local and State tax burden which Maine residents bear in relation to the other States of the country. Maine taxpayers per family of $5,000 income pay more in local and State taxes than do similar citizens of 46 other States.

In direct relationship to this fact which should have great significance for those in Maine who oppose Federal aid to education it is pertinent to note that the personal per capita income of Maine in 1958 was $350 below the national per capita income average. The economic squeeze on our citizens is obvious.

It is also pertinent to note, once again, that the Committee for Economic Development, sponsored by several of the big business interests of the Nation, found that Maine is included as 1 of the 11 poorer States of the country which needs and merits Federal aid to education.

The facts of Maine's taxload and Maine's per capita income, certainly support this finding. Those leading citizens of Maine who are opposing Federal aid to education are doing a great disservice to the educational needs of our State.

In this connection, Mr. Speaker, I am including in my remarks an editorial published in the May 29 issue of the Portland Sunday Telegram and a newspaper article which appeared in the May 23 issue of the Portland Press Herald:

[From the Portland Sunday Telegram, May 29, 1960]

FEDERAL AID TO EDUCATION—NOT WHETHER BUT HOW AND WHEN

To hear some people talk you'd think that the condition of the Nation's public schools system was not a matter of national interest.

Typical of this position, if not its most frequent advocate, is the Chamber of Commerce of the United States. For example, in the March issue of its magazine, Nation's

Business, an article called "The Real Crisis in Our Schools—Federal Domination," consistently speaks in terms of "intervention" or "influence" as the object, or at least the certain result, of greater Federal financial participation in the solution of school problems.

The argument runs that supervision and control of public education is constitutionally reserved to the States which in turn confer on communities, or combinations of communities, much of the operating responsibility. This, of course, is exactly the case.

But it does not follow that the Federal Government has no business in the field. In our view if a problem is a national problem the Federal interest is considerable although we agree that under the American system it cannot be, and ought not to be, paramount in the instance of schools. Yet Americans think of themselves as citizens of the United States before they think of themselves as citizens of a State and it is not likely they can be convinced that it is bad to use the broad taxing power of the Federal establishment to solve problems which threaten the political entity to which they give their highest loyalty.

"Intervention," then, is a poor word, chosen because it implies interference, something unwanted. A better one is "cooperation." As for the Federal influence that might flow from Federal financial support of schools, it is conceded to be a danger if in fact it were contemplated or inevitable. We do not think anyone likely to be listened to seriously contemplates writing Federal influence into law.

Nor is influence necessarily inherent in the concept of Federal cooperation. The problem is not one of standards, which is where influence is applied. Most school systems have high ones, although all cannot attain them at present. The problem is one of money and the fact, first, that the supply of it is distributed with disturbing inequality as between States and even regions and, second, that the local and State tax base is generally at or near the end of the line. A system of Federal help which granted no-strings assistance to iron out inequalities which threaten to become greater could eliminate, or at least acceptably minimize, the bugaboo of influence.

With respect to raising the money the question is not at all well illustrated by the oversimplification, taken as holy writ by the opponents of Federal aid, that such a scheme merely takes dollars out of a State, processes them in Washington, and returns them bureaucratically and severly bobtailed to the point of origin. It is true that some States, Maine among them, must do more for themselves before they come knocking on the door of the Federal Treasury. But it is not true that by itself a State like Maine can ever expect to provide its school population with education equivalent to that afforded, say, to young Californians.

The actual heart of the matter was recently skillfully exposed in Augusta at a meeting of the legislatively sponsored Maine Advisory Committee on Education. Said William McLin, an official of the National Education Association: "The property tax, upon which support of schools so largely rests, is borne in great measure by people with incomes of less than $5,000—a group which bears only a small portion of the Federal tax." Yet, he added, only a small part of the property tax is borne by those with incomes over $10,000, but they do bear the greatest share of Federal taxes. Thus did the NEA official pinpoint the actual cause of opposition to Federal aid to education.

The clincher, however, is in the fact that States are cut off from 70 percent of tax revenues by the preemption of these revenues to the Federal Government. Yet, as Mr. McLin said, the Federal Government's share of educational costs is now no more than 4 percent of their total. And this share, to a large extent, is earmarked for special programs, like the Defense Education Act, rather than for general use by States in accordance with State determination of prime needs.

What all this comes to, in our opinion, is that the question is not whether there shall be Federal aid to education but how it shall be provided and, most importantly, when.

[From the Portland Press Herald, May 23, 1960]

BOWDOIN PROFESSOR SAYS STATE ECONOMIC GAINS NOT KEEPING PACE WITH AVERAGE

BRUNSWICK.—A Bowdoin economics teacher told members of the Industrial Development Council of Maine, Monday, that while the State has made gains economically, it has not been keeping pace with average national growth.

Assistant professor, Giulio Pontecorvo, using per capita income as a measure, said that in 1958 the personal per capita income in Maine was $350 below the national average.

Maine's economy in a large measure depends upon military installations that may or not be permanent, Professor Pontecorvo said.

In 1958 the Federal Government spent $155 million in Maine directly related to the military, he said, including payroll, construction, prime contracts, school assistance, and medicare. These figures do not include Federal aid for highways, institutional care, or other such programs.

These expenditures, Pontecorvo pointed out, are one-and-a-half times the State's own budget which approximates $100 million.

Such Federal expenditures, Pontecorvo stated, "create an economy that is vulnerable to any shifts in military policy and strategy."

He pointed to Brunswick as an example of a community which would find it difficult to handle the surplus of classrooms and housing were anything to happen to its Naval or Air Force installations.

Pontecorvo said the State, as well as the individual communities, is neglecting Maine's potentially largest industry, its tourist business.

They must work harder, he said, at providing those facilities which the tourist now expects and has a right to demand. He said he believed more should be done to preserve the State's forests and to make availale additional recreational areas. Communities can do their part by establishing more parks and encouraging the development of better tourist facilities, he added.

Other important economic resources which are being neglected, he said, are our fisheries and our agriculture. By and large they receive little attention, he charged.

Some 30 members of the council attended the morning session at the Stowe's House.

Much of the morning was devoted to reports by various communities on progress they have made in attracting new industries.

A discussion of tax concessions as a means of drawing industry, found the gathering in agreement that most industrialists are fair and desire to carry their share of the community tax load.

Sam Michael, Lewiston's industrial agent, pointed out communities can provide services for a new industry such as roads, water and sewage services as a legitimate expenditure. He said such utilities being built for the Raytheon Co.'s new $2.5 million plant, will not only help that industry, but will open up the entire area for further development.

Communities were warned against attempting to solve their tax problems by laying it on industry.

Eugene S. Martin, of Portland, presided.

The session was attended by representatives of various State agencies as well as industrial agents, chamber of commerce officials and utilities representatives.

National Policy Machinery Subcommittee of Senate Committee on Government Operations

---

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, June 3, 1960

Mr. JOHNSON of Texas. Mr. President, the New York Times magazine of May 29 carried an excellent article by the distinguished reporter Cabell Phillips on the National Policy Machinery Subcommittee of the Senate Committee on Government Operations. The article is entitled "Subtle Spectacular on Capitol Hill," and it accurately describes the excellent work being performed by that subcommittee under the able leadership of the distinguished Senator from Washington [Mr. JACKSON].

This article is particularly timely because the National Policy Machinery Subcommittee is conducting one of the two present inquiries into the events surrounding the U–2 incident and the collapse of the summit conference. The objective manner in which this subcommittee conducts its vital business is detailed in this article, and none who read this article could have any fears of irresponsible or partisan investigation.

I think this article should be read by as many Americans as possible and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUBTLE SPECTACULAR ON CAPITOL HILL

(By Cabell Phillips)

WASHINGTON.—Congressional investigations are usually of two kinds. They either overwhelm the spectator with their gaudy dramatics, or lull him to sleep with dullness. Currently, there is one in progress that bridges these extremes—it is a subtle spectacular being played before an almost nonexistent audience in on out-of-the-way hearing room by the improbably titled Senate Subcommittee on National Policy Machinery. By the script, this should be pretty soporific stuff, but its impact is such as to keep a good many people in high places awake and on the edge of their seats.

The stated mandate of this small band of inquisitors is innocuous enough—to look into ways of improving the machinery through which high policy for the cold war is made. But inevitably it is being drawn into an examination of policy itself: of the decisions this administration has made, and is following, in the sensitive field of national security. No prerogative lies closer to the heart of the soldier-President, Dwight D. Eisenhower, than this, and no issue has more explosive potential in this political year than the question of whether all that needs to be done is being done to win the cold war.

Frightening urgency has been given to such questions as these by the U–2 espionage

incident and the debacle of the summit conference in Paris only 2 weeks ago. For here, most competent observers believe, was an obvious failure of planning and coordination at a most critical juncture of the cold war. As a consequence, the subcommittee is looking into the whole U–2 affair as a "timely case study." Under its mandate it will be concerned with what went wrong rather than with who did wrong, but it may be impossible to separate the two in the public hearings.

Sparks of controversy were struck at the first open hearing several weeks ago. What had been planned as a rather academic walkthrough of the policy-planning mechanism at the White House level veered off into a chilling indictment of complacency in the face of the mounting Communist offensive. The testimony—restrained but direct to the bull's-eye—came from Robert A. Lovett, financier and former Secretary of Defense; Robert C. Sprague, chairman of the Federal Reserve Bank of Boston, and Thomas J. Watson, Jr., president of the International Business Machines Corp.

What these men from the world of finance said was later reinforced by witnesses from the world of science, among them Dr. James A. Perkins, vice president of the Carnegie Corporation and a member of the 1957 Gaither commission; Dr. James B. Fisk, president of Bell Telephone Laboratories and vice-chairman of the President's Science Advisory Committee, and Dr. Eugene P. Wigner, professor of mathematical physics at Princeton.

These are men whose experience and knowledge and motives are beyond any challenge of pettiness or partisanship, and an ominous consensus has emerged from their testimony. It is that the mechanics of policy planning at the highest level have been made obsolete by the speed of a technology that has welded political, economic, and military considerations into a single imperative—national survival; that vital policy decisions are often extemporized, or based on inadequate information, or constricted by habits of thought that have been outmoded; and finally, that there is a failure at the top policy level to sense either the magnitude of the threat facing the country or the immensity of the effort needed to combat it.

As Mr. Lovett put it: "I feel that we are doing something short of our best. * * * If [Khrushchev's] statement, 'We will bury you,' does not carry the message to us, then words have lost their meaning. If we are not prepared after that statement to admit that we are in a struggle for survival, then we have truly succumbed to the hard sell of the soft attitude."

And Dr. Perkins, appearing a few weeks later, was even more specific. "Somebody would have to prove to me," he said, "that we have not given up important capabilities in the field of air defense and limited war, and maybe even in our deterrent program, as the price for getting all our requirements within a stable military budget."

The genesis of this significant inquiry lies in one man's worry, for a long period of time, over the provocative question: How can a free society organize to outthink, outplan and outperform totalitarianism and achieve security in freedom?

The worrier was Senator HENRY M. JACKSON, Washington Democrat and a leading member of both the Armed Services and Joint Atomic Energy Committees. Last summer, he proposed to the Senate, and the Senate approved, a study of the whole policy-making apparatus relating to national security.

He promised a scholarly, nonpolitical approach and said that the subcommittee's report would not be released until after the election. He also sought the blessing of the White House, since he would have to delve deeply into its inner workings, and particularly into its central policymaking organ, the National Security Council. After a good deal of skeptical deliberation, this was granted, but with a number of caveats attached—that any probing into the substantive operations of the National Security Council should be offlimits, that a White House representative should be on hand for all discussions of the National Security Council, and that the subcommittee should describe its mission as an inquiry and not an investigation.

"We took this," JACKSON said, "in order to avoid fights over prerogatives. Moreover, we really aren't out to 'get' the White House or the Security Council or anybody else. This is something that has to do with national survival, and we need the cooperation of everybody concerned."

Serving on the subcommittee with him are Democrats HUBERT H. HUMPHREY, Minnesota, and EDMUND S. MUSKIE, Maine, and Republicans KARL E. MUNDT, South Dakota, and JACOB K. JAVITS, New York. But the subcommittee is pretty much JACKSON's baby, and he has had a free hand in running it.

For staff he turned first to Dorothy Fosdick, who was a member of Dean Acheson's policy-planning staff when he was Secretary of State, and to J. K. Mansfield, a former teacher of international relations at Yale and an in-and-outer in many high level consultative posts with the Government. The chief consultant is Robert Tufts, professor of economics at Oberlin College and former policy-planning staffer at the Department of State. In all, there are 10 staff members and part-time consultants.

For 6 months this staff read, talked, thought, and wrote memos to itself. The members interviewed the chiefs and other members of all the important Government agencies in town, and they fanned out to the major universities, foundations, and laboratories across the country. They asked:

What was thought about the planning operation as it now exists?

What happens to ideas on their way up the bureaucratic pipeline from incubation level to action level?

What is the effect of compartmentalization among military, economic, and political sectors of planning?

Should administrators be depended on for primary planning?

What are the weaknesses of the present operation, and how can they be corrected?

Out of more than 500 separate interviews the subcommittee has accumulated a vast file of factual data and personal opinion. It has staked out as major areas for attention these matters: the roles of the President and the National Security Council, the roles of the State and Defense Departments, budgetmaking and problems of economic growth, science, and technology, and finally, the part individuals play in relation to the whole planning process. It has already begun to shape its ideas about how the planning machinery can be improved, and these ideas are being reinforced and modified by the expert witnesses who testify before the committee.

Inevitably, the subcommittee's public performance partakes more of the graduate seminar than of the congressional inquisition, except when it is unexpectedly enlivened by a sharply revealing or critical comment from one of the witnesses. Such sallies bring promp ripostes from the subcommittee's alert minority counsel, Edward Pendleton, who by questions and elucidation attempts to dull or deflect these stray missiles.

"Throughout this discussion," he reminded one witness recently, "you have referred to the President. Do you mean by 'the President' any particular occupant of that position?"

"I was talking about the Presidency," the other responded.

"And not the present incumbent in particular?"

"No, sir."

The high quotient of sensitivity arises from the fact that there is here an implicit invasion by the legislative branch of the jealousy guarded precincts of the Executive. Such an inquiry in the hands of a biased or an imperceptive Senator could create serious frictions and hamper rather than help the policymaking process.

Fortunately, this is unlikely to happen. The guiding genius of the subcommittee, Senator JACKSON, is a quiet, hard working, mild mannered, youngish-looking bachelor with gentle gray eyes and guileless demeanor, who is more noted among his colleagues for plodding earnestness than for crusading zeal. He approaches his present mission as a student seriously intent on finding the answer to a knotty problem of government.

JACKSON was born in Everett, Wash., of Norwegian immigrant parents, on May 31, 1912. He waited on table to pay his way through the University of Washington, where he got his law degree in 1935, and 5 years later, at the age of 28, was elected to the House of Representatives. For a politician with a career singularly free of color or controversy, he has achieved a remarkable string of electoral successes. He moved up to the Senate in the Republican landslide year of 1952 by polling 30,000 more votes in his State than Mr. Eisenhower.

"I don't know how to explain him as a politician," a longtime friend recently said, "except by the fact that he's just a hell of a nice guy with a hop on the ball and who is always up on his homework."

His addiction to homework has much to do with his standing in the Senate. Early in his congressional career he became absorbed in the twin problems of nuclear energy and national defense and set about learning everything he could in these fields. Today, his knowledge and his opinions command the highest respect not only in the Senate but in the Pentagon and in Government scientific circles as well.

For the past several years he has hammered at the question of whether this Nation's defenses are adequate. He has been skeptical of the bland assurances offered by high military and civilian officials, and he often has pinned them down with his own superior knowledge. He was primarily responsible for "rescuing" Capt.—now Vice Adm.—Hyman Rickover from Navy Department obscurity and getting him a go-ahead for the development of the nuclear submarine. And he won a 2-year battle with the Defense Department and the Atomic Energy Commission on stepping up the output of weapon-producing plutonium.

In a lecture at the National War College a year ago the Senator summarized his views in these words:

"What seems most to be missing is a coherent and purposeful national program that sets forth in simple terms what we have to do to survive, and why. In wartime there is a basic strategy to defeat the enemy. Our leaders know, and our people know, what they are trying to do and what is demanded of them. * * * We have no comparable strategy for the cold war. * * *"

Inevitably, the Jackson subcommittee's work has come to focus—for the present, at least—on the National Security Council, the Government's highest strategy-planning board.

The NSC was created under the National Security Act of 1947 as a part of the Executive Office of the President. Its statutory membership is limited to the President, Vice President, Secretary of State, Secretary of Defense, and Director of Civil Defense and Mobilization, with a professional staff to help. However, President Eisenhower has expanded the NSC by adding other top Gov-

ernment officials as regular or occasional members. In theory it acts as a funnel to put before the President all the essential information he must have to formulate policy in any area affecting national security.

There has never been much of a quarrel about the basic concept of the NSC. It was born out of the shock of Pearl Harbor and the war that followed. Its major assignment soon became the masterminding of the cold war, and it nurtured such innovations in U.S. policy as foreign aid, the "containment" of Communist imperialism, and the doctrine of collective security.

But with the proliferation of cold war threats and crises and with the birth of the age of space, many feel that the Security Council is no longer capable of meeting the demands put upon it. This complaint goes primarily to the question of its structure, but it also embraces the manner of its use. Such disquieting fears have been expressed by many responsible individuals who have had a look behind the curtain of secrecy that surrounds the agency.

The substance of what is being said in the subcommittee hearings is that the Security Council has become too big, too diffuse, that it has lost its sense of purpose. Instead of serving as a sharp, unambiguous focus on basic policy problems, it has, according to its critics, become little more than a paper mill.

"If I were to make a general judgment about the NSC," Dr. Perkins told the committee, "it is that the President has not received from the normal NSC routine the kind of sharp debate, the clear differences of opinion, the new ideas that would require major modifications of program."

Some witnesses have questioned the recent tendency to make policy decisions within a predetermined budget ceiling. "The budget officer," Mr. Lovett told the committee, "should be a consultant and a participant, but not a decision-maker." Others have deplored the lack of proper coordination of policies between the Departments of State and Defense.

But inevitably such discussions of the process of planning become involved with the product of planning, and this leads into sensitive appraisals of the personal judgment that goes into the making of policy decisions. Thus, Mr. Sprague told the committee he thought the President was the only man who could awaken the country to the need for a greater effort to secure our survival, adding, "I believe that the danger is more serious than the President has expressed, himself, to the American public."

JACKSON and his staff do not try to stifle such spontaneous and pointed observations, but neither do they openly encourage them. They are realists enough, however, to know that they help draw public attention to their work, and, as one member explained, "We aren't likely to get any meaningful results out of all this unless the public becomes interested in what we're doing."

The end result the committee seeks is to have ready for whoever the next occupant of the White House may be a blueprint for a refurbished policy-planning mechanism that will, in JACKSON's words, "not only improve the planning process itself but help the new President to identify the areas in which fresh and imaginative planning has become essential."

What this may mean is not yet known, but it seems likely that an extensive overhaul of the NSC will be high among the committee's eventual recommendations. The aim will be, probably, to reconstitute it as a more compact forum for the debate of basic policy questions unencumbered by bureaucratic handicaps. This might involve better staffing, better coordination between planning functions of the State and Defense Departments and, possibly, legislation to put appropriations for certain national security operations, such as foreign aid and defense, on a long-term instead of a 1-year basis. Another idea taking form is the creation of a science advisory council for the President which would have a status comparable to that of the present council of economic advisers.

A persistent question the committee faces is this: Are we geared to put the best minds available to work on vast problems of policy and strategy? Out of this have come the beginnings of an idea that perhaps provision should be made for some sort of elite corps of thinkers—scholars and experts who, free of administrative responsibility and attachment to particular services or departments, would have no other function than to cerebrate about basic problems.

Most such ideas, JACKSON notes, are still in the germinal state at this point. A long period of study will be necessary after the hearings are concluded before concrete proposals begin to take shape. It will then be necessary to get the authority from Congress to put them into effect or, where legislation is not required, to persuade the new administration to adopt them.

But the important thing, he feels, is to bring some new light and fresh ideas to the task of creating Government policy to meet the challenge of the 1960's.

"When you realize," he says, "that there has been no serious congressional review of the policy-planning process for 13 years, it is reasonable to think there may be some room for improvement."

The Kidjel Ratio—A New Age in Applied Mathematics and Arts

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. INOUYE. Mr. Speaker, Hawaii's wealth in human resources has once again proved to be unlimited. The ingenuity and pioneering spirit of its citizens have given to the world a new and practical system of solving a multitude of problems in the important fields of applied mathematics, art, and design.

The Kidjel ratio system is now being used to great advantage in more than 40 related activities in the world of architecture, engineering, mathematics, fine arts and industrial arts. Our schools, technical colleges and other educational institutions are now teaching the use of this fascinating system in addition to their regular curriculum.

In short, the Kidjel ratio of 5.33/1 is a universal geometric ratio which applies to all phases of life. This useful ratio also answers two of the most baffling problems which confront students as well as professionals in the entire world of art and design. It provides a fast and accurate system of determining the correct and most pleasingly beautiful proportion for any given design or layout. It also provides a fast and accurate method of determining pleasing spatial harmony in any given composition or design.

Specifically speaking, the Kidjel ratio system can:

First. Quickly and accurately lay out buildings and residences in beautiful and harmonious proportions.

Second. Quickly and accurately lay out pentagons and other prime sided regular polygons from 7 through 17 sides—no protractor required.

Third. Quickly and accurately lay out other beautifully proportioned classical graphic designs.

Fourth. Quickly and accurately locate various design elements in pleasing composition.

Fifth. Quickly and accurately lay out beautiful spirals.

Sixth. Quickly and accurately lay out male and female human figures in ideal classical proportions.

Seventh. Quickly and accurately determine the proportionate size of lettering in poster and magazine layout—plus an unlimited number of other valuable applications.

The Kidjel ratio system is based on the apex of creation and design—the ideal classical proportions of the human figure which in turn is based on the wonders of Greek geometry. This new academic and practical concept is thoroughly explained and illustrated in the text called "The 2 Hours That Shook the Mathematical World." This fascinating volume was written by Maurice Kidjel, the dean of Hawaii's portrait artists in collaboration with Kenneth W. K. Young, versatile Honolulu business executive. A specially designed instrument called the Kidjel ratio calipers was also invented by Mr. Kidjel to apply the system.

The Kidjel ratio system and calipers were discovered, developed, and now being manufactured in Hawaii for worldwide distribution—thus creating an entirely new industry for the newest State in the Union.

Academically speaking, the Kidjel ratio also led the author to the subsequent discovery of the solutions to the three famous 2,500-year-old so-called impossible problems in Greek geometry, popularly known as:

First. Trisecting the angle—dividing an angle into three equal parts.

Second. Squaring the circle—constructing a square equivalent in area to a given circle.

Third. Doubling the cube—constructing a cube, double in volume to that of a given cube with the use of compass and unmarked ruler only.

Mr. Kidjel and Mr. Young presented public lecture-demonstrations on the three impossibles and the Kidjel ratio system in Honolulu, San Francisco, Los Angeles, Chicago, New York, and Washington, D.C. Their presentation in San Francisco aroused such an interest that KPIX-TV — Westinghouse — produced the "Riddle of the Ages," a special documentary release showing one of the three Kidjel solutions. In Chicago, the Kidjel solutions captured top awards at the 1959 Chicago district Catholic high school science fair and later again at the Illinois State high school science fair sponsored by the Illinois Academy of

Science. The Kidjel solutions are also now being taught in hundreds of schools and colleges throughout Hawaii, the United States, and Canada.

The Kidjel ratio system textbook, the Kidjel Ratio Calipers and the Kidjel solutions to the "three impossible problems" in Greek geometry are on display at my office for the inspection of my colleagues and members of their staffs, should they be interested.

An Injury to One Is an Injury to All

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, June 3, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Oregon Labor Press entitled "An Injury to One Is An Injury to All."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oregon Labor Press, Apr. 1, 1960]

AN INJURY TO ONE IS AN INJURY TO ALL

(This editorial is reprinted from the current issue of the Guild Reporter, national publication of the American Newspaper Guild.)

It has become clear that the stake in the newspaper strike at Portland is nothing less than union survival. The heads of the five international unions primarily affected indicated full awareness of that fact when they met last week at Phoenix, Ariz.

That meeting developed into a war council. The conferees stressed the gravity of the attack on the newspaper unions in Portland, reached agreement on united resistance to it, and paved the way to future close cooperation in other areas of union activity.

They agreed, too, that the Portland strike is not a struggle involving only their own unions. Should the Portland pattern succeed in crushing newspaper union organization in Oregon's largest city, there is every likelihood of its adoption and adaptation elsewhere not only in the newspaper field but in other large segments of organized labor as well. The meeting therefore invoked the interested aid of all organized labor since the threat is a universal one.

There are unmistakable nationwide aspects of the Portland situation which differ from the ordinary local union dispute.

In financial control of the larger of the two struck dailies is S. I. Newhouse, of New York, owner of the third largest daily newspaper chain. His personal fortune, in large part earned for him by members of the same unions he now wants to destroy, is reported at $150 million.

Were he the sole union antagonist, he would be formidable. Losses in his strike situation can become tax exemptions credited to his other enterprises. He could, if necessary, stand alone.

But behind Newhouse, and by all indications deeply interested in his union-busting campaign at Portland, is the American Newspaper Publishers Association, corporate body of this country's press. Newhouse and some 400 other members of the ANPA subscribe to the association's strike insurance plan. Like all insurance, the ANPA scheme is supported by premium payments, investment of which furnishes benefit payments to struck policyholders.

Newhouse has twice within the past year drawn heavily on the fund for benefits. It is in the use to which Newhouse has put his indemnities in Portland that every member of the ANPA becomes inescapably involved in the strike.

For in Portland some of the premium dollars paid by ANPA members found their way into the pockets of imported strikebreakers who swarmed into Portland at the outset of the strike, openly boastful of their high wages and living-expense tabs. More recently, premium dollars have been used to pay apprentices in training at the idled Journal plant, all nonunion personnel by careful selection.

In the Portland strike situation the ANPA is clearly involved, both through its sponsorship of strike insurance and its admitted use of a commercial strikebreaking agency operated by one Bloor Schleppey, of Indiana, whose crews rushed into Portland last November.

Portland, in short, is the perfect example of the self-evident trade union truth that an injury to one is an inqury to all; that an injury by one is an inqury by all.

The labor union movement has an opportunity, in this crisis, to demonstrate that organized people are more than a match for organized money.

The President's Forthcoming Visit to the Philippines

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. MARTIN. Mr. Speaker, President Eisenhower is about to undertake another goodwill trip, this time to southeast Asia and Japan. I am particularly happy that his visit will be to the Philippines, a close ally and tried and true friend.

He accepted the invitation extended to him by President Carlos P. Garcia, a statesman and patriot, who is a stalwart champion in Asia of the ideals of democracy and freedom. He was elected in a clean, honest, and free election as the acknowledged leader of a truly free people. It is fitting that he should receive President Eisenhower as his official guest in the same manner that he was received here at the White House by our Government 2 years ago.

We still remember his stirring address delivered before Congress and I am sure that President Eisenhower will be delighted as are all friends of the Philippines with its progress as an independent sovereign government.

Gen. Carlos P. Romulo, Philippine Ambassador to the United States, in an article written for the Associated Press and published extensively all over the world, writes perceptively of the significance of the President's visit to the Philippines.

I ask for unanimous consent to include General Romulo's article in the RECORD as part of my remarks:

(By Gen. Carlos P. Romulo, Philippine Ambassador to the United States)

On behalf of President Carlos P. Garcia, I extended to President Eisenhower an invitation for him to make a state visit to the Philippines. The invitation was accepted.

Needless to say this news will be received with rejoicing by my people. I never doubted that President Eisenhower would make such a decision. Not only because of the historic ties of friendship and partnership that have joined our two countries together for more than half a century but also because he lived with us for several years, helped us write our first National Defense Act, and has long standing Philippine friendship, that I was sure he could not have decided otherwise and that he needed no persuasion to make it.

To the Filipino people, President Eisenhower's visit at this time has a particular significance. It will help to allay the growing misgiving in certain sectors of our Philippine public opinion that America is taking us for granted. I am happy to note also that the President will pay us the deference of visiting us first before he goes to the other countries in his schedule, flying directly from the United States to Manila and setting aside 5 days to be on Philippine soil.

The last time he visited the Philippines was soon after the Second World War and he saw a country in ruins. So shocked was he at the extent of the devastation that he said of all the destroyed cities that he had seen, Warsaw and Manila suffered the worst.

He will now see a people that have risen from the ravages of war, their cities rebuilt, their economy restored, their democratic government functioning efficiently, peace and order secure. Last year the Philippines achieved a favorable balance of trade, we now produce more rice than we consume, we have established 800 new industries since the war, our international reserves have risen to an encouraging level, and because of improved economic conditions, partial decontrol of trade restrictions has been recently established by our government.

President Garcia has undertaken a vigorous campaign against graft and corruption in the government with such positive results as: total number of administrative cases—17,579, showing an increase of 5,346 cases from October 1, 1959 to March 31, 1960; number of cases decided, 12,202; convictions, 8,669; dismissed, 3,533. This is a record unequaled by any of the previous Philippine administrations.

President Eisenhower will renew his acquaintance with President Garcia who was his guest in Washington 2 years ago, an avowed anti-Communist who signed the law outlawing the Communist Party from the Philippines, and whose confidence in the United States he reaffirmed recently when he invited the American Government to make the Philippines a base for its missiles. In a section of the world where neutralism is followed by many countries, the Filipino people have taken a forthright stand for democracy and freedom and President Eisenhower in visiting them will regird their confidence in their alliance with the United States.

As is normal between two closely allied countries such as the Philippines and the United States, there are unsolved problems such as the war damage claims, the Filipino veterans' benefits, increase in our sugar quota, the few remaining unsettled questions regarding the U.S. military bases, which the Presidential visit will help to place in their proper perspective and thus bring about a better understanding between our two peoples.

After the collapse of the summit conference, President Eisenhower's visit will also project America's true image in southeast Asia, an image so disfigured and distorted by Communist propaganda that it is important that one with the personality and prestige of the President should set it aright in the minds of the Asian people.

He will be received in the Philippines with an unequaled warmth that precisely at this time should be known by the outside world. Undoubtedly it will be gratifying to him personally to be accorded a welcome that I dare predict will be second to none in his recent travels. Such affectionate warmth and cordiality will be a tonic to a harassed world of rising nationalism and increasing antagonisms everywhere, when a people, once under America, can give such a spontaneous demonstration of good will, gratitude and friendship for the leader of a Nation that to them at one time represented alien rule.

Foreign Aid Folly

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, June 3, 1960

Mr. TALMADGE. Mr. President, an excellent analysis of the fallacies inherent in the philosophy of the present foreign aid program is contained in the May 16, 1960, issue of Life Lines, the publication of the Life Line Foundation. I ask unanimous consent that this article, entitled "Foreign Aid Folly," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN AID FOLLY

Does your family have a hundred dollars that you would like to donate as a gift to a man who constantly goes around telling the neighbors that you are no good, your wife is a meddlesome gossip, and your son and daughter are the most destructive children in the neighborhood?

No, of course not. You would consider such a thing absurd.

The cost of the foreign aid program per next year being talked about in Washington would amount to just about $100 for each family in the United States. And the effect of this program will be just about the same as if you gave a hundred dollars to the man who has shown quite clearly that he is no friend of your family.

Our foreign aid program has been going on ever since the war. Our position in the world is worse now than it was when we started handing out money to all comers. It has been claimed, and is still being claimed, that foreign aid giveaways will improve living conditions in the less developed countries of the world and create new markets for American products. It has been claimed, and is still being claimed, that Washington's handouts of our money will win friends and hold allies for our country in the struggle against the international Communist conspiracy. The facts show that these claims have little or no justification.

NATIONAL SUICIDE

If the entire national income of the United States were spent to improve the living conditions of the hundreds of millions of people in underdeveloped areas, their living standard would not be raised as same would not be lasting because of the fast-growing populations of these countries.

Under the foreign aid program, American products and services are bought with our tax dollars and then given away to foreign countries. How can trade be promoted that way? The only way to build new markets is the way we have traditionally done it—the businesslike method of sound private enterprise and investments. This method is the only one that actually increases productivity, and in doing so, enables the less developed countries to get the means to support themselves and build up their own capital.

Can foreign aid buy trustworthy friends and allies? The answer has to be "No." Friendship is not obtained by bribery. A man—or a nation—getting something for nothing places on it the value of precisely nothing. In fact, as a former Prime Minister of France once said, "The Americans manage to create something very near to hatred by the way they give their aid."

The greatest myth of all is that communism can be weakened and defeated by the American foreign aid program. As a matter of fact, it is part of the Communist doctrine that productive workers shall support the incompetent and the lazy. Isn't that exactly what we have been doing on an international scale with our foreign aid program? In fact, we have turned great sums of money over to the outright Communist governments of such countries as Poland and Czechoslovakia.

Since the end of the war, we have spent for foreign aid the equivalent of about $1,800 for every family in America. But international communism has not grown weaker during that period. It has grown stronger and has swallowed up hundreds of millions more people in the world.

Why does foreign aid go on—endlessly—year after year? Who favors such squandering of our resources on this program? There are several groups. One group is made up of unrealistic sentimentalists who persist in believing, against all evidence to the contrary, that we can buy international friendship. Another group includes those who hope to sell their products to the agency directing the program. And still another group, the most dangerous of all, is made up of the mistaken—those who, for whatever reasons, are enemies of freedom and who see in this giant giveaway program a means of weakening this Nation where freedom is the keynote of our governmental and economic systems.

Foreign aid has been called a design for national suicide. The term is not too strong. There are those, and we must never forget it, who would welcome death of God-given freedom in America. And the foreign aid program is one of the weapons they use. A bankrupt America means freedom in the world is bankrupt, too.

South Dakota "My True Security" Winning Oration

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. McGOVERN. Mr. Speaker, each year, the U.S. Junior Chamber of Commerce and the Mutual Benefit Life Insurance Co. cosponsor an oratory contest on the subject of security.

This year's winner of the State competition in South Dakota is Mr. Michael A. Jackley of Sturgis, S. Dak.

I include at this point in the RECORD Michael's winning oration:

MY TRUE SECURITY THE AMERICAN WAY
(By Michael Jackley)

What is security? Webster defines it as a feeling of safety and freedom from anxiety.

When can I, or for that matter any person, have a feeling of real security?

When can we feel that we are completely free from any danger or worry? The answer to this question can only be never. A situation without worry or danger would be a utopia, a dream.

On this earth no one can really have a completely true security. We can, however, approach this utopia, and for all practical purposes we can consider this true security.

Again we run into another paradox. The way a human being thinks cannot be considered an exact science. Every human thinks differently, every human being would have a different definition for his true security. Some find their security in wealth or social position, others in power, many in religion, still others in a feeling of safety. A complete list of these various things would cover a multitude of items.

For me to have a feeling of true security, I must have a number of these things.

First and most important, a firm belief in God and a life hereafter. For me life could hold no meaning, no security, without this.

The rest of the necessities for my security can be placed on as equal plane.

I would have to have confidence in myself. A confidence backed up by experience, practical knowledge, and education. I would have to feel that I was capable of meeting any situation with which I might be confronted. With this feeling of self-confidence would come independence. When a person is confident in himself, he does not have to and will not depend on anything or anyone else for the things he wants or needs. Not so independent, however, as to not need the next necessity, a family and friends, people I know, love, and can trust, people that know, love, and can trust me.

I want to be financially secure, not necessarily wealthy. I want to have enough financial security so that I can always depend on my own resources and not the Government or anyone else.

Lastly, I want safety, freedom from danger and fear. This is supplied by a government and the ideals behind it, whether it is national, State, or local. A person can be reasonably secure if he lives in a nation where there are a set of laws to protect his safety and freedoms, and the means to enforce these laws.

These then are the things which would give me, and probably only me, a feeling of true security, or rather a feeling approaching that of true security.

Mississippi and Wyoming Join in Being Proud of Dr. Humphrey

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Friday, June 3, 1960

Mr. STENNIS. Mr. President, ties between the South and the West go back generations; they span the decades of our country's history, and will, I am sure, extend far into the future.

Large numbers of the early settlers—the pioneers of the West—came from Southern States. Seeking new lands, new opportunities, and new challenges they settled in the Western States and territories, making important contributions to the history of the West and of the Nation. Their contributions were not limited to the fields of commerce, ag-

riculture, industry, and Government. They also had a major part and were leaders in shaping the culture of this vast and important region of our country—in the arts and in education at all levels.

As Americans, we owe more to those who spend their creative and productive years in training our youth than to any other secular group. Certainly, to all of them we owe recognition and honor, and additional recognition and honor when they carry the added burden of administration and leadership in the field of higher education.

A highly creditable and an outstanding example of a career of such worthwhile achievement is that of a native Mississippian, who has earned fame and recognition at home as well as beyond our borders, Dr. G. D. Humphrey, president of the University of Wyoming.

This was recently recognized in a double editorial, one from the Wyoming State Tribune, quoted and included in another from the Jackson (Miss.) Clarion-Ledger. It is with pride that I join wholeheartedly in the sentiments of both editorials.

I ask unanimous consent that the following editorial from the May 27, 1960, Jackson (Miss.) Clarion-Ledger be included in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MISSISSIPPI AND WYOMING JOIN IN BEING PROUD OF DR. HUMPHREY

Dr. George Duke Humphrey, native Mississippian and former president of Mississippi State University, has been for 15 years president of the University of Wyoming, and has been claimed as a prominent citizen by his adopted State.

Mississippi continues to claim him, however, and we hope to reclaim him, as it were, when the time comes for him to retire and come "home."

The Wyoming State Tribune, oldest newspaper in that commonwealth, recently praised Dr. Humphrey for the latest honor that has come to this outstanding educator. Said the Tribune:

"Singular honor has come to Wyoming in the election of Dr. G. D. Humphrey, president of the University of Wyoming, to the presidency of the National Association of State Universities.

"Extant is a circumstance in which imposing tribute and recognition literally tumble on Dr. Humphrey, and through him, on the State's only 4-year institution of higher learning.

"He rose to the presidency of the NASU from the vice president's chair; he has just completed a term as president of the Association of American Colleges, of which he is also a former vice president and director.

"Additionally—he was chairman of the Western Interstate Commission for Higher Education in 1954 and 1955 and, since 1951, has been a member of the National Science Foundation Board.

"It is also significant that the Wyoming Society of North American Newcomen, when it decided to resume honors activity (it had been inactive in the State since 1944), did so by spotlighting Dr. Humphrey and the UW. (This was at a glittering Cheyenne dinner last week.)

"The educator came to Wyoming in 1945, from Mississippi State, and has since administered the UW through the period of its greatest growth, including enrollment as well as university services and capital improvement.

"The Wyoming public interest has been profoundly served in the situation in which Dr. Humphrey has chosen to remain at the U.W., which has involved turning his back on calls to eminent service elsewhere.

"Although born to Mississippi, he meets all the qualifications in what we mean in the term Wyomingite. He knows Wyoming, its people and its needs. He labors ceaselessly, and effectively, for Wyoming and higher public education.

"He is esteemed with the best. How warm it is to add: He's from Wyoming."

Mr. McGEE subsequently said: Mr. President, it was a quite surprising and delightful coincidence that I happened to be occupying the chair of the Presiding Officer at the moment when the Senator from Mississippi [Mr. STENNIS] was paying tribute to a very distinguished American educator, Dr. George Duke Humphrey, president of the University of Wyoming.

I served not only as a colleague but also as an employee of Dr. Humphrey for 13 years while I was a professor at the University of Wyoming. I wish to associate myself in every respect with the remarks of the Senator from Mississippi, and to assure him that there could have been no finer example of the ties between the West and the South than in the personality which we are discussing at this particular moment.

The selection of Dr. Humphrey to be president of the American Association of Universities at the present time comes both as an honor to his former State and as an honor to his present State. I would only hope that the wishes of the Mississippi editor, who was calling him back home, might not be borne out, for the reason that Dr. Humphrey has made his place in Wyoming and with the university. While he may perhaps be approaching retirement age, he has many contributions yet to make. Again, I join in the tribute to Dr. G. D. Humphrey.

Mr. STENNIS. Mr. President, I am delighted to have the Senator from Wyoming make the statement he has made in connection with the remarks I made about Dr. Humphrey. I am delighted, too, that he was in the Chamber, where he usually is to be found. I looked around but did not see him a moment ago. However, as has been the case with many of us, I discovered later that the Senator from Wyoming was presiding at the time I spoke. Therefore, he was on double posts of duty.

I appreciate his reference to my State. I share with him his great pride in the accomplishments of not only Dr. Humphrey, but also the University of Wyoming.

One of my memorable experiences was to be shown through the university and its grounds, even thought it was nighttime, the only time available. It is a university of a great State and of a great people of the West.

Mr. McGEE. Mr. President, even at night, the University of Wyoming looms large. It is the highest institution of learning in the United States. It is located at 7,200 feet above sea level. We are very proud to be able to make that claim.

Dr. Humphrey has been responsible for the architectural advances on the campus. The University of Wyoming has a tremendously impressive building program now in progress. It has been going on for almost 12 years. We think it is one of the finest educational plants, on the higher educational level, in the country. We have God-given, built-in air conditioning to go with it. This likewise becomes an asset to the university itself.

Surplus Property for Education, Health, and Civil Defense

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 3, 1960

Mr. McCORMACK. Mr. Speaker, in 1955 the Congress enacted Public Law 61 which I introduced to enable our struggling education and health institutions to obtain useful and needed property which was being sold by the Defense agencies for a few cents on the dollar.

Since that time personal property valued at approximately $1,400 million has been made available for these education, health, and civil defense purposes.

I enclose herewith a report made by the Secretary of Health, Education, and Welfare which indicates that surplus property which cost $91,190,147 was made available to the States during the first quarter of calendar year 1960. The Secretary's report indicates that each of the 50 States received surplus personal property as did the District of Columbia and Puerto Rico.

Mr. Speaker, while the evidence is conclusive that the proper organization of the agencies of the Department of Defense under existing legislation would prevent the generation of much of the surplus property it is gratifying to know that the taxpayers are getting a dividend in the form of this property which can be put to such meritorious purposes.

The report follows:

U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, OFFICE OF THE SECRETARY, WASHINGTON, D.C.

Surplus property for which the Federal Government paid $91,190,847 was made available to the States for educational, public health, and civil defense purposes during January, February, and March 1960, by the Department of Health, Education, and Welfare.

Real property accounted for $4,164,203 and personal property for $87,026,644.

Secretary Arthur S. Flemming announced the totals in making his quarterly report to Congress on the Department's surplus property program.

Property no longer needed by the Federal Government is distributed, under the provisions of the Federal Property and Administrative Services Act of 1949, to educational and public health agencies and civil defense organizations of State and local governments, and to eligible nonprofit health

and educational institutions exempt from Federal taxes. Regional offices of the Department of Health, Education, and Welfare and various State agencies channel the surplus property to the institutions.

Property transfererd to the States includes such items as school and hospital building sites; buildings suitable for college dormitory or faculty housing; motor vehicles; hospital, school, and office furniture; hand and machine tools; motion picture projectors; laboratory equipment; and school and office supplies.

Department of Health, Education, and Welfare.—Personal property received by State surplus property agencies for distribution to public health and educational institutions and civil defense organizations and real property disposed of to public health and educational institutions Jan. 1 through Mar. 31, 1960, in accordance with sec. 203(o), Public Law 152, 81st Cong., as amended

States	Personal property	Real property	Total
Total	$87,026,644	$4,164,203	$91,190,847

Proclamation of New York State Dairy Month by Governor Rockefeller

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, June 3, 1960

Mr. KEATING. Mr. President, the importance of the dairy industry to the physical health and to the agricultural prosperity of our Nation cannot be overemphasized. The State of New York looks upon this industry as one of the prime and indispensable factors in the economy of the State and in the well-being of its citizens. In recognition of the outstanding contribution of the dairy industry, Nelson A. Rockefeller, Governor of the State of New York, has proclaimed the month of June 1960 as Dairy Month throughout the State.

In view of the significance of this proclamation, both in terms of the welfare and prosperity of New York State and of the Nation, I ask that the text of Governor Rockefeller's proclamation of Dairy Month be printed in the Appendix of the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION—STATE OF NEW YORK, EXECUTIVE CHAMBER, ALBANY

Nearly 50,000 dairy farms in New York State are producing 4,353 million quarts of milk annually. This vast supply is the third largest of any State in the Nation.

Aside from constituting approximately one-half of all agricultural income in New York, the dairy industry provides livelihood for thousands of persons in the processing, manufacturing, and delivery of milk and dairy products.

June is the traditional month of large milk supply. It is also the season when milk commends itself in all its delicious forms—hot, cold, fluid, solid, for meals, for snacks, for icebox raids, by young and old alike. Since it is the perfect food, the more milk we consume, the healthier we shall be.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim June 1960 as Dairy Month in New York State and urge people of all ages to partake of this superb product of nature.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 20th day of May in the year of our Lord 1960.

NELSON A. ROCKEFELLER.

By the Governor:

WILLIAM J. RONAN,
Secretary to the Governor.

Defense Production

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. VANIK. Mr. Speaker, yesterday I took the floor to direct attention of the House to bidding procedures in the Defense Department which appear designed to direct a $42 million production contract to one particular bidder, the Food Machinery & Chemical Corp., of San Jose, Calif. The procedures involved were discriminatory and prejudicial to the cause of economy and to the use of a Government-owned plant in Cleveland.

The preparation of these prejudicial and costly specifications was contrary to the recommendations of the Army Ordnance Corps, the Department of the Army, and the findings of an independent survey conducted by engineers of the Ford Motor Co. under contract.

It seems to me that Congress should give a very "hard look" at what is going on in the Pentagon. From all I can gather certain companies are simply "figured in" for defense production, while other capable competition is "figured out." In the proposals for bids on the M–113 armored vehicles the "rigging" of specifications is a documentary fact.

I cannot believe that Defense Secretary Thomas S. Gates, Jr., or Secretary of the Army Wilber M. Brucker are fully aware of what is going on.

Following is a letter which I have today forwarded to Secretary of Defense Thomas S. Gates:

JUNE 2, 1960.

Hon. THOMAS S. GATES, Jr.,
Secretary of Defense, Washington, D.C.

DEAR MR. SECRETARY: Today I took the floor of the House to question bidding procedurs under which Army Ordnance procurement of the M–113 armored personnel carriers are currently being evaluated by your Department.

The work evaluated is used advisedly, because my examination of the facts indicate that under the extraordinary ground rules established for bidding, this contract can only be awarded to one prospective bidder, namely, the Food Machinery & Chemical Corp., of San Jose, Calif. I was startled to learn of the intricate devices which are being used to figure in the Food Machinery & Chemical Corp. and figure out any other prospective bidder. My enclosed statement explains this in detail.

I have since learned that at least one of the five prospective bidders who attended a bidders' conference on this contract in Detroit on December 17, 1959, was told that it was futile to bid because the Pentagon had "indicated there already was a source for this material." This could only mean that the Defense Department had already made up its mind to award this $42 million contract to the Food Machinery & Chemical Corp. regardless of the cost involved.

This procedure makes a sham of the alleged bidding—I might say, a costly one to the taxpayer. In addition to the increased cost of this procurement, if it is produced in the Food Machinery & Chemical Corp. plant at San Jose, the military has incurred wasteful and unnecessary expense in first obtaining a costly independent survey by the Ford Motor Co. to determine where this production could most economically take place—both from the standpoint of current production needs and an adequate mobilization base.

Mr. Secretary, this survey flatly recommended that this production work be done in the Government-owned Cleveland Ordnance Tank plant now standing idle at a cost to the taxpayer of over $2,000 each day for maintenance alone.

Compounding the waste of the survey, the Defense Department staff ordered a real estate appraisal, made by the Cleveland Real Estate Board, to determine the rental value of the Cleveland Ordnance plant which never was expected or intended to be used in the first place. This bidding procedure is so irregular and so definitely contrary to the declared intent of Congress on the economic use of Government plants when they are available that I am certain these questionable practices could not have been within your knowledge.

I respectfully submit this letter with the urgent request that you personally look into this matter at the earliest possible moment. A bid decision under these highly questionable ground rules is imminent.

Sincerely yours,

CHARLES A. VANIK,
Member of Congress.

Heroism Is Only One of Sharon Boero's Virtues

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, June 3, 1960

Mr. WILEY. Mr. President, the Senate yesterday wisely, I believe, approved Senate Joint Resolution 181—which I was privileged to cosponsor—for observing the second week in November as Youth Appreciation Week.

Across the Nation, the vast majority of youth are playing a significant role in community affairs, strengthening homelife and carrying on constructive activities not only to build better communities today but to equip themselves for the great responsibility of leadership tomorrow.

The establishment of Youth Appreciation Week will provide an opportunity to pay well-deserved recognition to the youth of the country who, in this way, hold the key to a better life in America.

As we know, the nearly 2,000 Optimist Clubs in the country have sponsored such appreciation weeks in the past. The objectives of the Optimist Clubs' program have been as follows:

1. To recognize the accomplishments of youth in the home, school, church, and community.
2. To promote more active participation by families in family affairs.
3. To encourage organizations and other groups to publicly show their respect for youth.
4. To encourage newspapers to devote more space to the news of the 95 percent of youth who are good citizens.
5. To encourage radio and television stations to recognize youth through special as well as regular programs.
6. To encourage national magazines to recognize the accomplishments and contributions of youth.
7. To provide the proper environment, recreation, and social activities for youth.
8. To encourage parents to rededicate themselves to the responsibilities of parenthood.
9. To illustrate the great influence religion has on the lives of youth and to encourage their active participation in religious activities.
10. To encourage a greater interchange of ideas between adults and youth, leading to a broader understanding of each other's problems.

In addition to paying warranted tribute to the positive role of the 95 percent of our youth, the designation of Youth Appreciation Week will serve to provide an antidote to the "sensationalisms" often accompanying the 5 percent of individuals "out of step" with society, who have contributed to delinquency.

Recently, Miss Sharon Boero, of Independence, Wis., received from President Eisenhower, the Young American Medal for Heroism. The presentation was made in recognition of her heroic effort to rescue five children from a burning building. Although, physically, Sharon will bear the scars of her heroism throughout her life, the significance of her act of heroism will leave a far greater positive mark not only on her own life and the lives of the involved children, but on the history of heroic acts by youth to serve their fellow men.

Recently, the La Crosse Tribune published an article by Ruth Rogers, entitled "Heroism Is Only One of Sharon Boero's Virtues." Reflecting courageous action by youth—in keeping with the youth appreciation idea—I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

I JUST DID IT AUTOMATICALLY—HEROISM IS ONLY ONE OF SHARON BOERO'S VIRTUES

(By Ruth Rogers)

INDEPENDENCE, WIS.—Possessed of extraordinary courage, Sharon Boero, who is 18 today, is also an extraordinary person.

Sharon is the girl who on February 9, 1958, saved three children from almost certain death in a fire at Chimney Rock.

But Sharon takes no credit, particularly. She says that whatever she did she did it automatically. We should have more such "automatic" people.

Baby-sitting for the Robert Everson family, who operated the Chimney Rock store on Highway 93 about 10 miles north of Independence, Sharon was awakened by smoke shortly after midnight on February 9. She first tried to call the Independence fire department, but could get no response.

Sharon then returned upstairs and got Ellen Everson, 3, and Peggy, 7, carrying the baby and leading Ellen, and the three went downstairs and outside to safety. Perhaps it should be qualified as "relatively" safe: the temperature was 17 degrees below zero, and the children were barefooted and clad only in pajamas.

Sharon told the children not to try to get in the building and then returned upstairs. She took Virginia, 5, in her arms and told Ronnie and Marie Arneson (Sharon's half sister) to follow. By this time the stairway was enveloped in flame and Sharon's hands were badly burned on her second trip.

Unknown to Sharon, Ronnie and Marie failed to follow her. Marie attempted to get Ronnie out, but he went back to bed as though to seek safety there. Marie, who is 11, then broke a window overlooking a porch and dropped to the porch roof and crawled down from there. She cut her hand in breaking the window.

A few minutes later, Bernard Colby and his wife came along on their way home. Marie screamed at them that Ronnie was "in the fire, upstairs."

Colby got a ladder from his nearby farm and was able to enter the bedroom where Ronnie lay. On his first attempt, Colby could not find the boy, but after emerging from the building and getting a lungful of pure air he tried again, and this time he found Ronnie and carried him down the ladder.

The Colbys found Sharon rubbing her hands in the snow, and not until Mrs. Colby asked about it did Sharon realize: she had put one shoe on before leaving the bedroom. She never found the other one.

All five children were treated at the Whitehall Community Hospital. Ronnie's lungs were smoke filled and Virginia had her hair singed and her feet slightly burned.

But Sharon will bear burn scars on the top of her right hand the rest of her life. Plastic surgery failed to obscure completely the scarred flesh.

For her heroism, Sharon received the Carnegie Medal and $250, and earlier this month she received the Young America Medal for Heroism from the hand of President Eisenhower, in Washington, D.C. It was, Sharon says, "almost overwhelming."

The President, when he made the presentation at the White House, said, "I'm sure my son and daughter-in-law would like to have you as their babysitter."

For his part in the rescue, Colby also received the Carnegie Medal.

Sharon is a typical teenager in that she likes most things teenage girls like, but Sharon is more than typical in her interests. She loves hunting and is equally adept with rifle and bow and arrow. She has two dogs, one a black hunter, the other a big white one of indefinite breed, and she likes to call them "Salt" and "Pepper."

She likes dancing and dance music and recently bought a new stereophonograph. Sharon can take over the household duties with the ease of one long used to it, as, indeed, she recently has. Her mother, Mrs. Ernest Jacobson, is taking a beauty culture course in Eau Claire, and so Sharon is the housekeeper on the modest Jacobson farm.

She cooks well, she sews and can darn a sock with the best of them, and she likes nothing better than helping with the routine farm chores.

During the haying and harvesting season, Sharon runs the tractor and helps hoist the hay into the barn loft. She's an expert milker and gathering eggs is one of her duties, as well as feeding the calves.

Sharon was in the upper third of her senior class at Independence High School, and found time to take part in just about every extracurricular activity the school had to offer. She played the flute in the band and sang both in the chorus and glee club. She was a member of the Pep Club and was a lusty cheerleader. Sharon was a member of the Girls Athletic Association and the Future Homemakers.

A boy friend?

"Sure," says Sharon, "in my spare time."

Her ambition, though, is to be an X-ray technician, and plans to take it up in college. Her Carnegie Fund money will help, and she need not worry about tuition because her father, Louis Boero, was lost when his destroyer-escort was sunk at Linguyan in the Gulf of Luzon.

As a result, Sharon is eligible for Veterans' Administration aid.

The Boeros were living in Kenosha when Boero enlisted in May 1944. He was killed January 10, 1945.

Sharon's sister, Barbara, has trained as an airline stewardess and is employed in Washington, D.C., while she awaits a stewardess assignment.

Her stepfather, Ernest Jacobson, is vice president of the Trempealeau County Farmers Union, and secretary-treasurer of the Unity Chimney Rock unit of the FU.

Needless to say, Jacobson is just as proud of his stepdaughter as her mother.

Mrs. Jacobson started a 9-month beauty culture course in Eau Claire March 1, and after a 2-year apprenticeship she plans, tentatively, to open a beauty shop at home.

Sharon recently won the Trempealeau County 4-H speaking contest, and will receive an expense-paid trip to State Club Week at Madison June 13–16, and will also attend the State 4-H Camp at Upham Woods near Wisconsin Dells.

The subject of her prize-winning talk was "Fire Safety in the Home."

The Federal City

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following editorial from the June 1, 1960, issue of Roll Call which is not only timely but logical:

THE FEDERAL CITY

There is only one Washington, D.C., in the entire world.

It is superfluous, then, to add that this is a unique area, honored to be the Capital City of the United States of America.

This is not an industrial city, a city of commerce, a shipyard city. It is the Federal City and stands alone as such.

It is a city which has grown in beauty, prestige, attractiveness, wealth and power because the Federal Government is centered here.

When the Founding Fathers established Washington as the Federal City they properly bestowed the exclusive powers for governing the city in the hands of the United States Congress. So definite were they in their belief that this power was the rightful province of the Congress, that they wrote the power into the Constitution in specific and definite language.

True, there have been great changes since the Nation's Capital was conceived. But nothing has occurred to give Congress reason for quitting its duty and responsibility to maintain legislative jurisdiction over the Nation's Federal City.

True, the permanent residents among the 800 thousand citizens are deprived of voting privileges by reason of their residence in the District of Columbia.

Granting of a franchise to vote for President and Vice President and even National Representatives to the Congress can well be accomplished without the necessity of the Congress turning over one of its important functions—the responsibility for the Federal city of which it is the foundation—to a vocal group of citizens privileged to reside in the Federal city.

There is no question of civil rights in the demand that Congress relinquish its duties as set forth in the Constitution. There is not a question of congressional power obstructing the growth, economy, and attractiveness of the Federal city. On the contrary, all that Washington is may be directly attributable to the devotion and interest lavished on the District by the Congress.

The Congress once bowed to pressures and granted territorial home rule to the District. It soon became apparent that the move was not a wise one. Congress abolished the setup as a dismal failure in 1874.

We are not concerned with what the make-up of a home-rule government would be. We believe that the District of Columbia should be maintained in the historic tradition set by the Founding Fathers and we believe each Member of Congress should search his conscience before he decides to be a part of relinquishing the congressional responsibility to the city that belongs not to the 800-odd thousand District residents, but to the 180 million Americans throughout the Nation.

We believe each Congressman should ask himself whether he has the right to delegate his responsibilities to local politicians.

We have read hundreds of arguments both for and against home rule. One of the most prevalent "for" arguments states that Congressmen are too busy with national and international affairs to be bothered with the problems of the District.

We hope we will never see the day when Members of Congress are too busy to be bothered with the welfare of America's national city.

Congress and Washington are synonymous in the minds of Americans everywhere. Millions of visitors each year pilgrimage to Washington not to savor the dubious attractions of just another metropolis—they come to see and revere, to be inspired in their seat of government.

To them Washington is not the cupola on the city hall. It is the power, strength, and beauty of the Capitol dome.

We are with the residents of the District in their quest for the right to vote. But we hope Congress will not now or in the future arbitrarily pass unto others its responsibility for the conduct and preservation of our Federal City.

GAO Finds Gross Mismanagement of DOD Major Electronic and Equipment Program

---

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 3, 1960

Mr. McCORMACK. Mr. Speaker, in 1955 I made an investigation into some of the inefficiencies involved in the multi-billion-dollar SAGE program wherein the Air Force was improperly employing an obscure proviso of law to justify a 10-year negotiated contract for services amounting to hundreds of millions of dollars. As a result of that study I have become interested in various aspects of communications and related electronic supplies and equipment and their management in the Department of Defense.

On January 30, 1959, I asked the Comptroller General of the United States if it might be possible for the GAO to investigate all facets of supply management of electronic supplies and equipment within the DOD and see what might be done pursuant to the McCormack amendment to the Department of Defense Reorganization Act of 1958.

I am now in receipt of a report made by the GAO and a letter of transmittal from the Honorable Joseph Campbell, Comptroller General of the United States, wherein he indicates great losses to the taxpayers because of inefficiencies in the execution of the supply management functions affecting major electronic equipment and components.

My letter of January 30, 1959, and the Comptroller's letter of May 31, 1960, follow:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
OFFICE OF THE MAJORITY LEADER,
Washington, D.C., January 30, 1959.

Hon. JOSEPH CAMPBELL,
Comptroller General of the United States, Washington, D.C.

DEAR MR. CAMPBELL: I am in receipt of your report (B–133036) relating to examination of the U.S. Army Signal Supply Center, Yokohama, Japan. This and the other reports which you have furnished to me are of great value and, as you know, relate directly to the so-called McCormack amendment (sec. 3(6)) (Public Law 85–599).

I note from your letter of transmittal and from the report itself that this one Signal Supply Center has failed to properly discharge its supply-control responsibility in regard to determining requirements. As a result of this failure the Government was placed in a position of buying millions of dollars worth of unneeded stocks.

I also note on page 1 of the report itself: "We did not make an overall appraisal of the activity or its administration. Our work and the related report devote major attention to the identification of deficient areas and the corrective actions taken by the agency in those areas."

It occurs to me that the findings and conclusions of your excellent report at one supply center indicate a deficiency in the supply system itself in the Signal Corps with respect to requirements determination, procurement, overall inspection and review, and inventory control methods and procedures.

Nor can I help but wonder as to the adequacy of the overall Department of Defense supply-demand control system. For example, your report indicates a failure at the one Signal Supply Center in the supply management function involving one item—dry batteries. What is the situation with respect to dry batteries within the Department of Defense? Does anyone relate overall inventory with requirements before procurements are made? Is there concurrent buying and selling?

I am enclosing for your use a copy of the Federal Real and Personal Property Inventory Report issued by the House Government Operations Committee. In analyzing the inventories in the supply systems of the Department of Defense it is noted that communications and signal equipment total hundreds of millions of dollars. It is to be noted also from the distribution of the reported stocks that a large percentage falls into categories that are either designated as being excessive or could reasonably be so considered. Also that each of the major services carries similar categories of stocks which undoubtedly include identical items.

The McCormack amendment to which I referred earlier reads as follows:

"(6) Whenever the Secretary of Defense determines it will be advantageous to the Government in terms of effectiveness, economy, or efficiency, he shall provide for the carrying out of any supply or service activity common to more than one military department by a single agency or such other organizational entities as he deems appropriate. For the purposes of this paragraph, any supply or service activity common to more than one military department shall not be considered a 'major combatant function' within the meaning of paragraph (1) hereof."

Would it be possible for your agency to etxend the scope of its investigation to all facets of supply management of electronic supplies and equipment within the Department of Defense? This would mean a study as to the adequacy of the requirements determination, procurement, inventory control, utilization of all available assets before procurement, distribution of stock, and disposal of excess or surplus property.

I should also appreciate recommendations which you may be able to make for improvement of supply management across the board in the Department of Defense as contemplated by the legislation to which I refer.

Sincerely yours,
JOHN W. McCORMACK,
Majority Leader.

COMPTROLLER GENERAL OF THE
UNITED STATES,
Washington, May 31, 1960.

Hon. JOHN W. McCORMACK,
Majority Leader,
House of Representatives.

DEAR MR. McCORMACK: In view of your expressed interest in electronics supply management, we are inclosing a copy of our report to the Congress on review of supply management of electronic supplies and equipment within the Department of Defense.

Our review disclosed that inadequate coordination of electronics supply management activities among and between the military departments is resulting in significant additional costs to the Government and is

adversely affecting the efficiency and effectiveness of supply operations. Unnecessary purchases and inadequate supply support are resulting from the failure to consider and obtain needed items available and in long supply in other services; excessive costs and inefficient supply support are resulting from the failure to coordinate the various repair and overhaul activities of each service; and there is a costly duplication and overlap of electronic-supply management functions and organizations.

We identified major electronic equipment and components valued at about $20 million which were required by the individual services to satisfy current needs and were available for transfer from the other services. We appraised appropriate officials, and as a result transfers of over $16 million were initiated or accomplished. These transfers resulted in the cancellation or suspension of procurement actions valued in excess of $3 million.

Our review disclosed that electronic equipment valued at over $2.5 million was being, or was programed to be, repaired unnecessarily at estimated costs exceeding $680,000, when usuable items were available and in long supply in the other services. We also noted that the services were not considered maintenance facilities and maintenance personnel, not being fully utilized in the other services, to overcome their repair backlogs.

We also found that unnecessary administrative costs are being incurred because there are six independent organizations performing the same or similar stock-management functions. Combining of the organizations and functions could be expected to effect significant reductions in the present administrative costs which exceed $25 million annually.

The existence of these deficiencies indicates that present efforts by the Department of Defense to coordinate electronic supply activities of the individual military services are inadequate. Accordingly, we are recommending to the Secretary of Defense that consideration be given to assigning the management of electronic supplies to an organization within the Department of Defense that will be given the necessary authority and responsibility to centrally manage all electronic equipment and supplies. The responsibilities and authorities assigned to the organization managing electronics should include (1) authority to monitor the entry of new equipment into the supply system, (2) responsibility for reviewing, coordinating, and consolidating requirements, (3) responsibility for all procurement, (4) responsibility for determining the depth and range of initial supporting spare parts for new items, (5) ownership of all wholesale stocks including mobilization and production reserve stocks, (6) control and management of maintenance programs, (7) storing and distributing supplies and equipment, and (8) disposing of materiel excess to the needs of the Department of Defense.

In commenting on our findings, the Acting Assistant Secretary of Defense (Supply and Logistics) advised us in a letter dated April 29, 1960, that a study of the management of electrical/electronic materiel had been initiated in January 1960. He stated that it would be premature and inappropriate to comment on our recommendation for centralizing the management of electronic supplies until the results of the study, scheduled for completion in November 1960, are known.

In view of the significant potential for increasing the utilization of electronic supplies and equipment on hand within the Department of Defense as demonstrated by the results of our review, and in view of the extended period of time which will elapse until the results of the Department of Defense study are determined and corrective action is taken, we are suggesting to the Secretary of Defense that immediate interim measures be taken to obtain maximum utilization of electronic materiel under existing conditions. This course of action could be in the form of establishing a temporary staff within the Department of Defense to monitor electronic supply actions of each service and direct interservice transfers where appropriate.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General of the United States.

Ninety-third Annual Memorial Day Exercises, May 30, 1960, Antietam National Cemetery, Sharpsburg, Md.

EXTENSION OF REMARKS
OF

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, June 3, 1960

Mr. FOLEY. Mr. Speaker, on Monday, May 30, 1960, the 93d annual Memorial Day exercises were conducted at the Antietam National Cemetery, Sharpsburg, Md. This annual event is unique in Maryland and possibly in the United States. The formal program is preceded by a parade of civic, fraternal, patriotic, and military units. Numerous bands participate. An airdrop of flowers is made over the cemetery. The spirit of the occasion is in keeping with the old fashioned but ever new purpose of Memorial Day.

The Antietam National Cemetery was created by an act of the Maryland General Assembly in 1865. It was dedicated on September 17, 1867, the fifth anniversary of the battle of Antietam. Consisting of 11.35 acres, the cemetery is located within the confines of the Antietam National Battlefield Site. On March 13, 1878, Maryland ceded the cemetery to the Federal Government. It is the final resting place of 4,773 Union troops who fought in the Battles of Antietam and South Mountain. Of this total number, 1,800 are listed as unknown.

Servicemen who fought in the Spanish American War, World Wars I and II, and the Korean war have their graves in the cemetery. The last burial took place in 1953.

In keeping with the spirit and purpose of Memorial Day, I am inserting in the CONGRESSIONAL RECORD the remarks of John A. Matthews, commander, American Legion, Department of Maryland, presented during the exercises Memorial Day, 1960:

My fellow Americans, today is a day of reverent memories.

On this occasion we once again pay tribute to the valiant American dead who gave their lives in the defense of freedom and democracy. On this, the 30th day of May, as nature strives to bring to life all sleeping things, we gather to pay homage of respect and love to our honored dead, resting in cemeteries here at home and overseas in foreign lands.

It is not a sudden impulse of sentiment that prompts us to bow our heads in prayerful reverence. We do so because we, as a free people, wish to recall and honor the legacy of freedom and equality of opportunity bequeathed to us by those who gave their lives for freedom.

With deep gratitude and humility, we recognize the sacrifices of these men and women and the sacrifices of their families. It is fitting that we set aside this day to decorate with flags and flowers the graves of our dead comrades and of our families and friends. The placing of spring flowers and the rites being observed here today bear evidence of our respect and love for them.

We, the living, cannot exist entirely in the present. From time to time it is appropriate that we view the various aspects of our country's history, recall the unselfish patriotism of our men-in-arms, and consider the sacrifices they made to make our Nation great.

For in the pages of history we find the spiritual wealth of our Nation, and from the past we inherit our national traditions, our American heritage, our love of God and country.

The birth of Memorial Day came about at the close of the Civil War in 1866 in the small town of Columbus, Miss. The war's end brought no joy to this small town, which had stood in the path of many bloody campaigns of the Civil War.

Of the hundreds of men who marched away from Columbus, only a few had returned. The town's cemetery held hundreds of Confederate soldiers, as well as some 40 men who had worn the Blue. The women of Columbus, grieving for their dead, decorated with flowers the graves of their loved ones. In a spirit of generosity, they also placed flowers on the bare and forlorn graves of the Union soldiers buried there. The idea of a day of memorial caught the public imagination and spread from town to town.

In May 1868, Gen. John A. Logan, Commander-in-Chief of the Grand Army of the Republic, issued an official order that every post of the GAR hold suitable exercises and decorate the graves of their dead comrades.

In part, General Logan's proclamation read:

"The 30th of May, 1868, is designated for the purpose of strewing with flowers or otherwise decorating the graves of comrades who died in defense of their country. We should guard their graves with sacred vigilance. Let no wanton foot tread rudely on such hallowed grounds. Let no vandalism of avarice or neglect, no ravages of time, testify to the present or to the coming generations that we have forgotten as a people the cost of a free and undivided Republic.

"If other eyes grow dull and other hands slack, and other hearts cold in the solemn trust, ours shall keep it well as long as the light and warmth of life remains to us.

"Let us then at the time appointed, gather around their sacred remains and garland the passionless mounds above them with the choicest flowers of springtime."

Nearly a century after that first Memorial Day, we are stirred by much the same feelings expressed by General Logan. Once again we are reminded of our heroic dead who have emblazoned the pages of history with such names as Valley Forge, the Battle of New Orleans, of the Alamo and Gettysburg, San Juan Hill, of the Marne and the Argonne, of Bataan, Corregidor, and Iwo Jima, of Porkchop Hill, and Heartbreak Ridge.

And, too, it is not easy to forget December 7, 1941, when Pearl Harbor was attacked and our Pacific Fleet crippled. On that day we should have learned the cruel lesson of unpreparedness. Battleships, light cruisers and destroyers were sunk and damaged. But of much greater importance, 2,117 lives were lost on that day.

THE COST OF WAR IN HUMAN SACRIFICE IS STAGGERING

Battle and nonbattle deaths during World War I claimed over 116,000 lives. The figures become even more staggering when we

look at World War II. Battle deaths alone totaled more than 292,000, while deaths from other causes almost equaled the combined total of World War I.

More than 21,000 white crosses fill 50 acres in the U.S. Military Cemetery at Margraten, Holland. Row upon row, each cross marking the final resting place of an American soldier.

Today, as we once again pay tribute to our war dead, we wonder if we have come very close to the goals for which they gave their lives. Scarcely a day passes that we do not read in our newspapers or see on television of the strife in other nations—of masses of people who have not tasted the benefits of freedom and of their struggle to break the chains that keep them in bondage.

The dangers which confront our Nation and the world today are massive. The problems complex and trying. Our theory of democracy is being challenged in a cold war with communism, a designed plan for world revolution that would strip man of his belief in God.

In his book, "Masters of Deceit," J. Edgar Hoover warns us that today, "Communism is the major menace of our time and threatens the very existence of our Western civilization." Mr. Hoover continues: "I have deep faith in the American people and in our American way of life. But I know what communism could do to us. Not because it is stronger than we are; it is not. Not because it has something better to offer; it has not. But we may not learn until it is too late to recognize who the Communists are, what they are doing and what we ourselves, therefore, must do to defeat them."

Much indisputable evidence has been presented to the world and to the American people, warning us of the great dangers of communism. But there seems to be complete apathy on the part of most Americans, on this subversive "ism" which threatens and gnaws away at the very foundation of the free world.

It is timely, in this period of dismal uncertainty, that we pause to take stock of ourselves. We should decide now whether we are on the right track and headed in the right direction—or just racing down a blind alley.

The cause of freedom is never won completely, and the course of freedom has never been a steady or smooth one. Since the beginning of our Nation, the course has been rugged.

With each new dawn the flag must be raised.

Those whose memories we keep green each Memorial Day, raised Old Glory and kept it flying during the dark days of war. It remains for us the living to guarantee that the cause for which they gave their lives shall not be forgotten, that the very cornerstone of our way of life—liberty, human dignity and respect for the rights of our fellowmen—shall continue firm.

Once again, Memorial Day services are being reenacted in thousands of cemeteries throughout our land where men and women of many wars lie silent.

On this day, the American Legion pays solmn and grateful tribute to the memory of those who sacrificed everything in order that our Government and its blessings • • • and our many freedoms shall be perpetuated.

Over the silent chambers of these honored dead we wreathe garland of flowers, symbols of our love and devotion, sacred testimony that their memory lives within our hearts, our pledge that the Nation for which they fought died, shall always live.

Even before the first Memorial Day was observed, an American of towering stature gave to the Nation the finest expression of its meaning and its purpose. May these words of the tragic Abraham Lincoln at Gettysburg be etched in our minds and hearts:

"It is for us, the living, rather to be dedicated here to the unfinished work that they have thus far so nobly carried on. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to the cause for which they here gave the last full measure of devotion."

The Free World in the World Crisis

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. VAN ZANDT. Mr. Speaker, yesterday at Windsor, Ontario, Canada, Louis G. Feldmann, commander in chief of the Veterans of Foreign Wars of the United States had the honor of addressing members of the Canadian Legion at the 25th annual convention of that great organization of war veteran sons of our friendly neighbor and ally to the north.

During the course of his remarks, the leader of the more than 1,300,000-member VFW, who recently completed a 10-week, 21-nation, round-the-world goodwill mission under the auspices of the Veterans of Foreign Wars of the United States, and President Eisenhower's people-to-people program, pointed out some significant facts to the present world crisis due to Communist Party Chairman Khrushchev's duplicity and what the free world should do to retain the friendship of the more than 700 million still free Asian peoples.

Under leave to extend my remarks, I include the address of VFW Commander in Chief Feldmann to the Canadian Legion on June 1, 1960:

ADDRESS OF LOUIS G. FELDMAN, COMMANDER IN CHIEF, VETERANS OF FOREIGN WARS OF THE UNITED STATES, AT THE 25TH ANNIVERSARY CONVENTION, THE CANADIAN LEGION, WINDSOR, CANADA, JUNE 1, 1960

Comrades, it is good to be in Canada; to have the honor of being the guest of war veterans of your great Commonwealth of vast forests, of towering snow-clad mountains, and of plains that meet the sky; of deep and cascading rivers and blue, mirror-lakes; of enormous industry and abundant agriculture, in a land from sea to sea populated by some of the most hospitable people on earth.

If I had not seen your beautiful national emblem that I salute in reverence for what it symbolizes to you and to me, it would be difficult indeed to be aware that I had crossed an unguarded, invisible frontier.

Undeniably, we have many differences of opinion and beliefs. We are dissimilar in many respects. Yet, paradoxically, we are quite similar. We live in friendship by design, in sincere mutual admiration and understanding that does not exist between other people under flags of different nationalities.

How happy would be the world's people if they would live as do we Canadians and Americans; peaceably instead of contentiously; friendly instead of acrimoniously, and neighborly instead of belligerently. We live as we do because we know this is the correct way to live in the sight of our fellow men and in the universal eyes of God.

Your comrades in the United States, the more than 1,300,000 members of the Veterans of Foreign Wars of the United States, have not, or ever will forget the sacrifices of Canadians, or Canada's great role in two World Wars and in Korea. Many comrades of the Canadian Legion remember Americans beside them in the lines, in your ships, and in your aircraft formations.

Canadian aptitudes and fearless airmanship made your country a training center for airmen of all the Commonwealths in World War II. Hundreds of these intrepid young men emulated your incomparable ace of World War I, Billy Bishop, whom I am sure now flies the best aircraft in heaven.

Your navy is a working navy, instead of a glamorous service. Your brave officers and men helped save the free world from tragic disaster by distinguishing themselves in the hard, wet, dirty, antisubmarine warfare and convoy duty.

In peacetime we are each other's best customers. Our trade volume in dollars is greater than that of all Western Europe and more than that with all Latin America. It may come as a surprise to many, but Chicago's trade alone with Canada is equal to that of all West Germany with Canada.

What is equally surprising to many is the fact that Canada has an elaborate mutual aid program with foreign countries. On a population basis, with Canada having by census only a 10th of the population of the United States, your program is 16 percent greater than the U.S.'s foreign aid program. You are to be commended for aiding under the Colombo plan; helping your West Indies trading patrners, and for your enterprise with the emerging, new nations of Africa.

You are experiencing a natural population growth that attests to your youth, vitality, and the strength of your great Commonwealth.

We saw you accept by selective processes 2 million immigrants since World War II, and take to your nation's bosom a great number of Hungarian victims of Communist hatred of human freedom.

Americans learned much from Canada's pioneering all other nations in the care of veterans through your civil reestablishment program following World War I. We admire your generous veterans educational program.

You also have another distinction: That of being the only nation whose units in the North Atlantic Treaty Organization are professional soldiers. By that I mean, all are volunteers.

Because of the enormous importance of NATO in our freedom, we must exert our energies toward all-embracing land, sea and airpower, particularly now since NATO was one of the prime targets of the Communist Party's chairman Khrushchev. He would like to see this free world shield weakened and then disintegrate. We now know how protective NATO is because of Khrushchev's determination to destroy it.

Recently, the Khrushchev of consummate deceit who poses as a good family man; who countenances the destruction of all religions and who tried to deceive the vast majority of our people, who are religious, by piously imploring: "As God is my witness, my hands are clean and my heart is pure." Pilate, too, after the crucifixion, washed his hands and protested they were clean. How hypocritical can even a deceitful man be?

This is the same Khrushchev who helped make possible the genocide in Tibet; who blithely goes from capital to capital threatening war and simultaneously offering his peculiar brand of peace.

Kremlin leaders with Khrushchev in the forefront, look into a dormant volcano's crater; bend over, shout a torrent of Herculean vituperation into the abyss against the

West, particularly the United States; listen to the echo of their defiant Promethean speeches and are obviously pleased by their association with Mars based on their supposed Atlas strength. They commit these villifying acts against persons and nations who, under normal conditions would be their friends. Then, when the venomous traducers again meet the maligned, act as though nothing abnormal transpired to disfigure the friendship.

This is the hypocrisy of Khrushchev in trying to frighten the free world into surrender without a struggle. He reminds us of another uncontrollable national leader who destroyed himself in his bomb shelter.

So long as we war veterans have strength and breath we shall not give up our heritage of freedom to the international conspiracy that was shocked by a single plane over the Soviet Union while they have thousands of spies on the ground, in our governmental offices and defense plants. The Communists have produced their electronic Trojan Horse in the transmitter-gift to the American Embassy at Moscow, concealed in a carved great seal of the United States.

The former wide gap between the Soviet Union's vaunted missile lead is rapidly closing and with it the Communist's opportunity to attack us without warning is disappearing. The 9,000-mile missile shot from Cape Canaveral to south of the Cape of Good Hope should give the Communists pause.

Within a short time, I am told, many American vehicles will be in the skies, capable of detecting the launching of a missile anywhere. In addition, we of the free world will also have fantastic cameras in orbit that will photograph clearly missile sites. Instead of the present 15-minute warning period provided by the Midas satellites that will detect by infrared sensors a missile engine's heat waves, we will also soon have the Samos satellite to photograph any single missile or concentration of missiles on the ground.

This will give us on this side of the Atlantic and Pacific 30-minutes warning time to retaliate. England and France will also have a doubled warning period.

Thus, the initial advantage of the Soviet Union that devotes virtually its entire scientific strength and industrial plant to war against the free world will have been lost.

Instead of Khrushchev driving a wedge between the free world partners in defense, I am sure that consultation between Canada and the United States on the official level has never been greater. There is the frankest kind of diplomatic exchanges completely devoid of deceit and deception; unmarked by duplicity, unquestioned integrity, and certainly none of the violence and ill manners that marked the recent unpleasant events at Paris.

There, the free world stood in solid unity in the highest tradition of freemen threatened. We learned a lesson and I feel certain we will be less anxious to sit at a summit meeting without previous absolute guarantees that real peace, instead of a false peace, is possible.

In the meanwhile, let us get on with the greater business of assuring ourselves of the kind of peace we desire. Let us use every honorable means to keep on our side the 700 million free peoples of south and southeast Asia.

It is distressing to contemplate how Communists have succeeded in transforming and destroying the Western meaning of democracy; republic, freedom and equality, and turned them to their advantage.

The feeling is equally deep when we remind ourselves that we in North America, were first to translate all these noble words into the electrifying hope of mankind that would gratify the slumbering Greeks and Romans who strove to give positive meaning to the dignity of man that is totally ignored by the Communists.

We cannot come in second in this grim race to capture the domestic revolutions now in progress in south and southeast Asia. There will be no second.

We disagree with those who say we are in Asia on borrowed time. We dispute claims the area is lost to democracy. We violently disagree with those who say we lost it by default. This is the propaganda Communists want us to believe.

It is, however, undeniable that with the clock running out, we are locked in a titanic struggle for the more than 700 million still free Asian peoples who can change the earth's face politically and economically, if they fall victims of communism.

The same belief holds true with respect to the millions of people in the Middle East. These nations are young, vigorous, serious, and proud. They have every human right to be proud and free.

All these people, those in south and southeast Asia and in the Middle East, want to be and will be and remain our friends if we are their friends; if we prove we share sympathetically their interests, hopes, and aspirations, and will continue to help them toward these goals which are humanity's right.

We are not prepared to admit we are poor salesmen of ideas. Our history proves otherwise. But it is evident we have an anti-Communist selling job to do in those parts of the world.

We must convince these peoples we genuinely desire to help them and prove the Communists are not their friends.

We must prove we have the best political and economic product to sell and that the Communists do not.

We must prove to them we really have freedom and an economic paradise in the bargain, that is possible for them to achieve, and that the Communists do not.

We must prove all our arguments in freedom's name are invincible and that the Communists are not.

We as war veterans can be enormously helpful in fulfilling our destiny by fighting, unscrupulously if necessary, this evil of communism we can see; that we can feel, can reach, and can destroy.

There was no need for us to win two world wars and the battles of Korea, if we are to lose the peace. We cannot forget we owe allegiance to the cause of our comrades who were killed in World War I; or ignore our solemn obligation to our fathers and brothers who died for freedom's sake in World War II; or deny our unpayable debt to the Canadian and American youth who perished from this earth in Korea. We cannot abandon the memory of our comrades; we must serve them in their silence as faithfully as they served to protect our freedoms. This is our duty to them and to ourselves in this time of crisis.

Our countries have an obligation solemnly engrossed in the Manila Pact and the Southeast Asia Collective Defensive Treaty, and the Colombo Plan. These are instruments of trust and reliance we will honor.

But, should these people's governments perish, we too will be in grave jeopardy. Not by arms, for we have the strength and the courage and the indomitable will to win. But, we can lose through economic pressures forced upon them by our common enemy.

Docile as they are and possessing friendly innocence, some peoples in south and southeast Asia and the Middle East, are easy victims of communism. Their poverty is appalling. How they exist in squalor tests the imagination. Their sickness and disease are constant scourges. They are hungry from morning until night, and again the following morning and the next. Their minds become twisted by hunger. They wonder if their distress will continue forever.

Despite their pathetic condition they trust the free world and look upon us to come to their aid with every possible means before they are compelled by their circumstances to accept the only alternative and vanish beyond rescue.

We war veterans, members of the Canadian Legion and of the Veterans of Foreign Wars of the United States, cannot be insensible to the fact that, as that great Englishman and political benefactor of my own country, Edmund Burke, said, "Evil will triumph if good men do nothing."

With Canada our steadfast ally and trusted friend at our side, the free world will predominate in this cold war over the evil forces of communism and all of us can go forward in peace together.

Jobs After 40

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. HOSMER. Mr. Speaker, two analyses by the U.S. Employment Service throw light on the problem of obtaining equal employment opportunities for workers over 40. The first, entitled "Why Do Older Workers Have Job Search Problems?" reads as follows:

WHY DO OLDER WORKERS HAVE JOB SEARCH PROBLEMS?

Mature employees are an important part of our work force and their contribution to our expanding economy is recognized. If they become unemployed, their skill and judgment do not evaporate. The facts, just listed, about middle-aged and older jobseekers point to their being desirable candidates for job openings. Yet, the individual older worker has difficulty in getting another job. Why?

1. EMPLOYERS CLING TO INVALID ASSUMPTIONS

Some employers allege that older persons lack physical stamina and are less productive than the other workers. Some generalize that older jobseekers are inflexible, that they cannot learn new tasks, that they will not fit in with younger employees, and that they will not consider work at a lower skill level or at a lower pay rate. Other employers assume that older persons are absent from work more and that they are accident prone.

2. HIRING POLICIES PENALIZE THE OLDER JOBSEEKER

Restrictive physical examinations bar many able-bodied older jobseekers. Since some employers assign their aging employees to lighter jobs, they maintain that they cannot hire older persons. Higher pension and insurance costs are cited by other employers as their reasons for maximum age limits on new hires. Long seniority with one employer may hurt an older jobseeker who needs to look for another position. Some employers assume that younger persons must be hired so that they can be trained to assume greater and greater responsibilities and can be promoted to better jobs.

3. OLDER WORKERS ARE DISPLACED ALONG WITH OLD MACHINES

New processes and new machines often affect the number of workers and the type of skills required by an industry. Older employees are laid off rather than being trained

for the newer processes. If a plant or whole industries shift to other localities, older employees who may not be invited to transfer are left in areas with little need for their skills. To magnify their problems they are labeled as miners, as textile workers, or as steam locomotive workers, and are not considered for other types of job openings.

4. THE COMMUNITY CONSIDERS HIM A WELFARE PROBLEM

Although the community is vaguely aware that a problem exists and that something should be done about it, there is a disproportionate emphasis on the social aspects of the older worker's problems. Unless persons are individually involved, there is a belief that there is no real problem, that a good worker can always find a job.

The second USES analysis under title "Why Are We So Concerned About the Older Worker" brings out these answers:

WHY ARE WE SO CONCERNED ABOUT THE OLDER WORKER?

We must be concerned with the problems faced by the older worker, for his sake, for the sake of the economy as a whole, and in our own self-interest. The plight of the person "too old" for current job openings and too young to retire is one we cannot afford to ignore.

1. THE OLDER WORKER HAS MORE TROUBLE IN GETTING A JOB

A glance at any "help wanted" column will show that the mature jobseeker is having problems. A study of local office job orders reveals that generally more than half of all job openings specify upper-age restrictions. About a fifth of the orders specify 35 years of age or under, and twice as many list age limits at 45 or under. Local office placements for older applicants reflect these restrictions, since they represent only about a fifth of all placements, while older persons represent about one-third of all applicants. Age barriers on new hires lead to a higher rate of unemployment for jobseekers age 45 and over than for those in the 25–44 age group and also to longer average duration of unemployment. After age 55, the problem of finding a job intensifies and becomes severe after 65.

2. POPULATION AND LABOR FORCE TRENDS INDICATE THAT THERE WILL BE MORE OLDER WORKERS

People are living longer, and longevity will increase with medical advances in early diagnosis, and treatment of chronic diseases common in middleaged and later life. The population 45 and over is increasing more rapidly than total population. For example, during the first half of the century, total population doubled but the number 45 to 64 tripled, and the number 65 and over quadrupled. This growth in our older population is expected to continue during the next two decades at a rate double that for the 25–44 group. Our major population increases will be in the older and younger groups. The applicant load in our local officers will reflect this shift in our potential labor force. Not only will more jobs be needed every year, but age restrictions in hiring will need to be modified to keep pace with our increasing population.

3. OUR EXPANDING ECONOMY WILL REQUIRE MORE WORKERS

If we assume that our population and the demand for goods and services will continue to grow at a rate comparable to that in the past, our gross national product will have to increase from $391 billion in 1955 to $560 billion in 1965 to provide for our 25 million more people. Hours of work will probably continue to be reduced gradually as well. This means that we will need 10 million more workers by 1965 to keep pace with the demand for goods and services. The 25–44 age group can be counted upon for only a nominal increase, and the younger group must be encouraged to get as much education and training as possible. More than half of the labor force increase will have to come from the 45 and over age group.

In order to face up to the growing problem of the older jobseeker, first of all we must have knowledge of the extent of the problem locally and of the qualifications and attributes of the older jobseekers. What barriers are older applicants meeting in the local labor market? For which skills among older jobseeker is there little or no demand among local employers and why? What other potentials and qualifications do these applicants have? How can these skills and potentials be adapted to local needs?

Armed with knowledge of the extent of the problem, the qualifications and favorable attributes of older workers, and the industrial and labor situation in the community, we can effectively employ techniques developed to overcome employer objections and to facilitate the employment of older applicants.

She Fought Her Way Back to Health

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. MICHEL. Mr. Speaker, I wish to call attention to the following article which appeared in the May 29, 1960, issue of Parade magazine, written by Sid Ross. It is the inspiring story of a courageous mother residing in my congressional district who is living evidence of what good results are being realized from rehabilitation centers.

We in Peoria are exceptionally proud of the work being carried on by the Forest Park Home. The Institute of Physical Medicine and Rehabilitation is supported by the Forest Park Foundation, run by local Peorians who, as Sid Ross says, "have allowed nothing to prevent their dream of a model rehab center from becoming a reality."

The article follows:

SHE FOUGHT HER WAY BACK TO HEALTH

(By Sid Ross)

PEORIA, ILL.—A little more than a year ago, Margaret Duffield, 33, of nearby Ladd, suffered a paralyzing stroke. Had she been like thousands of stroke victims before her, life afterwards would have been a creeping, almost meaningless existence.

But today Margaret Duffield is busily caring for her husband and four children. Helped by a modern medical wonder, she has finally transformed pain and anguish into happiness and satisfaction.

In recording her case for almost 2 years, Parade has charted the exciting story of modern rehabilitation — "come-back-to-life care," it might be called—which has swept the United States since the end of World War II.

Today, hundreds of thousands of Americans from infancy to age 100, suffering from heart trouble, arthritis, injuries, polio, and a dozen and one other disorders, are being helped to live once again by treatment in the Nation's "rehab" facilities.

In October, 1958, after giving birth to her fourth son, Mrs. Duffield suffered a stroke, a rare aftermath resulting from a blood clot or a burst blood vessel in the brain.

After emerging from a month-long period of coma, she was admitted to the Forest Park Home, where physiotherapy was begun in the Institute of Physical Medicine and Rehabilitation here in Peoria. Examination showed she could hardly talk or hear. Paralyzed on her right side, she teetered at the edge of life.

Under the direction of the attending physician and the physical medicine specialist, her rehabilitation program swung into action. This included speech therapy, braces to correct deformity, massages and exercises to prevent muscle tightness—all this before Mrs. Duffield would try to walk again.

The institute is able to provide such intensive therapy because of the all-out support it receives from a unique local philanthropy, the Forest Park Foundation. This is run by local Peorians who have allowed nothing to prevent their dream of a model rehab center from becoming a reality.

HER FIRST STEP

On the day Mrs. Duffield took her first step, Parade was on hand.

"I was quite frightened," she admits candidly. "I was afraid of being hurt. But I guess deep down I never gave up—and I won't ever."

It did hurt when she tried to walk, and there were tears. But she kept at it tenaciously, doggedly.

As she gained confidence and stamina, her activities were increased. There was her wheelchair, with a lapboard to keep her in an erect sitting position, splints on her right hand and leg. Then she teeter-tottered on a tilt table to stimulate reflexes. Every day, over and over, there were exercises, baths, little tasks to perform to reeducate the muscles on her right side so they might work again. And there were little tasks for her left hand—combing hair, eating, drawing—to get it accustomed to added duties.

Progress was slow but sure, as often is the case in rehab. And perseverance and drive won out for Margaret Duffield.

Since last June she has been at home with her machinist husband, Lloyd, and their four youngsters. Mrs. Duffield still has some disability on her right side but she can do her own housework, cook, make beds, dust, feed the baby and fix dinner. For some of these chores, she needs help.

Gradually strength is returning to her right side although at times she still uses her wheelchair and arm and leg braces.

But more important, Margaret Duffield is at home with her loved ones, performing many tasks of a wife and mother.

She returns periodically to the Institute for checkups. "I look forward to continued improvement," she says, "although I don't think I'll ever be perfectly well.

"So I'll learn to live with this thing. There's lots to live for."

From a point close to death to renewed hope and vigor—that is the story of rehabilitation in America today. And it is Margaret Duffield's story, too.

Fourth Year Allocation to States Under H.R. 10128

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. BAILEY. Mr. Speaker, on May 26, the House passed H.R. 10128, a bill authorizing Federal assistance to the States for school construction.

During the course of House action, the bill was amended to extend its duration from 3 to 4 years.

The report from the Committee on Education and Labor, House Report No. 1426, on page 9, contains a table showing a calculation of allotments to States during the first, second, and third years of operation of the School Construction Assistance Act of 1960. So that Members may have complete data on allocations to the States, I have had prepared a table giving the calculated allotments during the fourth year.

The table follows:

Allotment of $325 million under provisions of H.R. 10128 during fourth year (1963–64)

Aggregate, United States	$325,000,000
Alabama	6,208,000
Alaska	455,000
Arizona	2,470,000
Arkansas	3,120,000
California	26,910,000
Colorado	3,348,000
Connecticut	3,998,000
Delaware	845,000
District of Columbia	1,202,000
Florida	8,352,000
Georgia	7,702,000
Hawaii	1,235,000
Idaho	1,300,000
Illinois	17,128,000
Indiana	8,645,000
Iowa	4,940,000
Kansas	3,900,000
Kentucky	5,752,000
Louisiana	6,500,000
Maine	1,658,000
Maryland	5,688,000
Massachusetts	7,735,000
Michigan	15,438,000
Minnesota	6,305,000
Mississippi	4,355,000
Missouri	7,215,000
Montana	1,332,000
Nebraska	2,600,000
Nevada	552,000
New Hampshire	975,000
New Jersey	9,880,000
New Mexico	1,885,000
New York	26,325,000
North Carolina	8,970,000
North Dakota	1,268,000
Ohio	17,518,000
Oklahoma	3,868,000
Oregon	3,282,000
Pennsylvania	18,622,000
Rhode Island	1,398,000
South Carolinia	5,135,000
South Dakota	1,332,000
Tennessee	6,468,000
Texas	19,045,000
Utah	1,918,000
Vermont	650,000
Virginia	7,442,000
Washington	5,200,000
West Virginia	3,575,000
Wisconsin	7,248,000
Wyoming	650,000
American Samoa	32,000
Guam	130,000
Puerto Rico	5,232,000
Virgin Islands	65,000

Post Office Policy Reduces Train Service

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. CUNNINGHAM. Mr. Speaker, the Post Office Department has maintained that its airlift of 4-cent letter mail—which has been extended to include other classes of mail in recent weeks—will have little or no effect on the Nation's railroads.

I submit the following information which clearly refutes that statement and shows that the removal of postal cars has caused a discontinuance of main line service in the northwestern part of this country, a condition which can be expected to occur time and time again across the country if the Congress does not stop the Post Office Department from its unauthorized extension of the airlift of mail on which air mail postage has not been paid.

Example 1. The Northern Pacific Railroad retired two trains running between Seattle and Spokane, Washington on March 31 due to the removal of postal cars. The removal of the postal revenue cut $145,000 from the receipts of these trains; thus all service on these 2-day trains was ended.

Example 2. Postal changes on the Great Northern run from Seattle, Wash., to Vancouver, British Columbia, resulted in the removal of the evening run of the famous "Internationals." The removal of mail from these runs cut revenue $90,000 a year according to Great Northern's announcement.

My bill H.R. 9488 and companion bills would put an end to this unauthorized airlift of 4-cent letter mail, and thus prevent the Post Office Department from causing the discontinuance of train service.

World Tension Worries Teenager With Dreams

EXTENSION OF REMARKS
OF
HON. JOHN M. SLACK, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. SLACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a teenager, Miss Judith Webb, of Hurricane, W. Va., which was written to the editor of the Charleston Gazette, May 27, 1960:

EDITOR, THE GAZETTE.

I am a teenager and as most teenagers I deam about my future. I dream of someday going to college to study to be a journalist and I dream of getting married and rearing a family. But in the situation the world is in today it seems as though my dreams will never come true.

If the tension between Russia and the United States keeps mounting I believe we will have another war, only this one much larger than we can handle.

Don't the leaders of the various countries realize what will happen if we become involved in another war? Is it so important to prove which is the stronger and more powerful nation? Why can't we live peacefully and trust one another?

With all the atomic weapons we have today a simple click of a button could end everything. I don't want this to happen. I want to grow up and enjoy life without fear of death. But since I am young and have no voice in Government affairs all I can do is pray that God will help our countries and our leaders to realize the terrible consequences of a war.

I love my family and my friends. I love my country and my life. I want lasting freedom and lasting security to be mine always.

JUDITH WEBB.

HURRICANE.

Martin J. Gillen's Boyhood Reminiscences

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. BENNETT of Michigan. Mr. Speaker, in the last quarterly issue of the Wisconsin Magazine of History released for the winter of 1959–60, there is included a feature story entitled "Martin J. Gillen's Boyhood Reminiscences." This historical article summarizes the life's work of one of the Nation's outstanding men who served the Government, along with statesmen like Bernard M. Baruch, during World War I.

In his later life, Martin J. Gillen was a resident of the 12th Congressional District in Michigan which I represent. His reminiscences were edited and prepared by two historical writers from this area. Dr. George S. May, a native of Ironwood, Mich., is a noted author and presently the research archivist of the Michigan Historical Commission, Lansing, Mich. Mr. Victor F. Lemmer, also of Ironwood, is a graduate of the Univertity of Notre Dame, a former associate of Martin J. Gillen, past president of the Historical Society of Michigan, and agent of the University of Notre Dame du Lac Gillen Foundation.

The sketch of Mr. Gillen's life is based on original sources collected by Mr. Lemmer over a period of years. The following is from the article which appeared in the Wisconsin Magazine of History written by Dr. George S. May:

In 1926, Martin J. Gillen, a native of Racine, Wis., set down some recollections of his boyhood years. Perhaps as never before this wealthy and astute lawyer, financial expert, and public servant must have realized how far he had come since his birth in 1872, and especially since receiving his law degree from the University of Wisconsin in 1898.

After practicing law, mostly corporation work, in Racine for 14 years, Gillen in 1912 took over management of the Mitchell Wagon, Mitchell Motor, and Racine Rubber Companies. Within 3 years he had placed these companies, representing assets worth $15 million, on their feet and returned a profit to their stockholders. In 1916 he sold the Mitchell Motor Co., and later liquidated the Mitchell Wagon Co. for New York and Chicago bankers.

With the outbreak of World War I Martin Gillen turned increasingly to work connected with the national interest. He prepared and distributed at his own expense, an industrial mobilization plan which was adopted with success by Bernard M. Baruch in 1917 as the basis for much of the program of the War Industries Board.

(NOTE.—Gillen was throughout his life a respected friend of Baruch. According to the most recent biography of Baruch, it was

Gillen who mentioned him to President Franklin D. Roosevelt as a Presidential adviser. Baruch is later quoted as telling Gillen that it would perhaps have been better if he had not done this. Margaret L. Coit, "Mr. Baruch" (New York, 1958), 487.)

When America entered the war Gillen authored a plan for local councils of defense which was adopted by communities throughout the country. In collaboration with Dr. Charles McCarthy he set up a State council of defense for Wisconsin which was copied by over three-fourths of the States. On the first liberty loan campaign in Wisconsin he was the sole speaker on a special train that stopped at 131 cities in 30 days, and he led Wisconsin to first place in its district in subscriptions during the first three loan drives.

From September 1918 to January 1, 1919, Gillen was an assistant to Baruch in the War Industries Board, and later in October 1919 became executive assistant to the Chairman of the U.S. Shipping Board, John Barton Payne, and settled contracts and claims involving some $3 billion. Subsequently Gillen was offered an appointment as Commissioner on the Board but declined because of other interests.

Returning in October 1920 to his Broadway offices in New York, Gillen's services as an adviser and consultant were in constant demand, particularly by steamship lines and such banking institutions as the National City Bank of New York and the First National Bank of New York. He continued to devote much time to governmental studies, and is credited with spurring the Commerce and Agriculture Departments to adopt new methods of gathering and publishing international economic data. After 1930 he spent more and more time on his vast wilderness estate, "Tenderfoot," on the border of northern Wisconsin and Michigan, which he turned over to Notre Dame University during his lifetime for scientific and educational purposes. Here he relaxed, supervised various construction projects on his property, and worked on the studies which occupied his interest up to his death in 1943.

A gruff, strongwilled bachelor, Martin Gillen sometimes alienated people by his tactics, but he won the undying and loyal support and friendship of many more. Typical of these acquaintances was the theatrical producer, John Golden, with whom Gillen had been associated in the Lambs Club. A decade after Gillen's death Golden wrote, "He was a kind, thoughtful, and wise gentleman. I wish I had known him better."

(NOTE.—As chairman of the club's financial committee, Gillen succeeded in removing the heavy burden of debt with which this theatrical group had been saddled.)

The following reminiscences of Martin J. Gillen, as condensed for the CONGRESSIONAL RECORD, are reprinted from a typed copy in the possession of Victor F. Lemmer. Internal evidence indicates that Mr. Gillen wrote or dictated this sketch, which is abridged, sometime in 1926 when he was 54 years of age:

I was born on October 1, 1872, on the west shore of Lake Michigan, at Racine, Wis., and resided there until September 1918. There, good, hard winters began in November and ended about St. Patrick's Day. In the summer the heat ranged from 70° to 100°, depending on the lake breezes.

My father, Edward Gillen, was born at Chillicothe, Ohio; was three-quarters Irish and one-quarter Scotch blood. He entered the Northern Army at 17 years of age, was one of the advance guards to enter Atlanta with Sherman, was in Libby Prison for a long period. He was a marine contractor and had scows, tugs, dredges, and piledrivers working from Waukegan, Ill., on the south to St. Ignace, Mich., on the north, a range of some 900 miles, at one time or another constructing large works in every principal port on the east and west coasts of Lake Michigan.

My mother was an Irish immigrant girl who came to this country when 2 years of age, an orphan. There were 11 children; I was the fifth.

I entered at the age of 5 an Irish Catholic parochial school, where I remained for 6 years, until I was 11. During this period, all the children of our family were subject to strict but kindly discipline on the part of my mother.

During the first 6 years of my schoolwork, I was affected by a great influence. It came from Sister M. Corona of the Dominican Order and of Irish descent, in the last 2 years of these 6 years. Sister Corona compelled boys and girls to know reading, writing, the meaning of words, and mental arithmetic. At 11 years of age, when I went to the Fourth Ward School, standing on my feet at the blackboard, I could multiply, divide, subtract, and add with almost lightninglike speed.

In 1884, when 11 years of age, I went to the fourth ward public school. My mother died in December, 1884, and we had housekeepers who were not kind to us. Then a second woman came into my life, Katie Cary, an Irish school teacher and the niece of our old parish priest. She was as great a woman as Sister Corona and even a better teacher.

I have spoken of two women and now I come to my mother. Her influence was always with me and is to this day—the most just and honorable mind I ever knew.

When I entered the high school, I became well acquainted with a silent, shy, studious boy and his sister. Both were remarkable students, with brilliant minds who had behind them a pioneer mother in thought, in woman sufferage, with great force of character. She was the influence in their making. The boy was Parker Willis, who did such fine work in the creation of the Federal Reserve.

The summer vacation before I entered the high school, my father put me on as a water boy on contract work for the 10 weeks vacation. Every summer after that, including the Easter vacation, I worked on Government and municipal contract work, building wharves, piers, breakwaters, lighthouse foundations, bridges, and building docks, scows, dredges, and pile drivers. Too, for 8 weeks one summer I was cook on a tug for a crew of seven men. I worked at Waukegan, Ill., Kenosha, Racine, Milwaukee, Two Rivers, Manitowoc, Sheboygan, Kewaunee, Green Bay, and Sturgeon Bay, Wis., and at St. Joe and Grand Haven, Mich. I worked as water boy, then boatman; on crosscut saw; as pile sharpener; fireman on pile driver, tug, and dredge; linesman on pile driver; winchman on pile driver; unloading limestone rock by hand, sometimes on the waterfront, other times from 1 to 4 miles out in the lake; laborer, foreman, and at last superintendent.

Thus, from the time I left the grammer school until I finished the law school at the university, I had no vacation. The money I earned during the summer vacation, my father took. He paid for my board, clothes, and allowed me $1 a week spending money. I never smoked or touched a drop of liquor until I was 28 years of age. During these 10 summer vacations, I was placed and worked with the roughest sort of men that are known and generally slept in a boarding house or in a bunk in a scow or temporary house to be able to be near my work, and lived with men one meets in the roughest place in America. Thus, mind you, was spent my vacation time for the 4 years at the high school and the 6 years at the university. It was hard, rough work and as I look back I enjoyed the work. I was known as a hustler at whatever I was doing. It gave me a fine experience with the white man's burden of daily toil and it built a strong body for my life's journey. I never regretted a single moment of it. Never do I remember of having suffered with self-pity as to my lot.

The last two summers of the years I was at the university, before I started to practice law, I largely had charge of 1,700 feet of breakwater 2 miles east of the city of Milwaukee, working in 32 feet of water with a large floating equipment employing some 300 men. We had to fight the storms there always. When sinking cribs, we started at 4 a.m. and finished at 11 p.m.

The industrial activities at Racine, during my university period, were based on 8 months' operation of the factories which generally began operations about December 1 and ran to August 1. Ninety-five percent of the people owned their own homes. Two men who visited Racine come to my mind: James E. Blaine, in his campaign. I heard him speak, and later when I graduated from the high school my graduation oration was "Reciprocity." Then I well-remember Alexander Bell displaying at the high school a rough little machine to which he attached an ordinary tin horn and producing talking from a machine.

I entered the University of Wisconsin 1 month late, in 1892, at 19 years of age. I was delayed because my father could not spare me from the contract I was on. Fortunately for me, my high school had been more or less a failure, my home life was unhappy. The hard sledging on contract work warned me that physical labor was not mind-or soul-satisfying and I started on my university work with a vengeance. I placed a little card upon my dresser on which I wrote: "Remember Sister Corona; remember Katie Cary; remember your Mother." And I started in. I was bidden to a number of fraternities, but I stayed with the nonfrat crowd. I joined "Athenae," a literary and debating society—the society from which Bob La Follette came. I was a member of it for 4 years and never missed a Friday night meeting during that period. It was the greatest single influence of my work at the university. It was run under the strictest rules and no man could join it if he belonged to a fraternity and no man could stay in it if he did not do his work. One had to be on a debate every 2 weeks. In turn, he had to be a critic, a presiding officer, and deliver an oration. There were 60 members in it and one-half the members had to perform every second week. The society met at 7 o'clock p.m. and adjourned at 12 p.m. The preparation for debate required a great deal of research work and of course it gave character and courage and vision to the men who belonged to that society. Too, it made them progressive, in the true sense of the word. You fought for your life in that society in debate and, too, no nonsense or sharp practice was permitted, for a senior sat as presiding officer and another as chairman on the jury and a senior critic reviewed the work of each debater at the close of the debate after the decision was given. These seniors were stern men. Oh, Athenae. What a jealous, knowing, Spartan mother.

In 4 years of Athenae I participated in or heard debated every public question of moment—past, present, and future—such as: the Civil War question of rights of succession versus the Union; public ownership of railroads, street railroads, electric lighting and power companies, telephone and telegraph; parcel post versus express companies; Behring Sea controversy; Monroe Doctrine; Australian ballot system; rights involved in Homestead strike; gold standard versus free silver; national divorce law; tariff in all phases; Panama Canal; war versus pacifism; socialism as a cure-all; subsidy for a mer-

chant marine; right of future generations in the natural resources of the Nation versus the right of personal discovery and occupation; taxation—inheritance and income law and tax burdens; manifest destiny of United States to seize Mexico and Canada; right of State to tax for higher education; commission form of government for municipalities; formation of State commissions to curb and check public corporations, and the like.

The magnificent university library was the storehouse for information and authority. It became our workshop.

Robert La Follette and his great battle aides, such as Francis P. McGovern and Henry Corgens, were leaders in Athenae in their day. Its alumni were scattered all over the State of Wisconsin and they were clear thinkers and forcible public speakers. The La Follette legislation and the legislative reference library came from Old Athenae. I firmly believe Athenae profoundly influenced La Follettism in Wisconsin, and thus the Nation, more than did any single factor in the reform and checking of corporate abuses in the United States, in my day. The La Follette doctrine spread west and northwest from Wisconsin and made possible Theodore Roosevelt, courageous, as a worthwhile President. La Follette knew how to dig up the data, knew how to interpret and construct it, knew how to dramatize it to the public and, too, his training as a public speaker was had wholly within Athenae's halls. Joseph E. Davies received his training as an orator there. I write the above impartially as I never belonged to Bob's party, though much he did I supported. He possessed a supreme courage. He drove straight ahead to his objective with the hammering, bulldog tenacity of a Grant. He had the Athenean method of "prepare well and then dare."

(NOTE.—Although Gillen, a longtime Republican, may have been referring here to the Progressive Party, under whose banner La Follette ran for President in 1924, it is more likely that he means that he never supported the La Follette faction of the Republican Party with which the great Wisconsin Senator was associated, at least in name, throughout the rest of his career.)

Across the hall from Athenae was its worthy rival, "Hesperia," from whence came William F. Vilas and John C. Spooner; yet in the yearly joint debate between these societies, Athenae largely won, and, too, she gave to and led Wisconsin in the great reform movement in which the progressive alumni of Hesperia did fine service. No man who came out of Athenae lacked in the spirit of service, service, service—to man and his country.

My allowance at the University of Wisconsin, including tuition and clothes, was $550 a year and I lived on it. There, too, it was a simple university life, with no distractions, excepting collegiate or literary contests. No student owned horses, and motor cars were unknown. Few of the boys had boats and a few, canoes, but no student owned a little steamer or gasoline launch. And there was no drinking or carousing among the students.

Among my professors at college who impressed were Dr. Edward A. Birge in biology, later president of the university; Prof. John C. Freeman, in poetry and prose—had been general in Civil War, Ambassador to France; Prof. Charles R. Van Hise in geology, later president of the university; Prof. William A. Scott in economics; Prof. George C. Comstock in astronomy; Prof. Frederick Jackson Turner in American history, all topped off by Charles Kendall Adams, the distinguished university president. These men were serious-minded teachers and carried their burden with high regard for the students and generally the students accepted the authority of these men. The University of Wisconsin went to its high water under their guidance. These men were our classroom professors. The students of today, in all the American colleges, are taught by subprofessors and in large classes. We had a wonderful opportunity.

My course was civic-historic and I took hygiene, biology, physiology, bacteriology, laboratory work, history, and economics. Study of hygiene and the premedical courses gave me a great fund of knowledge as to the care of health and body that has been of inestimable value to me. At 54 years of age, I can truthfully say I have never known a sick day since childhood.

My pastime was athletics. There were two great parties in the university at my time—the fraternity men on one hand and the nonfraternity on the other. With considerable pride I recall the fact that I belonged to the nonfrats, or the poor boys group and they gave me every athletic and class honor that a man could receive. In a word, they made me a leader. I ran the mile and a half mile for my college and then moved into managerial work of athletics. In turn was manager of the track team, manager of the football team, director of the Athletic Association, director of Midwinter Athletics; representative for 4 years for Wisconsin to the Western Intercollegiate Amateur Athletic Association.

(NOTE.—In the 1890's the faculties and administrations of the member universities had not yet taken over the dominant role in running the athletic affairs of the Western Conference and converted it into the high-powered "Big 10.")

In my senior year, the boys gave me the class presidency which carried with it the president's address on commencement day, farewell address to the faculty, and one of the four orators of the day, which meant three addresses during commencement week. This all came out of "Old Athenae."

Probe Spurs Highway Reforms

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 3, 1960

Mr. WRIGHT. Mr. Speaker, the June 2 edition of the Engineering News-Record contains a very interesting and revealing article concerning the highly desirable results already being felt in the Nation's highway program as result of the investigations of the special select committee on the Federal aid highway program.

This is a magazine written expressly for the engineering trade, and it is widely circulated among engineers and public officials engaged in various public works activities.

The article points out the findings of the committee have already forced road officials to take a new look at some important administrative deficiencies, and that as result of these hearings and the facts they have divulged, the Bureau of Public Roads has begun to tighten its project controls.

It speculates further than studies underway by the American Association of State Highway Officials as result of the House committee's roads investigation will probably result in new procedures designed to protect the taxpayers' funds in a better and more efficient manner.

Under leave to include extraneous matter, I am inserting this article at this point in the RECORD in the belief that it will be of interest to the membership:

PROBE SPURS HIGHWAY REFORMS

The Blatnik committee findings have forced road officials to take a new look at some important administrative deficiencies.

BPR has already tightened its project controls; and AASHO studies now under way will probably result in new procedures.

The Bureau of Public Roads and State highway officials are busily tightening nuts and bolts in their administrative machinery.

They are well aware that the Blatnik committee is filing away fodder for hearings perhaps just as embarrassing as those that uncovered the irregularities on the Skelly Bypass in Tulsa, Okla. (ENR, May 12, p. 21).

But they are determined to correct whatever irregularities remain and to work out procedures to insure against their recurrence.

An extensive reshaping of construction contract supervision began last week when key members of the American Association of State Highway Officials met with BPR Commissioner Ellis L. Armstrong and Deputy Commissioner Frank C. Turner.

That was the third meeting of road men in recent weeks—all of them spurred by the scandals, all of them aimed at heading off new ones.

The first was held early this month at LaSalle, Ill. There AASHO Chairman David H. Stevens of Maine set up a special committee on project procedures charged with setting guidelines for insuring effective supervision of all phases of construction in road projects (ENR May 19, p. 31).

The committee is working out a system for cross checking such things as sampling and testing results, materials quantity and quality and workmanship. Five subcommittees have been organized to go into such subjects as paving type determination and documentation, grading, and minor structures, flexible pavements, rigid pavements, and channels of project supervision.

Another AASHO committee is checking into current procedures for handling right-of-way purchases.

A first draft of proposals from these AASHO task forces should be ready by the end of this month, and a final version will be ready in time for the annual AASHO meeting in Detroit in December.

If new procedures are formally adopted by the full AASHO membership BPR may well make them a part of all Federal-aid road-building procedures, just as AASHO construction standards now form the basis of BPR regulations in that area.

Meanwhile, with the Blatnik investigators breathing down their necks, state highway departments aren't waiting for these new regulations to put their own houses in order. Many have already begun overhauling their construction administration practices.

From States like Arizona, Maine, Texas, Missouri, Oregon, Virginia, and others come reports of 1 and 2-day skull sessions between road officials and their engineers on how to close loopholes.

Reviews are underway in almost all States to make sure that inspection systems which look good on paper are actually working as planned.

Typical of the sloppy administration they're trying to get at is the deterioration of the spot-checking system in one State. There, the central laboratory, which was supposed to make the spot checks, did not actually go into a project unless specifically requested to do so. Over one 10-year span the laboratory received not a single request.

As far as BPR is concerned, it just doesn't have the manpower to do the inspection job necessary for the approximately 10,000 highway projects under construction.

It has 500 area engineers spread across the country. BPR says it needs twice that number.

BPR's workload has tripled since 1956, when Congress voted the $50 billion Federal-aid highway program. Personnel to handle the program has increased only 20 percent. BPR requested 150 more men, mainly area engineers for the coming year. That was whittled to 100 in the budget request, then snipped to 50 by Congress.

That is not to say that BPR offers its lack of personnel as a blanket excuse for inadequate inspection. It sought, 3 days before the Blatnik hearings began, to tighten Federal control of the roadbuilding program with this 3-point edict to its field offices:

In addition to the presently prescribed responsibility of the division engineer or his representative to inspect material test reports during his visits to projects, he will report for the Bureau's permanent project records the findings from such reviews and any actions taken regarding the materials and workmanship being incorporated into the job. Payments will be held back on States that don't have on file, when the BRP representative makes an inspection, material test reports and other reports that show a project is being constructed according to approved plans and specifications.

Bureau inspectors must submit in writing the results of thickness, lineal, and other measurements taken during the inspection of a project. The BPR inspector will select random points for samples to be taken on project work. These samples must then be sent by the project engineer to the State central laboratory for testing with results reported to the Bureau of Public Roads' division engineer. Location of the points where samples have been ordered will be included in the inspector's reports.

Beginning this week, before the final acceptance of a project, States must take samples on a project as selected by the Bureau's division engineer. A Bureau representative will observe both the sample taking and testing. States must also certify that the project meets all governing plans and specifications, including workmanship and materials, before the Bureau will pay for the project.

Address by Lt. Gov. Wilson W. Wyatt: "A Three-Point Program for the Appalachian Region"

EXTENSION OF REMARKS

OF

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, June 3, 1960

Mr. FOLEY. Mr. Speaker, on the 26th day of May I had the privilege of inserting in the RECORD an address by the Honorable J. Millard Tawes, Governor of Maryland, on the occasion of the convening of the Governors' Conference on the Appalachian Region at Annapolis. As the Congressman from western Maryland, I am vitally concerned with the economic and social problems of our citizens residing in these mountain areas. I think this body recognized these problems and the consequent need for immediate and comprehensive Federal help by passing the area redevelopment bill. To those of us who live with this pernicious economic ailment, the President's veto was indeed an act of tragic indifference.

Lt. Gov. Wilson W. Wyatt of Kentucky delivered a clear, succinct, and meaningful address on May 20, 1960, at Whitesburg High School in Letcher County of his native State, in which he proposed a three-point program for the Appalachian region. By his remarks, the Lieutenant Governor indicates an understanding and feeling for the aspirations of the industrious and energetic citizens of the entire area. I ask permission to insert his speech in the RECORD and recommend it as must reading for Members who have more than a passing interest in the region as well as the puzzling problems of persistent hardship common to so many areas of our country.

A THREE-POINT PROGRAM FOR THE APPALACHIAN REGION

(By Lt. Gov. Wilson W. Wyatt, Whitesburg High School, Letcher County, May 20, 1960)

This is your commencement night—you have completed your course and you are commencing a new one. Here in Whitesburg, in Letcher County, in the heart of the Appalachian region, you are commencing the next phase of your career. You, and all others in this area, love the Appalachian region—its Pine Mountain, the Breaks of the Sandy, the rivers and streams, the wooded mountainsides. It is here that you would like to make your future with your family, your friends, and your loved ones. There is no area in the United States that has greater natural beauty or greater scenic attraction. With proper development this can be the mecca for millions of tourists every year. With proper development this area can boast forests among the finest in the country. With proper development woodusing industries can be brought into this area. With proper development electricity generated from the great coal deposits of this region can turn the wheels of commerce and thousands of new jobs can be created.

And, yet, realistically, we know that the problems of eastern Kentucky are great ones. But just as you are graduating tonight and commencing a new phase of life in times that are without precedent and in a world in which the population explosion, the scientific revolution, and the battle for the minds of men have combined to produce crises and opportunities which can be met only by solutions which have never been tried before, so, also, the problems of eastern Kentucky can be solved by an approach that is bold and new and practical. Let's talk for a moment about what that approach may be.

It is understandable that those who live in areas of high employment and prosperity find it difficult to comprehend the problems of depression, the pockets of poverty, which exist in certain areas of our land. But it is not understandable that these problems should be left unsolved. Just recently the depressed areas bill passed both Houses of Congress of the United States but at the White House the bill was vetoed. I share with hundreds of thousands of people in this region the deep regret that the depressed areas bill should have been vetoed by the President. The entire Appalachian region would have benefited had this bill been permitted to become law.

Instead of regretting the past and shedding a tear for what might have been, let's work for and look to the future—the immediate future—to see what still may be. I am convinced that the unprecedented problems of the Appalachian region can be met successfully only by an unprecedented solution. There is no area in the country where the people hold their heads higher in self-respect or will work any harder to help themselves and meet their own problems. But there are fundamental things that should be done and must be done to make it possible for the people of the Appalachian region to improve their lot and make their own way. Governor Combs and I are anxious to do everything we can to help create the basis for new opportunity and a new economy in eastern Kentucky.

When I talk of this area I am referring to the entire Appalachian region which includes part of southern Pennsylvania, the western part of Virginia, West Virginia, and Maryland, and the eastern area of North Carolina, Kentucky, and Tennessee. The economic problem of the area may vary in degree but the causes are the same and the result is the same. And the cause is one for which there is a solution. It ill becomes the richest nation of the world to suffer so large an area, with so great a population—people of rugged pride and native ability—to continue to be looked upon as a problem area when there are solutions which we can plainly afford. I would restate that phrase—there are solutions which we can not afford to be without.

Back in the acute depression days, relief funds were spent at the rate of $30 million a year in the valley of the Big Sandy, and in lesser sums for a further period. More than $100 million was spent as handouts because of the depressed conditions. At that time this sum of money would have been sufficient to improve and develop the Big Sandy River.

Or, let's take another approach. Last year, the year 1959, the State of Kentucky and the Federal Government together spent more than $80 million in Federal and State subsistence and in unemployment compensation payments to Kentuckians. A disproportionately large share of this huge sum was spent in eastern Kentucky.

The last thing wanted in eastern Kentucky, and this I know from traveling to every county seat in the entire region—not once but many times—the last thing wanted in eastern Kentucky is a handout. What eastern Kentucky wants, and what all the Appalachian region wants, is the chance to be self-sufficient; the chance to help itself; the chance to be self-reliant.

On the occasion of this commencement, let me suggest the commencement of an entirely new program—one that is bold, one that is simple, one that is practical. It is based on the fundamental fact that in the Appalachian region the roads are bad and the creeks and rivers are unstable. It contains three points:

1. Roads: I have said many times that the greatest need of eastern Kentucky could be stated in one syllable—roads. The standard formula for determining Federal assistance in the building of roads is the traffic count. The money is spent where the traffic is heaviest and where the count is greatest. But that means that in the Appalachian region where there are almost no major roads, there can be no major traffic. It seems clear enough to me that you cannot count the automobiles on roads that don't exist. Or, more accurately, on roads that do not invite modern traffic. Therefore, since major roads have not been built, interstate highways, under the present formula, cannot be built. It is a downward spiral. For lack of roads in the past and at present, it is impossible to get proper Federal participation in building roads for the future. I do not quarrel with the standard formula for determining Federal participation, with this exception: a constructive approach to the depressed areas of the Appalachian region would be to restate the formula for Federal

participation so as to make the 9-to-1 matching Federal funds available for construction of major highways through the Appalachian region of America. This would require no new program, no new agency, no relief. It would require merely the realistic recognition of the simple fact that this area of the United States is entitled to a constructive solution. The railroads received special subsidies to help them span the continent; the airlines receive special subsidies to help create the great modern network of transportation by air; the steamship lines have received and still receive subsidies in order that we can sail the oceans. The principle of special treatment of special problems in order to bring about special results is nothing new in this country. Let's take that proven method and apply it as a constructive solution in the Appalachian region. Governor Combs has already announced—and before the fall the dirt will fly—a major road from central Kentucky to Whitesburg and to Pikeville. But this road, and other roads like it, could be greatly accelerated if full 9-to-1 matching funds were available from the Federal Government. And they should be.

2. Water: A second fundamental need for eastern Kentucky—and for the entire Appalachian region—is the control of water—the elimination of flash floods through the construction of reservoirs and flood impoundments, and the damming of the streams in order to make navigation possible. Eastern Kentucky has plenty of water if only it could be brought under control. Flash floods prevent many new employers from bringing their businesses to the region. At the same time that flash floods could be controlled through impoundment, industrial water and vacation meccas would be made available, but again a Federal formula stands in the way. Impoundments can be built and dams can be constructed provided something known as the "economic feasibility test" is adequately met. Once again, I do not quarrel with the justness and propriety of the formula for all other national purposes. It is a just one and a sound one. What I suggest as a commencement of a new approach to the problems—and let me say also, to the opportunities—of eastern Kentucky, is that in the Appalachian region—and any other such depressed region in the country—there should be applied a special rule of feasibility that will recognize the special problem. Until the water of this region is brought under control the richness of the region cannot be reflected in a formula of economic feasibility. Again we have the downward spiral. The values are not there because the water is not under control; and since the water is not under control, the values do not Appalachian region, impoundments could be built that would make this area one of the great tourist meccas of the world, and industrial water would be provided for great economic development. Here, again, is a constructive approach to spending dollars for a solution rather than for relief.

3. Special work projects: People in prosperous areas—and that means people in most areas of the United States—prefer not to think back on the times of the depression when the country found it not only necessary, but desirable, to have special work projects in order to give employment rather than relief to self-respecting people. Let us recognize frankly that in the Appalachian region we have just as great a need today for special work projects as the country had need for them generally during the period of the depression. As a matter of fact, these special work projects could, to a very large extent, be a definite part of the special Federal program for roads and the special Federal program for water impoundment and stream improvement. In addition, they could include the worthwhile projects of taking the silt from streams, stopping erosion, and reforesting great areas. This would be work which would maintain the self-respect of the individuals, contribute to the wealth of the region, and help bring about the fundamental change that would open a new future for eastern Kentucky and the rest of the Appalachian region.

This three-point program would be a constructive program. It would start at once to bring about the solution. It would lay the foundation for the great and promising long-range development of the area.

Kentucky has two Senators and eight Congressmen. Seven of the Congressmen are Democrats and one is Republican. Both of the Senators are Republicans. But in the problem of the Appalachian region, there is no party line. I feel confident that Republicans and Democrats alike in the Kentucky delegation and in the delegations of the other affected States, would be willing to support a constructive program for the sound solution of what has been called a problem area. This would be a new approach—different from any of the depressed area bills which have been considered by either party. Perhaps this could be the beginning of a new joint effort for the solution of the problem and the realization of the opportunities that lie in that great area known as the Appalachian region.

To join hands in this project I invite the Senators and the Congressmen from the seven States in this region—to join hands in a great regional effort to initiate and carry forward a program that will bring not just temporary relief, but a real, long-range, and fundamental solution.

Should the Interest-Rate Ceiling Be Removed?

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include an article from Tax Review entitled "Should the Interest-Rate Ceiling Be Removed?" by Charles E Walker, assistant to the Secretary of the Treasury.

Mr. Walker points out the urgent need for action by Congress to remove the statutory limitation on interest rates on long-term Government bonds.

The arbitrary ceiling, Mr. Walker says, contributes to a further shortening of a marketable debt that is already much too short in maturity; that excessive reliance on short-term issues in debt management exerts strong inflationary pressures; that the confinement of Government financing to short-term securities distort credit markets, harming consumer, small business, and farmer borrowers of short-term money; and that the interest ceiling has increased the cost to the Treasury for debt servicing by from $200 million to $400 million.

Mr. Walker warns that "the problem of the interest-rate ceiling is not a short-run transitory problem, nor should it be approached on a partisan basis. The ceiling, if not removed, can continue to obstruct debt management through many administrations in the future."

The article follows:

SHOULD THE INTEREST RATE CEILING BE REMOVED?

(By Charles E. Walker, assistant to the Secretary of the Treasury)

Treasury debt management today is the weakest weapon in the Federal Government's arsenal of financial policies to promote sustainable economic growth, and the Federal debt grows shorter and shorter in maturity. The facts behind this situation are these. A 4¼-percent interest-rate ceiling on new issues of marketable Treasury bonds, established in 1918 in connection with a particular financing operation of World War I, has effectively prevented the Treasury from selling more than a token amount of long-term securities for almost a year. Through no choice of its own, the Treasury has had to rely almost completely on new issues of notes, certificates, and bills—securities that mature in 5 years or less and on which no interest rate ceiling applies.

There are four major arguments for removal of the ceiling. In the first place, forced reliance on short-term financing contributes to further shortening of a marketable debt that is already much too short in maturity. Today, almost 80 percent of the marketable debt matures within 5 years; this figure contrasts with 50 percent in 1946 and 67 percent at the end of 1952. Most of the shortening in the debt during the postwar period occurred between 1946 and the end of 1952, during which time the Treasury sold only $5.2 billion of marketable issues of more than 5 years' maturity. Since the end of 1952, $49½ billion of over 5-year securities have been marketed. But, despite these determined efforts during the past 7 years, the passage of time has moved more and more securities closer to maturity. Moreover, if the marketable debt does not change and no securities of more than 5 years' maturity are issued, the under-5-year debt will swell to 87 percent of the total by the end of 1964.

Debt-lengthening must, therefore, continue to be a high priority goal of Treasury debt management. Otherwise, the average length of the debt will grow shorter and shorter, and Treasury refunding operations will occur more frequently and in larger amounts. This will not only tend to disrupt the Government securities market, but will also complicate the flexible administration of Federal Reserve credit policy. The relentless shortening in the public debt cannot be viewed with complacency.

Progressive shortening in the maturity of the public debt has another important implication, which leads to the second major argument for removal of the ceiling. It is universally agreed the unbridled creation of new money to finance Government deficits or to pay off maturing issues would result in disastrous inflation. But apparently too few people realize that excessive reliance on short-term issues in debt management can also exert strong inflationary pressures. This is because the shorter the term of a Government security, the more like money it is. A 25-year Treasury bond is a true investment instrument, but a Government security maturing within a few days is almost the same as cash. Similarly, a security maturing within a few weeks, a few months, or even a year or two automatically turns into cash within a relatively short period of time. Thus, a large build-up in short-dated Government securities increases the inflationary potential embodied in the Government debt; holders can easily liquidate short-term securities to obtain cash for spending for goods and services, either by selling the securities or by simply letting them run off at maturity.

Federal fiscal and monetary policies have been used effectively in recent months to contain the inflationary pressures that, although sometimes dormant, are always present in a prosperous economy. But because

of the interest rate ceiling, Treasury debt management has actually contributed to the inflationary potential in the economy.

A third major argument for removing the interest rate ceiling arises from the distortions in credit markets that result from confining Government financing to short-term securities. Even though the Government is now operating with a balanced budget, the Treasury must turn over $70 to $80 billion of marketable securities each year. The confinement of so huge an amount of financing to securities of less than 5 years' maturity—and this will be the inevitable result if interest rates do not decline significantly from present levels and the ceiling is not removed—may add unduly to pressure on the short-term market. Thus, short-term interest rates would be higher than otherwise would be the case, and the availability of credit to private short-term borrowers—particularly consumers, small businesses, and farmers, all of whom rely heavily on short-term credit—would be curtailed. Moreover, experience last autumn indicated clearly that such distortions can contribute to severe drain on savings institutions, as customers withdraw money to buy high-yielding securities. This in turn may unduly restrict the flow of savings into home construction and other long-term projects.

Finally, experience during the past year indicates that the interest rate ceiling has caused interest on the public debt to be higher. Knowledgeable market observers estimate that the arbitrary confinement of Treasury financing to short-term securities has caused short-term interest rates to average one-fourth to one-half of 1 percent higher than if the Treasury had been free to spread its borrowing over a wider range. This additional interest, when applied to the $70 to $80 billion of securities that must be turned over each year, increases Government spending by some $200 to $400 million.

CEILING PRESCRIBES MARKET'S AREA

What are the arguments that have been presented by those who oppose removal of the ceiling? The first and most familiar argument is that removal of the ceiling would cause interest rates in general to rise. But if the ceiling were truly effective in holding down rates, it would be logical to expect rates on outstanding Government bonds to remain below the ceiling. During most of the past year, however, such yields have exceeded 4¼ percent.

The fact is, of course, no Government-decreed interest rate ceiling can prevent forces of demand and supply from exerting their effects so long as credit markets are free. Quotations on outstanding Government securities that are the product of each day's free market trading among thousands of holders of Government securities cannot be repealed by Treasury or congressional fiat. If interest rates are to be controlled then the actions of lenders, borrowers, and all market participants must be controlled. But so long as the basic freedom or the marketplace is maintained and direct controls are not used, interest rates—or the price of borrowed money—will continue to reflect changes in the basic forces of demand and supply, including the impact of flexible monetary policies.

Rather than preventing interest rates from responding to market forces, the real effect of the ceiling is to prescribe the area of the market in which the Treasury can borrow. President Eisenhower put the matter succinctly in a special message to Congress last summer. He said: "To prohibit the Treasury from paying the market price for long-term money is just as impracticable as telling the Defense Department that it cannot pay the fair market price for a piece of equipment. The result would be the same in either case: the Government could not get what it needs."

NO GUARANTEE OF BENEFITS TO BANKS

As a corollary to this argument, some of those who oppose removal of the ceiling argue that such action would only serve to enrich the large financial institutions of the Nation. This view is basically in error because interest rates, as noted above, are not determined by Government edict but by forces of demand and supply; in and of itself, removal of the ceiling would not cause interest rates to rise. But even when interest rates do increase, it does not follow that the financial institutions themselves receive all of the benefit. Many of the large lending institutions in this country are mutual in nature, and a substantial portion of the rise in interest rates has been passed on to the saver.

Although commercial banks are not mutual institutions, it is important to understand that their current earnings would tend to fall rather than rise if the ceiling is removed. This is because the vast preponderance of commercial bank loans and investments are of relatively short maturity; for example, the average bank loan is estimated to mature in about 2 years and the Government securities banks hold have an average maturity of only 3½ years. A principal effect of the interest rate ceiling is to force short-term interest rates to higher levels than would otherwise prevail, since the Treasury must arbitrarily confine its financing to the less than 5-year maturity range. As short-term rates rise, including rates on banks loans and short-term Government securities, the current earnings of banks also expand. But if the Treasury could prudently spread its borrowing over a wider maturity range, pressure on short-term rates would be eased, and bank current earnings would tend to be less than would otherwise be the case.

A second argument sometimes made against removal of the interest rate ceiling is that, in so doing, Congress would in effect be relinquishing its historic right to determine the general terms of long-term bonds issued by the Treasury.

To determine general terms of new issues is one thing, but to lock the Treasury firmly into the short-term market is another. Rather than determining the general terms of new bond issues, Congress, in failing to remove the ceiling, is in effect flatly prohibiting any significant debt-lengthening through sale of longterm issues. The Treasury is responsible for the management of our $290 billion public debt; that is precisely where the responsibility should rest. But by insisting on retention of the interest rate ceiling, the Congress is denying the Treasury the essential tools for sound, noninflationary debt management.

REFORMS WOULDN'T HELP

According to a third argument, the interest rate ceiling should indeed be removed, but only if the Treasury first agrees to instituting some so-called reforms in its debt management operations. Such reforms include abolition of the committees of commercial bankers, investment bankers, and others that commonly advise the Treasury with respect to financings; sale of intermediate- and long-term securities at public auction; issuance of bonds with relatively early call provisions; and a signification of the intent of the Treasury to market long-term securities only when interest rates are relatively low. The proponents of these first three reforms maintain that their inauguration would probably permit the Treasury to sell bonds at lower interest rates than now prevail and, as a result, the removal of the ceiling would not be necessary.

The Treasury believes that just the reverse is true. If, for example, the Treasury's periodic consultations with advisory committees were discontinued—a practice, incidentally, that was started by Secretary Morgenthau in 1942—the Treasury would be foregoing the opportunity of obtaining firsthand and expert information on the Government securities market. Its only alternative, therefore, would be to price securities more liberally—to offer somewhat higher interest rates than otherwise—in order to make certain that a particular financing did not fail. This void of information could not be filled by increasing the Treasury's debt management staff; the type of information that is obtained from the advisory committees can only be provided by individuals who operate daily in the Government securities market. By consulting with these committees, the Treasury obtains accurate and firsthand reports on the attitudes of the thousands of potential buyers of Government securities.

Moreover, it is important to emphasize that Treasury officials, in approaching a financing decision, talk to scores of individuals all over the country; in fact, these contacts are maintained on a more or less continuous basis. The Treasury also engages in intensive studies and analysis on its own. By the time the advisory committees are called in, responsible Treasury officials have already carefully considered the many alternatives involved. And in every case, all that the Treasury obtains from the committees, and other contacts, is advice. The final decision is made solely by the responsible Treasury officials.

RATE MOVEMENTS UNPREDICTABLE

Similarly, it is the Treasury's judgment that extension of the auction technique to securities other than Treasury bills in the near future would result in higher, rather than lower, interest rates on Government securities. This is primarily because the market for new long-term securities would be significantly narrowed, inasmuch as many long-term investors would be reluctant to incur the risk of submitting bids in auctions, but would prefer to purchase the securities later in the market.

The case is even stronger that the use of relatively early call features on Treasury bonds would result in higher initial interest costs to the Treasury. An investor will be willing to purchase a new 25-year Treasury bond, callable, say, in 5 years, only if the initial interest rate is sufficiently high to warrant his taking the risk of an early call. Still, call features, if properly constructed, may save interest costs for the Government over the long run. It is primarily for this reason that the most recently offered Treasury bond—the 25-year, 4¼-percent issue sold last month—included a 15-year call feature. By extending the call feature to 15 years—several years longer than prevails with respect to corporate issues—the Treasury believed that the initial attractiveness of the security was not affected.

Although the suggestion that the Treasury market long-term bonds only when interest rates are low appears, on the surface, to have considerable merit, it is important to understand that this suggestion is tantamount to recommending that the Treasury ignore the state of the economy in its debt management decisions. This is because long-term interest rates usually fall to their lowest levels during business recessions. If the Treasury sold large amounts of long-term bonds during such periods, it would run the serious risk of absorbing long-term funds that would otherwise be used to finance homebuilding, State and local government projects, and business capital expenditures. Such a policy would, of course, impede recovery and might even intensify recessionary pressures. Minimization of interest rates, therefore, cannot be accepted as the overriding goal of Treasury debt management.

The decline in interest rates earlier this year—which has since been reversed at least

temporarily by market forces of demand and supply—apparently convinced some people that there was no longer any reason for removal of the ceiling. This view is and was wholly unwarranted. The very decline in interest rates earlier in the year, in contrast to widely held expectations to the contrary, is convincing evidence that interest rate movements are quite unpredictable. The Treasury has no way of knowing which direction interest rates will move in the future, simply because it cannot accurately predict the outcome of the millions of individual decisions which, in a free economy, actually determine interest rates. Interest rates may stay close to present levels, they may go up, or they may go down. Unless they decline considerably from present levels, the Treasury will continue to be locked into the less than 5-year sector of the market.

The problem of the interest-rate ceiling is not a short-run, transitory problem, nor should it be approached on a partisan basis. The ceiling, if not removed, can continue to obstruct debt management through many administrations in the future. In the interest of sound debt management—which means in the public interest—the 4¼ percent interest rate ceiling should be removed permanently and as soon as possible.

"Urban Renewal—The Viewpoint From City Hall"—Address by Mayor Ben West, of Nashville, Tenn., 26th National Planning Conference of American Society of Planning Officials, May 22–26, 1960, Miami Beach, Fla.

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. BRADEMAS. Mr. Speaker, I should like to call to the attention of my colleagues an excellent address by the Honorable Ben West, mayor of Nashville, Tenn., delivered at the 26th National Planning Conference of the American Society of Planning Officials held at Miami Beach, Fla., May 22 to 26, 1960.

Few Americans speak with as much authority as Mayor West on the subject of urban renewal and the other problems facing our cities today. I believe Members of Congress will find particularly valuable Mayor West's comments on the relationship of the Federal Government to the problems of urban areas.

The address follows:

URBAN RENEWAL—THE VIEWPOINT FROM CITY HALL

(Address by Mayor Ben West, Nashville, Tenn.)

If the rocket scientists were called upon to locate city hall in the governmental orbit, they would place it at the perigee—and correctly so. This is the point nearest the earth and, therefore, nearest the people. Being at the low point in the governmental scheme of things permits city hall only two vistas when observing any subject No mayor can afford to look backward, so he can look horizontally around him and thus evaluate his position, or he can look upward. When he looks up he automatically assumes a prayerful position whether his problem be governmental or spiritual.

Municipal governments, or local governments, are the test tubes for State and national programs. They constitute the last resting place for the "buck" as it is passed along. Here is the arena where the action occurs—the crucible which turns paper into pavement, conversation into concrete, debate into deeds, remarks into results, and complaint into compliance. The prime reason for this is that municipal government is the form best suited and equipped to render the basic, essential services, without which the modern urban complex could not exist.

Then there are the people and the social trends they are creating around metropolitan areas. To delve into these elements of 1960 society with an audience of planners is bringing coal to Newcastle, yet one proposition should not be forgotten. Two out of three Americans live in cities now; soon, four out of five will be born, educated, work, play, live and die, some within cities proper, some within the suburbs of cities, but all within urban surroundings. They will be there because they will want the ease and convenience of life which only the availability of municipal type services will give them. Demands for urban type services crawl ever upward on the graph. There will be no leveling off or downward dips in the foreseeable future, only a continuously mounting line toward the top of the graph page.

The wealth of America, expressed in terms of educational and cultural seats, industrial and manufacturing centers, wholesale and retail distribution centers, lies in its cities, the golden egg of the national treasure; but the gold is becoming tarnished and insecure for every American city is engaged in a struggle to save itself. No matter which road you take, or in which direction you seek to move, the way leads always to a great big dollar sign.

Increasing requirements of the Federal Government for purposes of national and international security, income taxes to support the national defense and to service the national debt, State sales taxes to support education and welfare services, gas taxes to finance highways, have left cities dependent on the traditional, overworked property tax, supplemented by a variety of makeshift revenues generated by the compulsion of rising municipal costs and a diminishing tax base. Ben Franklin said, "Death and taxes are inevitable." Mayors sometimes prefer them in that order.

Not too long ago I made a speech before the Nashville Chamber of Commerce which featured a series of colored slides. I prefaced the flashing of one of those slides on the screen with the comment that I wanted to show them one of the most expensive pieces of property in the city of Nashville. Those who expected to see some grand edifice were disappointed because the picture was of a tumbledown shack in a slum neighborhood. I told these businessmen that this property cost them more in fire and police protection; in the generation of crime and disease; in welfare expenditures; in human misery, suffering, and degeneration. I said that these slums cost so much Nashville simply could not afford them—no other city could. On the other hand, neither could Nashville afford to do much about them without financial assistance from the Federal Government.

PLANNING NEEDED TO COORDINATE RENEWAL

Something is being done but it isn't enough. Nashville has a large urban renewal program underway right now—reputedly, the second largest in area in the country. We have 2,256 acres in the eastern section of Nashville involved. Four hundred and sixty acres will be cleared and 126 of them used as rights-of-way for the Federal Interstate Highway System. Five thousand seven hundred and fifty structures containing 8,617 dwelling units are scheduled for either elimination or rehabilitation. This is a 5-year program costing some $20 million. It is a beginning, but only that. If we do not get other programs started in other sections of the city which need them just as badly, if not worse, before this one is completed, we will not have made much progress in our battle against slums and blight. This is the same piecemeal approach which has been used so often in the past. For many years we have tried various methods to meet the needs of urban populations. We have seen the housing industry expand with tremendous force through one form of Federal assistance to meet the needs of one segment of our population, while cities were at the same time building decent housing for the low-income groups to some extent through publicly assisted programs. We had the airport development programs, just about ended now; water pollution programs; highway programs, the daddy of them all; and many others, all aimed at meeting new urban problems which seemed to materialize as rapidly as the old ones were solved, or more so. This era saw the emergence of the planner in the public's eye from the tenant of the ivory tower to a full-fledged lusty partner in municipal government. The planning profession and the city planning commissions have reached a maturity which bids well for the future development controls of our cities. But, I believe that planners are still publicly feared in some ways. Perhaps the public mind and the planners themselves have not been conditioned for much more than the routine problems of city growth. Some planning solutions have been large scale and bold to a degree, but somehow there seems a lack of public and governmental planning confidence, and perhaps self-assurance, too, on the part of planners in America which does not enable them to carry out bold new experiments in city design and development as is evident in Holland, Sweden, and the British Isles. Some day the curve of necessity will cross the curve of planning ability and the old shackles of archaic forms of municipal government and systems of taxation will be loosed from the shoulders of city officials and we will see accomplishments more daring in concept and more realistic in execution than we have heretofore entrusted ourselves to undertake.

Some cities have done well in meeting traffic needs, and in providing accommodations for other modes of transportation, in recreation, and health, but nearly all of this has been done in piecemeal fashion. Urban renewal—not urban replacement—seemed to give us the long awaited opportunity for comprehensive planning and a completely integrated program for meeting most, if not all, of the physical needs of our cities. This creation of the current administration in Washington, which brought such great promise with it, does not now seem to be well regarded by the very ones who created it and its administration has fallen into limited routine despite the fact that many cities have worked wonders with their urban renewal programs, bounded as they were. We have been learning for 10 years, and when one is learning it is best not to assume too big a job. But now we must broaden our concept in both planning and undertaking our urban renewal programs if we ever intend to remove blight and obsolescence from our cities and restore them to their rightful place as the vigorous, efficient, service-producing cores of our metropolitan areas.

In 10 years I think we have progressed nicely insofar as methods of practically ap-

plying urban renewal are concerned, and administrative liaison between the different levels of government has been good. It is encouraging to see programs of planning assistance available to smaller cities, who cannot afford a regular planning staff but whose problems are just as acute as the larger ones, from the State planning commissions, and some monetary help from the Federal Government in this respect. Highways and urban renewal are two of the most important programs in America at the present. Their application will have a durable and profound effect on the lives of nearly every living American and yet, so far as I know, there is not even an exchange of information between the two programs at Washington, much less any sort of combined action.

FEDERAL ASSISTANCE NEEDED

To use a cliche—there isn't a great deal wrong with urban renewal that money wouldn't cure. There are a few sore spots in selling and administration which time and more local effort should take care of but local governments cannot supply the money. That is a financial impossibility.

In his state of the Union message, the President indicated that cities should not look for Federal assistance in meeting their urban problems although he recognized them as "staggering." He said: "The overall guiding goal of this budget is national need—not response to specific group, local or political insistence."

This was the same pattern followed in his 1959 message which had the result of making these subsequent allocations in the budget. In a $77 billion budget, there were urban renewal provisions of a 6-year program beginning at $250 million and going down. Actual cash appropriation was $145 million.

I do not want to appear to be antagonistic to farmers. I have naught but good will for them. We probably need them a great deal more than they need us. Although slum dwellers outnumber farmers by a million, I wanted to make some budget comparisons because their numbers, as groups, are so nearly approximate.

In the same budget there was $490 million for stabilization of farm prices and income under a program also termed "unsuitable" by the President. Rural electrification and telephones got $335 million; research and other agricultural services were given $301 million; financing farm ownership and operation, $196 million; conservation and development of agricultural land and other related resources received $675 million. In all, $6 billion is the cash expenditure for agriculture in 1960 against $145 million for slum clearance. I am not questioning the value or the amount of any of these specific programs because I am not in position to evaluate them. I might add here that there are also many other nondefense functions which get much more out of this "economy" budget than slum clearance.

This type of budget asks that every American contribute $34 per capita for farm programs and 83 cents per capita for slum clearance. Put another way, as Thomas R. Reid, civic and governmental affairs manager for the Ford Motor Co., says it, Federal per capita expenditures on farm families is $3,000 annually against only $84 per slum family. Bear in mind that this allocation is made to the 65 percent of people who live in the cities where is paid slightly over 75 percent of the total Federal tax take.

NEED FOR FEDERAL AID FOR OUR CITIES

The representatives of the big cities in Congress have in the main favored the Marshall plan and the point 4 program. Perhaps it is time we recognized that the 22 million Americans who live in slum ridden cities have a need for Federal aid which is just as great and pressing as any country in Europe and Asia. Nearly everyone accepts and understands the need for foreign aid. Wouldn't it be wonderful if everyone had the same understanding of urban renewal and its objectives? Herein lies the biggest local failure but it is difficult to put your finger on just how we failed to educate our people and arouse their interest. We did everything we could think of in Nashville by way of explanation and education on urban renewal. We visited other cities, held public meetings on both large and small scales and are still doing it. The news media were all very kind. Council passed all legislation without a dissenting vote. We are in actual clearance work on our project but I still have my doubts at times whether the public actually understands what we are trying to do.

The low interest rate and the small profit margin are not attractive to lenders and contractors. Relocation problems are many. You hear these comments often: "I own my little home. It isn't much but it's good enough for me, and it's paid for. You won't give me but three or four thousand dollars for it. Now, where could I get any other place for money like that except in another degenerating neighborhood. I have been buying my home for years and have owned it now for several. I don't want to rent or live in a housing project." These arguments are hard to refute, even though they are not new.

Another lightly considered adjunct of urban renewal is zoning where local governments must accept deficiency responsibility. Municipal land use as it now exists is a jungle of diversification, partly inherited, mostly created. It is a hodgepodge of classifications ranging from the all-inclusive industrial uses where slaughter houses and funeral parlors rest blandly alongside each other to the location of densely populated factories on the most narrow streets. At the other end are the suburban esates where it seems one must have registered nostrils to breathe. Old properties are inhabited generally by only the ghosts of legal restrictions found in deeds and wills. The restrictive trust is often the bitterest enemy of progress. Old properties, not subject to subsequently enacted zoning laws, and heir nonconforming uses, are frequently the cause of liptwiddling among city officials and planners. Zoning, the champion of proper land-use, has become a conglomeration of political pressure, false sentiment, personal interests, and intergovernmental bickering, while common sense sits on the sidelines—and laughs. Just imagine an upstart, socialistic planner telling the landed gentry and the nobility how they can or cannot use their land.

NEED FOR SOUND PLANNING EMPHASIZED

Urban renewal emphasizes the need for sound, imaginative but realistic planning and coordination at every level of government. Today's slums touch the lives and the pocketbooks of suburbanites and other noncity dwellers but lightly. Not so the slums of tomorrow, because they are being created right now in the unplanned, haphazard growth of the subdivisions mushrooming on the municipal borders, without sewers, parks, libraries, or other recreational facilities, and little thought of traffic generators and transportation. If present trends continue, there will be more than 40 million Americans living in slums by 1975. To ignore the plight of cities further now is going to cost taxpayers of every description an astronomical amount by then. Everybody will be talking about slums then—and everybody will be paying a much higher price for them.

Cities are not great because they are big—or because they are wealthy. Only people can make a city great. A city achieves greatness by recognizing and being concerned with the inherent human values of its people, one for the other. Widespread citizen support and understanding are vital to the success of any program. The creative energies of alerted individuals are the most powerful forces for good which could possibly be released in any community. Our cities can be what we want to make them and certainly a decent place to live is one of those inherent human values of which we just spoke. Urban renewal can provide America with many more of these inherent human values to the ultimate benefit of us all, if it doesn't die of a starvation monetary diet first.

To kill a man is murder; to kill a city is economy.

Task Not Insurmountable

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting editorial concerning a much-needed pension for veterans of World War I, which appeared in the National Tribune-The Stars and Stripes on June 2, 1960:

TASK NOT INSURMOUNTABLE

In the May 26 issue of the National Tribune-The Stars and Stripes we published verbatim a report rendered by the Administrator of Veterans' Affairs to Chairman OLIN TEAGUE of the House Veterans' Affairs Committee on H.R. 9336, which is the pension bill supported by the Veterans of World War I of the U.S.A., Inc.

It will be recalled that Veterans' Administrator Sumner Whittier outlined in detail the proposals set forth in H.R. 9336, gave an estimate on the cost of the legislation for the 4 years following passage of such a bill, and then went on to say in these words, "Advice has been received from the Bureau of the Budget that there would be no objection to the submission of this report to your committee and that enactment of the proposed legislation would not be in accord with the program of the President."

Whittier, himself, in the report stated, "For the reasons indicated, in my opinion, enactment of H.R. 9336 would not be in the best interests of the Nation as a whole or veterans and their dependents in particular. Accordingly, I recommend that the bill be not favorably considered."

From the foregoing it now seems apparent that the Veterans of World War I, perhaps for the first time, have discovered just exactly where and who their antagonists are. It is readily seen that the White House, backed by the Bureau of the Budget and the Veterans' Administration, is adamant in its opposition to any liberalization or extension of pension benefits to the aging veterans of 1917–18.

Even though the House Veterans' Affairs Committee might, as it well could, disregard the recommendations of the VA Administrator and approve in their entirety the provisions of H.R. 9336 and secure passage of the measure in the House of Representatives and if approval is given in the U.S. Senate, it would take a two-thirds vote in each House to override a certain Presidential veto.

Thus it can be seen that the main opposition lies in the executive agencies and it appears to us that the adverse report might well have a detrimental effect upon any possible change of the legislation being enacted during the present session of Congress. Even those Members of Congress, who have introduced similar bills to H.R.

9336 (over 100) now realize that final enactment can only be secured by the mustering of a sufficient majority to override a Presidential veto.

This, of course, is a hazardous proceeding as Members of the President's own party are loath to join the opposition party in overriding a veto. Therefore, it can be expected that many of the Members of the administration party will be more or less lukewarm in their support of the pension bill. The situation presents a real problem to the Veterans of World War I and their leaders. Members of the organization know the tremendous task now confronting them and it is incumbent upon them to broaden the scope of their endeavor.

They must, it seems to us, secure the cooperation and assistance of other veterans' organizations. Further, they must place greater emphasis on membership. We recall last year that one prominent Senator made the statement that "the Veterans of World War I do not want a pension; otherwise they would have built their membership to one-half million."

The present situation also calls for long-range planning, for more cooperation between members of the organization and a spirit of harmony which from our observation has not always been present.

The task ahead is a formidable one but not insurmountable. We want the veterans of 1917 and 1918 to remember that they have the confidence and support of this newspaper as we feel their cause is a just one.

Atom-Powered Plane

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Atom-Powered Plane," which appeared in the May 28, 1960, issue of the St. Louis (Mo.) Globe-Democrat:

ATOM-POWERED PLANE

A nuclear airplane, once thought of as an impractical project, a gamble not worth the $73 million it might cost, has come into new importance with the sudden tensions developed by the summit conference failure.

So much so, that a House committee, for psychological reasons, has approved the administration's request for the sum. Only $58 million of it will be spent in the fiscal year beginning July 1.

Behind closed doors, the House Appropriations Committee concluded that, in light of the summit failure, a refusal to exploit all possible defense measures would produce a bad psychological reaction throughout the country.

Expert opinion has been divided on the merits of costly research on nuclear-powered airplanes, or whether such a plane ever would be practical. The most serious problem is reducing the size of the nuclear reactor engine to fit into a plane, and protecting crewmembers from radiation.

That such a plane could remain in the air indefinitely, and thus be able to reach any spot on earth without concern for refueling sources, was proven to a relative degree by the recent 83-day around-the-world trip of the atomic submarine *Triton*.

Much research has been done already on possible atom-powered space rocket flights. Through such funds as the House has appropriated could come a major breakthrough in producing atomic-powered bombers, transport planes, and even fighters.

The Cold War: Espionage Is Not for Amateur Gentlemen

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. DADDARIO. Mr. Speaker, a former intelligence officer in the U.S. Army is now publisher of the Middletown Bulletin in Middletown, Conn. He has written an article on the U-2 incident which deserves the attention of the Members of this body. His extensive background in the field of intelligence, and his constant attention to world affairs, makes his article most instructive:

THE COLD WAR: ESPIONAGE IS NOT FOR AMATEUR GENTLEMEN
(By Max Corvo)

In order to eliminate many elements of risk, it is almost elementary that in the business of espionage the spy must be provided with suitable prearranged cover. Failure to provide such cover exposes the agent to unnecessary risks which may result not only in apprehension, but also in the blow up of chains and cells already successfully operating in the area.

The case of Pilot Powers is somewhat different than the average espionage case. His was a technical intelligence mission which was conducted at subsonic speed from a very high altitude. Obviously, CIA could not concoct a cover for him, for it would have meant that the individual in question must speak fluent Russian and must be provided with a point of contact on the ground. His mission was a mission of desperation, which relied completely on the perfect functioning of all mechanical instruments and the lack of ability on the part of the Russians to shoot down his plane. In the event of either failure, CIA should have provided for the complete destruction of the plane and not have left the choice of life or death to the pilot.

The Powers' case arouses the suspicion that CIA has not been too successful in utilizing shoe-leather intelligence to do a proper job in Russia and has had to resort to aerial intelligence in order to fill in the tremendous gaps in the Soviet intelligence picture. What other impelling reason would there have been to expose American prestige to Russian ridicule and worldwide suspicion by mounting such a mission?

Living as we do in an era when a single plane can inflict untold damage to a nation by the use of atomic or hydrogen bombs, did CIA assess the possibility of Russia taking deterred action against the United States or its allies in the event such aircraft were detected violating Russian airspace, and was the intelligence gathered worth the risk of a third world holocaust?

Again this seems to bear out the sense of urgency and lack of ground intelligence which must exist in our national files, for to risk war for the simple purpose of photographing the installations of an opponent is hardly justifiable on any moral grounds.

The Powers flight over Russia or any other flights which may have been made in the past or will be made in the future can hardly be labeled as intelligence operations, for they expose not only this Nation, but the entire world to the possibility of a push-button retaliatory war; a war of misjudgment by either one of the antagonists involved, for surely if Russian planes are sent on reconnaissance over Chicago, Detroit, Cleveland, or any other American industrial center our very policy of deterrance will be put to a serious test.

Espionage, too, has its own unwritten code.

The spy who under cover, is capable of gathering vital millitary or political secrets or of worming his way into the confidence of the enemy is risking his own life and that of those who are immediately associated with him. If he is captured he is readily repudiated and easily commiserated • • • if he is successful only his immediate superiors are aware of his exploits.

That type of a spy must be an intelligent creature, able to survive partially by instinct and partially by his wits. He is provided with adequate cover, adequate financing and is armed with a patriotic or political motive which often transcends all personal considerations. It is this spy who down through the centuries has performed the most valuable work and who has proved to be the most successful instrument for the implementation of sub-rosa policies.

The success which the Reds have enjoyed thus far in this specific field can be traced directly to the secretive nature of Russian communism; its rise to power by clandestine operations; and the quasi-religious nature of its political philosophy. These qualities have been instilled in the Communist people for the past four decades and they serve as national assets in offensive and defensive intelligence operations.

On the other side of the ledger the average American is a good natured and trusting individual who believes in sportsmanship and who by upbringing is always ready to give the benefit of doubt to an adversary. He has been trained from youth in sports and other lighter pastimes and his political ideologies in our democratic form of government are seldom so deep rooted that they can obstruct his broad views of any given situation.

This is the type of individual, many of them recently out of college, that the CIA has endeavored to indoctrinate in the most complex and ofttimes field of international espionage, and this is the primary reason why CIA operations, even in friendly countries, have often failed and have become the subject of local ridicule.

Positions of responsibility as desk chiefs are often given out on the basis of family connection rather than on the basis of knowledge of national psychology, language, and ability to properly plan, supervise and execute delicate missions in the area involved.

Thus while there is an impelling necessity for technological intelligence there is also a crying need for the traditional type of intelligence agent who penetrates a forbidden area not only to look and see, but also to talk to the people, assess their moods and win the confidence of persons in high places. This type of intelligence cannot be provided by long-range infrared cameras or radar, it must be provided by individuals ready and willing to risk their lives for the cause of democracy.

Unquestionably the lack of this particular type of intelligence is emphasized by the recent collapse of the summit conference in Paris which has left American officials wondering why Khrushchev acted as he did and which has led to a good deal of pure speculation as to why he really torpedoed the conference.

All of the cameras and technological gadgets in the world will not help us to correctly analyze the internal bickering that goes on behind the scenes in the Kremlin

and until such time as we are able to penetrate this particular curtain of secrecy which is the brain center of international communism, our Government will be operating with a blindfold and will continue to make serious blunders.

General de Gaulle Outlines the Principles of France's Foreign Policy Following the Failure of the Summit Conference

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following outline of policy given in an address by General de Gaulle, President of the French Republic, is one which will be of vital interest to all Americans.

The hope that the French President holds out of a United States of Europe is one that we all would like to see fulfilled in our time.

This ideal was first put into words by a Frenchman, Victor Hugo, almost 100 years ago, and it is therefore most proper that France should be the leader in this move today, when it can be so vital to the West and to the world.

We in the United States, while we may not agree with all of General de Gaulle's pronouncements, admire his courage and his idealism, and hail him as the one who has raised his country so that today she is a very phenix rising from the ashes, and the leader of Western Europe.

The address follows:

GENERAL DE GAULLE OUTLINES THE PRINCIPLES OF FRANCE'S FOREIGN POLICY FOLLOWING THE FAILURE OF THE SUMMIT CONFERENCE

Man limited by his nature is infinite in his desires. The world is thus full of opposing forces. Of course, human wisdom has often succeeded in preventing these rivalries from degenerating into murderous conflicts. But the competition of efforts is the condition of life. Our country finds itself confronted today with this law of the species, as it has been for 2,000 years.

The division of the peoples that inhabit Europe and North America is the main fact and the worst evil of our time. Two camps are set up, face to face, under conditions such that it depends solely on Moscow or Washington whether or not a large part of humanity is wiped out in a few hours.

In the face of such a situation, France deems that there is no territorial disagreement or ideological dispute that has any importance by comparison with the necessity of exercising this monstrous peril. In France's view, this situation implies three conditions.

The first is a détente, in other words, the bettering of international relations, putting a stop to provocative actions and speeches and increasing trade, cultural exchanges and the visits of tourists in order that a more peaceful atmosphere might be created; failing this, the dizziness of desperation would afflict discouraged men, to such an extent that one day and all of a sudden, for any reason at all, the world would find itself at war, as it was, twice in my lifetime, because the Archduke was dead or because someone wanted Danzig.

The second condition is a specific degree of controlled disarmament preferably aimed at the devices capable of carrying bombs to strategic distances, in order that the possibility—and, at the same time—the temptation suddenly to provoke general destruction might vanish.

The third condition is a beginning of organized cooperation between East and West devoted to the service of man, either by helping in the progress of underdeveloped peoples or by collaborating in the great projects of scientific research, on which depends the future of all.

France is all the more disposed toward this détente, this disarmament and this cooperation in that no direct dispute sets her in opposition to Russia, in that she feels a traditional attraction for the people of that country, in that she hopes to see the Iron Curtain lifted which separates her from the nations of central Europe and of the Balkans, of which she is the neutral friend and ally. She believes, moreover, that by virtue of the modern rate of activity, the condition of men tends to become alike everywhere and that the virulent opposition of the various regimes is destined to diminish.

Now, it seemed recently that certain prospects were about to open up. In the East, as in the West, it was recognized that nuclear war would, in any case, spell disaster for the whole world, since the risk would be that after the conflict, on both sides, there would no longer be any constituted authorities, or laws, or cities, or cultures, or cradles, or graves. It was then that in Soviet Russia a new tune was heard. A statesman, who had reached the top, proclaimed the necessity of peaceful coexistence, declared that the competition between the Communist system and the capitalist system should have as its goal men's standard of living, affirmed that the ambition of his country was to insure its own development and let it be understood that the meeting of those in the positions of supreme responsibility in the Soviet Union, the United States, Great Britain, and France would open the way to peace.

Doubtless Mr. Khrushchev was laying down a condition contradictory to the détente, in claiming that a treaty called a peace treaty, were it to be concluded by him alone, would consecrate forever the present division of Germany, and would establish in West Berlin such a status that this city, which is free and intends to remain so, would be doomed, sooner or later, to submit to the totalitarian yoke. But later, this demand seemed to be accompanied, in the mind of its author, by certain delays and compromises. On the other hand, the trips that the Chairman of the Soviet Council of Ministers made to the United States, and then to France, seemed to be the preludes of a new orientation. Beginning then, it seemed that a summit conference could offer an opportunity for improving the international atmosphere. For my part, having the Premier and the Minister of Foreign Affairs at my side, I was ready and willing.

Everyone knows what happened. I will not review again the reasons which succeeded in preventing the conference from being held. But I must state that if the overflight of Soviet territory by an American photography plane, 2 weeks before the meeting, was certainly and at the least ill-timed, as the President of the United States recognized in short when he ordered that no further flights of this nature were to take place—I must state that this was not sufficient reason for refusing to open the discussion of the affairs of the world at the summit.

In an age when the sky is streaked with satellites, missiles, and planes equipped for taking pictures of any region of the globe and of firing projectiles capable of terrible destruction, what must be done is to organize reciprocal control of these devices, as France has proposed and as the four Chiefs of State or of Government could have dicided. At the very moment when Moscow had launched a new space vehicle passing over the West 18 times a day, it seemed excessive to require public apologies and reparations from Washington because a single-engine plane, equipped with a camera, had attempted to cross Soviet territory, considering that the plane which had been shot down and its films were being held, and that the guarantee that the act would not be repeated had been received. Finally, if the Chairman of the Soviet Council of Ministers intended to set as a condition for the opening of the Conference that the incident of May 1 be settled as he wished, would it not have been better for him to have stayed in his capital until this previous matter was settled definitely in one way or another?

In any case, France took note of this outcome with composure. But, in her eyes, what was necessary yesterday will still be necessary tomorrow. The détente, the controlled disarmament of strategic weapons, the cooperation of well-provided states in the development of those which are not, remain as much as ever, the goals that the other world powers owe it to themselves and to the universe to accomplish together. As for ourselves, we are disposed to return to this course. But also, we believe that in order to follow this course, methodical steps of diplomacy are worth more than tumultuous exchanges of public speeches or than the passionate debates of the delegates in the United Nations, which, alas, are not united. On the basis, which a reasonable preparation will enable us perhaps to lay down, France could, when the time comes, consider the reopening of this Paris Conference which we had decided to hold and which could not take place.

Yet, until we achieve an organized peace, if that is at all possible, France intends, as far as she is concerned, to be ready to defend herself. This means, first of all, that she shall remain an integral part of the Atlantic Alliance. Moreover, the recent trial has shown the deep-seated soldarity which exists among Western powers. Of course, President Eisenhower, Prime Minister Macmillan, and I each have our own problems and our own temperament. But, when faced with recent events, we three, in view of the friendship which unites us, did not have much trouble in reaching agreement, in wisdom and in firmness. Our alliance appeared a living reality. In order that it become even more so, France must have her own role in it, and her own personality. This implies that she too must acquire a nuclear armament, since others have one; that she must be sole mistress of her resources and her territory; in short, that her destiny, although associated with that of her allies, must remain in her own hands. It goes without saying that such an autonomy must be coupled with an ever closer coordination among the Western world powers, regarding their policy and their strategy.

But if the Atlantic Alliance is necessary at present for the security of France and of the other free peoples of our old continent, they must, behind this shield, organize to achieve their joint power and development. The trials they have gone through showed them how much their divisions and conflicts had cost them. Neither the Rhine, nor the Low Countries, nor the Alps, nor the Pyrenees, nor the English Channel, nor the Mediterranean, for which they fought so long and so bitterly, any longer set them one against the other. No feeling of hatred remains between them. On the contrary, the nostalgia inspired in each of these lands by its relative downfall in relation to the great new empires, has drawn them closer in the feeling that together they would regain this grandeur for which past centuries had given them the talent and the habit.

To this must be added the fact that they constitute an incomparable whole, precisely when our time, which abolishes distances and obstacles, demands large ensembles.

To contribute to build Western Europe into a political, economic, cultural, and human group, organized for action, progress and defense—that is what France wants to work toward. Already West Germany, Italy, the Netherlands, Belgium, and Luxembourg are cooperating directly with her in several fields. In particular, the Common Market of the Six will, on December 31, become a practical reality. Of course, the participants do not want this organization to injure the other countries of Europe, and we must expect a way to be found of accommodating interests. Also of course, the nations which are becoming associated must not cease to be themselves, and the path to be followed must be that of organized cooperation between states, while waiting to achieve, perhaps, an imposing confederation. But France, as far as she is concerned, has recognized the necessity of this Western Europe, which in former times was the dream of the wise and the ambition of the powerful and which appears today as the indispensable condition of the equilibrium of the world.

Now, in the last analysis and as always, it is only in equilibrium that the world will find peace. On our old continent, the organization of a Western group, at the very least equivalent to that which exists in the east, may one day, without risk to the independence and the freedom of each nation and taking into account the probable evolution of political regimes, establish a European entente from the Atlantic to the Urals. Then Europe, no longer split in two by ambitious and ideologies become out of date, would again be the heart of civilization. The accession to progress of the masses of Asia, Africa, and Latin America would certainly be hastened and facilitated. But also, the cohesion of this great and strong European community would lead vast countries in other continents, which are advancing toward power, also to take the way of cooperation, rather than to yield to the temptation of war.

Yes, international life, like life in general, is a battle. The battle which our country is waging tends to unite and not to divide, to honor and not to debase, to liberate and not to dominate. Thus it is faithful to its mission, which always was and which remains human and universal. The purpose is great. The task is hard. But in the midst of world alarms you can see, women and men of France, what weight France's will can have again.

The Dollar as a Reserve Currency

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. FRELINGHUYSEN. Mr. Speaker, for the past year we have heard much about dollar discrimination and balance of payments. I believe the Members would be interested to read an intelligent and informative discussion of our currency. The following address was given by Walter B. Wriston, senior vice president of the First National City Bank of New York, at the 38th annual meeting of the Bankers' Association of Foreign Trade at French Lick, Ind., on May 2, 1960:

THE DOLLAR AS A RESERVE CURRENCY
(By Walter B. Wriston)

The recent outflow of gold which appeared in substantial amounts in 1958 and 1959 suddenly focused attention on the position of the American dollar in world finance. The balance of payments of the United States had not been a bothersome issue for so long that its appearance as a serious problem caused many of our friends abroad to reexamine the strength of the dollar as a reserve currency. We tended to regard balance of payments problems as something that plagued other nations but could not happen here. The United States has, it is true, run a balance of payments deficit every year for the past decade with the exception of 1957 but, until 2 years ago, the amount was not alarming. It was only when the deficits assumed huge proportions and gold began to move out in substantial amounts that balance of payments became a familiar term in American financial life.

In thinking about the dollar as a reserve currency, it is well to remember that it is also a relatively new currency. Some 70 years after our Constitution was signed, foreign coins still circulated as legal tender in the United States. In the middle 1800's, paper dollars were issued not only by many banks but also by business concerns, and sometimes circulated at heavy discounts because they were redeemable only at point of issue, and often by banks lacking more than a local reputation. In those days it was necessary to subscribe to a journal called "Picknells Counterfeit Detector and Bank Note List," one issue of which listed 54 banks whose notes still circulated, 20 entirely fictitious institutions, to say nothing of over 1,300 counterfeit notes. Indeed, it was not until 1863 that the National Bank Act and subsequent legislation forced out of circulation all notes excepting those issued by national banks.

The dollar then has only recently arrived on the scene as a currency to be reckoned with, and its entry as a reserve currency dates only from the late 1920's. By 1929 foreign holdings of dollars were in the order of $2,500 million, but in the early 1930's these balances were used up for payments to the United States or were withdrawn, and at the beginning of 1933 they amounted to only some $700 million. In the late 1930's, principally because of the inflow of money seeking refuge from abroad, the balances were rebuilt and when the war started in September 1939 foreigners held short-term dollar assets of $3 billion. The real importance of the dollar as a reserve currency was, in some respects, a direct product of the war. When the conflict ended, the products of the American economy flowed out to world markets almost unopposed as the shattered economies of Europe and the Far East struggled to regain their internal balance. We had a tremendous outpouring of goods and services which, after foreign gold and dollar reserves had been substantially drawn down, were financed basically by U.S. Government aid of all kinds. This aid was a new concept in human history which was sparked by Secretary Marshall's speech at Harvard when he launched the then novel concept: "Our policy," he said, "is directed not against any country or doctrine but against hunger, poverty, desperation, and chaos. Its purpose should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist."

During the past decade the United States has furnished the rest of the world, by means of imports, investments, loans, and economic grants, with $16 billion more than foreign nations spent here. Out of this $16 billion the rest of the world took $5 billion in gold and added $11 billion to its short-term assets which stood at somewhat over $16 billion in February of this year. Central banks around the world used the dollars which we furnished to rebuild their monetary reserves. The official short-term dollar holdings quadrupled and the private holdings more than doubled during these past 10 years.

Private banks in America played a major role as bankers to the world and, indeed, at the end of last year held short-term dollar assets of foreigners of more than twice the amount lodged with our Federal Reserve System. Although the figure was large, the concentration of those that held these funds was relatively narrow. Germany, Italy, Canada and Japan hold almost half of all short-term dollar assets owned by foreign nationals. If you added to these four nations the United Kingdom, Switzerland and France, it is possible to account for about three-fifths of the total. That so many reserves are held in dollars reflects confidence in the dollar, and this confidence helps make it a leading reserve currency of the world.

The fact that the dollar is tied to gold at a fixed price has become the peg upon which our present international monetary system hangs. This dollar exchange standard really achieves a substantial stretching of the world's gold by augmenting it through the holdings of convertible currencies. The security of the dollar exchange standard is of tremendous importance to the stability of the world financial position and I suggest that its security rests upon more than a narrow statistical basis. Recently there have been many calculations made to show the relationship between the American gold stock and our external liabilities, and statistical tables have been assembled which are designed to prove that the ratio of world reserves to imports has declined alarmingly in the last 10 years. The United Kingdom, which has operated for many decades on a slim margin of reserves, has demonstrated conclusively again and again that the arithmetic delineating the ratios between reserves and imports, and reserves and liabilities, can be highly elastic provided that the intention of the Government to defend its currency is clear. Basically, the usefulness of the dollar as a reserve currency rests upon the distributive judgment around the world that the government which controls that currency will act decisively to protect its integrity.

The statistical position of the dollar, by any measure, is still strong. In 1913, we held one-fifth of the world's gold stock; in 1928—two-fifths; reached a high in 1949 with two-thirds; and today hold slightly less than one-half of the world's monetary gold. Sometimes the elementary principles of banking are forgotten and far-reaching deductions are drawn from the fact that out of our gold stock of $19 billion the law requires that we set aside $12 billion to back our currency, thus leaving only $7 billion to cover our short-term liabilities to foreigners of $16 billion. Any one of you whose bank had its deposits 44 percent covered by gold would feel in justice that you conducted your institution on a sound and liquid basis. The United States, as banker to the world, maintains this technical ratio. Any bank would become insolvent if every depositor wanted all of his money on the same day. In addition, of the $16 billion of liabilities, only $9 billion are held by foreign governments and central banks and therefore presently eligible for conversion into gold. The remaining $7 billion held by commercial banks, businesses, and individuals could be converted into gold only if they were sold to central banks who, in turn, made the conversion. Despite this fact, an articulate minority have suggested that since the United States does not cover its total short-term deposits 100 percent by "free" gold,

we might be forced to restrict gold convertibility and ultimately devalue the dollar.

From these facts I think you will agree that on a banking basis the United States maintains a sound technical position, but the balance sheet is only one factor in assessing the soundness of the dollar. The basic factor in all credit appraisal is an assessment of management, and in the case of the dollar as a reserve currency, it is basically an evaluation of public management. Although we do not print the phrase on our dollar bill, as we do on some other obligations, the full faith and credit of the United States is involved in its fullest sense.

In discussing the worthiness of the dollar to remain the principal reserve currency of the world, its detractors have speculated adversely about the ability of the United States to conduct its fiscal affairs in a sound fashion or whether inflation would be allowed to run unchecked. It has been suggested that we are pricing ourselves out of world markets and that perhaps, since our balance of payments deficit last year represents less than 1 percent of our gross national product, its leverage is so small as to exert little or no effective pressure upon public policy.

We all tend to make decisions on yesterday's facts and much of the concern about the dollar was based on very recent history and not, as projections must be, upon a changing world pattern. It is perhaps not an overstatement to say that an entirely new situation is slowly emerging in world finance. This financial phenomenon is being shaped by some fundamental changes. Firstly, the dividend on the Marshall plan is a strong and prosperous Europe where not only has the dollar gap disappeared but some nations are actually slightly embarrassed by their own balance of payments surpluses. These dollar surpluses can remain abroad so long as the world does not incur new deficits with us. Foreign nations acquiring dollars from us have many choices available to them: they may use their dollars to purchase our exports, they can merely allow their reserves to increase, or they can redeem them in gold. Even if the United States were to achieve a perfect balance of payments, the world would probably have adequate dollars to transact its business.

Secondly, while nations abroad have decried the complex tariff structure of America, they themselves have discriminated often to the point of absolute prohibition against American goods through devices of exchange controls, quotas, and tariffs. With the advent of convertibility in Europe, the technical reason which could prevent the purchase of goods for dollars has disappeared, and we are now witnessing the gradual dismantling of dollar discrimination which, as it gathers momentum, will have an effect upon our exports which cannot yet be accurately calculated.

Thirdly, many American firms have run their export departments with their left hands. They were a useful appendage. If goods could not be sold domestically in days of recession, some firms allocated the surplus for sale abroad, providing that they got a confirmed sight credit from a first-class bank. This pattern is changing rapidly. There is a growing awareness among business managements of the need to put the same muscle and intelligence, and to measure the risks as carefully in the export trade as in the domestic trade. The use of foreign markets is being carefully assessed by many firms, not formerly interested in anything but domestic sales. I cannot help but feel that the momentum of this program will make itself felt in our export figures. As more and more companies interest themselves in making the export market a vital factor in their corporate planning, the cumulative effect should be to remove the United States from the category of a marginal supplier. To the extent that we overcome the tendency to become a marginal supplier, we will also be moving in the direction of cushioning our internal booms and recessions which tend to be accentuated in a nation which does not command steady access to foreign markets. Throughout the period when we have been losing gold so rapidly, the United States nevertheless had an absolute favorable balance of trade. While Adam Smith's ancient theory of the international division of labor still operates, some categories of goods will always be produced more economically abroad, but these categories are changing almost daily and will shift tremendously with the advent of technological progress so that what we may lose in one area we gain in another. It is the fact, for instance, that we ship American coal to Newcastle and that one of the biggest percentage increases in British exports to Germany last year was toys. Trade is a two-way street and, at the very moment when the United States is importing half of its barbed wire from abroad, we are exporting steel plate to a German automobile manufacturer. In the general discussion about pricing ourselves out of the market, it is often forgotten that goods are sold on more than price. Recently, a large shipment of hats was sent to London because of style advantages. Any one of you who is married would probably be prepared to admit that in selecting a new dress your wife is interested in more than the cost of the material and the hourly wages of the seamstress.

To date American exporters have not enjoyed the same credit facilities as have been made available to our competitors around the world through Government guarantees and political risk insurance. This pattern is also changing. Of course, selling our exports on credit does not directly help our balance of payments because the increased receipts are offset by increased payments in the form of private capital outflow; but there are secondary effects which may be helpful.

Fourthly, if we look below the line of our international balance sheet we find that the United States is a net long-term creditor to the extent of perhaps $40 billion and the return on this investment, flowing back to our country, is growing more and more substantial. In 1959 the income on our private investments abroad exceeded the outflow of private capital by some $900 million. It can be said therefore, in fairness, that while our short term position has suffered severely our total international posture has improved.

On a Government level it is becoming more and more apparent that the United States should no longer be required to carry alone the great burden of the underdeveloped countries. The nations of Western Europe can well afford to take a more active role with their new earned riches and distribute more equitably the burden among the nations of the free world.

It is abundantly clear that the leverage our balance of payments exerts on our domestic economy in absolute terms is relatively negligible in comparison with other nations. The size of our market is staggering and, although we are the world's largest importer, our imports, nonetheless, represent barely 4 percent of our national income. When you contrast this with some of the trading nations whose imports reach as high as 50 percent of national income, it is immediately apparent that our response to the balance-of-payments problem must necessarily be slower than that of a country whose very livelihood depends upon prompt and adequate response to a balance-of-payment deficit. The balance-of-payments discipline is accepted most quickly where the need for it is most readily understood. Despite the relatively small part that our external trade plays in our overall economy, the recognition of the need to subject ourselves to the balance-of-payments discipline is growing daily. Of the total value of goods produced in the United States, our exports account for some 8 to 10 percent and the Department of Labor estimates 4,500,000 persons, or 7 percent of the civilian labor force, gain their livelihood directly or indirectly from the export trade and the domestic distribution of imports. The impact on our economic life is greater in some industries than in others, but geographically all regions of the United States now have a growing stake in foreign trade.

To a certain extent, and over a long period of time, the law of compensating forces is always at work. Balance of payments deficits tend to set in train the forces leading to their own correction. Sometimes the laws of compensating forces are temporarily frustrated. The imposition of artificial exchange controls, capital controls and tariffs, quotas and all the other paraphernalia which have been built so laboriously to insulate nations from the facts of international economic life tend to thwart, at least temporarily, some aspects of the law of compensating forces. With the return of convertibility many of the artificial barriers which tended to delay the work of the law of compensating forces are over, and our payments deficit is now, in effect, transferring purchasing power from the United States to countries acquiring surpluses. In the normal course of events some of these surpluses will be used to purchase goods and services in our country. On the other side of the coin, the pressure of imports on our domestic price level tends to hold down our costs while the building of reserves abroad tends to increase foreign costs. Indeed, wages, wholesale prices and consumer prices in the United States have tended to increase rather more slowly in recent years than in Britain and France, and at about the same rate as in Germany, Italy, and Japan.

The return of orthodox economics to the world scene also plays its part in the law of compensating forces. As nation after nation has taken Per Jacobsson's effective medicine and their economies have responded to stabilization programs, they have tended to accumulate reserves, principally at our expense. These stabilization programs, although varying from nation to nation, have a common denominator in that they aim at a better control of the money supply. Reserves tend to flow toward nations which discipline their creation of money and away from those which do not.

In saying all this, I do not suggest that we do not have a serious balance of payments problem because we do, but what I do suggest is that the alarm about the dollar which was widespread in Europe last year was considerably overdone. The professional undertakers of currencies overlooked the fact that we are well able to defend the dollar. The real question is whether we will do it in a way to cause the least problems around the world or through the imposition of quotas, tariffs, and other restrictive measures. There is a real awareness that we must redress our balance of payments, and more and more people have come to realize that the conduct of our internal affairs has a profound influence upon the attitude of the world toward the dollar as a reserve currency. In projecting our sentiments abroad, the actions which we take at home have a great deal more force than the statements which may be issued. Sentiment abroad has changed about the dollar, and this change can probably be dated from the President's announcement of a new budget showing a surplus in excess of $4 billion. This determination to keep the dollar sound by applying conservative budgetary measures which supplement the monetary policy pursued by the Federal Reserve System gives promise of the Government's determination to pursue the kind of policies which maintain respect for our currency. The prob-

lems which we face are large and they will require continuous efforts to hold them in check, but our capacity to meet these problems will, I believe, prove adequate to the task.

Highways Can Be Happier Ways

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. BOWLES. Mr. Speaker, the able and distinguished Governor of my State, the Honorable Abraham Ribicoff, is nationally known for Connecticut's successful campaign to reduce highway fatalities. His fellow Governors have named him chairman of the Committee on Roads and Highway Safety of the National Governors' Conference. In 1958 Governor Ribicoff proved that a strict enforcement of traffic laws was, among other things, a political asset, and he was reelected Governor of Connecticut by the greatest vote margin any Connecticut Governor has ever received.

Under his leadership, Connecticut last year won the National Safety Council's highest award for its total traffic safety program. In an article in the June issue of the Journal of American Insurance, Governor Ribicoff explains that there is no magic formula for highway safety. He points out, however, that the three E's of enforcement, education, and engineering, if applied on a nationwide basis, could save 20,000 lives a year. I call his article, which follows, to the thoughtful attention of my colleagues:

HIGHWAYS CAN BE HAPPIER WAYS

(By Abraham Ribicoff, Governor, State of Connecticut)

To a nation accustomed to having hundreds of lives snuffer out on the highways every holiday weekend, an annual traffic toll of 324 for one State might not seem so bad.

We Americans are statistic happy, and we're callous.

But when we in Connecticut saw 324 lives lost on our highways in 1955, we were appalled. At that our traffic death rate was fourth lowest in the Nation. But to accept fourth place on any such tragic list would be the height of social and moral irresponsibility.

So we have been working hard over the past 4½ years to cut our highway toll, and we have succeeded. It has been reduced each year, a total of more than 22 percent. Today we have the lowest traffic death rate of any State in the Union—2.5 per 100 million vehicle miles of travel. And, at the suggestion of the Journal of American Insurance, we have some ideas to offer other States that might help them cut their traffic death tolls too.

We don't say we have all the answers to highway safety. Unfortunately nobody does. We don't say we're doing a good enough job; we still had 248 fatalities last year, and we can never be satisfied until we've cut that number right down to zero.

We do have this to say to our fellow workers for safety in the other 49 States:

If you can do what Connecticut has done—and certainly every State can—you can save this country 20,000 lives a year. If you can beat Connecticut's record, more power to you; the saving of lives will be that much greater.

Nationally we killed 5.4 persons per 100 million vehicles miles last year—more than twice Connecticut's rate. We lost 37,800 persons, injured more than 1½ million, suffered an economic loss of $5 billion from highway accidents—a waste that no humane people can tolerate and no economy, no matter how strong, can afford.

If the United States could cut its traffic death rate down to Connecticut's size, that toll would be 17,500 fatalities instead of 37,800. It would still be 17,500 too many lives needlessly lost—but there would be 20,300 more people alive this year, and every year.

How can it be done? There may be some ideas for others in these efforts of ours.

Stepped-up law enforcement, in particular a crackdown on speed, was our first step. It was obvious there is a direct relationship between traffic speed and traffic deaths; the problem was how to make drivers go slower. We decided to try an experiment based on the ironic proposition that a driver who will not slow down to save his life will slow down to save his license.

Suspension of licenses of all motorists convicted of speeding was begun. There are no exceptions to this policy. For a first offense, the speeder must walk, or ride with someone else, for 30 days. For a second offense, 60 days; for a third, suspension is indefinite.

In 1955 the Motor Vehicles Department had suspended 372 licenses for speeding. In 1956 the number jumped to 10,055. And early in 1956 traffic deaths began to drop. From 324 in 1955 they fell to 288 in 1956, 283 in 1957, 251 in 1958, 248 last year. Preliminary figures for the first months of this year showed Connecticut with a 22 percent drop in fatalities over the same period last year.

YOUNG DRIVERS ARE EDUCATED, CONTROLLED

Speeding isn't the only offense resulting in suspension of a motorist's license. We also do not believe in leniency for the reckless or the drunken driver. Reckless drivers get a 30-day suspension for a first offense, 90 days for a second. A drunken driver incurs a 1-year suspension for the first offense, 5 years for the second, and outright revocation of his license for a third offense. There also is a long list of other offenses calling for automatic suspension.

The operator who drives while under suspension has a year added to the original suspension period, 5 years for a second such offense.

Stiff fines also are imposed for all these offenses, of course, and at the discretion of the court jail sentences may be added.

There is evidence that our license suspension policy, though opposed by many at first, is serving a desirable educational as well as a punitive function. Many drivers write in to say they are grateful for the lesson it tought them. One teenage boy write me: "At the time, I was mad at the whole world because my license was suspended * * * (but) this was the best thing that could have happened to me, for two reasons. One: It made me stop and think how easy it would have been to get killed or to kill someone else. Two: It taught me respect for the law. For all I know, it may have added 20 years to my life."

This is the kind of thinking we are trying to create, and I believe we are succeeding. Sober driving, moderate speed, and obedience of the traffic laws are becoming part of the mores of the people of Connecticut. I am convinced the large majority of them are proud of the fact that their State is one that gets tough with traffic violators. And our safety record gets better as each citizen acquires a feeling of individual responsibility to help maintain it.

Besides the deterrent effect of strict, persistent enforcement, here is where education enters the picture—the second of the three big E's of traffic safety.

NO LENIENCY GRANTED TO DANGEROUS DRIVERS

We start with the young people, who satistics show are involved in a disproportionately large number of traffic accidents. Connecticut was one of the first two States to require that before they can be examined for a driver's license, all boys and girls under 18 must pass a State-approved driver-training course. The minimum requirement is 20 hours of classroom instruction and 6 hours of behind-the-wheel training. This training also enables young drivers to get lower, preferred-risk rates on their auto insurance.

Control over young drivers is aided, too, by a statute providing that all licenses issued to persons under 21 be provisional, subject to indefinite suspension should the driver show evidence of irresponsibility.

Driving attitudes are harder to control, but we are doing our best to help cultivate mature, healthy ones among both youth and adults. Hundreds of talks on this subject are given before various groups. The State safety commission is very active, and the press, radio, and TV keep the subject of safety in the public eye. Another important ally in our efforts is the insurance industry, one of the strongest links in Connecticut's economy. Individually, through the State insurance information office and through the National Insurance Institute for Highway Safety, the insurance companies are pushing more and more into a position of energetic leadership in the safety effort.

(Insurance, incidentally, is one place where safe driving is starting to pay off in cash as well as in lives in Connecticut. Under the new 1960 rates, effective March 31, an estimated 82 percent of our motorists will pay up to 15 percent less for their auto insurance this year than last.)

STATE'S PEDESTRIAN PROGRAM WINS AWARD

Pedestrian safety is stressed by schools and police departments. Educational programs, stepped-up enforcement against hitchhiking and other pedestrian violations, and increased use of pedestrian control devices all helped Connecticut win the American Automobile Association grand award for its pedestrian protection program.

The third big E in Connecticut's safety program, engineering, is especially important because of our disproportionately large traffic volume. Ours is the third smallest of the 50 States—only 100 miles long and 50 miles wide—but it is the gateway to New England, the funnel through which pours all the traffic between New York and most of the rest of the country to the west and south and the other five New England States to the north and east. During peak traffic periods on weekends and holidays as many as 6,000 cars an hour pass through a toll station on the New York-Boston route.

The modern, safe Connecticut Turnpike, built at a cost of $464 million and opened January 2, 1958, is our principal answer to this problem. Last year more than 40 million vehicles used it, 80 percent more than in its first year. We have tried to modernize our other streets and highways for safety too, and the last session of the State legislature authorized an accelerated highway construction program which, including Federal grants, will involve the expenditure of more than half a billion dollars.

Supports from the courts is a fourth essential element in any effective highway safety program. Connecticut has had a hodgepodge of local courts, many part-time or run by justices of the peace. Of course, there was little uniformity in penalties, and therefore inequities. The last legislature abolished these courts, effective December 31, 1960. They will be replaced by a circuit court of 44 full-time judges, with tenure. They will hear all traffic cases, and although this was by no means the sole consideration,

I feel sure the creation of the circuit court will mean a long step toward even greater highway safety in Connecticut.

There are numerous other aspects of our program, many of them developing to meet new needs. We used unmarked patrol cars, radar (pioneered by Connecticut, incidentally, in 1947), and spot checks on secondary roads at night for better enforcement. We have trained a volunteer, nonpaid auxiliary police force of 1,000 men to help our 450-man State police force handle heavy holiday and weekend traffic, and we recommend such a program to other States. We established a municipal police training committee which will see that all Connecticut policemen receive adequate training through the State Police Academy.

MORE ACTION PLANNED ON OTHER PROBLEMS

Proposed laws permitting chemical tests for intoxication, an absolute maximum speed limit, uniform traffic tickets, and accident report forms were rejected by the last legislature, but I intend to press for them again in 1961.

A study to determine if there is a relationship between the physical health of motorists and accidents was begun recently in Connecticut by the U.S. Public Health Service, which will screen up to 25,000 drivers in a mobile health examination center. Findings should have great interest for driver-license-standard setters everywhere, and a big impact on the overall safety picture.

These are just some of the things that might stimulate others in highway safety efforts. There is no magic formula, obviously. It takes hard work and unceasing attention. But surely no amount of either is too great to save 20,000 lives a year—or even one.

Mr. K.'s Temper Tantrums and Our Hope for Peace

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1960

Mr. HALPERN. Mr. Speaker, I have read many editorials and observations on the U–2 incident and the summit conference. One of the more perceptive and well-reasoned comments that I have seen was a frontpage editorial that appeared in a recent issue of the Bayside Times, a weekly newspaper in my district. In forceful, well-considered language the editorial points out how Mr. Khrushchev failed all men by his intemperate conduct. With the passage of weeks its phrases assume more and more pertinency. Under unanimous consent I insert this excellent editorial in the RECORD:

[From the Bayside Times, May 19, 1960]

MR. K.'S TEMPER TANTRUMS AND OUR HOPE FOR PEACE

The horrible weapons with the power to destroy life on earth are still poised skyward. Their very existence has made every summit conference the focal point in mankind's longing for peace. This time, Paris has been made a shambles by Mr. Khrushchev's deliberate and premeditated crude conduct and insults to our President.

The Soviet leader had every opportunity in the past 2 weeks to cancel our President's invitation to Moscow, to demand an apology for the U–2 plane incident, and to ask for punishment of those responsible. However, he waited until Monday to tongue-lash Mr. Eisenhower and present him with an ultimatum which could not be satisfied. Our decision to terminate similar flights was not enough.

Khrushchev waited for the world's attention. He knew that every human being with a wish for peace would be hoping for success at the summit. But, the Soviet spokesman opened his bitter barrage and destroyed even a hope for negotiation on the critical issues that becloud the future.

Americans, regardless of political persuasion, should renounce such incivility and demand that our President not be a party to Mr. K.'s temper tantrums. Bringing Mr. Eisenhower, Mr. Macmillan, and President de Gaulle to Paris as whipping boys for a propaganda blast is absolutely unjustifiable.

Man-to-man diplomacy is today's method of solving East-West disputes, and if there is to be a future generation at all, it must succeed. But back-alley tactics at a summit conference will never bring about a meeting of minds.

Khrushchev obviously is reflecting his country's indignation over the U–2 flight, but his "holier-than-thou" attitude over the existence of espionage and counterintelligence in all nations is merely an excuse to make propaganda jabs against the West. It is no reason to wreck a summit parley, and dash the hopes of peace-loving people the world over.

Khrushchev came to Paris prepared to destroy the summit conference. In falsely accusing us of aggression, insulting our President, magnifying the U–2 flight out of all perspective, and crushing the hopes of millions hoping for peace, the Soviet strongman has failed all men.

Additional Support for H.R. 9488

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. CUNNINGHAM. Mr. Speaker, I am pleased to include a resolution supporting H.R. 9488 which was passed by the Central Western Shippers Advisory Board during a recent conference.

The board represents 3,800 members residing in Iowa, Nebraska, Wyoming, Colorado, Utah, Idaho, and Oregon.

The resolution of support for H.R. 9488 coincides with the recommendations of the House Appropriations Subcommittee, which is responsbile for the Post Office Department appropriation and is headed by the gentleman from Virginia [Mr. GARY]. The resolution follows:

Whereas several bills similar to H.R. 9488 are pending in Congress; and

Whereas various proposals exist concerning the carriage of mail by air instead of rail: Be it

Resolved, That the Central Western Shippers Advisory Board go on record as favoring H.R. 9488 and action of Congress to set the policy for mail movements and not leave the decision to the Postmaster General; and be it further

Resolved, That pending the establishment of that policy by Congress no expansion of air services be initiated.

Rickover Scores U.S. Weapons Lag

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1960

Mr. KOWALSKI. Mr. Speaker, Vice Adm. Hyman C. Rickover is best known for his historic development of the nuclear-powered submarine which he built in the face of bitter and unimaginative service opposition. More recently, the indefatigable admiral has directed his attention to the military red tape which has been stifling creative men engaged in missile and weapons development. As he knows, this is a task much more formidable than building an atomic submarine, because this time he is trying to cut through the maze of an archaic Pentagon organiaztional structure which will resist change with a vengeance. But if we are to compete successfully with the Soviet Union, this stifling military redtape must somehow be slashed.

Admiral Rickover is a man who given the authority could slash through this redtape. Several months ago, I urged the Secretary of Defense to place all missile research and development under Rickover. This recommendation was not favorably considered. The truth is that Admiral Rickover will be retired from the Navy shortly unless we decide to make him the first four-star admiral promoted by Congress.

Philip Benjamin in the New York Times of Wednesday, June 1, 1960, recounts Admiral Rickover's views on military redtape. I am pleased to call this article to the attention of my colleagues.

[From the New York Times, June 1, 1960]

RICKOVER SCORES U.S. WEAPONS LAG—TELLS FORUM AT COLUMBIA THAT REDTAPE SLOWS ADVANCES AS RUSSIANS SPEED

(By Philip Benjamin)

Vice Adm. Hyman C. Rickover said yesterday that the United States was floundering in military redtape while the Russians were forging ahead with new weapons.

Present practices, he said, are resulting in "ever longer lead times, while the Russians keep on cutting theirs."

The reason for this, the admiral declared, is "the unwillingness of the military to make room for the men who can produce new weapons—the technical professionals."

Admiral Rickover, who developed the nuclear-powered submarine in the face of strong opposition, spoke at a panel discussion in the Low Memorial Library of Columbia University. The discussion was entitled, "Intellect and Democracy: A House Divided?"

The admiral, as blunt and outspoken as ever, outlined the present system of directing complex technical projects for new weapons systems.

ROTATION OF POSTS CITED

"The actual productive work is performed by qualified technical experts, but the direction is by officers who rarely possess the necessary technical knowledge to understand the work," he said.

"Moreover, they are rotated in and out of assignments for short periods of duty. * * * Officers thus exercise management control without having the requisite technical com-

petence which today can only be acquired by a long and arduous professional education."

A more ineffectual system could not have been devised, he asserted, "had we deliberately set out to do so."

At least two-thirds of his time and that of other scientists in his group is wasted by administrative fiat.

A short time ago, he related, "every senior technical man was doing paper work ordered from above; we had difficulty releasing one of them from his writing chores to deal with an urgent technical problem."

"We were scribbling instead of building ships. The Russians were forging ahead with new weapons, widening the leadtimes between the two countries."

Among the solutions Admiral Rickover suggested were making authority coincide with competence and responsibility, and recognizing that freedom from routines for creative workers was essential and did not constitute "a pampering of eggheads."

Dedication of Old Ben Coal Corp. Mine No. 21 at Sesser, Ill.

EXTENSION OF REMARKS
OF

HON. KENNETH J. GRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. GRAY. Mr. Speaker, I have the honor of representing one of the Nation's largest coal-producing areas. We are proud of the great contribution southern Illinois is making to the Nation and the world through the production of this great mineral called coal. Like all other industries we have felt the hardship created through automation by loss of jobs. Therefore, we all rejoice when a new mine is opened.

On June 14, in southern Illinois, an event will take place that may well become a milestone in the industrial progress of the United States. That event is the dedication of Old Ben Coal Corp. Mine No. 21 at Sesser, Ill. The new mine is a deep-shaft coal mine, the largest in the Midwest devoted to the production of metallurgical coal.

The significance of this new mine to national progress is best explained in the light of the relationship of coal and steel, as well as by the great changes that have been taking place in the coal-steel economy of this country.

America is the world's greatest steel producer, due largely to the abundance of iron ore in this country. Yet without an equally abundant supply of coal, the iron ore might well remain unused. For without coal and the coke made from it, there would be no practical, low-cost way to convert iron ore into steel.

From its earliest beginnings in this country and elsewhere, the steel industry has considered the availability of metallurgical coal to be of prime importance, and has located its mills close to this coal. For nearly a hundred years, the Appalachian region has been the major source of coking coal for steelmaking, and has accounted for the growth of Pittsburgh and other eastern cities as world-renowned steel-producing centers.

At the turn of the century, certain industry leaders realized that, if America were to continue satisfying the ever-increasing demands for steel, provision would have to be made for the day when eastern coal reserves would no longer be sufficient, and when steel production itself would move westward.

Thus it was that in 1918, the Old Ben Coal Corp. of Chicago purchased a reserve of 100 million tons of metallurgical coal in Franklin County, Ill., to be held against the day when the steel industry in the Midwest would match or exceed production elsewhere in the Nation.

This day has now come to pass. For several years now, steel production of the Chicago-Gary area has outstripped the East, and there are many indications that the Midwest will grow in importance as a steel region. Briefly, these indications are:

First, the central location of the area with respect to geography and population, an important consideration in market accessibility and shipping costs.

Second, the opening of the St. Lawrence Seaway and the availability of the many fine water routes of the Mississippi Valley States, which make it economical to ship iron ore from new fields in Labrador and Venezuela directly to the mills.

Third, the availability of vast reserves of low sulfur metallurgical coal in Illinois for iron ore reduction.

It is interesting to note that even though steel production has made great progress in the Midwest, the mills have up to now continued to utilize eastern coal. This has resulted partially from past practice, partially from unfamiliarity with midwestern metallurgical coal.

In deciding that now is the time to open mine No. 21 and tap its metallurgical coal reserve, Old Ben officials believe that the steel industry is ready to begin buying Illinois metallurgical coal in ever increasing quantities. By 1962, much of mine No. 21's output of 3 million tons annually is expected to be going for steel production.

The dedication of this new mine is signal in Illinois history. It marks the first time a coal producer in the State has opened a mine designed specifically for metallurgical coal production. It also marks the tapping of the largest commercially available tonnage of metallurgical coal remaining in the State.

By making this pioneering move, Old Ben, which has 86 years of history behind it, is setting the stage for further development of the Midwest as a steel and coal producing center.

The anticipated benefits of this development are remarkable to contemplate. In the Chicago area alone, metallurgical consumption amounts to 18,250,000 tons yearly, which is now largely being met by coal from eastern fields. Much of this market is expected to be developed by Illinois coal producers.

For the steel industry, utilization of nearby coal means important freight savings, in some cases $1.50 per ton differential between coal shipped from the East and coal shipped from southern Illinois. At the same time, the railroads of the Midwest can look forward to more metallurgical coal traffic.

There is also the matter of many new jobs in mining and coal hauling for the people of southern Illinois, and for the hundreds of industries and businesses which supply the living needs of these workers. Increased industrial development of the area should contribute to its stability and economic health.

Finally, by contributing to the further development of the steel industry, mine No. 21 is providing new strength for our consumer economy and our national defense.

The foresight of company officials in obtaining the coal reserve, and their patience in waiting for the proper moment in the evolution of steel industry logistics to open the mine, are worthy of note. Their action will be of immense benefit to an industry, to a State, and to the Nation.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Electric Business Is a Public Business

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, June 3, 1960

Mr. JACKSON. Mr. President, Dr. Paul J. Raver, superintendent of Seattle City Light and president of the American Public Power Association, has made an outstanding statement on the public responsibility of the electric power industry, privately and publicly owned. His statement was in the form of the president's message to the APPA convention in Washington, D.C., May 3. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE ELECTRIC BUSINESS IS A PUBLIC BUSINESS—PRESIDENT'S MESSAGE, AMERICAN PUBLIC POWER ASSOCIATION CONVENTION, WASHINGTON, D.C., MAY 3, 1960

(By Dr. Paul J. Raver, superintendent, Seattle City Light)

The theme of this convention is "Public Power—Democracy at Work." It is appropriate that this theme be discussed at our 17th annual convention in Washington, D.C.—a city which is the symbol of democracy to the entire world.

It is time that we who work for publicly owned electric systems show the world how and why a free people in the United States have chosen in many communities to furnish themselves with this essential of modern life and how well they have served themselves.

The local public power system has been part of the American scene for about 80 years, since the first days of central station service.* * *

Today, the almost 2,000 local publicly owned systems serve approximately 23 million people in 48 States and Puerto Rico. When one adds the 16 million people served by rural electric cooperatives, we see that almost 40 million Americans provide their own electric service through their own consumer-owned utilities.

The many local public power agencies do indeed represent "democracy at work." Organized, owned, and controlled by the local consumers, they are providing their communities with an essential service at reasonable rates—often well below those of the privately owned utilities.

Propaganda notwithstanding, the fact is that these local public power systems in addition make payments and contributions to their communities which on the average exceed the local tax payments made by privately owned power companies, when measured as percentage of gross revenues.

We can be proud of the fact that these local public systems, many of them small, nevertheless frequently undersell the much larger private companies in their areas, and in addition furnish good service, and pay the equivalent of local taxes or more—all on a self-supporting basis.

In addition to our primary function of serving our own communities, our local public power agencies benefit virtually all power consumers in the United States. Wherever they exist, these local consumer-owned systems provide an example of good service and low rates which often is far more effective than regulation in stimulating the private companies to keep rates down.

It is safe to say that if there were no local public power, all or most American consumers would be paying far more for their electricity and using far less of it than they are today. Our public power systems have led the way in selling "more power at lower cost," demonstrating to the Nation that this policy is of great public benefit and also a paying proposition for the utility—any utility.

In order to set the tone to this theme of "Public Power—Democracy at Work" let us take a brief look at some of the problems facing us. For background let us first consider the basic principles underlying the reason local public power systems have an important place in the power industry.

Public power is a public business—because the power industry itself is a public business, whether it is owned and operated by a public agency or a private agency.

Why is this so?

It is so because electricity is essential to public health, life and economic survival and because this commodity is sold under monopoly conditions. When these two factors, necessity and monopoly, are predominant, we have "business affected with a public interest" and the business itself is public and not private. If it is operated by a private monopoly, it is only because the private monopoly acts with the consent of and as the agent of the State under a franchise grant and State regulation. Competition is the regulator of private "free enterprise" business but in a public business rendered by a private concern, government regulation is set up to act as a substitute for competition. In short, in this country the entire electric power industry is either publicly regulated or publicly owned. But it is public business regardless of ownership.

As responsible managers we need constantly to keep in mind the basic principle that we are managers of a public business—and so are the managers of the so-called free enterprise privately owned electric companies. This is so regardless of all of the high-powered propaganda of the Madison Avenue boys directed to misleading the public into thinking that privately owned public utilities are part and parcel of the free enterprise system, the same as the corner grocery store, the country doctor, the filling station, the baker and the candlestick maker, none of whose services are rendered under monopoly conditions. The consumer has a choice of grocers, bakers, and druggists. If he is dissatisfied with the service or prices of one, he can go to a competitor on the next corner. Our business, on the other hand, is a monopoly rendering an essential service. The customer has no choice. He must have our service to live and he must pay our price regardless of whether the ownership is public or private.

Furthermore, all publicly owned utilities which raise their capital requirements by the sale of revenue bonds in the open market—and all of our municipally owned and public utility districts do so, so far as I am aware—have the same basic credit problems that the private utilities must meet. We are not supported by taxation; we do not have the credit of the municipality back of us and we must show a net income—or profit in order to float our bonds.

The only difference here is in the use of the net income. Private management may plow a portion of the profit back into the property but primarily the profit is paid to stockholders in dividends. This is required in order to attract capital—particularly risk capital. Public management, on the other hand, may plow all of its net income back into property or use it to retire a debt or—if the credit position will stand it, pay a part or all of the net income to the customers in the form of a rate reduction. In other words, all of the net income accrues to the benefit of the customers and stays in the community.

We both use the same standard accounting principles and we must both earn a net income in order to have a sound credit position to raise new capital. We must both use that net income in a manner to maintain a sound credit position.

Consequently this segment of the public power business is just as much a part of the capitalistic system as the private power segment. But neither we nor they are free enterprize in the sense of competitive private business because we are both monopolies, we are both public enterprises, we are both creatures of the state, and we both operate subject to the will of the public. It would be helpful in getting along with our public business if private managers and their paid propagandists would recognize this basic economic fact. It would at least reduce the area of conflict over basic public policies in the overall power field if they would do so.

So much for the economic reasons in answer to the question: Why is this a public business and not a private business?

The same answer is also written into our law—the common law, Supreme Court decisions, legislative law, and regulatory commission decisions. * * *

* * * * *

From this basic public character of our business flows a whole line of basic public policies developed over the years.

The whole regulatory system of privately owned utilities is based on this public business concept. The right of the public to own and operate these businesses themselves is based on this public business concept. The right of eminent domain is based on this concept.

The great TVA development and the Bonneville Power Administration grid system are based on laws flowing from this basic concept.

Full and comprehensive development of our river systems is based on this concept.

The recent policy of BPA to wheel non-Federal power over its grid system and to build facilities to do it—the common carrier principle—is based on this basic concept. Incidentally, the "partnership" policy of the Federal Government would not work in the Pacific Northwest without this policy of wheeling non-Federal power over Government transmission lines.

The tax-free status of municipal corporation bonds is based on this concept that "the

function performed is that of the State." The lower interest costs resulting should therefore accrue to the public and not be diverted to nonutility uses.

The public financing of atomic power development is consistent with this basic public principle.

A host of present controversies, such as the proposed downstream benefits bill, the middle Snake River development fight, regional transmission interties, the Bonneville Power Corporation bill, territorial disputes between both public and private power agencies, the proper development of the Potomac River here in the Washington, D.C., area, and many others must be resolved on the basis that this is all public business affected with a public interest and that this interest must be protected regardless of the form of ownership. * * *

The fact that the power industry is vested with a public interest means that a private power corporation has no inherent right to serve a community, that it engages in the business only by permission of the public, and that the people reserve the right to provide themselves with electricity through their public agencies wherever and whenever they choose.

This concept means competition for the privately owned utilities. Because they dislike this, and would prefer an undisturbed and nationwide monopoly status, with complete control over the resources as well as the markets, the private power companies have unleased a great propaganda drive to undermine this basic principle in the minds of the public, our legislators and our own local boards of directors.

If the private companies are having problems, they will not solve them by pretending they are like the little grocery store on the corner.

The solution is in a recognition by the private power managers themselves that they are operating a public business and that this business must be operated for the benefit of the public and not for the primary benefit of themselves and their stockholders.

First and foremost, this concept means that as responsible managers our first concern is the customer—the public.

That is why we in public power stress low rates as a prime consideration in the service we render. Statements are being circulated—some coming from academic circles—that the cost of electricity is really not very important to the economy. Low rates are important to the economic well-being of the people of a community for two important reasons:

(1) Electricity is a socially desirable as well as a necessary commodity. It has countless uses, in the home, on the farm, in the factory. Those uses have been developed as the cost of electricity has gone down. Ample supply of low-cost power has been and is one of the most important factors in maintaining and improving the productivity of labor. Our expanding standard of living—the envy of the whole world—could not have been accomplished without it. We are now spending billions of dollars in aid to the underdeveloped countries in a stupendous effort to partially satisfy the demands of underprivileged peoples to enjoy the comforts and conveniences, industrial development, and job opportunities which low-cost electricity has brought to us, until such time as they can attain these advantages unassisted. No small percentage of these financial aids are for hydroelectric dams and electric transmission and distribution systems.

No community, no region, no nation can raise its standards of living and be economically strong without an adequate, expandable, and low-cost energy base—coal, oil, waterpower, atomic energy. The lower the cost, the better the economic advantage. Indeed, the world struggle is for control over natural resources—and one of the greatest of these is a cheap energy base which can be converted to electricity.

This is a public business of the first order in world politics—as well as in local affairs.

Low rates are important to the economic health and well-being of a community for a second reason:

(2) Electricity is a commodity which has a high elasticity of demand. This economic term simply means that the demand increases as the price is reduced. New uses are developed. If the price is halved, the use will double. In Seattle, the average price per kilowatt-hour for residential use in 1959 was slightly less than 1 cent. The average use per residence per year was 8,660 kilowatt-hours. For the United States the average price was about 2.6 cents per kilowatt-hour. The average use was 3,577 kilowatt-hours per year. Our price was 39 percent of the national average. Our average use per residence was about 2½ times the national average. As a result of our low rates, we have more electric ranges and electric water heaters in Seattle than any other city of the United States—regardless of size. Nine out of 10 cook electrically and over 3 out of 4 heat water electrically; 157,000 of our 208,509 residential accounts are all-electric, meaning that they have electric ranges and automatic hot water heaters. This has been accomplished in spite of gas competition. The change to natural gas in our area in 1956 has failed to halt this demand for all-electric living.

It can be said that our rates in Seattle are low because we have cheap hydro, which many other areas do not. This is true, but we could double our selling price, which should be enough to cover this difference, plus the power company Federal income taxes and their expenditures for propaganda advertising and public relations, and we would still be selling it for less than the price charged by some of the largest privately owned utilities in the country—with all of their mass production advantages.

Why is this? I assure you that it is not for the reasons alleged in the power company propaganda. It is because we pursue an aggressive high-use low-rate, anti-inflationary sales policy; it is because we run an efficient and business-like operation; it is because our board of elected officials do not try to "milk" us for nonutility purposes; it is because we run our utility in the interest of our consumers and for the welfare of our community.

In short it is because we recognize the economic fact that electricity has a high elasticity of demand and use increases as price is dropped. Also, it is just as important to note—use will decline as the price goes up.

* * * * *

What do we need to do to keep our rates low?

First, we need to recognize that ours is a business of decreasing unit costs. The greater the use of power, the greater the use made of existing capital investments and the lower the cost per kilowatt-hour of our commodity. Second, the lower the cost per kilowatt-hour, the higher the use by the people of our community and the better the economic health of our city, State and Nation.

* * * * *

This poses one of the major problems facing the locally owned utility now and in the decade ahead.

How can a locally owned utility—operating within the confines of a city—participate in the cost-saving techniques of a large, integrated mass-production system and assure its people of a continued supply of power at low cost?

Integration of electric systems by high-voltage transmission is becoming more and more essential. The advantages are numerous. Markets are broadened, justifying the installation of larger power-production units at lower unit costs. Reserve capacity needs are reduced and system load factors are improved. The lowest-cost producers are used on base loads. A better utilization of water supplies is secured in hydro systems. All of these and many other advantages from integration bring lower costs per kilowatt-hour—providing a utility is permitted to engage in such mass-production arrangements.

* * * * *

I cite the TVA and Pacific Northwest experience to emphasize the economies which can be attained through large, regional wholesale power supply systems and because, in the case of TVA, as our largest steam-hydro system, its cost experience is the most striking. With equally competent management, a privately owned and operated regional system should be able to achieve similar results. By interconnection and integration, local public power utilities and rural cooperatives also can realize the advantages of larger wholesale power supply systems.

The American people in many areas still do not enjoy the benefits of low-cost wholesale power supply but there are no technical or engineering reasons why they should not. * * *

The power industry historically has been a rapidly expanding one and public power's rate of growth has exceeded that of the privately-owned companies—because of our policy of "more power at lower cost." According to Federal Power Commission statistics, the power sales to consumers of local public power systems in 1958 were 3.2 times as large as in 1946, while the sales of private systems in 1958 were only 2.7 times their 1946 level.

If we assume this same growth rate, the local public systems by 1980 will have total sales of about 350 billion kilowatt-hours, 7.5 times the 1958 level.

Another measure of the job ahead is the additional investment required. In 1958, total investment by local public systems in electric utility plant was estimated at $5.3 billion. Assuming the growth rate of the past 10 years, our local systems will need to have by 1980 a total plant investment of about $40 billion, 7.5 times the 1958 level. This is exclusive of Federal utility investments.

Although the rate of expansion will be uneven over the country, every local public power system will share in this rapid growth over the next 20 years. We all must recognize that this great expansion in sales will present not only a great responsibility but a great opportunity, if we will but seize it. * * *

Beyond the integrated systems developed by groups of local consumer-owned utilities, we must look to the development of regional heavy transmission grids and low-cost wholesale power supply for each region of the country. I am not suggesting that these all should or need to be publicly owned. I am saying only that from an engineering standpoint they are needed, they are feasible and, in my opinion, they are going to develop. In this connection, it seems to me most necessary that the common carrier principle come to apply to certain transmission lines under reasonable rules and regulations if we are to have a reasonably efficient electric power industry in this country.

* * * * *

We also must continue to advocate and support Federal multipurpose development of our hydro resources whenever Federal development will result in the most comprehensive and beneficial use of these resources. For the country as a whole, Federal Power Commission estimates indicate that less than one-fourth of our hydro potential has been developed even though this represents our only feasible source of renewable energy.

Throughout the country, the future of electric power supply and service offers both opportunity and challenge.

As managers of public business—as agents of the state—let us try in every way to join forces through our legislatures and our Congress to promote the economic health of our communities, our States and our Nation. Let us seek legislation which will enable us to better provide adequate quantities of low-cost power for industrial expansion and development, for commercial expansion and development, and for wider use in the home and on the farm. Fighting for these basic principles is a winning fight because it is for the customer—for the public—for the community which we serve. This is the ball on which responsible management keeps its eye. Enlightened private management will join with us in our effort to bring the benefits of mass production to all customers, theirs as well as ours. They and we should recognize anew and emphasize by our actions that we are managers of a public business, that we are acting for the state—that we are the stewards of a public trust. Recognition of this basic public business concept by the managers of private as well as public power could usher in a new era of cooperation, giving added stimulation to the economic growth and development of our country.

In the words of our convention theme, public power is "democracy at work," but in a very real sense the development of our power resources goes beyond questions of electric power policy to the very heart of our national democracy. How adequately and efficiently we provide for our electric power needs can be one of the important factors in determining how our Nation and our way of life fare in the strange, exciting, and sometimes frightening world of tomorrow.

Views on Improving the Patent Section of the Space Act of 1958

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, the following communication is an excellent illustration of the manner in which businessmen and the legal profession view the efforts of the Committee on Science and Astronautics to improve the patent section of the Space Act of 1958.

It is typical of the wide approval which is being given to this proposed change in the law:

AMERICAN MACHINE & FOUNDRY CO.,
New York, March 17, 1960.

Hon. OVERTON BROOKS,
Chairman, Committee on Science and Astronautics, House of Representatives, Washington, D.C.

MY DEAR CONGRESSMAN: As a vice president of the American Machine & Foundry Co. who is concerned with the company's patent affairs, I am writing to you about a matter which is of a great deal of concern to AMF as well as to me.

As you undoubtedly know as a result of your chairmanship of the House Committee on Science and Astronautics, the Space Administration Act contains patent provisions which give a great deal of concern to those in industry who have to do with patents. The general effect of these provisions of the Space Act is to give the Government full title to inventions made by contractors with the Government, ignoring the satisfactory experience resulting from the principles worked out over a great many years under the Armed Forces Procurement Regulations. Under these regulations the Government gets all the rights it needs; namely, a royalty-free, nonexclusive license for all Government purposes and the contractor retains title for all private commercial purposes.

The reasoning back of the Armed Forces Procurement Regulations is that the contractor who has made the invention and is in best position to make it commercially useful should retain the patent incentive to invest capital and manpower in developing, manufacturing and marketing it. Once full title is in the hands of the Government, it, in effect, becomes without an interested owner so that no one has an interest in making the invention commercially available.

Long experience with the Armed Forces Procurement Act has shown that ownership of commercial rights in the contractor under whom the invention was made gives the maximum benefit to the public through inducing the owner to risk his money and time in endeavoring to make these inventions attractive and available to the public. It is this sort of self-interest, energy and enterprise that gets these inventions into commercial use and makes our industry dynamic and progressive.

The March 8 recommendations of this subcommittee of the Science and Astronautics Committee, under Congressman MITCHELL, are generally in accord with these principles so vital to the economic development of our country and would go a considerable distance toward remedying the unfortunate provisions of the present Space Act. I therefore strongly recommend that you support the proposed new provision recommended by the Mitchell subcommittee as a part of the Brooks bill (H.R. 9675).

Sincerely,

GEORGE S. HASTINGS.

Lewis G. Castle

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, June 6, 1960

Mr. WILEY. Mr. President, I rise to pay tribute to the life and works of a longtime friend, a great public servant, and a dedicated American, Mr. Lewis G. Castle.

As my colleagues know, he passed away on Saturday, June 4.

During a 70-year lifetime, Lew's work reflected the kind of devotion to duty and meticulousness in doing a good job that has helped to make this a great country. For those of us who knew and respected him as a worker in the public service—establishing a record of soundness, integrity, and courage—realize how well his efforts merit the Scriptural passage, "Well done, thou good and faithful servant."

During recent years Lew had been administrator of the U.S. St. Lawrence Seaway Development Corporation. As a cosponsor of the seaway law authorizing U.S. participation in the project, I naturally had opportunity to work closely with him on the complex problems of this job of great magnitude. Always I found him efficient, capable, and tireless and unstinting in his efforts to carry forward this great project and serve the public interest.

To his son and two daughters I wish to extend warmest sympathy and deepest condolences. As one who knew Lew as a great friend, I can understand their sorrow. In such dark days it is often difficult to see any sunshine; however, I believe his son and daughters—as well as many friends in Congress and throughout the country—can take heart and be deeply grateful that we knew and loved Lew Castle, who well served his country and fellow man.

At this time I ask unanimous consent to have an article from the Sunday Star, reviewing the life and work of Lew Castle, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Sunday Star, June 5, 1960]

LEWIS G. CASTLE, HEADED U.S. PORTION OF SEAWAY

MASSENA, N.Y., June 4.—Lewis G. Castle, who had supervised the U.S. portion of the giant St. Lawrence Seaway since construction started in 1954, died today in a hospital. He was 70.

Mr. Castle entered Massena Memorial Hospital a week ago for treatment of an acute stomach ailment and pleurisy.

Mr. Castle had been a banker in Duluth, Minn., for 34 years before becoming the first administrator of the U.S. St. Lawrence Seaway Development Corporation.

As head of the Corporation, Mr. Castle directed construction and operation of the U.S. portions of the $400-million waterway connecting the Great Lakes and the Atlantic Ocean.

The seaway opened in the spring of 1959.

Mr. Castle had resided here since 1958, when the Corporation established its headquarters in this northern New York community.

Mr. Castle was born at Portage, Wis., and was graduated from the University of Wisconsin in 1913.

He was associated with the Northern Minnesota National Bank at Duluth from 1920 to 1954 and was its president for the 7 years prior to taking the Seaway position.

Mr. Castle, a lifelong Republican, was appointed by President Eisenhower, after whom one of the American seaway locks was named.

Mr. Castle is survived by a son and two daughters. His wife died in 1939.

Babel—A.D. 1960

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. DOOLEY. Mr. Speaker, Mr. C. J. Dover, consultant, public affairs planning, General Electric Co., New York City, addressed the seventh annual meeting of the American Society of Technical Writers and Editors, and the Technical Publishing Society, last April 22 at the Hotel Drake in Chicago.

His trenchant and well-considered remarks merit wide attention. Mr. Dover's speech follows:

BABEL—A.D. 1960

(An address by C. J. Dover, consultant, public affairs planning, General Electric Co., New York City; seventh annual meeting American Society of Technical Writers and Editors and the Technical Publishing Society, Drake Hotel, Chicago, April 22, 1960)

History abundantly confirms that progress in the art of human communication has been badly outdistanced by the rapid and spectacular scientific advances in communications technology.

In the near future—as soon as space satellites can be placed in orbit to act as relay stations—we will have the means for achieving almost instantaneous communication, visual and aural, between any two points on earth.

This development will climax more than a century of almost incredible progress in communications technology—a communications revolution which spawned the telephone, motion pictures, radio, television, and other significant scientific advances.

Scientific progress has tended to obsure the fact, however, that the art of human communication has failed to keep pace. Lagging far behind have been advances in man's ability to communicate effectively his intentions, ideas, and opinions to the masses of his fellow men.

I hope that those of you with engineering or technical backgrounds won't think me impertinent when I suggest that many of today's problems of human communication might well be blamed on a mistake in strategy made several thousand years ago by some of history's earliest engineers.

You may have learned about the Tower of Babel in Sunday school and, as I did, promptly forgot about it. But there is a certain significance to that story which struck me as most appropriate to the topic we're discussing. The Towel of Babel, after all, was an engineering project—possibly the most ambitious the human mind has ever conceived. It was planned that the great tower would reach to the very gates of Heaven, and substantial progress was indeed being made.

But the engineers and other technicians had made one fatal error in their planning. They had neglected to consider the sociological implications of their grandiose technological plan. Or, to put it another way, they did not equate the human factor into their calculations. And what happened? The God of man, in His infinite wisdom, determined that society was unprepared, emotionally or intellectually, for such a miracle of engineering. So He stopped the project. But how did He stop it? Until that time, all men spoke the same language, and the Lord, in the words of the Bible, "confounded the language" of the people—took away from the workers their ability to communicate with each other.

Since that time, ladies and gentlemen, effective communication has been mankind's toughest problem. This is the legacy left us by our early engineering brethren. And today, as we share that curious mixture of uneasiness, awe, and wonder at the implications of atomic energy, intercontinental ballistics, earth satellites, electronic computers, and space travel, it is perhaps appropriate for us to remember that all the technological skills and engineering know-how which went into the building of the Tower of Babel were useless when the power of effective communication ceased to exist. It is perhaps well for us to reflect that, unless we learn much more about communication and other facets of human behavior, we may again come to that point of disaster where society is intellectually and emotionally incapable of assimilating the miracles of technological progress.

I think we can categorically assert that we still live in our own special kind of Babel in this year of our Lord A.D. 1960.

You can see it in the face of a beatnik from Boston, or on the screen of a horror from Hollywood. You can hear it in the beep-beep of a sputnik, in the rush-hour dissonance of Times Square or Chicago's Loop, or in the wailing of a billion babies born in a world of political and economic uncertainty. You can sense it during a U.N. debate on nuclear disarmament, or when a man dies in South Africa because he was born black.

You can be pessimistic, and point out that, in spite of the dedicated efforts of many who have proposed an international language, the multiplicity of tongues continues to impede progress—and that cultural conflicts—political, social, and economic—continue to block mutual trust and understanding, at both national and international levels.

You can be optimistic, and point out that we have assembled the greatest array of communication channels and techniques in history—magazines, newspapers, technical journals, posters, letters, telephone and telegraph, bulletin boards, radio, TV, intercoms and public address systems, newsletters, special bulletins, billboards, round-table conferences and individual and mass meetings—and that out of this sea of paper, avalanche of words, and thunderroll of sound something of value simply must flow.

Or you can be simply cynical and sum up the total situation, as did one observer, as follows:

"We have not succeeded in answering all our problems—indeed we sometimes feel we have not completely answered any of them. The answers we have found have only served to raise a whole set of new questions. In some ways we feel that we are as confused as ever, but we think we are confused on a higher level, and about more important things."

But whether we laugh at it or ignore it, curse at it or cry for it, the fact is indisputable that we live today in a modern Babel.

It is certain that many of society's biggest problems and most dismal failures are caused essentially by ineptness in the art of human communication.

The dimensions of our communication failure touch every facet of our life, but let's look briefly at two examples—(1) our Nation's relationships with the rest of the world, and (2) business management's relationships with employees and the general public.

World events have dramatized the problem of U.S. relationships with the rest of the world. In recent months we have seen how our President found it necessary, during visits to supposedly friendly nations, to be so closely flanked by police and military vehicles that the newsreel cameras could scarcely record the event. In recent months we have seen the victorious revolutionary, Fidel Castro, figuratively thumb his nose at us across a very few miles of ocean water—and publicly brand U.S. people with the familiar Latin hate-word "Gringos."

And, not too long ago, in the city of Caracas, a mob attacked a car carrying the Vice President of the United States, and spat in his face; in the city of Tripoli, the public library of the U.S. Information Service was sacked and burned; in the city of Lima, the U.S. flag was burned on the streets while thousands cheered.

Why?

Do things like this happen because the deeds of the United States in its relations with foreign nations have been selfish, evil, or unsound in recent years? These are the explanations we sometimes hear, but those who say so usually are political partisans, grinding an axe for one party or the other.

But if we lay political partisanship aside, most of us would agree that during the past two decades and under three different presidents, the international behavior of the United States in general has been generous, ethical, and honorable.

We have given billions for foreign aid, and we have championed the cause of freedom. Certainly, we have made some mistakes. But, taken at face value, our actions should have generated understanding, rather than hatred. But substantial evidence points to the fact that we have made new enemies, and alienated many of our friends.

Why? When our intentions have been honest and our deeds in general have been good, why do we as a nation rate so relatively low in the esteem of many of our good neighbors in foreign lands?

We must conclude, ladies and gentlemen, that though there are many factors involved, a major reason for these failures on the international scene has been ineptness in human communication. Our international propaganda program has suffered from unimaginative and ineffective implementation. We've been outthought and outmaneuvered by our ideological competition. We've said the wrong things to the wrong people at the wrong time and through the wrong channels. We have failed to interpret properly our good deeds, and we have failed to persuade others that our intentions toward them are sound and honest.

Behind these inadequacies in international communication are many factors. Our Congress has too often displayed indifference to the oversea information effort; we have not staffed the U.S. Information Service with a sufficient number of professionally qualified people; those responsible have too often failed to apply even the most elementary principles of propaganda and persuasion; too many of our representatives abroad have failed to become bilingual; too many have been blinded by ethnocentrism, and oblivious to cultural differentials in the country of their residence. The list of specifics would be long, but the overriding consideration remains; namely, that inadequacies in our total communication effort must bear a major share of the blame for the deterioration of our Nation's international status.

But now let's compare the striking similarity of these international problems and failures to the problems and failures of business management's relationships with employees and the general public. Just as our Nation's record of deeds on the international front is a good one, so business management's overall record of accomplishment and public-interest operation is visible on the record.

Internal reforms, both voluntary and as a result of public pressures, have made the industrial "robber baron" a memento of faded history. "The public be served" has replaced "the public be damned" as the characteristic attitude of the business community.

These managers have been able to generate and to apply technological improvements which have been so astounding in terms of innovation and improved living standards that they have been able to change literally the face of the world and the course of history.

But business management, like the United States itself, has failed to reap the measure of understanding and support which is justified by its overall performance.

Indications of this failure by management are abundant, but four, in particular, stand out:

1. The fact that it is precisely those companies which provide the best material re-

wards for employees, and the best product-quality-price mix for customers, which so often are most severely censured by their own employees and the public;

2. The continuing low level of general public awareness of the good intentions and significant accomplishments of large business enterprises; public opinion polls often make this fact painfully obvious;

3. The frequent failure of management to win its deserved share of employee loyalty, as indicated by the pushbutton control in the hands of some top union officials—control which enables them to assert life-or-death power over many business enterprises;

4. The failure by management to tap substantially the sharply greater individual productivity which awaits solutions of the complex problems of human motivation and communication.

These failures of management—like the failures of Government on the international scene—are often caused by ineptness in communication. Business management, too, has failed to interpret properly its good deeds, or to persuade others that its intentions toward them are ethical and sincere.

Management certainly cannot blame these failures on quantitative deficiencies. It spends about $1 billion per year just on the oral, visual, and written techniques of employee communication. This includes the sponsorship of 8,000 employee publications which reach an estimated 75 million readers. Many of these publications, it may be added, are exercises in futility of truly epic proportions.

* * * * *

The problems of U.S. management and of the U.S. Information Service are by no means the only examples of the unfortunate consequences of failures in communication.

Even the greatest issues of our times—the issues of war, peace, and survival—will be determined to a great degree (perhaps solely) by the degree of acceleration in our knowledge of the processes of human communication. One does not have to be a prophet to sense that, if people could learn to communicate with people, without misunderstanding—and had the opportunity to do so—there probably would be little need for armies, armaments, or wars. The very core of the power of every dictator and every demagogue in history has been his ability to manipulate the media of communication, and thus to prevent the effective flow of people-to-people communication. This is the reason the so-called Iron Curtain exists. We are all familiar with the bipolarization of political power today in the United States and Russia. The ultimate winner of the cold war between the East and West may well be the side which wins the continuing communication contest which has so often been termed the "battle for men's minds."

What then are the dimensions of our progress? Because we see everywhere evidence of a 20th century Babel, should we join the gloom-doom fraternity and retreat to the fallout shelters?

It seems to me there are, on the contrary, good reasons to be hopeful. It is true that the art of communication today is only approximately at the place the physical sciences had attained prior to Newton's identification of the laws of motion. But this should not cause thinking men to behave like Chicken Little, and rush about in panic shouting "the sky has fallen."

For there are some highly promising developments in communication and related fields. These developments promise to bring order out of chaos, to make our special kind of Babel more meaningful, and to increase the degree of rational exchange of meaning between human beings.

I would like to review briefly just three of these areas of increasing significance and promise. They are (1) greater institutional sophistication about the role of communication in society, (2) better understanding about the ethics of persuasion, and (3) the acceleration of progress in the social sciences.

I. GREATER INSTITUTIONAL SOPHISTICATION ABOUT THE ROLE OF COMMUNICATION IN SOCIETY

Business organizations, government bureaus, and most other institutional-type entities are beginning to be more sophisticated about the role of communication with respect to their own needs and opportunities in society.

They are learning through observation, and through trial and error, that the realities of modern society require a conscious effort by the institution to interpret its actions. They are learning that deserved public recognition does not necessarily accrue on the basis of actions alone.

There is perhaps a pertinent analogy in the field of product marketing. It was once believed that the world would "beat a path to the door of the man who builds a better mousetrap." This concept, of course, is dead—a casualty of the modern-day Babel we are discussing. Successful marketing today demands not only a good product, but effective advertising and selling; it demands the implementation of a formula which may be stated as follows:

Good products plus aggressive merchandising equal customer acceptance.

Similarly, it is no longer sufficient for today's institution merely to make positive contributions in the best interests of society. The idea that "actions speak louder than words" is still impeccable logic for an individual—but it has serious shortcomings for an impersonal institution.

As we saw in the examples of U.S. industry and the U.S. Information Service, it is absurd to expect that good deeds alone are sufficient. Thus, the basic marketing formula can easily be borrowed for institution purposes, and stated as follows:

Good actions plus effective communication equal public approval.

Institutional communication, in the sense used here, thus becomes primarily interpretative and persuasive in nature—and in the process makes a solid contribution to better understanding by all concerned.

An increasing awareness of the need for institutional communication in this frame of reference offers solid hope that we may attain higher levels of cohesiveness in our group-studded society.

II. BETTER UNDERSTANDING OF THE ETHICS OF PERSUASION

The second of these three encouraging developments is better understanding of the ethics of persuasion. This, of course, is a need which goes in tandem with the emerging pattern of interpretative and persuasive communication by institutions.

Emotions tend to run at high tide on the subject of persuasion. Many people traditionally have felt that there's something sinister about persuasion—that it is a by-product of evil, manipulative intent, and dishonest juggling of the facts.

But a better perspective on persuasion is beginning to emerge. People are increasingly conscious that others continuously and beneficially exert persuasive influence on our actions and our ideas. We are persuaded by ministers, parents and the mass media to observe moral and ethical standards. We are persuaded to choose one automobile or one refrigerator over a competing brand. We are persuaded to support a given issue, or a given political party.

So we are coming to understand that we should not condemn persuasion, pe se. We should simply insist that persuasive communication meets proper ethical standards. Ethical persuasion requires that the communicator's purpose must be honest, that his message must reflect sound judgment, and that his position is based on well-documented facts.

The intellectual underpinning—indeed the very essence of a free society—is that conflicting viewpoints are subjected to public scrutiny. Our own Republic has matured under the principle of free expression. But we have too often been exposed to the notion that conflict in itself is immoral or degrading.

Regarding harmony as an end in itself—more important than any laws or any principles—is a view which has spawned, in our generation, the policy of appeasement, the cult of conformity, and the insidious notion that the group is more creative, collectively, than the sum of its individual members.

But it is a hopeful sign that a growing number of thinking citizens recognize that, while we have an obligation to avoid needless physical conflict, in a free society the conflict of ideas is the axis of our intellectual world; that when all conflict ends, when we all conform to one single set of values and ideas, when pure harmony is nowhere disturbed by the voice of a maverick—we will be, in full measure, in the age of faceless humans, the time when freedom will wither and die, the period of decay and destruction.

III. THE ACCELERATION OF PROGRESS IN THE SOCIAL SCIENCES

The third encouraging development is an observable acceleration of progress in the social sciences—and particularly with respect to the process of communication.

The Shannon-Weaver "Mathematical Theory of Communication" and the social-science oriented paradigm of Dr. Harold Lasswell, have provided us with workable theoretical frameworks.

A mass of research in psychology, anthropology, semantics, sociology, and other related fields have brought us important new knowledge in such areas as attention, perception, motivation, learning, attitude formation and change, group interaction, and mass behavior. Specific communication theory is being tested and retested as a part of pioneering communication research at Michigan, Ohio State, Chicago, Harvard, Yale, Princeton, MIT, and many other universities.

Professional organizations such as the National Society for the Study of Communication, the American Management Association, and the Society for Advancement for Management are also sponsoring communication research and study projects—as are several independent companies. A flood of books and articles on the subject are contributing to the establishment of a formidable bibliography.

Social scientists like Carl Hovland, Wilbur Schramm, Irving Lee, Leonard Doob, S. I. Hayakawa, Bernard Berelson, Paul Lazarsfeld, Joseph Klapper, Hadley Cantril, Robert Merton, and many others are making frequent and highly constructive contributions to our pool of knowledge. Their work offers great possibilities for real progress in the art of human communication.

Sparked by men like Dr. Ralph Nichols, of the University of Minnesota, important new breakthroughs may be imminent in listening—that greatly neglected fourth communication skill which we do so much of, but know so little about.

Think of the billions of dollars we Americans have spent on laboratory research into what materials will do under temperature, stress, and other conditions. Such research in the physical sciences has been tremendously rewarding to the material well-being of people everywhere. What we have spent on research on human behavior has been, by comparison, a mere pittance. But many thoughtful Americans are beginning to suspect that research in communication and other facets of the social sciences may be

just as rewarding for all concerned as the more orthodox physical research of the past.

So let us pay tribute to the pioneering, unheralded research that is being done by the social scientists and other students of communication. Their work may be the best hope our Western civilization has in meeting the challenges which Toynbee has reminded us must be met as a primary condition of survival.

In conclusion let me restate my belief that, in spite of the considerable evidence that we live in Babel—A.D. 1960, there remains great and reasonable hope for progress.

While our collective study of the communication process is still in its infancy, what we have learned stirs the imagination. It points the way to exciting new frontiers of greater harmony between individuals, institutions, and nations—and in the last analysis, a lessening of the entire range of human conflicts and tensions.

A Real Success Story

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, June 6, 1960

Mr. KEFAUVER. Mr. President, Noble C. Caudill, the vice president and treasurer of Genesco, Inc., of Nashville, Tenn., one of the Nation's largest footwear and apparel producers, is a dear friend of mine, and I feel he is one of the Nation's outstanding executives and humanitarians. In addition to all his good qualities, he takes active interest in government, politics, and religious causes. It is certainly encouraging that people like Noble Caudill interest themselves in public affairs and are willing to do so actively.

The May 15, 1960, edition of the well-known magazine, Finance, carried a brief story of the life and accomplishments of this outstanding citizen. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Noble Chesteen Caudill, 53, is vice president and treasurer of Genesco, Inc., of Nashville, Tenn. In the diversified framework of the footwear and apparel producers, Caudill wears a haberdashery full of hats as head of the complex financial setup.

The treasurer is required to be expert in the many fields Genesco is involved in. This variety of Genesco interests led last year to a $318 million total volume of business and earned the firm a new high of $8.6 million.

Genesco (formerly General Shoe Corp.) is an important producer of shoes (Delman, I. Miller, Mademoiselle, Johnston & Murphy, Jarman, Flagg) as well as apparel (Formfit, Fenn-Feinstein, Greif), and through its holdings in Manhattan's Hoving Corp. has a controlling interest in famed jeweler Tiffany and the Bonwit Teller stores. Thus Caudill must concern himself not only with such fiscal duties as checking on the usage and allocation of funds to Genesco's 60 operating divisions, supervising investment of the company's liberal retirement fund and making recommendations on dividends, but is day by day, desk-deep in matters relating to Genesco's own particular specialty—shoes.

He must, for instance, oversee the financial needs and operation of Genesco's leather tanning facilities, see to the state of the company's inventories of such vital raw materials as chemicals and hides, and all the while function as a student of the hide market. Says Genesco chairman, W. Maxey Jarman: "Noble's one of the best informed men in the industry."

One technical matter of particular concern to Caudill is the state of Genesco's inventories of raw materials. Because it takes fully 6 months to produce top-quality sole leather from hides, Caudill must see to it that Genesco's tanneries have a good supply of hides and that the company does not get caught in any squeeze as the result of wildly fluctuating hide future prices. Since hides are a byproduct of meatpacking, and future prices are largely based on an estimate of how much meat the Nation is likely to consume in the near future, this require a good deal of sharp skill and finely honed judgment.

No less skilled is Caudill's long-term capital planning. "I'm really the treasurer of 60 companies," he says with a smile. "I have over 800 bank accounts, and my job is getting money into all of them." Caudill's latest efforts in that direction reached fruition only last month when the company completed the sale of 500,000 shares of Genesco common stock to the public.

Object of the public offering was to pay off notes and replenish Caudill's treasury inasmuch as Genesco had only recently spent a sizable sum to acquire Baltimore's L. Greif & Bro., Inc. For shoemaking Genesco, the acquisition of Greif, a manufacturer of men's clothing (which includes the English-American tailoring company, Roger Kent), means several strides forward in the company's march to become a comprehensive footwear and apparel manufacturer.

A Genesco career man (27 years), Noble Caudill is a native of Franklin, Ky., where he graduated from Franklin High, went on to take his degree in business administration at Bowling Green University. His first postgraduate job was as a bank mail boy and messenger, rising quickly to become manager of the bank's transit department.

But in 1933, Caudill joined Genesco (then known as General Shoe Corp.) as a clerk in the purchasing department, at a time when General Shoe had precisely one manufacturing plant on Nashville's Main Street and 600 employees (today it has 57 plants throughout the country and a personnel roster numbering 25,000). Concentrating on purchasing, Caudill won swift promotion; became a buyer, assistant secretary, and was awarded his vice presidency (along with the title of treasurer and a seat on the board) in 1947.

A conscientious citizen as well as an able business executive, Caudill and his family (wife, Venorice; son, Noble Christopher) live on a 100-acre farm on Old Hickory Lake about a mile north of Hendersonville, Tenn., where Caudill likes to hunt, fish, and boat, even raises white-faced cattle. More than that, his greatest interests lie in helping new churches in the community get started, and in serving as unofficial aid, confidante, and volunteer worker for his friend, Tennessee's Senator ESTES KEFAUVER.

The surprising thing is that Noble Caudill somehow finds time for all this in the face of his demanding Genesco duties. Last year, for example, Caudill logged 9,000 miles of travel within a period of 8 days, barnstorming about the country and addressing local societies of security analysts on Genesco's growth.

That is one subject which Noble Caudill never tires of discussing. "This company," he declares, "is on its way to becoming one of the greatest merchandising outfits in the United States." But Caudill also draws as much satisfaction from bringing along promising young Genesco talent. As he puts it: "If you can break a fellow in to do your job better than you can, you're a good executive."

How To Amortize the National Debt

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. INOUYE. Mr. Speaker, one of my constituents, a Honolulu tax consultant, Mr. Louis C. Silva, has long worked on a plan for amortizing the national debt. He describes it as a painless way to restore the value of the dollar and, at the same time, save the country millions it now spends for interest on the debt.

Under leave to extend my remarks, I submit herewith for inclusion in the RECORD Mr. Silva's efforts in this respect for my colleagues' study and consideration:

HOW TO AMORTIZE THE NATIONAL DEBT
(By Louis C. Silva)

It is common knowledge that the maintenance of a form of government such as ours depends almost entirely for its lifeblood from taxes imposed upon the people. These revenues are used to serve our Nation in many different ways. Besides revenues received from taxation the Government derives substantial benefits from moneys voluntarily contributed for the support of certain institutions devoted to public purposes. This automatically relieves the Government from the necessity of levying taxes to the extent of these contributions.

The continued maintenance of the functions of Government under adverse conditions usually results in deficit financing. This generally occurs during periods of depression, preparation for the defense of our country or under actual war conditions. Such large sums of money are expended during these short periods that it becomes impossible to collect sufficient revenues to meet these expenditures upon a pay-as-you-go basis. To offset this the Government reverts to borrowing money through the issuance of bonds and other instruments of indebtedness.

The aggregate of these borrowings have attained astronomical figures. And the hit-or-miss policy of the past and present does not seem to indicate any definite plan of repayment. Instead of our national debt being lowered during prosperous times, it has, for one reason or another, actually continued its upward spiral almost without interruption.

Although it may require many years for the accomplishment of the dish my plan does offer a definite method of amortizing the national debt. What is more it will be accomplished without causing hardship to anyone as participation in the plan is strictly voluntary.

Provisions of the Internal Revenue Code presently allow the taxpayer a maximum deduction of 30 percent of his adjusted gross income for contributions voluntarily made to any one or more of a long list of public institutions. My plan advocates an additional allowable deduction for voluntary contributions for support of the greatest of all

our institutions, the United States of America.

Rendering contributions to certain institutions a voluntary act constitutes the basic reason for the success this activity has attained. Many billions of dollars have been contributed and continue to be contributed to these public institutions. Affording taxpayers the opportunity to help build a better and stronger America through the medium of gradually lowering and eventually abolishing our national debt should serve as an incentive not presently obtainable in helping to support some of her institutions.

Generally speaking, voluntary contributions for religious, charitable, scientific, literary, or educational purposes are rendered exempt from income taxes. There are also other institutions included in these tax-exempt categories, such as veterans' organizations, etc. The U.S. Government itself may presently accept voluntary contributions which become tax exempt to the donor when such are used for public purposes such as a gift of land for a public park. My plan proposes that the law be amended to include contributions for amortization of the national debt.

It is suggested that contributions made toward amortization of the national debt be limited to 10 percent of a taxpayer's adjusted gross income. So that institutions now benefiting by voluntary contributions may not suffer, it is urged that the total amount of contributions be increased from the present 30 percent of adjusted gross income to 40 percent. In the event the maximum amount of contribution is taken, not more than 25 percent of it shall be contributed toward amortization of the national debt.

The taxpayer shall retain the right to specify what portion of his contribution, if any, shall be applied toward amortization of the national debt and what portion, if any, shall be applied to other institutions. At no time, however, shall more than 10 percent of the taxpayer's adjusted gross income be applied to the national debt.

The total amount contributed toward amortization of the national debt shall first be deducted from the taxpayer's adjusted gross income before any other deductions are taken, either actual or standard. The remaining taxable income shall then be used for all other purposes presently applicable under provisions of the Internal Revenue Code, with the exception that the taxpayer shall be given the privilege of still taking the standard deduction, if he so chooses, after the deduction of voluntary contributions, whether for institutions or to amortize the national debt, or both.

Example: John Doe, a married man, contributes 25 percent of his adjusted gross income of $100,000 toward amortization of the national debt and other institutions of his choosing. His adjusted gross income for tax purposes now becomes $75,000. If the remaining actual deductions which he may take amount to only $500 he shall be given the privilege of using the maximum $1,000 standard deduction instead.

Taxes saved by contributing toward amortization of the national debt shall first be ascertained before ariving at the taxes saved by contributions to other institutions. Based upon the 1959 schedule of tax rates the tax savings to John Doe, a married man, for lowering the national debt by the sum of $10,000 would be $7,200. His cost of contributing therefore would be $2,800. Under provisions of the law as presently applicable none of the actual cost to the taxpayer for contributing to institutions is reimbursable.

My plan proposes that the taxpayer be reimbursed the full amount of his cost through the medium of a negotiable certificate redeemable at the end of a specific period of time. These negotiable certificates shall be tax-free, either during their tenure or upon redemption. They shall serve as a medium of exchange and over the period of a few years would run into billions of dollars in daily circulation. While waiting for the date of redemption the holders of these certificates may use them for many purposes, such as security on loans, etc., and even discounting them.

Using the foregoing case as an example, John Doe would be given a negotiable certificate for $2,800. Assuming an average interest rate upon the national debt outstanding of 3 percent per annum, means an annual savings of $300 to the Government upon the $10,000 redeemed by John Doe's contribution. These savings shall be accrued until the amount of the certificate shall have been accumulated at which time it shall be redeemed at its face value of $2,800. At the rate of $300 per annum this certificate would be redeemable at the end of 9 years and 4 months. Thereafter the annual savings of $300 would be used to amortize additional amounts of the national debt.

My plan envisions amortization of the national debt presently outstanding through application of the interest now being paid upon it. Because interest requirements must be met no additional funds need be appropriated to realize my idea.

Each billion dollars in national debt obligations redeemed would mean annual interest savings of $30 million. These savings, after redemption of the certificates, would be used to amortize additional outstanding obligations. And so on until the entire debt has been liquidated. Please remember that the savings in interest presently payable which would be used to redeem outstanding indebtedness would be in addition to the larger amounts to be amortized through the medium of voluntary contributions.

The 3 percent annual interest saved upon contributions made by the lower income strata would not help too materially in decreasing the national debt outstanding and it seems a certainty that the lower income earners may not be too anxious to take part. The fact remains however that they may if they want to as the plan bars no one from participating.

The higher the income bracket of the contributing taxpayer the greater the benefits to be derived by the Government in the form of a lower national debt outstanding. Think of a contributor with an adjusted gross income of a $1 million contributing 10 percent or $100,000 toward amortization of the debt. He would affect an annual interest savings to the Government of $3,000 or 3 percent of the amount of debt redeemed.

His tax savings would amount to $91,000 and his cost of contributing toward the national debt, $9,000. The annual interest savings of $3,000 would make his negotiable certificate of $9,000 redeemable at the end of 3 years. Thereafter the $3,000 annual savings in interest payable would be used by the Government to lower the national debt by this amount each year.

In view of the fact that the plan proposes to amortize the national debt through the use of a part of the interest being appropriated, it is suggested that the appropriations to cover interest requirements upon the national debt presently outstanding be pegged at its present level, until the debt has been appreciably lowered or entirely retired. Any overages in appropriations to cover interest requirements shall be used to apply against the remaining obligation outstanding.

The sum total of our national debt has been attained through the medium of debits and credits. Very little actual cash has been used in the purchase of bonds and other evidences of indebtedness. It is my contention that this process can be reversed and the same medium of debits and credits used to lower and eventually abolish the national debt.

My plan of amortizing the national debt visualizes participation by many income groups, from all walks of life. Helping to pay off our national debt can be made attractive. Preserving our own freedom and helping to keep America the most powerful nation upon the face of the earth would guarantee the same rights to other freedom-loving nations of the world.

It is quite obvious that my proposal will derive a large part of its benefits from what would otherwise have to be paid in taxes. So far as the possible loss in tax revenues is concerned it has definitely been established that the medium of making voluntary contributions toward support of certain public institutions has proven very successful. Even during World War II when tremendous sums of money were required to prosecute the war, the practice of allowing tax deductions upon voluntary contributions to public institutions was maintained.

If the underlying principle of voluntarily contributing toward amortization of the national debt is the same as the principle covering voluntary contributions toward the support of certain public institutions, then the results should be the same.

The slack from purported losses in tax revenues should be more than offset by the many beneficial results which should follow in the wake of amortization of the national debt. The most important of these would be its contribution in winning the battle upon the homefront, the battle against inflation.

The problem of amortizing our national debt is one of grave import. It requires the thinking of many minds, particularly those of our national representatives in Washington. May I hope that the message I am trying to convey will serve to bring forth other ideas which will help to remove a cancer that plagues America today.

Address by the Honorable Buford Ellington

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, June 6, 1960

Mr. KEFAUVER. Mr. President, I have just returned from a memorable occasion in my State of Tennessee—the birth of a newly incorporated city. Oak Ridge, the seat of atomic research and production which had been, since its inception, an adjunct of the Federal Government, is now a city on its own.

In the course of the ceremonies during which Oak Ridge was formally turned over to its citizens, the Governor of my State, the Honorable Buford Ellington, was the principal speaker. His remarks on this occasion were well-chosen and significant to the moment. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF GOV. BUFORD ELLINGTON BEFORE THE OAK RIDGE INDEPENDENCE DAY, OAK RIDGE, TENN., BLAKENSHIP FIELD HIGH SCHOOL, JUNE 4, 1960

Mayor Bissell, City Manager Weisbrod, members of the council, and friends, ladies, and gentlemen, it was but a few days ago

that Oak Ridge became Tennessee's newest incorporated city.

My sincere congratulations to Mayor Bissell, City Manager Weisbrod, members of the council, other officials gathered here, and the citizens who make up this world-known municipality.

What a beautiful setting for a city.

Nestled in the cradle between the Great Smokies and the Cumberlands, this is a valley of lush green flooring.

Within this boundary, which just a few short years ago heard only the sound of a plow turning a furrow, or a lonely cow bell breaking the silence, we now and have been hearing the sounds of tremendous progress.

This once quiet, peaceful valley was changed completely.

It has grown up and is looked upon today, and in recent years, as the "cradle of the atomic development world."

In Oak Ridge, a city of some 27,000 with the world's largest concentration and widest variety of atomic research and production facilities, many pieces of Government-owned realty have been sold, leading to your status as an independent municipality.

It is a real pleasure to join you people in the celebration of Oak Ridge independence day.

At first thought, independence day sounded to me somewhat like our forefathers throwing off English shackles back in 1776.

I have, however, been officially informed by your good Mayor A. K. Bissell, that this has not been the case. In fact Al tells me that the relationship between the city of Oak Ridge and the Atomic Energy Commission has been most friendly.

I am further told that Oak Ridge citizens voted 14 to 1 for incorporation back on May 5, 1959, and then proceeded to elect a city council which took office on June 16.

This new council, along with the city manager and several effective citizens' committees, worked faithfully for many long days, and nights also, to prepare for the eventual takeover of municipal functions.

This transfer of functions and associated facilities was carried out on Wednesday of this particular week.

Thus, we can this evening celebrate both the first anniversary of the incorporation decision and the real beginning of self-government.

I extend my sincere congratulations to you for the way in which you have progressed with your plans.

Today as I drove through the streets of Oak Ridge, Tenn., and visited with you, my friends, I could not help being reminded of the summer back in 1942.

At that time, I knew this section of east Tennessee as rolling farmland, as I mentioned a few moments ago, dotted with three small villages.

Work was started late in that year and early 1943 that was destined to transform this 95 square-mile area into an industrial complex which was to bring an end to World War II and eventually spread the beneficial uses of atomic energy around the entire world.

During the intervening 17 years there has grown here an internationally known center of science and technology.

You have developed an industrial complex with an investment of more than a billion dollars.

You have built up a pool of scientific knowledge that is unsurpassed anywhere in the free world today.

At the same time, you have been able to devote your energies to the development of a new city that is taking its distinguished place in our great State of Tennessee.

The work that you carry out here in developing the benign uses of atomic energy is lending greater impetus to an effort now underway throughout the South to bring the tremendous force of the atom to full fruition.

As you are no doubt aware, the southern Governors' conference at its meeting in 1955, by unanimous action, decided to launch a regionwide effort to study the feasibility of united action for industrial opportunities in the South through nuclear energy, research and other ways.

The result of the decision was a study, carried out with the help of the southern regional education board, to determine the possible action that could be taken, both by the region on a coordinated basis and by the individual States, to further their economic growth and develop more fully the resources of the South through atomic energy.

Subsequent studies have shown the advisability of proceeding with a concerted plan of action which would embody a compact among the Southern States.

The compact as approved by the southern Governor's conference last year has now been offered to the prospective member States for ratification.

Kentucky became the first State to enact the compact into law in March of this year.

Other Southern States are making ready enabling acts for consideration by their respective legislative bodies next year.

Utilization of nuclear energy for our industrial growth is, however, only a part of the general effort on the part of Tennessee to develop its entire resources for the benefit of each of its many citizens in the application to industry, agriculture, and medical research.

In this southern region, we have two of the largest Atomic Energy Commission installations in the United States—the Savannah River plant and our own Oak Ridge facilities.

I am sure you are aware of the important work being performed here, both for production and in connection with research.

The gaseous diffusion plant has supplied enriched U-235 for weapons and fuel applications in reactors of all types.

The Oak Ridge National Laboratory furnishes 85 percent of all radioactive istopes used in this country.

The University of Tennessee conducts an agricultural research program which is revealing nutritional information on stock feeds and the genetic effects of radiation on plants.

The entire agricultural industry of this country and, probably much of the rest of the world, will be indebted very much to these important activities.

The Oak Ridge Institute of Nuclear Studies benefits from the participation of 37 southern universities. Its range of activities extends to the special training of scientists and medical doctors from literally every part of this entire world.

It is apparent that international understanding and good will are being advanced by this program.

Nuclear reactor technology is being investigated through many approaches at the Oak Ridge National Laboratory.

Construction is currently underway on a 25,000 kilowatt air-cooled reactor which will offer facilities for research and development even during high output operation.

The foregoing outline points up only a few of the features of the Oak Ridge atomic story, but should be impressive enough to explain the close interest of the southern regional board.

You can be sure, too, that our State agencies will look to the industrial possibilities relating to Oak Ridge activities.

Our industrial and agricultural development commission, under the capable leadership of Commissioner George Benedict, has met with considerable success in bringing plants and factories of a wide diversity to the State of Tennessee.

Some measure of this achievement is underlined by the fact that during 1959, $420,781,000 was spent on public and private construction in our State of Tennessee. This was exactly a 100 percent increase over such expenditure in 1958, and in rate of gain was the greatest achieved by any State in the Union. I repeat, was the greatest achieved by any State in the Union. These figures were reported in a recent issue of the Engineering News-Record.

It is my opinion, however, that we have just begun to realize the tremendous industrial potentialities of the State of Tennessee.

I can assure you that there will be no letup in our efforts to make Tennessee fairly blossom out with new enterprises all over the great volunteer State.

Industrial development is a favorite subject of mine—modern industrial development in Tennessee.

A total of $243,500,000 in new money was invested in Tennessee industry during the year 1959.

Yes, we are indeed quite happy over this achievement—but we are not satisfied. We are proposing to exceed that total investment in these "stirring sixties" that are now squarely upon us.

A total of 17,300 new jobs came into being as the result of the pouring of millions of dollars into Tennessee industry. Doesn't that sound to you like a boost to Tennessee labor? And for helping to terminate the out-migration of our people?

A total of 146 new manufacturing plants came to the State of Tennessee last year, and we were particularly happy and delighted to see 187 existing industries in the State make an expansion.

You immediately recognize the latter figure as being particularly significant because an industry that goes into expansion where it is obviously pleased is unquestionably profiting by its location.

Most naturally we like to hear people say that in Tennessee there is a State government that is trying all the time, as best it can and as best it knows how, to do as you do—and that is to run its business in a businesslike way, just as you are doing in Oak Ridge.

Every dollar that we are investing in industrial development is paying handsome returns.

I think it is a well recognized fact that the economic growth of this area and of Tennessee as a whole will be in direct ratio to the energy and interest shown by the people themselves.

Government at the local and the State level can clear the way statutorily—but the basic actions and decisions must come from the level of the people themselves.

I have always believed that it is better to expand opportunities than to expand government.

We have definite expansion goals in Tennessee, because we are not a careless people, but a cohesive and determined group, in our municipalities and our counties and in the State as a whole.

Of course we want a more abundant life. That's but a natural feeling of the free man.

We want full employment for our people.

We want good and fair returns for our work.

We want a great new outpouring of industry.

We want a prosperous agriculture still clinging to its traditional independence and self-reliance.

We want maximum educational instruction and facilities for our children.

We want the health of our people protected from infancy to old age.

We want a housing program in line with our social and economic expansion.

We want urban improvement and development.

We want a vast new system of highways—and we want to be able to travel safely on them.

We want an enlightened relationship among all our people who make up this Government of ours.

Yet we want these things to be accomplished as far as possible on the lowest levels, with a minimum of higher concentration of governmental power.

In so doing, we need a vast new alinement of local communities, cities, and counties, as well as private individuals and corporations, with the State and then only so far as necessary and advisable with the Federal Government.

Above all we want every tax dollar spent wisely, cautiously, and frugally. Without those safeguards on expenditures, the threat of new taxation would always be upon us.

Yet Tennessee is an example today of how a State government can operate all essential services at an efficient pace without resorting to new taxation.

Reorganization of State government, and a tight hour-by-hour control of your tax dollar, have made this possible.

Two years ago, as a candidate for Governor, and a little more than a year ago when I delivered my first message to the legislature, I said that there would be no new taxes levied.

We have kept that promise.

There is no change in my attitude as another session of the legislature approaches. We have had the help and the enthusiastic support of the people in this stand against new taxation.

Whether the tax dollar is spent by local government, the State government of ours, or the Federal Treasury in Washington it comes from, as do the mighty rivers, one small source only—the taxpayers' pocketbook.

It is his dollar—and he has the right to protest loudly about any misuse of it.

It's his "tax right," just as the States have always been in a fight to protect that States right.

I have been greatly gratified to see Melton Hill Dam become a reality.

This project with all of its ramifications will be of tremendous benefit to the east Tennessee section. I can well imagine what a factor it will be for drawing new industry and attracting tourists.

Here again you will find our State agencies such as the planning commission and the various tourists bureaus anxious to help you in realizing the full advantage of this vast project.

As I have considered the notable features of your community, you must be just as convinced as I am that Oak Ridge will grow and prosper. However it will not thrive automatically and without your earnest and concerted efforts, any more than some other well-endowed areas.

Your citizens as a unified body must plan and work with foresight and vigor.

Your civil clubs and chamber of commerce and other community-minded groups must have high purpose and persuasive enthusiasm.

The city of Oak Ridge is starting off with certain advantages unusual for Tennessee and most other States in the Union. You have municipal facilities which are adequate or superior, with no burden of bonded indebtedness.

In addition, your city officials have organized a government which is not saddled with many of those unfortunate attributes which so often evolve after years of partisan politics.

As Governor of Tennessee, I want to sincerely commend you people of Oak Ridge for your new position as a full-fledged member of the family of Tennessee's growing cities.

I know you will find your new status more productive and better tuned to the democratic principles of this great country. What you accomplish for yourselves and by your own efforts will be more meaningful to you.

There can now be, also, a more genuine sharing of burdens and rewards between your city and your State.

As your Governor, I can promise you that the State will not shirk its responsibility to you in this wonderful new relationship.

Thank you and good night.

Observation on Our Relations With Russia

EXTENSION OF REMARKS
OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks I include a letter I have just received from one of our great men here in the Nation's Capital. I am referring to my longtime friend, James L. Dixon, Washington, D.C. Jimmy Dixon, as we call him, some other friends and I spent several hours Saturday talking about our problems here in Washington. He made some very good suggestions and I asked Mr. Dixon if he would write them down for me, because I agreed with him on almost everything he said; many things that are not in this letter.

Anyway, this is a good letter and whenever I get anything good, I like to either take it in the First District of Alabama, where they have everything, or give it to my colleagues here in the Congress of the United States—here, Mr. Speaker, where the men who are listening to me now represent every human in the United States.

I had another letter that I wanted to put in along with this one, but I left it at home this morning. It was a letter I had from Texas, about our great leader in the Senate, Senator LYNDON JOHNSON. I thought LYNDON JOHNSON, like James L. Dixon, did well, so well, in taking up for our President. So many other men—and I was surprised and disappointed in them—have criticized our President. It is no trouble for us to make a date and see the President and talk to him about things, or we can certainly write him. I have done both, and so have you, many times. President Eisenhower usually answers the letters the same day he receives them, and while I know he is not perfect, we do have a man that we know is honest, who has a brilliant mind, that he has served the people of the United States, all of the people of this Nation and the world, practically all of his life, and I think he has done a splendid job. Of course, he has made some mistakes, but our Christ made a mistake in just selecting His 12 disciples. He did select one bad one, as you know.

Well, I am glad to get this letter; I am glad to pass it along; and I am going to send President Dwight D. Eisenhower a copy by special messenger to the White House today; but I wanted it to go in the RECORD where not only our Representatives on both sides of the Capitol could read it, but where all of the people who read the CONGRESSIONAL RECORD could know what Jimmy Dixon had to say about Nikita Khrushchev.

I cabled the President at the summit conference that I thought this would happen. I also told him that I believed this man was the devil turned loose on earth again; that Khrushchev was another Hitler or another Mussolini; but thank God, we have so many wonderful, good men, and if we will just stay with them and back them up, even when we do make some mistakes, I thoroughly agree with the President that we have nothing to hide. You can buy a map for $1 that will show this entire Nation and others which show every one of our military installations; they will show everything from right on the earth clear to the heavens.

The President has been absolutely right in saying we should have the same privileges in Russia as we give them here, and I for one am behind him, not a hundred percent, but a thousand percent and more; and I believe, Mr. Speaker, that all right thinking men will agree with us that we must get closer together here in our own beloved homeland and back up our leaders—such leaders as you, Mr. Speaker, the great SAM RAYBURN of Texas, who has been the Speaker of the House of Representatives longer than any living man, even longer than the great Henry Clay. Mr. Speaker, when I told a group of children this the other day—110 of them—when I was in your office, that you would be the President of the United States, if anything should happen to our President or Vice President, it seemed they did not know that.

Well, there are a lot of things that so many of us do not know, but we do know that you are doing a good job, and we do know that LYNDON JOHNSON and his great group over there are doing their dead level best, and with you two great men—you in the House, LYNDON JOHNSON on the Senate side, and the rest of your great group—we will stand by our President, and we will stand by the next President, and Mr. Khrushchev and all of his insults will not divide us, whether we are Democrats or Republicans. We are Americans—true Americans—and all right thinking men will applaud you and LYNDON JOHNSON for standing by Dwight D. Eisenhower, the elected President of the United States.

The letter follows:

JAMES L. DIXON & CO.,
Washington, D.C., June 5, 1960.

The Honorable FRANK W. BOYKIN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BOYKIN: In line with our very pleasant discussions of yesterday,

Saturday, it is my humble opinion that one of the finest things to happen to this country since the signing of the Declaration of Independence was the collapse of the recent summit meeting held in Paris, France, May 1960. Whether the collapse of said summit meeting was preplanned by the men in the Kremlin or brought about as a result of the widely publicized U–2 incident is unimportant now. What is important is the fact that we now know for sure that we can no longer continue to live in a fool's paradise. Personally I am very pleased that our President did not apologize to Mr. Khrushchev at the summit meeting. However, I very much regret that the President promised to discontinue spying from the sky. The men of U.S.S.R. are the inventors of the spy system and we must never back off at beating them at their own game.

In November 1933, the brilliant Russian statesman Maxim Litvinov, with the help of his English-born wife, convinced Franklin Delano Roosevelt that the then down-and-out Russia should be recognized to the community of Nations. In so doing, Maxim Litvinov did more for the U.S.S.R. and the Russian people than any Russian before him or since him. With a sincere hope that this was another step toward an everlasting world peace, F.D.R. recommended this to Congress and the Congress approved. We have been living in a fool's paradise ever since. How long should it take for us to be convinced (now 27 years) that we, or any other country, cannot live peacefully with the Russians?

Every treaty and/or agreement made between the U.S.A. and the U.S.S.R. during the last 27 years has been broken by the men in the Kremlin. Their signature is not worth the paper it is written on. In fact, their wanton disregard of international agreements is a vile mockery to all respected nations and, with particularity, the United States of America.

When I was a very young man my grandfather said to me: "Son, whenever you find yourself in a game with men of evil intentions, protect yourself and don't fumble." And that's where the U.S.A. stands today as far as the U.S.S.R. and the men in the Kremlin are concerned. These men in the Kremlin have, over the past 27 years, proven themselves to be nothing less than international gangsters on the face of this earth, and must be dealt with accordingly. The time has come when the U.S.A., and all member nations of the free world must take their respective heads out of the proverbial sand and face the stark realities of life as it exists on this earth today. When our own J. Edgar Hoover, Chief of our FBI, writes a book on communism (recently), title—"Masters of Deceit"—that's good enough for me. What else do we need? J. Edgar Hoover learned a long time ago that you cannot even molly-coddle our own local gangsters, much less international gangsters. Or, can it be (God forbid) that some of our illustrious servants on Capitol Hill think that they themselves possess the magic touch to tame these "masters of deceit"?

From my own point of view, Mr. Congressman, here's another important point: When in November 1933 the U.S.A. recognized the U.S.S.R. as a respected member to the community of nations, this was done strictly on a basis of good faith of one nation to another. In extending the hand of friendship in this way to the Russian people, all that we, the people of the U.S.A. asked for, or even expected, was the hand of friendship in return. After 27 years, however, the record shows conclusively that said good faith has been shattered to shreds by the violation of every treaty, and/or agreement between the U.S.A. and the U.S.S.R. My point is this, Mr. Congressman: Had we known in November 1933, that the U.S.S.R. would violate her commitments, as the record now shows, it stands to reason that F.D.R. would not have recommended acceptance of the U.S.S.R. to the Congress, and the Congress would certainly not have approved said recommendation—had we known then what we know now. If this is true, and I would hate to think it would have been otherwise at the time, then why, after 27 years of glaring evidence of the breaching of the trust and the good faith we reposed in the U.S.S.R., do we not now at this time derecognize the U.S.S.R.? To prove my point, Mr. Congressman, I will herewith make a small wager that if the U.S.S.R. was not now recognized by the U.S.A., and with all the evidence of the referred-to 27 years of bitter experience now in the hands of the Congress, she would not now be recognized by the U.S.A., or even accepted as a member of the United Nations at any point in the foreseeable future. If this be true, then this proves my point. Further, it is my contention that to derecognize the U.S.S.R. at this time would do more to immediately reduce world tensions than most people think, including the Russians.

It is further my opinion Mr. Congressman—that the abuse this Nation takes from any other nation—up to a reasonable point—indicates our strength. However, the abuse we take beyond that point—will indicate our weakness.

Another thing that the collapse of the recent summit meeting proved is this; that the two term limit of the presidency of the United States is completely wrong and should be reversed immediately. On the local political level we, here in the United States, understand and have learned to live with the meaning of a lame duck Congressman, or a lame duck Senator. This can rightfully be classified as an internal political affair and something to be settled within our own borders. However, on the international level—an outgoing President of the United States, be he Democrat or Republican, who, now by law, cannot run for reelection, not only becomes a lame duck President, but moreover, from the embarrassing events of the last summit meeting, obviously, becomes a sitting duck president for all heads of other governments to shoot at, knowing full well that his tenure in office is not only limited, but also is not to be renewed, and that his influence in the community of nations diminishes each day from the starting date of his second term in office. This observation applies particularly to his last 6 or 8 months in office, as witness—recent summit meeting events.

No President of the United States in our history has ever been subjected to the indignities heaped upon our now President by the head of a foreign government as was done at the recent summit meeting, and subsequent thereto. There should be no doubt in the minds of men on Capitol Hill but that the two term limit of the presidency of the United States contributed much too much to the unwarranted insults hurled at our President by the head of the U.S.S.R. However, if the events of the recently collapsed summit meeting serve to bring about a reversal of the two term limit of the presidency of the United States then, and in that event, the collapsed summit meeting will not have collapsed in vain.

It is further my opinion, Mr. Congressman—that summit meetings, so called, should be abolished forever. As a taxpayer I would like to ask you the pointed question, "For what purpose was the United Nations established if not to resolve problems between nations? Is it not, at least in theory, a violation of the charter of the United Nations for heads of State to meet outside of the United Nations for the purpose of trying to resolve international problems?" The pages of history already record that the results of all previous summit meetings has contributed largely to increased trouble and additional misunderstandings between members of the United Nations. Summit meetings have proven one thing for sure, and that is, there should be no more summit meetings.

Summarizing: It should not be too surprising to any of us that Mr. Khrushchev revoked the invitation to President Eisenhower to visit the U.S.S.R. All of us know that Mr. Khrushchev insulted our own Vice President last year. Why should we be so gullible and naive to think that Mr. Khrushchev would be any different this year? He insulted Prime Minister Macmillan in Moscow, and now accuses Chancellor Adenauer of Germany of being an idiot. Any further accusations by Mr. Khrushchev against the United States should, in my opinion, be responded to by stony silence. We should no longer dignify Mr. Khrushchev, or any other man in the Kremlin, by association, or communication.

The recent rantings of Mr. Khrushchev, reminiscent of mad man Hitler, and Benito Mussolini, are clearly indicative of fear of loss. That's why he revoked the President's invitation to visit Russia—fear of loss of face and prestige with his own people. And on this particular subject—this writer learned a long time ago that those who are afraid to lose, Mr. Congressman—lose. It could be a bloody mess before it's all over but the outcome in favor of men of the free world, under God, can never be in doubt. Make no mistake about it however, Khrushchev is runnin' scared and is therefore a very dangerous man.

I wish to thank you for taking the time to read this letter, and in conclusion permit me to say that while it took brains to write the Declaration of Independence, it took gutttts—Mr. Congressman—to sign it.

Our next President—Mr. Congressman—must have both.

Remaining,

Very cordially yours,

JAMES L. DIXON.

Saving Part of "God's Great Outdoors"

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, June 6, 1960

Mr. WILLIAMS of New Jersey. Mr. President, Americans are slowly realizing that urban and suburban areas do not have a limitless supply of open land for recreation and other purposes. A sharp warning on this matter was given recently by Carleton E. Heritage, president of the New Jersey Farm Bureau. An editorial in the May 31 issue of the Passaic (N.J.) Herald-News comments on the issue and on Mr. Heritage's remarks.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAVING PART OF GOD'S GREAT OUTDOORS

The president of the New Jersey Farm Bureau, Carleton E. Heritage, in a recent speech joined in the growing demand for setting aside open space in our State before it is too late.

Mr. Heritage spoke before a group which is particularly interested in preserving part of the State's original heritage of forest and

stream, the New Jersey Federation of Sportsmen's Clubs, Mr. Heritage took a realistic view. "No sensible attitude would admit for a moment that we must stand in the way of progress," he said. "Homes and factories will rise. Highways must cut through our great woodlands, take hundreds of acres of our richest farmlands. That is our life pattern. But let us plan to preserve some part of God's great outdoors."

The point that needs emphasizing is that these plans must be made and carried out quickly, because in a relatively few years, it will be too late. The expected population increase of New Jersey to 10 million by the year 2000 will convert most of the northern part of the State into one huge suburb. Already, Mr. Heritage said, New Jersey's population density is greater than tiny Rhode Island's. Time is running out more quickly than we realize.

Dedication Ceremonies of the Dubois-Jefferson County Airport of Dubois, Pa.

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. VAN ZANDT. Mr. Speaker, after being rained out on May 30, 1960 the dedication ceremony of the Du Bois-Jefferson County Airport was held on Sunday June 5, 1960 in the presence of some 5,000 persons, various types of military aircraft and several hundred private planes.

The new airport has been the goal of the residents of the Du Bois area for many years and now that it is a reality, we are all proud of the accomplishments of the Du Bois Municipal Airport Authority which was made possible by the splendid cooperation of area residents.

It was my privilage to deliver the following dedicatory address:

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE DEDICATION CEREMONIES OF THE DUBOIS-JEFFERSON COUNTY AIRPORT, DUBOIS, PA., JUNE 5, 1960

It is a real pleasure to participate in the dedication ceremony of the Dubois-Jefferson County Airport and to congratulate the businessmen of Dubois and the residents of the area on the fulfillment of the long-cherished dream of modern airport facilities for this region of Pennsylvania.

This accomplishment reflects great credit on various residents of Dubois who have been actively striving for a modern airport since the close of World War II.

It is pleasing to commend especially the members of the Dubois Airport Authority who since 1952, regardless of many obstacles, remained steadfast in their determination to achieve the goal of a modern airport.

These men, dedicated to advancing the best interests of Dubois and surrounding communities, could not have succeeded in their mission were it not for the wholehearted and generous financial supoprt from area residents who share in the credit for the success of the drive to obtain financial contributions necessary to match Federal and State funds.

Since the close of World War II when I returned to Congress from military service, the need for modern airport facilities in the Dubois area has received my constant and painstaking attention.

Many will recall that as pioneers in the movement to improve the Du Bois Airport, in 1950 we were successful in having the Civil Aeronautics Authority make an allocation of $150,000 in Federal funds for the purpose of modernizing the then existing airport facilities.

Because of difficulties regarding a suitable site, the city of Du Bois reluctantly had to let the Federal appropriation lapse because of the lack of perfected plans for providing a modern airport.

It was a bitter disappointment to all of us—when the Civil Aeronautics Authority informed us in 1951 that since the city of Du Bois could not use the funds it was necessary to allocate them elsewhere, since many other communities that had qualified for Federal assistance were still on the waiting list.

In 1952 with the creation of an airport authority, a renewed and vigorous effort was launched by a dedicated group of citizens who had but one objective in mind—a modern airport for the Du Bois area.

Today we are viewing the success of the determined effort to acquire a suitable site and the sponsor's share of funds necessary to match Federal and State allocations.

Waxing historical for the moment, when the request was made in 1952 for reinstatement of the $150,000 Federal aid for development of the Du Bois Municipal Airport, it was denied on the grounds that no sponsor funds for the proposed project were on hand.

Therefore, the allocation of Federal funds made in 1950 could not be reinstated.

In other words, we had to begin all over again to satisfy site requirements, and above all, provide assurance that local funds were available as the sponsor's share of the project.

The period from 1952 to 1956 represents 4 years of frustrating efforts in trying to select a suitable site and finally, due to the persistent efforts of a determined group of men functioning as the Du Bois Airport Authority, the site question was settled.

As a result, in June 1956, it was possible for me to convince the then Secretary of Commerce the Honorable Sinclair Weeks that the community of Du Bois should be included in the Civil Aeronautics Authority's airport program for that year.

Believe me this was not an easy task because airport funds had already been allocated.

In a spirit of cooperation and being assured of the determined effort by members of the Du Bois Airport Authority as well as the need of the Du Bois area for a modern airport, Secretary Weeks in 1956 "gathered together," as he termed it, the initial appropriation of $76,000 in Federal funds from other airport allocations.

In so doing, Secretary Weeks made possible the beginning of this much-needed airport which is being dedicated here today.

Since 1956 additional Federal as well as State and sponsor's funds have been made available to cover the cost of the construction of this million dollar airport.

The financial contributions by the Federal and State governments and which cover 75 percent of the cost of this airport are expressions of confidence by the Federal and State governments in the future of the Du Bois area.

As the Representative in Congress from this district it was a pleasure to have had a part in working with residents of Du Bois and vicinity, and especially the members of the Airport Authority, in bringing this airport project to the point of completion.

Therefore, today as we dedicate this fine airport—the Du Bois area is being linked with the airways of the Nation—yes, of the world, and in addition this new airport is truly a symbol of the progress being made in the field of transportation.

When we glance at commercial aviation today, it is hard to realize that we are examining such a young industry.

The record of its development since December 17, 1903, when Orville and Wilbur Wright made their flights at Kitty Hawk, is filled with a long list of achievements.

Fifty years ago, for instance, air transportation had already progressed beyond these initial flights.

In 1910 a solo flight was made by the first American woman pilot, and the first American flying meet was held in California.

In that year a record was established by Glenn H. Curtiss who took only 2 hours and 50 minutes to fly from Albany to New York.

Yes, the air age was on its way 50 years ago, but in those early days of aviation, air transportation was left to the adventurous.

It was a sport for the young and daring pilot who was characterized as a barnstormer.

The usefulness of aviation first became apparent during World War I.

In July 1917 an appropriation of $640 million was made for military aviation, and during the course of World War I our military aviation shot down 781 planes and 73 balloons.

As a result of these activities, in World War I, the possibilities of peacetime aviation began to emerge.

The Post Office Department, for an illustration, was among the early groups to recognize the potentialities of air transportation.

On May 15, 1918, an experimental airmail flight was made between Washington and New York, and in 1921 the first transcontinental airmail service became a reality.

The Post Office Department also pioneered night flying, and many of us remember the emergency landing fields in this area made necessary because this section of Pennsylvania was called "the graveyard of the Alleghenies."

Before aviation achieved commercial importance, it was essential that it become safe and dependable enough for the general public.

By the 1920's aeronautics had advanced to the point where the use of airplanes as common carriers became possible.

This development plus the interest generated by the 1927 Lindbergh flight across the Atlantic ushered in commercial aviation.

During the past 30 years commercial aviation has grown by leaps and bounds.

Let us not forget, however, that commercial air transportation is only one part of aviation.

It was the use of the airplane during World War I which first showed its potentialities and performance.

After World War II the importance of military aviation was recognized by creation of the U.S. Air Force.

In the Korean War 1,020 Communist aircraft were destroyed by the U.S. Far East Air Force.

Although in the 1950's much of the talk of our air preparedness has centered on missiles, it appears that military aviation will continue to be with us for some time. Both for the transport of military personnel and equipment and for combat duty.

In addition to commercial and military aviation, general aviation has become important on the American scene.

As of January 1, 1959, there were more than 67,000 active aircraft engaged in general aviation in the United States, and ap-

proximately 2,500 of the aircraft were located in our State of Pennsylvania.

This then is a brief description of aviation as it has developed in the Nation.

Now that the city of Dubois has achieved a long cherished dream let us dwell briefly on this question:

How important is the service that this new airport is bringing to this area. And is it worth the effort?

Well it is impossible, of course, for anyone to give you a final answer to this question, for the answer lies in the future.

And yet we can draw on the experience of other places and other years to arrive at the best possible answer.

In my mind the answer seems quite an obvious one because it is my firm belief that your decision to build this airport was sound and wise.

Therefore, the future of this region should be much better because of it.

The basic reason for my conclusion is the fact that good transportation is essential for the well being and development of any community.

As we all know one of the reasons this area is aware of the importance of transportation is because so many of you are employed in the transportation field.

In this connection the Bureau of the Census found that in 1950 almost 10 percent of the persons employed in Clearfield County worked in the field of transportation, communication, and other public utilities.

In addition, there are others who are members of the families of those transportation workers.

It is an accepted fact that transportation has become an important segment of American industry and yet sometimes perhaps we forget to relate this transportation to a particular community.

It is transportation, together with communication, which has permitted regions some distance from large urban centers to participate in their economic development.

It is transportation which has removed isolation and largely erased the distance gap between regions.

In the first place, there is the transportation of goods and secondly of more interest to us today, there is the transportation of persons.

This has meaning for all of us, because manufacturing firms hesitate to locate in completely isolated regions.

Therefore, a community without adequate facilities for the transportation of persons is bound to lag behind the Nation's economic development.

It is for this reason that the Du Bois-Jefferson County Airport is so important to this region.

As we all know, this area was rapidly becoming an isolated one.

In the past few years we have seen a nationwide decline in railroad passenger service, and this decline has been felt in this part of Pennsylvania.

Furthermore, although we have good highways in this region, as we all know, there are times during the winter when driving is hazardous and difficult.

Even though you were able to use the Black Moshannon Airport near Philipsburg, many of its advantages were lessened by the time which had to be spent in traveling to it.

Speaking frankly, an airport in a neighboring community is not the same as an airport at home and for that reason this new airport should do much to relieve this isolation.

Ladies and gentlemen, a commercial airport means that a community is accessible, that visitors can come to that area, and that economic development is stimulated.

Therefore, it is this kind of benefit that this new airport should provide, since it will be served by Allegheny Airlines, and will bring commercial air transportation to the residents of this part of Pennsylvania.

And so, after working side by side the past several years with airminded citizens of Dubois, including Gene Noon, Bill Korb, Don Kield, Bill Schneider, A. C. Nelson, John Groves, George Yohe, James Gleason, John Cherry, F. L. Brubaker, D. L. Sheesley, and their associates, I feel quite honored to participate with you today in the dedication of this airport.

I have similar feelings for the progressive-minded leaders of Brookville, Reynoldsville, Sykesville, Brockway, and Punxsutawney who blended their efforts together for a united necessity of dire importance to the entire overall area.

Therefore, as I close I extend to all of you hearty congratulations on the groundwork you have laid, and you have my best wishes that the flights originating and terminating at this airport may bring to this area the prosperity which is so richly deserves.

Random Thoughts on Spies and Espionage

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, June 6, 1960

Mr. DIRKSEN. Mr. President, recently, Walter Winchell devoted a column to the general subject of spies and espionage. The article goes back into the early history of this country, and is very interesting, indeed. I ask unanimous consent to have the article printed in the Appendix of the RECORD, under the title, "Random Thoughts on Spies and Espionage."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IRONIES OF HISTORY

(By Walter Winchell)

Allen Dulles must be pondering the ironies of history this week. Gen. George Washington sent in a spy once, a fellow named Nathan Hale, who got himself caught and was hanged as a result. The general reaction of the Americans is reflected in a couple of monuments to both Washington and Hale. The cheap appeasers now hollering for Allen Dulles' scalp want to reverse the process. If their logic is correct, they should be demanding that the statues of Washington and Hale be removed on the ground that all the foreign diplomats now at the United Nations might get the idea that this country approves of George Washington and his methods.

In one sense, George Washington had it comparatively easy: No one suggested that he should be pilloried because one of his people got caught. The fact is, in spite of the politicians, that most Americans stay along with the old idea: Allen Dulles deserves a plaque, if not a monument, for going 90,000 feet high and 7,000 miles out of his way just to be sure about what our little playmates over the fence might be cooking up.

The same fuss and feathers were raised in 1928 when it was discovered that the State Department had a code-breaking black chamber. A lot of childish people protested the opening of other nations' secrets, as if they weren't opening ours. So for a long time the United States simply didn't know what was going on. When we had the code-breaking we knew we could limit the Jap Fleet. How many American lives that saved is impossible to estimate, but it saved many. If peeking over the fence is illegal, why shouldn't we completely suspend our other activities? After all, all we were able to do because of intelligence was win the battle of Midway and defeat Rommel in Africa.

President George Washington also had an interesting answer when the House of Representatives asked to see his correspondence in the John Jay treaties. His interesting answer was that it was none of their business. After thinking it over, a vice not particularly prevalent among Congressmen, they decided he was right. So while Allen Dulles can't expect, like Washington and Hale, to get a monument out of this, he most certainly can and should point out to Congress the beauties of the Potomac River and tell the more inquisitive ones to go jump in it.

He could do no greater harm to this country than by yielding any information whatsoever on our intelligence system. Millions of people behind the Iron Curtain are willing to take their lives in their hands to help us. To expose how they work and who they are is to issue a death warrant against them. Even the possibility of exposure is enough to paralyze the passage of invaluable information to our country. The suggestion that it be openly debated is preposterous. If the administration furnishes even the slightest clues to the identity and methods of operation, it will not only have violated civilized law; it will have done what even the worst gangster will not do: Put a friend on a spot.

What puzzles many people is the question: Hod good is a handshake? The Democratic leaders went out to the airport to shake the President's hand, assuring him of their support, and before the applause had died, teed off on him. Adlai Stevenson, at—of all things—a fundraising rally, took the lead in the assault. The outrage is not free from an inference that the next $100 a plate Democratic dinner will be a sellout, at the expense of national unity.

In one of the most hilarious ads in American history a committee for Stevenson took full pages in metropolitan newspapers to advance the candidacy of the former Illinois Governor. All were solemnly assured that Governor Stevenson hadn't the slightest knowledge that they were doing this, surprise, surprise. It is time Adlai Stevenson quit kidding himself that he is kidding the American public. No man can sneak into the Presidency. If he wants the job, he should stand up and say so. If he doesn't—and he says he doesn't—he need merely point to General Sherman's statement, adopt it as his own, and the undignified pseudodraft will be over. At this time he is an embarrassment to the Nation and a millstone around his own party's neck. There is no public service he could render which could possibly match an apology by him to the President and the American people, followed by a sour-grape declaration that he would not accept a nomination, nor would he serve if elected. Millions now living and tens of millions yet unborn would carefully respect his well-earned oblivion.

Senator FULBRIGHT, as chairman of the Senate Foreign Relations Committee, would do well to suspend public exhibition of his ignorance of the law. An exercise of Faubustry is about all the Kremlin needs these days to refuel its propaganda gas tanks. Senator FULBRIGHT's disastrous friendly investigation of the stock market should be reminder enough to him that his delicate touch often results in a monkey wrench in the machinery.

This country once exhibited its general staff plans in the General MacArthur hearings. If it exhibits its intelligence setup, it will be similar to a giant blinding himself. Without CIA we cannot see and without foreign agents CIA cannot see * * * The principal danger to the country, right now, is not that CIA can see into the Soviet, but the politicians who can't see beyond-the-end-of-their-nose jobs.

If there is to be a Senate investigation, one of the first and most important persons who should be invited is Robert Bouley, the Paris newsman who reported that Adlai Stevenson told him that the United States should make heavy concessions to the Reds—which interview, in all fairness, Mr. Stevenson repudiates. A repudiated interview, however, is not necessarily a denial that the statements were uttered. It would contribute much to the national unity if Mr. Stevenson and the French reporter were to confront each other. It would also clarify matters if Mr. Stevenson stated whether or not he repudiates statements of his indicating that he favors the admission of Red China to the United Nations. If so, the country ought to know about it and the Democratic Party should decide once and for all if it wants it in the platform.

In any event, the confusion of the President's opposition is a marvel to behold. * * * At the very same time that Senator FULBRIGHT announced he intended to get the facts, Chairman Paul Butler issued a statement bitterly criticizing Vice President NIXON for revealing that two Red spies had been caught in Massachusetts. * * * The Democratic Advisory Committee sustained Adlai Stevenson's Chicago outburst; the New York Democratic leaders either repudiated it or said it was ill timed.

The fact is that in its gallop to make hay out of the U–2 incident, the Democratic donkey is making an ass of itself.

H.R. 9597—World War I Pension Act of 1960

EXTENSION OF REMARKS

OF

HON. EARL HOGAN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. HOGAN. Mr. Speaker, a motion to discharge the Veterans' Affairs Committee from further consideration of H.R. 9575, the World War I Pension Act of 1960, has been filed with the Clerk. Petition No. 7 is now on the Speaker's desk for signature.

Convinced that the time is overdue for consideration of a pension for our World War I veterans, I wish to call your attention to the proposition—this profound moral issue that perpetually confronts the Congress of the United States—the issue that goes to the very roots of American history, American tradition, American principle.

We must decide if our whole concept, our philosophy, of the consideration for the veteran is right or wrong. If he is just another citizen, then our parades, our memorials, our past considerations are wrong—then the very principle of veterans' benefits, dating back to the Plymouth Colony and 1636 is wrong. We have mistakenly carried out for three centuries the institution of just compensation and public gratitude for the veteran on this soil—here in America—if we feel that he is just another citizen.

There are those who would force this concept upon us today. There are those who feel that the veteran is a nonentity. They feel that the veteran should be given the same consideration as any other citizen and no more. That, basically, was the idea of the President's Commission on Veterans' Pensions which made its report to President Eisenhower in April 1956.

I charge that we need a reevaluation of what the veteran really is, what his role has been in the past, and what his considerations have been in order to focus our sights properly on the proposition of benefits.

Actually veterans' benefits in some form go back to the days of Caesar, to the wars of the Greek city-states, and to just about any civilization that used the soldier's life and his limbs to make sure of its own survival. Napoleon who used soldiers ruthlessly nevertheless had a regard for them and saw to their needs long after their usefulness as soldiers had been exhausted. The same was of course true of the Duke of Marlborough. The ancients apportioned land and loot to their returning soldier heroes.

Today, for some reason, we have, here in America borrowed General MacArthur's much quoted line that "old soldiers never die; they just fade away." Statistics tell a different story, however, for World War I soldiers are dying at the rate of something like an average of 9,000 a month. Now, the 9,000 or so that are gone this month are gone forever. We shall not have to worry about giving them any decent regard for the services they performed on the Nation's behalf. The same is true of all the dead that have gone before. There will be more than 9,000 in the months to come as the veteran population gets older and older, just as there were less than 9,000 a month in the years before when the World War I population was relatively younger.

If we are going to do anything about the veterans of World War I the time to do it is right now.

Of course, we can wait. Then all we shall have to do for the veteran is what we do for a dead veteran. We will blow taps over his grave and go home. That way we shall have escaped any necessity for giving him a pension. We shall, at the same time have put in the appearance of having honored him—at least when he is dead. The only cost will be our trip to the cemetery.

A grave picture? Yes, but it cost nothing, made no dent in the budget and passes as honoring the war dead. The Bureau of the Budget is pleased.

The Congress has improved and liberalized benefits to our veterans of all wars. This is good. The widow and the orphaned survivor has had some consideration also. This is just.

But, what has the Congress and our Nation done beyond the cases of utter need and elementary hardship? What are we willing to do for the World War I veterans?

I propose a five-pronged program for the Congress to consider and the veteran to champion:

First. Fight for the right of the veteran to be a person of dignity, an individual of standing in the country and not a problem.

Second. Fight to make certain that nothing is done to erase or dilute the veteran as a person with a distinctive status in the community. A veteran is not just another citizen; he is a veteran.

Third. Remain vigilant to see to it that the war injured, the maimed, the widow and the orphan, the veteran who has come upon hard times, be given high priority—the highest—on the legislative calendar of the Congress of the United States.

Fourth. Reexamine veteran legislation already passed, reviewing it, from year to year, reevaluate it in accordance with existing economic conditions, and make sure that the value for the recipient has not been diminished. Thus we see to it that legislation on the books is modified to keep level with changed conditions.

Fifth. See to it that particularly and especially the veterans of World War I, who are now the dean of veterans, be accorded the recognition due them. This means that in the light of the age factor, some legislation be devised that is arithmetically sound; that is suited to the economy of the country, and that can be absorbed without too much undesirable impact on the Federal budget. I frankly believe, gentlemen, that H.R. 9575, is that legislation. It is the answer we need to make to a great moral issue of today. It is an honest answer that is morally imperative. It would follow along the lines of the precedent set for the veterans of the Spanish-American War.

Certainly there is nothing in this proposition that I make to you that is extreme nor beyond solution. According to figures from the Veterans' Administration, there were some 2,694,000 living veterans of World War I, as of March 1960. A month before, that is, February 1960, there were 2,704,000 veterans of World War I. That means that just about 10,000 World War I veterans died in that 1-month interim—I was deliberately being conservative when I earlier mentioned 9,000 World War I veterans deaths each month. If we had an across-the-board $100 a month pension for them, that would cost the county about $3,196 million. This is of course, a pronounced addition to what is totally a budget of about $77 billion for all Government expenditures. The 1960 budget for veterans' services and benefits is about $5,088 million, and this $3 billion would be in addition or a total of over $8 billion for our Federal veteran program.

I hasten to point out, however, that by 1965 the World War I veterans will have thinned out to $2,090,000 costing the country, if $100 pensions across the board were adopted, two and a half billion dollars. This will be further diminished by 1970 when 1,483,000 World War I veterans will cost $1,780 million if the $100 pension is legislated.

By 1980 there will only be 452,000 World War I veterans costing the Government under the proposed $100 pension $542 million. And by 1990—just 30 years from now—your World War I veteran population will be down to 44,000 costing the Government for the remaining $100 pensions something like less than $53 million. In the succeeding decade or before the year 2000—there will not be any World War I veterans left to pay pensions to.

In terms of arithmetic, that is the story.

Our national duty will have been done—our debt paid.

Resolutions Adopted at Annual Session of Wisconsin Congregational-Conference

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, June 6, 1960

Mr. WILEY. Mr. President, in this space-age era, our Nation—and the world—faces the task of making decisions relating to human rights and race relations, the population explosion, the plight of world refugees, the plight of atomic destruction and a variety of other challenges of worldwide significances.

In endeavoring to deal effectively with such broad-scope problems, we need not only wise leadership, but also the benefit of grassroots thinking on these and other difficulties.

We recognize that in a world—shrunken by science and technology so that travel time between distant places around the globe has been reduced to hours and minutes—the interrelations resulting from such closeness needs to awaken new perspective among our people.

More and more, I am encouraged and gratified by the way that people across the country are attempting to understand and form constructive recommendations for dealing with problems of international scope.

Recently, I was privileged to receive a set of resolutions adopted by the Wisconsin Congressional Conference reflecting upon a wide variety of world problems.

Representing the kind of grassroots thinking which we need more of, I ask unanimous consent to have the resolutions printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

* * * * * *

RESOLUTION 3—A RESOLUTION ON THE PLIGHT OF WORLD REFUGEES ADOPTED BY THE WISCONSIN CONGREGATIONAL CONFERENCE AT EAU CLAIRE, WIS., MAY 10–12, 1960

RESETTLEMENT OF REFUGEES

Be it—

Resolved, That we commend the Waukesha and Oconomowoc churches for their activities in sponsoring the resettlement of three refugee families; be it

Resolved, That we reaffirm our resolution of 1959 and again urge the churches and members of our conference to provide sponsorship for the resettlement of refugees in our communities; be it

Resolved, That we support the proposals of the President of the United States for liberalization of our national immigration laws, especially as they pertain to the resettlement of refugees; be it

Resolved, That we urge the President of the United States to allocate a more substantial portion of his discretionary funds for the relief and resettlement of refugees.

RESOLUTION 4—A RESOLUTION ON HUMAN RIGHTS, RELATING TO INTERRACIAL RELATIONS, ADOPTED BY THE WISCONSIN CONGREGATIONAL CONFERENCE AT EAU CLAIRE, WIS., MAY 10–12, 1960

A RESOLUTION OF CONCERN

The Wisconsin Congregational Conference meeting in Eau Claire, Wis., May 10–12, cannot escape a feeling of great concern at distressing information published daily about the violent occurrences in South Africa and about indignities which have been, and continue to be, visited upon American Negroes in our own country. With respect to the latter, we have learned with deep and sympathetic interest of the many groups of young people, colored and white, who have been engaging in what appear to be dignified, orderly demonstrations in an attempt to focus attention upon the positive necessity for the people of the United States to purge themselves of discriminatory and degrading racial practices in churches, education, business, industry, and government.

In registering our concern with regard to such happenings at home and abroad we are mindful of the responsibility resting upon our churches, associations, and conferences, on our ministers and lay people as individuals, to be forward, not backward, in eliminating all barriers imposing racial discrimination in and on organizational life and conduct, and also to be sources of strength and centers of power for all the people of their communities, especially the young people, during these days of emotional tension accompanying the cultural shift in which we are all involved.

In expressing our concern, we are assuring all our people further, of our remembrance of them in our prayers that they may have wisdom, strength, and courage in bearing their witness in the spirit of our Lord Jesus Christ.

(Adapted from a statement by the executive council of the United Church of Christ meeting in St. Louis, April 21–22, 1960.)

* * * *

RESOLUTION 6—A RESOLUTION ON THE THREAT OF ATOMIC DESTRUCTION, ADOPTED BY THE WISCONSIN CONGREGATIONAL CONFERENCE AT EAU CLAIRE, WIS., MAY 10–12, 1960

Whereas we are informed by reliable authorities that the United States and Soviet Russia have more than enough nuclear bombs to destroy the cities of both countries; and

Whereas we are aware of the terrible health dangers to present and future generations of people from radio-active fallout caused by atomic explosions; and

Whereas the New York Times has reported that the Military Appropriations Committee has attempted to persuade Congress to pass legislation permitting "preemptive war"—that is, war in which, when we think we have reason—often unreliable military intelligence—to believe an enemy may be about to attack us or our allies, we attack first, without overt provocation; be it

Resolved, That we call upon our Government, in its legislative, executive, diplomatic and military branches to turn away from the mass destruction of atomic extinction.

That we call upon all branches of our Government to renounce "preemptive war."

That we encourage our President and his negotiators at the coming summit conference, in view of the intolerable risks in the continued production of atomic weapons, to venture the lesser and more rational risk of their discontinuance;

That we urge the Atomic Energy Commission to develop further atomic resources for constructive purposes only, and to terminate nuclear weapons.

That we offer to negotiate with any government anywhere in the world toward agreements by which we may eliminate the use of atomic power as a means of waging war against each other.

That we call upon all nations in this crisis of calamity before mankind to turn back from the "morals of extermination";

That we call upon congregations to pray and our ministers to preach against the irrational and immoral forces among us that can end in nothing but destruction; and

That we cry to God for deliverance out of the hand of judgment which so darkly overshadows us, in hope and faith that He will yet show His rainbow of promise and remember His covenants of old to deliver us out of the hand of violence, even when in our own hands, and to redeem us into the City of Peace in the name of One who came not to destroy humanity but that through Him humanity might be saved.

Chicago: Cultural Giant Born of Progress

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. PUCINSKI. Mr. Speaker, I would like to call to the attention of my colleagues an excellent article written by Clay Gowran about the city of Chicago, which appeared in the June 4 issue of the Chicago Daily Tribune.

There is little I could add to this fine analysis of the city which is destined to become the greatest metropolis in the world. I am happy that I can call this article to the attention of my colleagues, and I believe Mr. Gowran is to be congratulated for capturing the real spirit of Chicago.

Mr. Speaker, the article follows:

[From the Chicago Daily Tribune, June 4, 1960]

CHICAGO: CULTURAL GIANT BORN OF PROGRESS—THOUSANDS FIND COMMERCE CENTER ALSO HUB OF STUDY

(By Clay Gowran)

One might say the city was built by giants and for giants.

Henryk Sienkiewicz of Poland, later to win a Nobel Prize for literature, wrote these words in the 1870's. They summed up his feelings for a city which had captured his imagination and his heart.

The city was Chicago, and the words are as true today as when the author wrote them almost a century ago, although such a statement is bound to bring sneers from some critics.

Sadly, it seems to have become "fashionable" or "intellectual" among many Chicagoans to picture their city as crime ridden, slum filled, and culturally barren. To hear them, it is a tired, congested metropolis to which good citizens come only by day to earn a living, fleeing at night to the suburbs.

Sure, Chicago has scars and smears—gangsters, murders, slums, and scandals. This does not make it unique among cities, past or present.

Eighteenth century London is revered as the inspired home of Samuel Johnson, David Garrick, William Pitt, and a bustling empire. Who bothers to remember its brothels, stomach turning decay, agencies where children were rented to beggars to aid their alms seeking, and the interesting fact that it had a police scandal even before it had a police force?

Two hundred years before the recent mess in Chicago's Summerdale police district broke in the headlines, London discovered its watchmen were taking fees from housebreakers to look the other way while burglaries were committed on their beats.

Sienkiewicz's city "built by giants and for giants" lives up to his description in many ways. Not the least of them are intellectual.

ART INSTITUTE RANKS HIGH

Those who deride Chicago as an artistic wasteland probably have never passed between the bronze lions at Michigan Avenue and Adams Street. They guard the entrance to the Art Institute of Chicago, which ranks among the foremost art centers of the world.

Only the National Gallery of Washington, the New York Metropolitan, and the Art Museum of Boston are in a class with it in this Nation, and in balance of qualities—the test of an art center—none surpasses it.

In four ways, the Art Institute is outstanding. Its collection of paintings of the French impressionist school of 1840 to 1920 is, for completeness and variety, probably the world's best. Its collection of art objects of the Far East, especially of Chinese bronzes and Japanese prints, is fantastically rich.

Thirdly, the institute houses an enormous number of prints by all the great names in art. Finally, and unique among museums, it has the Thorne rooms. On permanent exhibit, these are a collection of miniature interiors of living rooms, both American and foreign, through history. They were assembled with enormous attention to detail by Mrs. James Ward Thorne, and their like exists nowhere else in the world.

But these are only the high points of a wonderland of art. Allan McNab, director of the institute, dislikes even to guess at the monetary value of the institute's treasures but, if pressed, grudgingly places the total at something around $200 million.

Last year, 1,039,000 persons visited the Art Institute. But visitors alone do not measure its good for the city and the world. It has a school which last year attracted students from 38 States and 17 foreign nations. McNab proudly points out that 9.4 percent of all persons listed in "Who's Who in American Art" either graduated from or were students of the school—a record enjoyed by no other institution in the country.

The Art Institute also owns and operates the Goodman Theater and School of Drama, with approximately 200 students and a faculty of 16.

Far south of the Loop on the campus of the University of Chicago, is a gothic hall which houses a fabulous blending of art and history. This is the university's oriental institute, one of the world's foremost centers for study of the beginnings of culture in man, and possessor of an unequaled collection of treasures from the period 4500 B.C. to A.D. 500.

TRAVEL THROUGH EONS OF TIME

To walk into its muted exhibit rooms is to walk back through eons of time. Here is the collossal statute of Tutankhamen, carved in 1350 B.C., found in 1929 by institute scientists. Here is the 40-ton, human-headed Assyrian bull which in 700 B.C. guarded the mighty palace of Sargon in what is now northern Iraq.

Another famous institution skillfully blending art, history, and science is the Chicago Natural History Museum at Lake Shore Drive and Roosevelt Road. Ranked by specialists as one of the four greatest of its kind in the world, it is the only one which represents all branches of natural history—geology, zoology, botany, and anthropology.

This is no dead museum, as some like it tend to be. Its more than 12-floor acres of public exhibits constantly are being improved to tell the story of man and his world to more than 1 million visitors each year. In closed sections of the museum, scientists pore over new data brought back by expeditions sent out year after year to all parts of the world.

Chicago has three libraries of which any city could be proud. First, there is the Chicago public library, an $8 million a year institution with 59 branches in addition to its huge building at Michigan Avenue and Washington Street.

Catering to the general reader, the library has more than 800,000 cardholders, 2½ million books plus recordings, motion picture films and slides, and tens of thousands of pamphlets. Last year, it purchased 321,000 volumes—an average acquisition to replace wornout books and keep abreast of new publications.

"More Chicagoans are reading today, and reading more purposeful books," said Miss Gertrude Gscheidle, librarian. "Twenty years ago, 65 percent of the books circulating to our adult readers consisted of fiction. Today the figure is just about reversed, with fiction making up only 35 percent of the volumes taken by adults."

At Walton Place and Dearborn Street, overlooking the tiny park known as Bughouse Square because of the wild orators who used to gather there, is one of the great scholarly libraries of the world. It is Newberry Library, founded in 1887 through the generosity of Walter Loomis Newberry, Chicago merchant and financier.

Its Edward G. Ayer collection of 80,000 volumes on the Indians of America, worth $20 to $30 million is unequaled. Since the destruction of Manila in World War II, Newberry probably has the world's best library of printed books on the Philippines. No collection in the world tops Newberry's on calligraphy, elegant writing of decorative style.

SCHOLARS COME FROM EVERYWHERE

"Our main objective is to cater to scholars," said Dr. Stanley Pargellis, librarian. "They come here from everywhere, some spending weeks and months in research. Many is the book which has been written as the result of such research here."

Finally, there is the John Crerar Library, which occupies 10 floors at 86 East Randolph Street and is one of the Nation's most important centers for scientific and technological publications. Here is a collection of 1 million pieces of scientific literature.

The library operates a research information service which in the last 12 months performed research work for 55 companies and 30 Government departments or trade associations. Its photoduplication service provided a third of a million copies of material from the library wanted by buyers all over the world. Its translation center provided 40,000 translations of foreign scientific papers to interested clients.

At Lake Shore Drive and 57th Street in Jackson Park is a huge, graceful building which houses the greatest institution of its kind in the world—the Chicago Museum of Science and Industry.

To this giant museum last year came 2,547,231 visitors from all over the world. They stayed an average of 3 hours and 12 minutes, or about three times as long as visitors normally remain in any of the world's great museums. There is good reason for the difference.

The science museum seeks to impart learning to its visitors, and its staff has long realized this objective cannot be accomplished unless the visitor's attention and interest can be captured. So, the science museum follows a "do-it-yourself" philosophy in which its guests learn while actively engaged in pushing buttons, turning wheels, and pulling levers to make exhibits work.

"The museum provides visitors with opportunities to see themselves on color television, test their hearing, hear their voices, see their voices on an oscilloscope, and test themselves for color blindness," said Daniel M. MacMaster, director.

FEATURE ATOMIC AGE EXHIBITS

"We produce manmade rubber, rain, snowstorms, and lightning bolts. Visitors may walk through a 24-foot-diameter reproduction of a human cell or contemplate the interior of the human heart inside an 18-foot-high reproduction.

"They can ride a moving rubber sidewalk, or a train in a coal mine. They can walk down a gas lit main street of yesterday and stop in a nickelodeon to see silent movies of long ago, or they can operate and participate in atomic age scientific exhibits—the nuclear fuel cycle first shown at Geneva, Switzerland, last year is one."

The museum, in effect, is a fitting monument to the enormous progress Chicago has made in science, industry, and education since its beginning.

Today, Metropolitan Chicago is a bustling business and industrial complex with 145,000 firms and 14,000 manufacturers. Its factories produced almost $23 billion worth of goods last year, and employed about 1 million workers.

It is the largest steel center in the world, with a 1960 capacity of 27,248,400 tons. It has nine industries in the billion dollar a year or better class.

In 1959, in value of manufacturers' sales, the city's top position was taken by manufactured food products, which amounted to $3,810 million, an increase of 0.8 percent over 1958. Manufacture of primary metals was second with sales of $3,530 million. Third place went to nonelectrical machinery, in which sales totaled $2.6 billion and fabricated metals was fourth with sales of $2.19 billion.

Expansion is continuing in virtually all fields. During 1959, investments for industrial land and building construction amounted to $335 million, compared with $198.9 million in such plant investments for 1958. Housing construction in the metropolitan area added an estimated 47,000 dwelling units in 1959, or 16 percent more than in the preceding year.

Construction contracts for commercial building totaled $140 million in the first 10 months of 1959, against $116 million in the similar 1958 period.

Chicago is the world's leading center of rail, air, and motor transportation. Twenty trunk line railroads serve the city. In 1959, there were 661,762 plane operations [landings or departures] at Midway Airport [the busiest in the world] and at O'Hare International Airport.

WORLD'S BIGGEST TRUCK CENTER

An estimated 500 trucking companies provide direct service between Chicago and 34,000 points, while 2,000 local trucking companies operate in the six-county metropolitan area. During 1958, the latest year for which final figures are available, waterborne commerce totaled 64,660,869 tons here, and was exceeded only by New York-New Jersey ports and Delaware River ports.

In 1959—first year in which the St. Lawrence Seaway operated—552 ships arrived

here from foreign ports to signal a new phase of the city's growth. In 1958, when the St. Lawrence facilities were limited to a 14-foot draft, only 365 small, ocean-going vessels reached the city from foreign waters.

Chicago is the home of Loyola, De Paul, and Roosevelt Universities; the medical, dental, and law schools of Northwestern University, and the professional colleges of the University of Illinois. It has the Illinois Institute of Technology, and the University of Chicago, one of the world's foremost centers of learning.

It was at the University of Chicago, in 1942, that physicists achieved the first nuclear chain reaction to usher in the doubtful blessings of the atomic age, and today the university is among the world's leaders in atomic research.

It operates and staffs the Argonne Cancer Research Hospital, the first institution built to use atomic tools in research and treatment of cancer. It also operates the Argonne National Laboratory near Lemont, southwest of Chicago, one of the Nation's most important centers for nuclear research.

The city's hospitals rank among the finest in the world. Its parks and magnificent lake front, the wooded forest preserves on its periphery, and its tall skyscrapers and stately homes are added sinews of Chicago, this giant built by and for giants.

Pampering Other Nations

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 6, 1960

Mr. SCHOEPPEL. Mr. President, with foreign relations, so-called, and all the turmoil connected with this phase of our Government filling the air around us, some light on the subject has been thrown on this currently vital subject by the senior Republican Member of the Senate, the distinguished senior Senator from New Hampshire [Mr. BRIDGES].

I ask unanimous consent that an article entitled "Don't Pamper Other Nations," written by Senator STYLES BRIDGES, and printed in the June 9, 1960, issue of Human Events, be printed in the Appendix of the RECORD, so that all Senators may have the benefit of the timely advice the article contains.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DON'T PAMPER OTHER NATIONS—A PLEA FOR A NEW U.S. FOREIGN POLICY

(By the Honorable STYLES BRIDGES, senior Republican in the U.S. Senate)

The essence of good government is the ability to foresee. For our future welfare the United States at this time must examine its position in the world community and reevaluate the wisdom of many of our economic and political programs.

To a large degree many of our activities such as Lend-Lease, the Marshall Plan, Point 4, and the Reciprocal Trade Agreements have been based upon the theory that internationalism was replacing national sovereignty. To promote the economic development, national security, education, and social welfare of foreign nations, the American taxpayer has expended over $70 billion since 1945.

No rational person believes that the United States can afford to put a fence around this country and live in splendid isolation. The question we must now examine is whether our country can long continue to be the only internationally-minded nation in a world rampant with nationalism.

The facts indicate that instead of moving toward a harmonious concert among all nations the free world is more and more being divided into separate, autonomous, and violently nationalistic units.

Of course the Communists believe in internationalism, but to them this merely means domination, control, and the establishment of Soviet communism.

In Europe, France, West Germany, Belgium, the Netherlands, Italy, and Spain are in the throes of a nationalistic revival. In the Middle East and North Africa the trend is more severe. In the Far East from India to Japan the resurgent nationalism is apparent. Africa seethes with the emergence of new nations—each seeking a place in the sun.

In our own hemisphere from Argentina to Cuba national sovereignty is the order of the day.

Despite our wishful thinking, therefore, the facts demonstrate that the world today is more nationalistic than at any time in modern history. This unpleasant conclusion suggests grave and serious implications for the United States and necessitates an immediate reappraisal of many of our present programs.

The effect of nationalism on the United States can be seen by an examination of the European Common Market.

Today Western Europe is a major industrial competitor of the United States. The war-raved economies have not only been restored, but actually are now growing at a faster rate than the United States.

Our annual growth, for example, is calculated at 3 percent, whereas West Germany is over 8 percent, France almost 6 percent, and Italy over 5½ percent. Significantly, the dollar reserves and the gold of Europe have increased from around $6 billion in 1949 to over $17½ billion in 1958; whereas during the same years, the gold stocks of the United States were reduced from approximately $24 billion to $20 billion.

Discriminatory tariffs and currency policies are in force against the United States as well as against the fringe countries such as Great Britain and Scandinavia, which do not belong to the Common Market.

Considering that Western Europe has a population almost equal to the United States and at the present time is producing almost half as much industrial goods as this country, it seems obvious that we should reappraise the wisdom of continued economic assistance.

We have a substantial deficit trade balance; Europe has a surplus; and yet we allow the discriminatory practices to continue, while at the same time we continue with military and economic aid.

In addition to these considerations, it must be emphasized that, although Western Europe has 60 percent as much capital available as does the United States, that area is keeping most of it at home and exporting only about $1.5 billion annually in comparison to our $3.75 billion.

Because of discriminatory practices against American products, we have seen a tremendous flight of American business into foreign countries. It is rather incongruous to observe one American automobile company build factories in Britain and then ship the product (which numbered around 70,000 units in 1959) to compete with American cars in our own domestic market.

Unfortunately, because of subsidies, favorable antitrust laws, cheaper labor, etc., foreign investments are appearing more and more attractive to American capital.

Add to this Western Europe's high tariffs, the currency exchange restrictions and quota systems, and the out-and-out prohibitions against the entry of American goods in some countries, and it becomes apparent that the situation, unless rectified, may eventually be intolerable for this Nation.

The impact upon our economy has certainly been felt already. Segments of the steel industry are undersold in their own manufacturing area. The same is true of pottery, textiles, plywood, tuna, sewing machines, typewriters, bicycles, automobiles, appliances, and others.

Though the European Common Market offers the best example, it is obvious that various other areas of the world have every intention of adopting similar procedures.

Both in Central America and in South America, organizational plans are now underway for the establishment of similar market agreements. Ironically enough, it appears that American capital is expected to finance these ventures.

The economic impact of these nationalistic trade policies upon the United States is in itself a serious problem for our consideration. Nevertheless, there are other ominous implications. Nationalism by nature is always associated with antiforeign sentiment. As nationalism flourishes throughout the world, the United States has become the natural target for such antiforeign sentiments.

Anti-American propaganda throughout the world has reached an alltime high.

These statements are serious but they can be completely documented by the facts.

Americans who are concerned with the future of our Nation must attempt to project into the future the effect of programs which we witness today.

In my opinion, despite outpourings of propaganda to the contrary, the growth of nationalism throughout the world will become more intense. As the economies of the various free nations become more developed, it appears as though more discriminatory practices will be aimed at the United States.

I anticipate that unless changes are made, foreign industrial competition will greatly increase, not only in the world markets, but even more important, in our own domestic market.

We are in the midst of an economic war with the Soviet Union. In the days ahead this economic struggle will become more intense. As the economy of the Soviets becomes more capable of producing consumer goods, it is my anticipation that such materials will be dumped, regardless of the cost of them, in whatever areas such dumping will injure us to the greatest extent.

The present situation is serious, but not hopeless. No solution to these problems can be found by advocating a return to isolationism in this country. If for no other reason, our national defense requirements would make such a proposition absurd.

Obviously, however, more inflation, fiscal insolvency or severe depression will lead us to eventual bankruptcy and economic collapse.

It appears to me that the time has come to cease deluding ourselves as to the facts of life.

We are not living in an international-minded world. We are trying to be an internationally oriented nation in a world rampant with nationalism.

We are not taking care of our own self-interests. Unless we begin to do so, the day may come when we will have no interests left.

There are some very definite things which in my opinion should be done as soon as possible.

First, we must put our fiscal house in order, balance our budget, eliminate waste, stop inflation, and begin to make annual, periodic payments on our national debt.

Second, we must insist that those nations of the free world whose economies have now been restored assume a fair share of their responsibilities toward the underdeveloped nations. This activity is not one which can be carried exclusively by the American taxpayer.

Third, we must reevaluate and revise our reciprocal trade programs to make them truly reciprocal instead of the one-way street which now exists. If discriminated against by our friends, we must institute appropriate countermeasures.

Fourth, we must adopt tax reforms and other incentives which will reduce the outflow of American business capital. American labor unions have a tremendous responsibility to reduce inefficiency, prevent unnecessary work stoppages, increase productivity (both in quantity and in quality), and restore the industrial reputation our Nation formerly enjoyed throughout the world.

Fifth, we must bring the wage-price spiral under control. This consistently upward trend is helping to price us out of our foreign markets, and even places our domestic markets in jeopardy.

It is a hopeful sign that for the first time American labor leaders in the textile, shoe, electronic, and other industries are expressing concern about the trend toward foreign imports and the export or loss of American jobs.

Basically, it is my belief that many of the problems which we now face have been brought about by well-meaning but misguided people who have sincerely desired to spread the benefits of our civilization throughout the world. In their zeal to help, they have unwittingly, in many instances, led foreigners to believe that our resources are endless, that our bounty is not voluntary, but instead is our duty, and that as a Nation we have none of the problems with which they are concerned.

As a consequence of all the foregoing, we seem impractical and unrealistic to other nations, and we have inspired very little confidence.

The time has come, therefore, for use to institute some changes. We should treat the other free nations of the world as partners, not as children to be pampered and financed.

We should be willing to accept our share of world responsibilities, but only in proportion to that which is equally shared by other nations.

Perhaps the entire situation can be best condensed by saying that we should be willing to be a friend and partner, but we must stop being dupes.

We cannot and should not try to return to isolationism, but we must safeguard our own self-interest by insisting that international programs be supported by the entire free world, not by us alone.

The Changing Face of American Cities—No. 3

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. IRWIN. Mr. Speaker, continuing my series of insertions in the RECORD on "The Changing Face of American Cities," I would like to introduce the following additional excerpt from Forum magazine's two-part survey on "The New Urbanites."

The excerpt:

THE CHANGING CITY PATTERN

Some observers maintain that this latest immigration will surely be absorbed by the cities, as others have been absorbed in the past. But this tends to deemphasize the most important single fact of the latest migration—color. Says Irene Taeuber: "The barriers of color make assimilation for Americans who speak English more difficult than it once was for those whose languages, religions, and cultures were alien, but whose skin color was white."

The new urbanite comes initially with hope of a better job, and it is the sort of job he gets that largely determines his living pattern. As most new urbanites are unskilled, they frequently wind up in the lowest categories of the "service industries"—as busboys, dishwashers, messengers or at the bottom of the construction trades. Even for those who have skills—and there are many who do, though their percentage is small—bias prevents them from joining unions to practice their skills or secure top wages.

In Washington, D.C., for example, Negroes are largely excluded from the building trades. Only last month, the National Urban League asked Vice President NIXON to act against the exclusion of Negro electricians from Government construction projects in Washington. In New York, where Negroes generally have a better chance for employment than elsewhere, Negro longshoremen are still kept from working the luxury-liner piers where tips are juciest. Overall statistics reflect the painfully slow progress of the Negro. In 1955, 42 percent of all white workers were in professional, managerial, or white-collar occupations, while only 12 percent of working nonwhites were in that category. Negroes complain that even as doctors and lawyers in northern cities they are frequently prevented from attaining the same professional status as whites. Negro doctors, for instance, are generally excluded from practicing in most voluntary hospitals.

"By and large," says Raymond Vernon in his "Anatomy of a Metropolis," "the distribution of jobs influences the distribution of population far more than the other way around." The jobs that are open to the new urbanite are most often found in center city or on its fringes in so-called "gray areas." The newcomer is restricted not only to jobs which his limited skills and the community's bias dictate, but also to jobs reached easily and cheaply by public transportation.

Economic insecurity causes the new urbanites to see advantages in living at the congested center of the labor market, and social insecurity causes them to huddle together in groups of their own kind in the cheapest possible housing. Poor housing is no deterrent to a sharecropper family that has lived six or seven to a crumbling wooden shack with no sanitary facilities whatever. And, if the price of urban slum housing seems outrageously expensive (as much as $28 a week for a two-room apartment), the new urbanite manages to afford it, particularly if his wife works also. A majority do, contributing to the family's income, and also to the family's instability, a major dilemma.

The confluence of new urbanites by the thousands in the fifties has set off a massive explosion of slums and devastating congestion in the worst, most obsolescent housing in center cities. The trickle-down theory of housing has worked to the extent that in most northern cities well-to-do Negro families (usually at least second-generation city dwellers) move into marginal areas previously occupied by lower income white families. But these families and areas in turn are constantly pressed by the daily influx of newcomers, who start through the same cycle: living first with friends or relatives, then in rooming houses, then moving to converted tenements divided into more pieces than a Swedish wedding cake. The only people who profit from this pattern are the slumlords and unscrupulous real estate dealers who help break down previously white neighborhoods to get housing prices considerably higher (25 to 30 percent higher in some cities) than those that white home buyers will pay.

FORCED SCHOOL SEGREGATION

The pattern of residential segregation in turn sets a pattern of school segregation that works every bit as effectively in the North as in the Deep South. Because new urbanities are usually compressed in the oldest parts of central cities, they must send their children to the oldest, most obsolescent schools. Their children, instead of being made a part of the diversity of peoples that converts a city into a fundamental instrument of democracy, are shut off from the vitality of other races and cultures. This kind of segregation is one of the most oppressive shackles on the development of a strong, new urban society, and it cannot be broken by anything less than complete freedom to choose living and educational accommodations. New York's experiment in transporting a few schoolchildren out of the ghetto long distances in an effort to bypass residential segregation is not working, and many school authorities doubt that it will work.

The problem of school segregation is further intensified by the many teachers who commute from the suburbs, with no vital interest in the long-term welfare of the community in which they teach. In such circumstances teachers become, as Dr. Dan Dodson of New York University has observed, "trained bureaucrats who are not essentially different from those trained by colonial powers for service in their undeveloped possessions." If schools are thus neutralized in their traditional role as assimilators of new citizens, there is little hope that other institutions can take up the slack.

Most big cities have made serious efforts to build a school system to solve the problems. New York, of course, has had the most difficult time, for many of its newcomers are Puerto Ricans, 50 percent of whom on disembarkation do not even speak English. The city has hired large numbers of Spanish-speaking teachers, set up special school curriculums for slow learners (a majority in some schools), and made a concerted effort to cut down the number of "drop-outs" from junior high and high schools. Yet schools in new urbanite neighborhoods are generally far inferior to those in other areas. In Baltimore, the Citizens Housing & Planning Council, a private group, has been coordinating its work with the schools in recent years, as the primary step to helping new urbanites acquire urban living techniques, and believes that the effort has been highly rewarding. And in Washington, a policy of assigning or promoting teachers based on a merit system has been termed instrumental in raising the level of public school education since schools were fully integrated in 1954.

The Supreme Court's 1954 decision barring educational segregation made it clear that "separate but equal" facilities were, in fact, unequal. Yet most northern cities so far have not advanced much further than many southern cities in this respect. New York, which is as advanced as any, is still being strangled by fiscal attitudes which have, to quote Dr. Dan Dodson again, the effect of relegating new urbanites to a status of "permanent, uneducated, unskilled and exploited cheap industrial-type occupations." The only conscionable solution to the key problem of equal education is to develop a completely free environment, total rejection of residential segregation.

Cultural Exchange Possesses Potential as Substitute for Summit Negotiations

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, June 6, 1960

Mr. WILEY. Mr. President, for more than a decade the people of the world have found themselves alternately involved in hot and cold wars because of the activity of a small minority of hard-core Communists. Although we know that these Communists actually comprise only about 4 to 6 percent of the population in the Soviet Union, and only about 2 percent of the people of Red China, yet almost 1 billion human beings in the world today are in the iron grip of their control.

As Americans, it is our firm belief that the political-economic system of dictatorship advocated by communism is contrary to the yearning and will for freedom of the great majority of mankind. Since such a comparatively small group of Communists continue to keep us literally on the brink of war, I believe it to be highly essential that the United States and the free world exert greater efforts to put across the "story of freedom" to the dominated people of the world. And, because of the methods displayed by Mr. Khrushchev in deliberately scuttling the potentially constructive summit conference, I believe that efforts should be made to go over the heads of the Communist leaders in order to acquaint these people with the dedicated attempts by non-Communist people and nations to promote a real peace—based upon justice and order.

My colleagues may recall that, during the last session, I introduced the bill S. 2188 for just such a purpose. If enacted, it would establish a citizens freedom council which would help to increase public awareness of the Communist ideological challenge and of our efforts to counter the Soviet offensive in the important battle for men's minds. Toward this end the council would utilize the ingenious mass media developed by our free enterprise system—translated into language easily understood by people of other lands—in order to spread a foundation of free ideas upon which to build a better world. As I have previously pointed out, I am happy to say that the idea of this freedom council has been endorsed by many outstanding individuals well qualified to evaluate the need in this field.

Mr. President, we are all aware of the great contribution toward the betterment of relations between the people of the Soviet Union and the United States, and the lessening of international tensions, brought about in recent years by the exchanges in the cultural, technical, and educational fields. We know that the cordial receptions given our visiting American artists by the Russian people have dramatized, in warm, human terms, the basic philosophy of this program. We believe that American artists, scientists and technicians visiting the Soviet Union show the Russians the true image of the American people—of the progress here in science, technology, and culture—and of the United States desire for peace. We know that the mutual exchange of information, ideas, and culture presents the most direct method for going directly to the hearts of the Soviet people; and offers one of the greatest potentials for promoting international understanding and good will. This field, indeed, represents an area—perhaps the only one—in which there is a common language between the world's two great rival powers.

Last week, there appeared in the Christian Science Monitor an article written by that paper's special correspondent in Moscow, Edmund Stevens. Entitled "Soviets Still Mob American Artists—Culture Escapes Chill," this interesting report emphasized that—despite the propaganda blasts from Mr. Khrushchev at, and following, the collapsed summit conference—our visiting American artists are greeted with continued warmth and enthusiasm. In fact, as one great American artist pointed out, the primary popular reaction was one of widespread concern lest this signify the abrupt termination of cultural and other contacts and a return to the former isolation of the Russian people from the rest of the world. Believing that it presents a graphic illustration of the fruitful potential in going over the heads of Communist leaders—direct to the hearts of the Russian people, themselves—I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, June 1, 1960]

SOVIETS STILL "MOB" AMERICAN ARTISTS—CULTURE ESCAPES CHILL

(By Edmund Stevens)

Two week after the summit that was no summit the best news from Moscow is no news.

American correspondents stationed in the Soviet Union who were in Paris for the dramatic debacle returned to their posts with mixed feelings and some trepidation.

How would the sudden unseasonal change in the international climate affect their professional and personal environment?

CANCELLATION REJECTED

Would the icy fallout from the summit blast frost-kill the carefully nurtured cultural exchange program in which most members of Moscow's small American colony have a personal stake?

Would their personal contacts and associations so painstakingly developed be blighted and they themselves confined to an icy quarantine?

These were questions that occurred to this writer and others as we booked our reservations.

My first pleasant surprise came just as I had settled myself in my seat aboard a Sabena Boeing 707 before takeoff.

Greeted by familiar voices, I saw Sol Hurok and Van Cliburn coming down the aisle. Both were fresh out of New York.

Mr. Cliburn was on his way to fulfill a 6-week concert tour of the Soviet Union. Mr. Hurok, his impresario, was going to Moscow to meet the newly appointed Minister of Culture, Mrs. Ekaterina Furtseva, who doubles as the sole woman member of the Communist Party Presidium.

Mr. Hurok acknowledged that under the direct impact of the U–2 incident and summit collapse he had considered canceling his trip but said he had been urged by Moscow to keep his schedule.

Mr. Cliburn hadn't the slightest qualm and was elated by the prospect of reunion with the many friends and countless fans he had acquired 2 years ago when he won first prize in the Tchaikovsky competition. Moreover, he breathed confidence that all would be for the best in the best of all possible worlds. "The main thing," he remarked with wisdom beyond his years, "is to concentrate on right thoughts."

From Brussels to Moscow by Boeing is barely 3 hours, and by the time we had finished a leisurely three-course lunch, it was time to fasten our seat belts for a landing. As the plane taxied to a standstill before the air terminal, a throng of several hundred waving, gesticulating bobby-soxers burst the barriers and surged out onto the airport apron. It was strictly against the rules, but no guard tried to hold them back.

While Messrs. Cliburn and Hurok surveyed the scene through the porthole, I descended the ramp and braved the human sea that parted to let me through. But it closed in immediately behind me, and that was the last I saw of the lanky Texan and his distinguished elderly traveling companion.

The bobby-soxers, who ranged in age from 16 to 60, behaved exactly like their counterparts in other lands, brandishing bouquets and autograph books, squealing and shouting: "Nash Van, Nash Van."

NO ISOLATION

In town one of the first persons I encountered was American violinist Isaac Stern, who was just concluding an extended tour. Asked whether the customary warmth of Soviet audiences had cooled perceptibly since the summit setback, Mr. Stern entered an emphatic denial.

He had been on the road when the adverse news started to break, first in Leningrad, then in Vilnius, and Rega. The only popular reaction he noted was one of widespread concern lest this signify truncation of cultural and other contacts and a return to the former isolation.

Coloratura soprano Roberta Peters, from the "Met," had a similar story to tell.

After a series of standing ovations in Moscow and Leningrad she declared, "What can I say of the Soviet public? Wonderful people; excellent listeners. They reacted to every number with amazing warmth and great enthusiasm." And she concluded, "It seems to me our two peoples should do everything to promote cultural contacts."

WARM RECEPTION

All three musicians—Mr. Cliburn, Mr. Stern, and Miss Peters—are Hurok "properties." The day after his arrival the boss himself was received by Mrs. Furtseva. He later reported he found her far more sympathetic and easier to get along with than her predecessor as Minister of Culture and willing—in fact eager—for bigger and better cultural exchanges.

The American "My Fair Lady" company has continued its nightly performances of that musical hit with unwavering success, first in Moscow, then in Leningrad, and currently in Kiev.

REASONS SIFTED

How to account for this apparent ambivalence?

One answer seems to be that, contrary to worst expectations, no shift has taken place in Soviet policy as regards contacts with the West, including the United States, and that hostile criticism, harsh as it is, is beamed at

the American Government and not at Americans as such.

Bad as relations appear to be, for the moment they have not yet sunk to the rock-bottom of the Hungarian uprising aftermath or the summer of 1958, following the landing of marines in Lebanon, when demonstrators pelted the American Embassy.

Despite the bitter words, the Soviet Government does not seem to be contemplating a basic realinement of its policy toward the United States. Instead, its intention appears to be to sit out the presidential election, keeping all outstanding issues on ice till then, apparently convinced that time is on the Soviet side and that the next President may prove more amenable.

Mr. Khrushchev on the Rampage

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. McCORMACK. Mr. Speaker, in the New York Times of June 4, 1960, there is a splendid editorial entitled "Mr. Khrushchev on the Rampage" which interprets the so-called disarmament plan recently announced by Mr. Khrushchev. As the editorial well says:

In short, it would start disarmament by shattering the free world's whole defense structure. For it would deprive the West of the nuclear armament that is its best defense against mass armies and the best guarantee of world peace, before any reduction took place of these mass armies—reserved for the second stage—if there ever be one.

The editorial also properly calls our attention to the fact that this proposal would also eliminate all mutual security bases and force the withdrawal of all allied troops abroad, therewith crippling free world alliances and wrecking the whole NATO setup.

In my extension of remarks I include the above editorial:

MR. KHRUSHCHEV ON THE RAMPAGE

With his attempt to drive the West out of Berlin wrecked on the rock of Western unity and firmness, Premier Khrushchev has apparently abandoned the path of peaceful negotiations for the present and instead launched a massive propaganda campaign against the free world, and especially against the United States. This campaign, in which he mingles blandishments with threats and outright lies, is so blatant as to betray the Soviet ruler's open contempt for free world intelligence. But his purposes are obvious.

These purposes are to divide the West, break up the free world alliances, disarm the West, intimidate some of the weaker allies, isolate the United States and denigrate President Eisenhower both as leader in the free world and as head of the U.S. Government in the hope of electing a more compliant President.

As part of this effort Mr. Khrushchev has reshuffled his plan for total disarmament in 4 years to include some features of the Western plans, in particular President de Gaulle's plan for first abolishing all nuclear weapons carriers, some form of "open sky" surveillance after total disarmament and even an international police force to keep peace in a disarmed world. This new presentation is just specific and persuasive enough to call for further detailed study. But the possible traps are evident at the very start.

During a first stage of 18 months the plan calls for the destruction of all possible nuclear weapons carriers, including rockets, planes, warships, submarines and artillery systems, and for the elimination of all nuclear weapons and a cessation of their manufacture, under controls limited to these fields. Furthermore, as part of any first step, it calls for the abandonment of all bases abroad and the withdrawal of all foreign troops to their own borders.

In short, it would start disarmament by shattering the free world's whole defense structure. For it would deprive the West of the nuclear armament that is its best defense against mass armies and the best guarantee of world peace, before any reduction took place of these mass armies—reserved for the second stage—if there should ever be one. It would also eliminate all mutual security bases and force the withdrawal of all allied troops abroad, therewith crippling free world alliances and wrecking the whole NATO setup. And it would do this under controls which would not only be inadequate in themselves but would enable the Soviets to conceal already manufactured nuclear arms now impossible to detect.

The National Conference To Stabilize Migratory Labor

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, June 6, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Senate Subcommittee on Migratory Labor is considering legislation intended to end hardship and injustice facing the migrant worker in the United States today. The proposed legislation must, of necessity, deal with existing conditions. It must change conditions where such changes are possible, which means that in many ways the subcommittee seeks to make repairs on an existing system. The results of such legislation may serve very essential purposes for only a limited number of decades or years.

As we on the subcommittee study the immediate future, the National Catholic Council on Working Life is taking aim on a goal which was expressed at the National Conference To Stabilize Migratory Labor in Chicago last November. The recently issued report on that conference sums up that goal when it says that: "The only way we can truly help the migrant is to convince him to cease to be a migrant. Only when he settles some place can he gain any stability in employment, income, or family life."

The conference also made it clear that its goal is a long range one. The final paragraph of the report says: "Of course, not all delegates * * * were of one mind. * * * But as they searched together for ways of providing regular employment, steady income, and stable family life for migrants and an adequate labor supply for farmers, most delegates left for home persuaded that the goal was not utopian; in fact, that it was attainable in their lifetime."

The delegates to the conference included State and Federal officials, citizen groups, and growers, working to find a common ground for cooperative action. The much needed and mature deliberations and conclusions are typical of the untiring efforts in this field by the Catholic Council on Working Life.

Mr. President, I would prefer to have the entire report printed in the RECORD, but I shall limit this insertion to the last half of the report, which describes the council recommendations for future action. Prof. Varden Fuller, professor of agricultural economies at the University of California, is quoted at some length.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

IV

The major goal of any national policy aimed at stabilizing migrant labor should be, in the words of Professor Fuller, "the establishment and maintenance of an employment environment that offers positive inducements to a resident core labor force that will have attachment to and identification with seasonal agriculture, and that will constitute an employment category in which workers will have a reasonably good chance of making a living."

Not a commodity

In the typical case the farm migrant is merely a hand. He has none of the status, none of the rights and privileges of an employee, as that concept now operates in industry.

"The man who picks or chops cotton or does similar work in fruits and vegetables typically enjoys none of the features that stabilize employment relations or give the worker any sense of identification with the employer, with the industry, or with the work force," said Professor Fuller.

"Very frequently, seasonal farm workers do not know the names of the farmers on whose places they have worked; not always do they know the real name of the labor contractor who brought them there. The worker frequently does not know whether the farmer of the labor contractor is the actual employer. With the work being done at piece rates, neither the farmer nor the contractor is much concerned whether a hundred boxes of tomatoes are picked by 2 workers or by 10, so long as they get picked. In a similar way, there is little concern whether those who pick today are the same as those who picked yesterday or last week or last year, so long as there are enough hands to get today's job done on time."

By establishing an employer-employee relationship between grower and migrant, the human dignity of migrants would be acknowledged. Migrants would have the rights and responsibilities of employees; growers, the rights and duties of employers. The result would be a resident reserve of experienced, skilled, and available farmworkers.

Joint planning

In setting such a national goal, the delegates to the Chicago conference realized that the attainment of a stabilized farm labor population would require joint planning by growers and representatives of farmworkers, the cooperation of local communities, a virgin appraisal of the role of collective bargaining in agriculture, and the resumption by Government, at all levels, of neglected responsibilities.

By himself, the individual farmer and grower would find this an almost impossible objective. "Their difficulty," Professor Ful-

ler stated, "is greatly diminished if the labor needs of farmers in a district are pooled and approached as an aggregate. The pooling of the labor needs of individual farms makes it impossible to employ workers more fully and effectively. There are very few areas in the United States that are so highly specialized to a particular crop (cotton, for example) and in which the seasonal labor demands of all farms occur simultaneously.

"Generally, throughout the United States, you have got enough diversification within a 50 mile or so radius that by pooling work you could have a longer work season and a more effective use of the work force if you had a stabilized set of employer-worker relations. This type of arrangement should appeal to workers who live in the many villages that are spotted through the farming areas. These families try to maintain fixed domiciles and to obtain work within the commuting periphery of their homes."

Diversification

What Professor Fuller advocated is already established practice in many farm areas throughout the land, notably in southcentral Minnesota. What is being done near Benton Harbor, Mich., was described by Catherine Daly, manager of the 1,000-acre farm.

"Work in the fruit-growing industry in southwestern Michigan is considered seasonal. This is true of harvesting, but when we look at the overall job we will find that the cultivation, replacement of trees and plants, and the care of equipment covers the entire year. Few of our growers are engaged in one-crop farming. This diversification extends the harvest season from May until November. On our farm this means asparagus to apples. When extra workers are needed during the peak harvest season, the families of full-time workers supply the extra help needed. The men or heads of households often continue in the cultivation of later crops rather than work in the harvest itself.

"There are gaps on every farm between harvests or because of weather conditions," said Miss Daly, who is a former social worker and college teacher. "Very satisfactory schedules can be worked out by the growers to provide steady employment. For instance, in the asparagus season growers cut asparagus on alternate days or have alternate morning and afternoon schedules. In this way workers have full-time work. On our farm we have a gap between asparagus and blackberries. Our neighbors employ our extra workers in the strawberry and gooseberry harvest. In blackberry time we absorb the workers who for some reason cannot work in the cherry harvest. (Those for example, who cannot climb ladders, the fat lady, children, or someone who gets dizzy.) Throughout an entire season a family can live on the same farm and have full-time employment, barring very adverse weather conditions, and work within a radius of several miles."

Cooperation

A plea for diversification through cooperation among growers also came from the Stockton, Calif., grower, Frederick S. Van Dyke: "It is almost incredible to me that my neighbor should plant 50 acres of new peaches while the man across the road is pulling out his trees because he cannot make a living on the price he receives for peaches. That happened this year. It cannot be permitted to continue to happen. Planning is going to have to govern the plantings within each area. I hope this planning is done by growers themselves, rather than by someone in a bureau in Sacramento or in Washington, D.C.

"Growers consider themselves stanch friends of the free enterprise system, but nothing is more destructive to this system than anarchy of the type which prevails in California agriculture. One of the most needed changes in current planting practices is greater diversification. This would stabilize the farm labor force to a very great extent. It would also stabilize the entire farm economy within each region.

"At the present time, an area which specializes heavily in one or two crops is at the mercy of market fluctuations, particularly if the crop in question is a luxury item, such as asparagus in my home county. With diversification, an area would be protected from boom and bust cycles to a large extent, since it is unlikely that a sharp downward trend would affect all crops at once."

Making migrants welcome

Helped by the insistent prodding of farmer organizations, urban centers of farm regions have made a double contribution toward stabilizing the labor supply. In the first place, new residents, whether from Texas or Tennessee, have been welcomed and made part of the community. In this integration, the church, the school board, the chamber of commerce, builders, unions, and public and private employment agencies play their parts.

Secondly, should supplementary farm help still be needed in peak seasons, the neighboring community mobilizes local residents to help in the harvesting—high school and college students during the summer vacation and adults during the school year.

While supporting such a program, a warning against "crop vacations" was strongly made by Mary M. Condon, of the rural education department of the National Education Association.

In one way or another, efforts to involve local residents are being made in scattered local communities throughout the Nation. But it is not, by any means, a nationwide pattern.

A plea for community support came from John Zuckerman, a Stockton, Calif., grower: "Our migrants today, excluding foreign contract workers are, for the most part, the least talented, least capable, least employable members of our society. These people are driven to migrant work because you and your fellow citizens in the communities in which you reside have not permitted them to be educated and motivated to become an integral part of the permanent industrial or agricultural work force.

"You—or perhaps I should say we—have not taken the necessary action, even where education and motivation prevail, to provide gainful, vocational opportunities that will permit these people to sink their roots in the community of their choice, to realize the ideal and goal of every American—a permanent home, a place in the community for themselves and their family."

Self-organization

In many branches of industry the self-organization of workers into unions and the resulting collective bargaining contract have enabled city workers to achieve a measure of human dignity, providing them with economic stability and a voice in determining conditions of employment.

Except for occasional pockets of union organization, migrant workers are unorganized. John Livingston, director of organization for the AFL–CIO, pointed out some of the reasons: literacy and language barriers, short-term employment, high mobility, fierce opposition of farmers, the competition of braceros, and a potential membership composed of rootless and marginal workers. In addition, he pointed out that there has been "no legal affirmation of their natural right to organize" by the Federal or by the State governments (though State labor relations acts in Kansas, Wisconsin, and Puerto Rico may be broad enough to protect agricultural workers).

Such obstacles, at most, are only half the problem. The organization of farmworkers would also require reorganization of the present system of recruitment, hiring, and tenure. Unless the union becomes a hiring hall, to which would come employees in search of work and employers seeking workers, collective bargaining will remain a lonely and ineffectual institution in agriculture. In other seasonal industries, logging, maritime, and construction, for example, the hiring hall became the cornerstone upon which workers firmly established their unions.

Hiring halls

Two rare examples of how the hiring hall had already operated were cited at the Chicago conference. A California rancher described how he went to the headquarters of the Agricultural Workers Organizing Committee in September and October to obtain a crew of experienced grape cutters to harvest his 90-acre crop. He was furnished the workers he needed and paid a minimum of $1.25 an hour and a bonus of $1 a ton.

William L. Batt, Jr., secretary of labor and industry for Pennsylvania, told how Pennsylvania growers had brought in trained field workers from Arkansas. Their crew leader was a representative of the National Agricultural Workers Union. The contract with the growers provided for a minmum wage of not less than 75 cents an hour and a guarantee of regular work for 160 hours in each 4-week period.

Some obstacles

But to extend the hiring hall to most of the factory farms in the Nation will be no simple task. It might be a project as monumental as the peaceful harnessing of atomic energy for industrial purposes. Under the present system, some or most of the functions of a union hiring hall are being performed—but by three other institutions.

Many farm employer organizations, which in prewar years had devoted most of their time to resisting unionization, simply shifted their energies to obtaining imported foreign laborers.

The crew leader is also an important cog in present hiring system. He provides the necessary transportation. He recruits workers. He persuades farmers to advance money to cover expenses of bringing migrants to the farm. He may serve as business agent, personnel director, paymaster, foreman, and all-around middleman between the grower and worker. Trying to represent both the grower and migrant, crew leaders develop real conflicts of interest. The U.S. Department of Labor estimates that there are about 10,000 migrant crew leaders of various kinds in the United States. They have become an important part of the hiring and recruitment system in agriculture.

Government action

Considerably more important is the function performed by Federal and State Governments which operate their own "hiring hall" staffed by more than 1,500 paid farm placement representatives whose job it is to find workers for farmers and work for migrants.

That is not all. In areas where there is no local public employment service office, a volunteer corps of 3,000 unpaid farm placement representatives working in 25 States, together filled nearly 150,000 farm job openings in 1958. To succeed, unions would not just have to organize farm employees; they would have to reorganize the present system of hiring.

Quasi monopoly

Thus, major decisions concerning union and government policy are required. Should the State and Federal Governments continue their quasi monopoly over the placement of farm employees or should farm workers be encouraged to establish their own unions and thus their own hiring halls?

Are unions able and, if able, willing to provide the tremendous amount of money and manpower needed to staff a string of hiring halls in those areas where large-scale farm employers hire large numbers of workers?

Is some compromise arrangement possible between the present tax-supported placement agency and a worker-operated hiring hall?

Is some other form of contract feasible, for example, one similar to the agreement under which Puerto Ricans come to work on the mainland, or to a growers' association contract which provides some employment guarantee?

Government action conducive to a stabilized force of farm employees has its paradoxical side. In some areas it may have to draw back, as in the bracero program under Public Law 78 and in the broad range of responsibilities now exercised by United States and State employment agencies. In other areas it will have to advance by the stricter enforcement of existing social legislation where it now applies to farm migrants and by its extension to migrants where it now does not.

Tighter reins by the Federal Government in the administration of the bracero program would give growers some inducement to become more self-reliant and to revamp present hiring practices. As long as growers can get migrant help from Mexico simply by calling a Government placement officer, they will have little incentive to cooperate for the purpose of creating a core group of resident farmworkers.

Under present laws

Toward this end the Federal Government could take further measures—

(1) to prevent Mexicans from being employed in skilled occupations and the year around—contrary to the original intent of the legislation;

(2) to confine Mexicans only to necessary crops and not allow them to work on olives, mushrooms, avocados, cut flowers, etc.;

(3) to make certain that farm employers actually attempt to recruit U.S. workers at wages no less than those paid Mexicans, thus preventing use of foreign workers to depress wages in any locality and relieving local unemployment among farmworkers;

(4) to restrict the use of the services of Federal and State employment offices to growers who meet certain minimum standards in wages, transportation, housing, and conditions of work; and

(5) to double check compliance with the provisions of Federal old-age, survivors and disability insurance so that all workers who earn $150 from a single employer have premiums paid on their behalf (thus ending the scandalous buckpassing between growers and crew leaders as to the actual employer).

Farm labor contractors

Furthermore, most State governments could help regularize the employer-employee relationship of grower and migrant by requiring farm labor contractors to observe the provisions of State laws regulating private employment agencies.

When Congress in 1955 widened the provisions of the social security law to reach some farmworkers, it took the first step to give farmworkers parity with industrial employees. Many other steps will need to be taken.

The U.S. Department of Labor is now studying ways and means of extending the Federal minimum wage law to agricultural employment and has announced it will make recommendations during the present session of Congress.

Although workmen's compensation legislation was the first type of social insurance to be widely adopted in the United States, most employees in agriculture, the Nation's third most hazardous occupation, are not protected.

Only a few State workmen's compensation laws (California, Connecticut, Hawaii, Ohio, and Vermont) protect farmworkers in the same fashion as other workers.

As already noted, the rights of farm employees to join a union and bargain collectively are not yet guaranteed under Federal law.

Federal protection

While the application of unemployment insurance benefits to migrant workers would be exceedingly difficult, their haphazard employment only serves to underline the urgency of finding some way to protect them.

Of course, not all delegates to the Chicago conference were of one mind on these proposals. But as they searched together for ways of providing regular employment, steady income, and stable family life for migrants and an adequate labor supply for farmers, most delegates left for home persuaded that the goal was not utopian; in fact, that it was attainable in their lifetime.

Timely and Significant Article by Miss Frances Knight

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, June 6, 1960

Mr. KEATING. Mr. President, I should like to cite an excellent article which appeared on Sunday June 5, in the weekly magazine Parade. The title of this article is "Don't Be An Ugly American" and it was written by Miss Frances Knight, Director of the U.S. Passport Office. Miss Knight's message is particularly timely since it comes as many thousands of Americans prepare for summer travel to foreign nations. In a very real sense, these travelers carry with them the image of America, and it is of paramount importance that their attitude and conduct while abroad reflect credit upon themselves and upon the United States of America.

In her article, Miss Knight has provided such travelers with many excellent points of advice that will enable them to avoid the mistakes that so often in the past have colored unfavorably the image of our Nation in the minds of foreigners. It is my feeling that Miss Knight is to be commended warmly for her imagination and initiative in thus helping to forestall unfortunate misconceptions of America.

This is but another instance of the outstandingly fine performance that has marked her tenure as Director of the U.S. Passport Office. This charming lady has assumed a most onerous and taxing assignment, yet she has fulfilled her difficult role in a manner that has earned her the praise and respect of all who are aware of her achievements.

Mr. President, in view of the timely significance of the article in question, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Parade magazine, June 5, 1960]

DON'T BE AN "UGLY AMERICAN"

(By Frances Knight, Director, U.S. Passport Office)

WASHINGTON, D.C.—Two years ago an American woman tourist strolled through the narrow alleys of a Middle East bazaar wearing only a halter, shorts, and sandals. She knew that a local religious sect considered it sinful for a woman to display her face and figure to any male except her husband. And she also knew that if any man looked at her, according to members of the sect, he, too, had committed a sin.

As she passed a sacred relic, a man who had been kneeling in prayer sprang to his feet and stabbed her several times. She was rescued; her life was saved. But so great was the resentment against her that she was forced to leave the country.

I cite her as an example—an almost tragic one—of the peril of rejecting the sagest advice ever offered to travelers: "When in Rome, do as the Romans do."

More than 2 million Americans are going overseas this year, many for the first time. The average American tourist will have close contact with at least 5, more likely 10, foreign nationals during his trip abroad. This means 10 to 20 million foreigners are exposed to American behavior, ideas and views in a year. It is a tremendous opportunity for our tourists to make friends—or to create ill will.

Most American tourists are well behaved and well liked. Yet each tourist season produces a crop of unpleasant incidents created by the brash, the thoughtless, the bad-mannered. Let me cite two recent typical examples:

A young American pasted devalued foreign money all over his suitcase—"just for kicks." His bad manners, making a joke of a proud people's poverty, caused plenty of anti-American feeling.

Three American visitors chatted noisily through a performance of the Vienna Opera. When asked politely to be quiet, they declared how glad they would be "to get back home where there is freedom of speech." Who could blame their music-loving Viennese neighbors for greeting the next American tourist with scowls instead of smiles?

What bad manners especially irritate our friends in other lands? Let's start with the great American passion for collecting souvenirs. Any large foreign hotel will tell you stories of Americans who help themselves to towels, sheets, blankets, cutlery, china, in fact anything that isn't nailed down.

Then there is the matter of dress. Americans tend to be informal; other people may not be. Along the sun-drenched beaches of Spain's Costa Brava, where women still live in genteel seclusion, there are strict rules about bathing suits. To appear in a bikini means being marched off by a patrolman.

WHAT NOT TO WEAR

Some European towns have found it necessary to post orders about the degree of undress that will be permitted in public places. Many restaurants exclude patrons wearing shorts. Some will not permit women in slacks, or men without ties, shirts and jackets. Worshippers do not care to see women tourists sauntering around cathedrals in shorts. Nor is it pleasant in restaurants or theaters to sit next to a man in a sweatshirt.

Ostentatious dressing can be just as distasteful as underdressing. Going to a fisherman's wharf or a farmers' inn swathed in mink and loaded with diamonds makes sturdy, independent people feel you are "slumming."

A word about litterbugs. Frankly, Americans are not as tidy as many Europeans. The American's carefree habit of letting somebody else clean up after him is taken by foreigners as a sign of contempt.

Bad manners in buses, trains, planes and ships are another cause of anti-American feeling. In other countries, travel comforts may often be more restricted than here. The only way to get along is to stick to the local rules—without grumbling. Treat the washroom of a train as you would treat your own washroom. Why must lipstick be tested on mirrors or towels? Why do some people

fail to drain the basin? Why are cigarettes often stamped out on the floor or ground into tables?

Most Europeans are both baffled and angered by Americans who smoke in a nonsmoking car or who smoke a cigar when only cigarettes are permited. They also dislike loud arguments, complaints, boisterousness, shouted demands for service. So, of course, do most Americans.

Finally, there are the more obvious offenses: getting drunk, engaging in street brawls, destroying private property, leaving a trail of bad checks and unpaid bills, dabbling in black markets. This last—black marketeering—is probably the most frequent and damaging charge brought against American citizens traveling abroad.

All countries have their shady characters, far more worldly wise than you in illegal dealings. They will offer "bargains" hard to resist. But resist them. By breaking some other country's laws, you may bring trouble not only on yourself but on Uncle Sam as well.

Good manners start with our parents and teachers. They cannot be learned from an official pamphlet or a last-minute briefing before embarkation. They are developed by daily example and personal experience. But remember: Wherever you go, at home or abroad, your manners are showing.

TIPS FOR TOURISTS

1. If you trip is worth taking, it is worth planning for. Take time to get background information on the countries you are going to visit—their history, customs, and current problems.

2. Don't throw your dollars around or give excessive tips. Learn the exchange rates in the countries you are visiting.

3. Don't sneer at somebody else's money. The coin you dismiss as almost valueless might buy a loaf of bread for some poor family.

4. Listen, learn, and think for yourself. Off-the-cuff opinions rarely make friends or influence people. Nobody likes listening to a 2-day expert on international affairs.

5. Don't go around boasting, "I only speak American." Other people are also proud of their languages. They don't expect you to speak fluently, but they will be flattered if you have taken the trouble to learn a few simple words in their language like "please" and "thank you."

6. Don't collect or mutilate private or public property. If you want souvenirs, buy them.

7. Be considerate of those you meet. Courtesy is understood around the world.

8. A boast about how much better things are at home only causes resentment.

9. Keep track of your belongings.

10. Show respect for the laws and customs of other countries. Remember: You are a guest. Besides, failure to do so may land you in jail. And that is no place to spend a holiday.

Moral From Morocco

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. INOUYE. Mr. Speaker, on June 1, 1960, the President asked Congress to appropriate the sum of $8.3 million to launch the recently authorized "Center for Cultural and Technical Interchange Between East and West" in Hawaii.

When we stop to consider that our Nation and the free world stand to benefit from the allegiance of the uncommitted nations of Asia and Africa, the $32 million requested by those close to the needs of such a center is but a drop in the bucket as compared to the sums being spent for defense purposes, and as further compared to the expanded program proposed by the Russians for their own center. Hawaii's appropriateness for administering and promulgating the purposes of the East-West Center should be matched with a realistic appropriation in order for it to become a really effective instrument in the cold war.

The woeful inadequacy of the President's recommendation is vividly pointed out in an editorial appearing in the June 2, 1960, issue of the Honolulu Advertiser. Under leave to extend my remarks, I submit herewith, for the RECORD, said editorial:

MORAL FROM MOROCCO

A young man in Morocco who not long ago attended the Afro-Asian Student Seminar in Honolulu has written a friend at the University of Hawaii he would like to study further in the United States.

The student said he'd borrow money to pay his transportation if some sort of scholarship at an American university—any university—could be arranged, together with a part-time job for living expenses.

The friend is seeing what he can do.

This doesn't seem too remarkable—except that the same student has been offered a 5-year, all-expense scholarship in advanced physics at the University of Moscow. But the Moroccan would rather come to the United States.

Premier Khrushchev's invitation to him was part of the accelerated Soviet program to indoctrinate young people around the world. This program is patterned, in some respects, after the East-West Center to be opened here.

But where Khrushchev's program is making a jet-assisted takeoff—with a goal of 5,000 students this year—the center here seems to be in the 1903 biplane stage as far as the U.S. administration is concerned.

President Eisenhower yesterday asked Congress for $8.3 million for the East-West Center. University of Hawaii officials say to do the job right, $32 million is needed.

The difference is simply this:

With the $8.3 million grant recommended by Ike, the center would start with 125 students the first year and grow to 500 students in 3 years.

With the $32 million asked by the university, the center also would start with 125 students—but would mushroom rapidly to 2,000 in 3 years.

Compare that with Khrushchev's 5,000 students, which may eventually swell to 10,000.

We're talking about the struggle for the minds of men—men who today are students but who tomorrow will help guide their nations, shape the decisions between communism and freedom.

This is one more battle in the cold war, and the President's $8.3 million is small ammunition for such a battle and such a war.

The administration has spoken favorably of the center but has not matched its deeds to its words.

We look now to Congress where key leaders, including Senate Majority Leader LYNDON JOHNSON, have a more realistic understanding of the center's potential in the cold war—and what it must have to do the job.

Need for Greater National Unity

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, June 6, 1960

Mr. WILEY. Mr. President, as we know, this is a presidential election year.

In 1960, particularly, we face the need for individually responsible, politically constructive and national- and world-oriented politicking.

Why? First of all, the great complex challenges of our times themselves require high integrity, broad perspective and thoughtful judgment—as we attempt to carry forward programs—as well as find solutions for problems—relating to local, State, national and international progress and security.

In normal times, the tasks—for both voter and candidate—are difficult enough.

Today, however, we have a new factor to deal with—that is, the attempt by Mr. Khrushchev to extend a long arm of interference into our internal politics.

The Soviet Premier, establishing a new low in international affairs, has engaged in an intemperate, unjustified, irresponsible effort to cast unfavorable reflections upon President Eisenhower and Vice President NIXON; no one knows who will be next on this black-tongued list of attempted villification of U.S. leadership by the Kremlin with a voice that echoes around the world.

The American people, of course, need pay no heed to this voice of trouble in internal affairs. To the contrary, extreme caution must be taken to assure that it does not interfere in our decisions on domestic issues. However, we might as well recognize that the Kremlin—probably as never before—will use the campaign material from our internal elections for anti-U.S. propaganda all over the globe. Consequently, I believe that campaigners—particularly candidates themselves—must be extremely watchful, careful and responsible in public utterances.

Although there are differences of opinion on a wide variety of issues, these internal differences must stop at the water's edge. Recently, I was privileged to discuss a range of issues which, among others, will be involved in the upcoming campaign, over radio station WGN in Chicago. I ask unanimous consent to have excerpts of the address printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WILEY URGES GREATER NATIONAL UNITY; SAYS INTERNAL CONFLICTS SHOULD CEASE AT THE "WATER'S EDGE"; OUTLINES ISSUES OF 1960 CAMPAIGN; SAYS NATION MUST INCREASE RATE OF VOTING AND CITIZEN PARTICIPATION IN GOVERNMENT IF UNITED STATES TO REMAIN STRONG AND HEALTHY

(Excerpts of address prepared for delivery by Senator ALEXANDER WILEY over radio station WGN, Chicago, June 5, 1960)

As citizens of a great country, we, in the 1960's, face difficult, though not insurmount-

able, challenges of local, national and international significance.

Globally, our survival, and peace, continue to be threatened by international communism. Following the Paris meeting, torpedoed by Khrushchev, the ghosts of the cold war are again afoot. As yet, it's not possible to determine whether or not, or just how, these may be transformed into additional real life threats to peace.

We recall, however, images of the past, reflecting communism's deceitful tactics, including: A string of broken treaties—37 out of 40; diplomatic deception at the Paris conference, plummeting world hopes for progress toward peace; military threats and missile-waving, recently demonstrated by Khrushchev, Soviet Defense Minister Malinovsky and others; constantly carrying on efforts to distort U.S. ideals and policies, and destroy our prestige; global espionage, sabotage, subversion and "aggression by propaganda" around the world.

In the face of these international efforts to undermine the U.S. position in the world, as well as to forward Communist aims—we must, I believe: Muster our resources; increase our vigilance; and, of extreme importance, present a united front to the world.

We recognize, of course, that 1960 is a campaign year. Politically motivated candidates will be searching high and low, at home and abroad, for issues upon which to capitalize.

The challenges, and dangers, of our time, however, require, I believe, responsible action by candidates of all parties.

Our internal differences should stop at the water's edge. Frankly, I believe, however, that there is plenty of room—and plenty of topics—for public discussion on issues upon which the major parties differ. These include:

First of all, the design of fiscal policy. That is, do we balance the budget, or don't we? If the budget is to be balanced, what happens to the surplus—tax reduction or debt reduction? If the budget is unbalanced, do we increase taxes to provide the revenue? Or do we transfer the burden to future generations by further increasing the national debt.

Secondly, how far do we extend our housing, urban renewal, anti-pollution, conservations, development of natural resources, and other programs? In these fields, as many others, the Democratic and Republican parties differ—not so much on whether we need such endeavors—but rather to what degree should the burden be on Uncle Sam.

Third, what about agriculture? Are there alternatives to present programs—that would resolve the dilemma both in the interests of the farmer and the Nation? Or will we continue to discuss the farm problem—like the weather—with lots of criticism, yet doing nothing about it?

Fourth, are we planning adequately to provide schools and teachers for the fast-increasing enrollments, expected to expand to about 76 million young Americans of school and college age by 1976.

Fifth, which party can deal most effectively with the task of protecting civil rights for all citizens, regardless of race, creed or national origin—with all its sociological and economic reflections in our society.

These, of course, are only a few of the major issues that, I believe, can and should be debated in the upcoming campaign.

POLITICAL FEATURES OF FOREIGN POLICY

Now, what about foreign policy?

What aspects of our international programs—to provide for our security, and promote peace in the world—are subjects for political debates?

In exploring this field, we recognize that we must tread carefully. Candidates can damage—rather than improve—our international prestige by irresponsible action in this field.

Mr. Khrushchev would like to sow the seeds of division in this country—as he is attempting to do elsewhere in the world. No responsible candidates, I believe, are going to help him do the job.

Now, what are some of the major features of U.S. programs aimed at improving security and promoting peace upon which discussion can shed light? These include:

First, are we maintaining an adequate defense? And is our timetable of planning for the future able to provide us with the jet-missile-nuclear-space defense of tomorrow.

You will recall that almost all of our defense experts agree that we have an adequate deterrent now; in addition, I, personally, feel that we are planning realistically; and effectively for the future.

Second, to what degree should we cooperate with other nations: To block communism; and to assist less-developed countries in promoting economic progress, to enable them to wipe out poverty, disease, illiteracy; and to create higher plateaus of living for their people.

Third, to what degree can, or should we participate in international organizations and blocs for military political, economic, ideological, and humanitarian purposes?

Fourth, what percentage of our national wealth—now at a peak gross national product of over $500 billion annually—should be earmarked for programs related to national security and promoting peace? And,

Fifth, how effectively are we stopping the Communists? And are there better ways of doing the job and of achieving world peace?

These, I believe, are legitimate questions of U.S. policy upon which constructive debate could further enlighten the American people of our responsibility in international affairs:

NEEDED: GREATER CITIZEN PARTICIPATION IN U.S. POLITICAL LIFE

In these times—as never before—the Nation requires the understanding, support—and, yes, the unique contribution which each citizen can bring to his country by participating in its political life.

In our battle for survival against communism—supported by dedicated, almost fanatical Reds—one of the drags on our efforts is popularly, and regrettably, known as apathy.

The lifeblood of our Republic is its people—well informed, creative-thinking citizens. Tragically, barely one-half of the people in the country are voting, or participating in political affairs—as evidenced at the polls. Consequently, our national life suffers—to that degree—from the lack of support, strength, and creativeness which dutiful forward-thinking citizen participation can bring to Government.

Now, how can we improve the situation?

Frankly, I believe it is high time that we undertook a strenuous effort to conquer the epidemic of apathy—resulting in a stay-at-home—let-the-other-fellow-do-it attitude among our people.

To encourage more of our citizens to vote, for example, I recently proposed the designation of a National Voters' Day. The purpose would be to coordinate national efforts to carry on public education programs, including: The issues in a political campaign; the candidates and their qualifications; informing eligible voters of—and encouraging them to meet—registration requirements; educating potential voters on the processes of Government—and the value of citizen support, participation in—and, if deemed advisable, constructive opposition; and finally, launching a counterattack against the apathy which, regrettably, is allowing to go unheard the voice of millions of people.

Incidentally, the idea has been approved by a great many Governors, mayors, and civicly oriented organizations across the country. The Governors endorsing the idea include Gov. William G. Stratton, right here in Illinois; Michael V. DiSalle of Ohio; Herschel C. Loveless, of Iowa; and a great many others in the Midwest and elsewhere in the Nation.

The designation of a National Voters' Day would not, of course, magically accomplish the purposes of complete voter participation in government and elections. However, I believe it would, in a modest way, help to coordinate national efforts to encourage greater participation in our political life.

If you feel sympathetic to such a proposal, you might want to drop a note expressing your interest to your Congressman or Senator in Washington.

CONCLUSION

As we face the complex, difficult times ahead, we must not underestimate the scope of the challenge or minimize the force and will of the Communist conspiracy dedicated to overthrowing our Government and subjugating freedom.

At the same time, however, we can feel confident in our system, its ideals, and its ability to successfully meet the challenges. In addition, our strength is vastly supplemented by the alliance of free nations and the will for freedom of all people, including those imprisoned behind the Iron and Bamboo Curtains.

If we continue—and further strengthen—our vigilance, dedication, and willingness to face realistically the Communist threat confronting us—as well as to meet the humanitarian need for providing a better life for people here in this country as well as abroad—I am confident that we will write a bright page in world history.

Memorial Day Address of the Honorable Mose Lindau

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. McGOVERN. Mr. Speaker, I believe that the Members of Congress will find the Memorial Day address given by Judge Mose Lindau of Aberdeen, S. Dak., a most interesting document.

I include it at this point in the RECORD:

On June 16, 1858, addressing the State Republican convention in the house chamber of the old State capitol, now the Sagamon County Courthouse, at Springfield, Ill., Abraham Lincoln electrified the United States with these words of wisdom and prophecy:

"'A house divided against itself cannot stand.'

"I believe this Government cannot endure, permanently, half slave and half free.

"I do not expect the Union to be dissolved—I do not expect the house to fall—but I do expect it will cease to be divided.

"It will become all one thing, or all the other."

In the 102 years that have passed since these words were uttered, our world in a jet-atomic age has become even smaller than the United States was then. One can travel to Europe, Asia, or South America in much less time than it would have taken Lincoln in his day to journey from his Illinois home to New York City or Washington, D.C. In

the space of time limited only by the speed of sound, one can hear a voice or speech in those faraway places as clearly as you can hear me now.

With these marvelous communications, the message of liberty, freedom, and equality has spread to all parts of the earth. As the Negro of 1858 prayed for freedom, subject and enslaved peoples in Africa, Asia, Latin America and other parts of the world seek freedom for life, liberty, and the pursuit of happiness. These people are not Communists, but they are rebels and revolutionaries in the same sense that our forebears of 1776 were rebels and revolutionaries. They bear the same torch and are entitled to our sympathy, our understanding, and support.

The quality which distinguishes man from the other species of the animal kingdom is his dignity. Deprive a human of his dignity and he becomes little better than an animal. So, in addition to liberty and freedom, the subject and enslaved people of this world desire to be included in the doctrine "All men are created equal." Our Negro fellow citizens, who have enjoyed less than a century of freedom, seek something more than second-class citizenship, something more than "separate but equal" treatment. They are—under all of the principles which we hold dear, for which those whom we remember today gave their lives—entitled to integration and to equality in the fullest sense of that word.

Because the world has become smaller, it is more important that we be sincere, understanding good neighbors—not only to those people who live in areas contiguous to our country, but to all the peoples of the world. When we seek to help them we should do so for themselves, and not because we fear that the Communists will take them over. We must help other peoples with that some goodwill which we expect in return—with the same goodwill with which Lafayette, Kosciusko, Von Steuben, and the nations who sent them aided our revolutionary forebears in their quest. In our giving of aid, we must recognize the brotherhood of man as a verity. In this spirit only can we hope to achieve peace.

However, men cry "Peace, peace, but there is no peace." When the Communist cries "Peace," as he does continually, he does not mean what we think of as peace. He means peace on his terms. He means peace for his aggrandizement and enrichment. He means peace through the enslavement and at the expense of the liberties of free peoples. He means peace without God or religion.

It is my view that our Vice President's visit to the Soviet Union and his subsequent experiences there were a mistake. Likewise the action of President Eisenhower in inviting Premier Khrushchev to the United States was a mistake. The Congress apparently felt the same way, for it adjourned and scattered before the Premier arrived in this country.

In seeking those things which are best for the peoples of the world, for our beloved country and ourselves, we must never lose sight of the fact that:

We cannot compromise with evil. We cannot compromise with godlessness.

To do so is to take unto ourselves a portion of that evil and godlessness, because compromise is a give-and-take proposition. We must face the fact that there is no difference between fascism or communism. There is no difference between a National Socialist Government or a Union of Soviet Socialist Republics. They mean the loss of freedom, the imposition of a dictatorship by demagogues without God or humanitarian principles.

Let us not despair over the failure of the so-called summit conference. The Communists would not have yielded anything of value to the free world, and whatever concessions they might have made in the way of time or relaxing tensions would have been obtained at the cost of vital concessions on the part of the United States and its allies.

If recent history has taught us nothing else, it has taught us that the Khrushchevs, Stalins, Hitlers, and Mussolinis, and their kind regard anything in the way of a concession on our part as a confession of weakness. They would follow up concessions with more unreasonable demands—with more world tensions. Appeasement and concession can never satisfy their insatiable craving for the domination of more free peoples.

Let us rather heed the advice of Washington: "To prepare for war is the best means for promoting peace." The phenomenon of the past 6 or 7 years has been the substantial reduction in both our regular and reserve armed forces. Military doctrine tells us that a regular Defense Establishment may be reduced only at the expense of increasing the strength of the reserve defense forces. Let us hope that the Government will reverse this dangerous policy.

Theodore Roosevelt told us to "Walk softly, but carry a big stick." It is sad to note that in recent years we have been treading very loudly, talking of "massive retaliation" and going "to the brink of war", and while doing so have been carrying a small twig.

In the memory of those who have laid down their lives that the Nation might live, we have the duty and responsibility of making ourselves strong, both individually and collectively. We must continue to work, not only for a stronger, more effective national defense, but for the better mental and physical health of our people and the peoples of the world, for better and more adequate educational and recreational facilities for all. Let us seek to be better neighbors to all the peoples of the earth, both through our Government and through the facilities of the United Nations, thus working for a genuine, lasting peace.

On this day of solemn remembrance, let us renew our faith and our hopes for the future in the imperishable words of Abraham Lincoln:

"With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphan—to do all which may achieve and cherish a just and a lasting peace, among ourselves, and with all nations."

Interest in West Virginia and Her Economic Problems

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD I include a copy of my newsletter which was released today:

KEENOTES

(By Representative ELIZABETH KEE)

In recent weeks there has been a heartening display of interest in West Virginia and her economic problems. People with whom I have talked in Washington show a genuine concern over the lack of job opportunities, and a desire to be as helpful as they possibly can. It is this interest, I believe, which prompted the passage by the House of the area redevelopment bill which was designed to cope with economic problems such as exist in West Virginia.

This sincere interest on the part of people throughout the country can be a great asset in efforts to build a bigger and better West Virginia.

There is no question but that West Virginia is endowed with great natural resources. Our labor supply is unequalled. Our people are as productive and as capable as any in the Nation. Proof of this is found in the fact that West Virginians, unable to find jobs at home, are welcomed in industrial centers throughout the Nation.

Our great coal industry, with vast reserves still untouched, provides a base upon which the future can be built.

With all of its assets, there is no reason why West Virginia cannot enjoy a tremendous growth and development in the years ahead. The great task we face is to put our natural resources and assets to work, to create jobs for the men and women of West Virginia so they will not have to look elsewhere for employment. The area redevelopment legislation, which President Eisenhower has unfortunately vetoed on two occasions, would have provided the means whereby we could have gotten such a program started.

I hope that the people of West Virginia will not be too discouraged by this turn of events. A new administration which takes office next January will no doubt look with favor upon Federal cooperation to help solve the economic problems of distressed areas.

In the meantime, it is encouraging to note that groups and organizations within West Virginia are continuing their efforts to attract new industries of all kinds. We need diversified industry. The coal producing areas can support many new and varied plants. The men who no longer can find jobs in the mines will be able to work in these new plants.

Recently I was interested to read an article written about 4 years ago by Mr. Andrew W. McLaughlin, a Lewisburg, W. Va., businessman. In this article he proposed the creation of a $15 million commission which would finance the establishment of new industries and the expansion of promising small businesses which are encountering difficult times.

It was Mr. McLaughlin's contention then, as it is now, that West Virginia itself must take the lead in creating new job opportunities. The migration of our young people to other areas can be stopped only if we create jobs for them at home.

The proposal made 4 years ago by Mr. McLaughlin is valuable because it shows the people of the State are thinking seriously about our problems and are determined to do something about it. I am sure that in the months ahead we are going to hear many more interesting proposals for positive action—for ways of meeting the serious problem which our section faces.

AMERICANS COME TO THE HELP OF CHILE

The spontaneous outpouring of help for the people of Chile is typical of the American people. They did not wait for the Government to ask them to contribute money to help the homeless people of Chile. Instead, the people themselves took the lead.

Reports from Chile agree that the people, left destitute by a series of earthquakes, are deeply grateful to the people of the United States. I am sure that people-to-people help will create more lasting good will than all the Government action we might undertake. After all, people help each other out of the goodness of their hearts. Governments are often suspected of having an ulterior motive.

I wish more and more of our help to other people could be channeled through church and charitable organizations. In this way we would avoid many of the mistakes which have plagued the foreign aid program.

An Address by Col. William H. McIntyre, Society of American Legion Founders, Staten Island, June 5, 1960

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. DOOLEY. Mr. Speaker, Col. William H. McIntyre of 316 West 79th Street, New York City, a past president of the Society of American Legion Founders, Ltd., has won many distinctions in the course of his busy and constructive life, but one accomplishment in particular is most unique and praiseworthy even though virtually everything he has done both as a military man and a citizen merits commendation.

Colonel McIntyre has met all the dead of World Wars I and II and the Korean conflict who arrived at the Port of New York on their way to final interment. In fair weather and foul, at all hours of the day or night, he was on hand to pay his respects to the gallant members of our military who were swept away in the irresistible tide of arms. The dead from World War I who came into New York Harbor numbered 44,243, from World War II 159,267, and from the Korean conflict 21,197.

For his faithful and dedicated attention to a cause above and beyond his duties as a military man, Colonel McIntyre received a citation from Frank Pace, the Secretary of War, Henry Anderson, the Secretary of the Navy, and also from the mayor of New York City. His devotion to burial services at the Army base in New York City caused the Secretary of the Army to invite him to attend the ceremonies at Arlington Cemetery in 1958.

Colonel McIntyre's brother last an eye in the Pacific hostilities while serving in World War II with the 69th of New York, and his son Bill served with the 1st, 2d, and 6th Marine Divisions in World War II.

Colonel McIntyre is the only man who has attended every national convention of the American Legion since its inception. For 55 years he has been connected with the Metropolitan Life Insurance Co. in New York City, but is now retired.

On June 5 Colonel McIntyre delivered an address before an American Legion Post on Staten Island, N.Y. His remarks follow:

ADDRESS BY COL. WILLIAM H. MCINTYRE, SOCIETY OF AMERICAN LEGION FOUNDERS, STATEN ISLAND, JUNE 5, 1960

Mr. Chairman, dear friends and fellow Americans, I am not a stranger to this county. I have been here many times early in the forenoon and late in the afternoon, meeting the war dead that came from Europe or Africa. It will be 6 years ago tomorrow that I represented the national commander, Art Connell, at the 10th anniversary of the landing of our boys on D-Day on the Normandy beaches after which I visited all American cemeteries in Europe.

However, it does seem strange to come down from Manhattan when you have so many competent speakers in this district. Since I have received the invitation, I am pleased to be present on this occasion.

The American Legion has built soundly over four decades for the future good citizenship of America. The world's largest veterans' organization was born in Paris, France, in March 1919; the babe was taken out of the cradle in St. Louis, Mo., May 1919, and trotted out to march in the snow at Minneapolis, Minn., in November 1919. I was a part of all these gatherings. The youngsters grew and changed just as the American Legion, too, has changed. Forty-one years of dramatic service to God and country now lie behind the American Legion. What a beautiful story from the founding dates—you have given freely of your time and funds and can point with pride to the many activities of our organization which is now a household word throughout our great country.

The march of time has changed the entire world; we are living in a fantastic period that we call space age—but it has not dimmed our patriotic, civil, and social activities. The American Legion still uses its strength to promote the interest of the defenders of America.

It has championed adequate care of disabled veterans and the protection of war widows and orphans. It is my opinion that even a greater chapter of the American Legion history remains to be written, since after all we are only 41 years young. Today we are celebrating the dedication of a new building Cespino-Russo Post, a post well known in the great department of New York. Over the years its accomplishments in community service is history. The great future destiny of the American Legion does not lie in nationwide concepts, it rests upon the vision of Legionnaires everywhere, and what they can do locally as enthusiastic individuals and as organized groups for their hometowns. The key to this vision is the spirit of community service, for building good and constantly improved local neighborhoods is the most solid foundation for strong States and an invincible Nation. Community service actually includes everything the American Legion does—child welfare is community service, because through this activity we seek to enrich the child life of our hometown. Rehabilitation is community service, because it is designed to improve the veteran lives of the community. "Americanism." What is Americanism? It is an unfailing love of country; loyalty to its institutions and ideals; eagerness to defend it against all enemies; undivided allegiance to the flag; and a desire to secure the blessings of liberty to ourselves and posterity.

National security. Junior baseball, housing, employment, musical organizations—they are all community serving programs—each designed to improve some phase of hometown life. Your post has engaged in some of this work. In the spirit of community service lies the great promise of tomorrow for our membership. In fulfilling that promise, the American Legion can make its proud past a mere prelude to an immeasurably grander future. In the stirring days ahead there will be greater calls on the services of the American Legion and its loyal courage and realism. The Red "fifth columns" are still working underground. Time will not permit me to say here all that I have in mind. My presence here as a speaker is but incidental. We are participants in a special day of dedication, a rallying day—to rededicate ourselves to keep alive the memories of our comrades who gave all. Therefore, we should build American strength, and perpetuate our liberty and the last best hope for freedom for all the world.

In Support of Youth Appreciation Week

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. IRWIN. Mr. Speaker, the Senate has just passed a joint resolution, soon to be considered by this body, which would establish an annual Youth Appreciation Week.

I am very much in favor of this resolution and believe firmly this would provide a means whereby appropriate tribute can be paid to the vast majority of our young people.

I happen to be one of those who thinks that our juvenile delinquency problems stem from a small minority among our youth.

In support of this belief, I would like to enter into the RECORD as sort of proof positive, that, given a chance, the achievements of American youth are many, the following news story about a teenage dance band from Bridgeport, Conn., which this month will go abroad to entertain U.S. servicemen under Defense Department sponsorship.

The article follows:

BRIDGEPORT, CONN., May 21.—A Cinderella story—and a true one—of what American youth can achieve if given a chance will unfold next month when a teenage dance band from Bridgeport goes abroad to entertain U.S. servicemen.

St. Raphael's Band is well known to Bridgeport area residents who've danced to its tunes in ballrooms, parties, and public events.

The trip to Europe, sponsored by the Department of Defense, will give youngsters and adults of other lands a chance to learn the band's remarkable history.

An ensemble of 17 musicians and a vocalist, aged 14 to 19, the band was actually created as the result of trouble and a young priest's conviction about young people.

It was about 3 years ago in Bridgeport's north-end section, where St. Raphael's Church serves a predominantly Catholic population, that Rev. Louis A. DeProfio took a long, hard look at what was happening to teenagers of the parish.

The north end had no adequate recreation facilities or programs and teenagers had little to do but loiter in leisure time. St. Raphael's had no school and could offer only a meager program.

Shortcomings of the section were noted elsewhere in the city. Juvenile court records contained a growing number of delinquency cases.

As assistant pastor of the church and executive director of its Catholic Youth Organization, Father DeProfio knew the time had come for a real test of a personal conviction—that youngsters are, by nature, religious and not bad.

"They were getting into mischief and worse," he recalled recently. "And we were losing them from the church. I believed we could change things by offering them a constructive program."

His program was a dance band, not a big one and not one comprised of just the best teenage musicians but one in which the youngsters could improve themselves while jointly becoming better as a group.

Father DeProfio enlisted a well-known local musician, Daniel DeMarco, as teacher and director and called a rehearsal.

"It wasn't much to start with," he laughed. "Just one boy with a trumpet, one with a trombone, and one with a saxophone. But I got parents to help and in 3 months we had 17 players."

Under the baton of DeMarco, who teaches instrumental music at the University of Bridgeport, the youngsters become good—good enough to play at neighborhood dances.

They got better. And demand for their services—they specialized in ballroom dance music—began coming in to St. Raphael's. They even played during Bridgeport's annual Barnum Festival. They played at local ballrooms, clubs, parties.

The band was good but Father DeProfio and DeMarco shared a single question: "Why stop here?"

To improve meant study and there was no better place for study locally than at the university. Who ever heard of sending teenagers to college? That didn't bother the priest and the band's director. They enrolled the youngsters in a summer course at the university.

Prof. Earl Sauerwein of the university's music department taught the youngsters music theory for 2 hours twice a week and DeMarco taught them for an hour a week.

"They did excellently and the band was greatly improved," Father DeProfio said. During the summer of 1959, the band played again at the Barnum Festival, most of its members also played with the university's community orchestra and concert band. They appeared at high school and college dances. "Every single member has become a soloist in his instrument in his respective high school band."

All the time, other programs of St. Raphael's CYO were growing and the delinquency rate in the area was sharply dropping.

The young priest and the band's director were no ones to limit horizons, however.

"We read about Louis Armstrong and all those other adult bands going overseas as musical ambassadors and we wondered if we might arrange to go on a tour during the summer," said Father DeProfio.

Early efforts met with redtape and reluctance, even though the young band could serve a dual function of showing foreigners what American youth can do as well as bringing good will.

Father DeProfio contacted his Congressman, Representative DONALD J. IRWIN. It took time. It took letters. It took telephone calls. It took a taped audition of the band.

The audition tape, incidentally, was made by Robert Blake of Rowayton, Conn., a close personal friend of Mr. IRWIN and a professional in the field.

Father DeProfio gives much of the credit for the success of the audition tape to Mr. Blake, who handled the taping as a personal favor to the Congressman.

"When Congressman IRWIN called us and told us he had received word that the Defense Department would sponsor a 4-week tour, it was a dream come true," the young priest said.

The Department had agreed to take the 17 bandsmen, vocalist, and Demarco and his wife to American installations for 4 weeks, starting about June 26.

"We had teenage trouble here and now we don't," Father DeProfio said. "Maybe we can show others here and in Europe that if you give teenagers a chance they'll surprise you with what they can do just like our teenagers did."

Wisconsin: Land of Opportunity

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 6, 1960

Mr. WILEY. Mr. President, Wisconsin—a Badger State of plenty, of great people, of opportunity—has a bright future.

Blessed with fertile soil, rich resources and a strong, creative citizenry, the Badger State holds great promise for economic progress and a better life for our people now and for the generations of the future.

Justifiably, Wisconsin has traditionally been known as America's dairyland, as the No. 1 milk producer in the Nation, with an almost 18-billion-pound output of fluid milk annually. Wisconsin also runs first in the production of cheese, providing about 50 percent of the Nation's production, or more than 615 million pounds annually.

Abounding in natural beauty, Wisconsin also has a tremendous out-of-door heritage. This includes unique glacial moraines, 10,000 miles of trout streams, 8,500 lakes abounding in sturgeon, muskie, pike, bass, perch, and other fish, opportunity for hunting, recreational areas, including 312 parks, 7 State forests, and over 1.4 million acres of national forest lands and many other historical and scenic sites.

As a land of opportunity, our State also contains: A strong economy; a healthy program of industrial expansion; good transportational facilities; a bright outlook for expanded trade and commerce—particularly as a result of the St. Lawrence Seaway; a splendid educational program, including, among other fine institutions, the world-famous University of Wisconsin; and a wide vavariety of other marks of progress and "open doors" of opportunity in this land of promise.

Recently, the New York Times published a special section of its Sunday paper entitled, "On Wisconsin: A State of Power and Plenty." The edition is sponsored and prepared by the Wisconsin Departments of Resource Development, Conservation and Agriculture.

Overall, the special Wisconsin issue is a splendid review of Wisconsin as America's dairyland and agricultural giant, an industrial land of opportunity.

Reflecting the way in which the State's motto "Forward," is realized—in its outstanding programs—I ask unanimous consent to have printed in the Appendix of the RECORD, the following articles:

First. "Wisconsin Prides Itself on Title of 'America's Dairyland.' "

Second. "Resource and Industrial Development," by David Carley, director Wisconsin Department of Resource Development.

Third. "St. Lawrence Seaway: Gateway to the World."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

WISCONSIN PRIDES ITSELF ON TITLE OF "AMERICA'S DAIRYLAND"

Visitors to Wisconsin are always intrigued by the "America's Dairyland" license plate on cars they see driven by citizens of the Badger State.

This public pride in being the dairyland of the Nation is well justified—especially when one looks into the record in dairying that Wisconsin has attained during the years.

MANY FIRSTS

Wisconsin's list of firsts in this vital field of helping to feed the world is an impressive one. Wisconsin ranks first in the Nation's milk production, producing almost 18 billion pounds of the fluid that is so vital to life itself. Wisconsin ranks first in the Nation in the production of cheese, providing some 50 percent of the Nation's cheese in the staggering output of more than 615 million pounds annually. That's seven times more cheese than produced by the next closest State. In fact, Wisconsin makes over 100 varieties and 18 main types of cheese, and leads the Nation in the production of such individual types as Cheddar, brick and munster and Italian.

Moving along to other dairy products, Wisconsin also leads the Nation in the production of condensed skim milk (both sweetened and unsweetened), condensed whole milk (sweetened), powdered whole milk for human consumption, powdered whole milk and powdered whey. In butter Wisconsin produces some 270 billion pounds annually, or 21 percent of the Nation's supply.

Dairying in Wisconsin has many "natural" reasons for success. Natural advantages of climate and the fertile rolling land produce conditions ideal for forage crops and good grazing land for dairy cows. The highly developed skills and techniques of producing Wisconsin cheese are attained by generations of cheesemakers having passing these talents down through the years.

Wisconsin, as noted earlier, produces a wide variety of cheeses. This specialization by variety has been developed to the maximum.

OLD WORLD FLAVOR

For example, in Wisconsin can be found replicas of almost every Old World community. The Swiss settlements produce Swiss cheese, with the production in the hands of descendants of Switzerland. Likewise with Italian, German and Dutch types. This specialization results in flavorful, high-quality cheese with the same wonderful characteristics that were found in the cheese first made in the countries of their origin.

Another vital factor in the dairying success of Wisconsin is the modern, up-to-date animal health program which has maintained high standards among the cattle in the State along with rigid dairy and milk handling techniques and other factors which assure the continued supply of pure milk from which Wisconsin cheese is made.

Wisconsin's 100,000 dairy farms produce almost 18 billion pounds of milk annually. Of this output, 29 percent is used in making butter; 27 percent goes into American cheese, and 37 percent is used in all of the other cheese in the State.

THE WISCONSIN STORY: RESOURCE AND INDUSTRIAL DEVELOPMENT

(By David Carley, Director, Wisconsin Department of Resource Development)

On, Wisconsin! The words in the title of a famous "fight" song of a Big 10 University are also part of the heritage of a great State. To us, On Wisconsin! also means an unrelenting effort to develop, to the utmost potential, those resources which we have so bountifully. It is with this in mind that this special section is so entitled.

SOMETHING DIFFERENT

There is something different about this Wisconsin supplement in The New York Times. Although its basic appeal is directed toward these industrialists seeking an outstanding site for a new or expanding industry, these additional observations should be made.

First, this section is sponsored by 3 of Wisconsin's departments of State government; the department of resource development, including divisions of Industrial development, state planning, and research; the department of conservation and the department of agriculture. This kind of sponsorship indicates the interest the whole State government of Wisconsin has in promoting the advancement of the State.

Secondly, many of Wisconsin's local communities, some very large, and a few quite small, are represented here. Wisconsin has a long history of close cooperation between the local communities and the State itself. The "balance" among those advertising in this special section—industries, financial institutions, newspapers, utilities, local communities and the State itself—is representative of the relationship that prevails in the Badger State.

Thirdly, and we believe uniquely, Wisconsin, in the description of its resources, gives great weight to its unsurpassed educational system. The world-famous University of Wisconsin with its outstanding extension divisions in adult education and agriculture is an integral part of that which makes this State an outstanding one as a choice in which to locate a new manufacturing plant or to bring up a family. Our vocational school system enjoys an outstanding reputation as well. That story, too, is included.

We think that you will enjoy this special supplement on Wisconsin. It is the largest and the most comprehensive section published to date by The New York Times for any State in the North Central area. We are proud to offer to the Nation our story of resource development.

WISCONSIN, A STATE OF INDUSTRIAL GROWTH

In 1959, 68 new manufacturing firms were established in Wisconsin. In this same period over $300 million was committed for permanent capital expenditures. More impressive even than the number of new firms is the rate of expansion of present Wisconsin firms. Two hundred and thirty firms completed, have been under construction or announced expansion in 1959 alone. New plant construction exceeded 7 million square feet in this same period. These are impressive indications that industry is looking to Wisconsin as a State prepared for great industrial and commercial growth in the decade ahead.

Wisconsin has been known as America's Dairyland for many years. We are justifiably proud of the title. And food production is big business in Wisconsin, surpassed only by machinery manufacturing. However, the transition from a basically agricultural economy to one of manufacturing, with great support from the recreational and agricultural segments, has been made and Wisconsin now ranks as one of the Nation's larger industrial States. The State's high per capita income, plus its geographic location in the world's greatest industrial complex, the Midwest, has made it a choice site for market-oriented industry. With new technological advancements in raw material and finished-product transportation facilities, Wisconsin is competing most favorably with other States that may have more abundant natural resources but less superior labor supply and capital resources.

The department of resource development

The State of Wisconsin, in 1955, created a division of industrial development to assist in the development of the economy of the State and its local communities. The 1959 legislature, in creating the department of resource development, alined with industrial development division with the State Planning Division. The purpose was to bring the plant location, economic research and industrial promotional activities of the State directly in line with the planning goals of the State and its regions. The integration of an action agency on the one hand with a staff agency on the other has brought outstanding results already, we believe. Our planning and research staff has been able to assist local communities with industrial development problems that had their beginnings in poor planning. In other instances, working with industrial park developers we have been able to show adequately the needs of potential industry so as to preclude planning problems before they arise.

The development of good industrial zoning principles and practices in local communities is a very important part of the work of our staff. Again, the close cooperation of our planning specialists with our plant location engineers makes a difference in assisting a community to prepare for industial location.

The important concept of regional planning, so long neglected in many of our States, is making headway in Wisconsin. Industrial needs such as adequate labor supply, superior transportation routes, closer markets, recreational facilities for employees and general livability are all provided better under a concept of regional planning. Wisconsin, recognizing its capacity for potential economic development, is taking the lead in turning from restrictive and merely local planning to regional and statewide planning.

Research facilities

The private and public research facilities in Wisconsin, always available to industry, are second to none in performance. The Badger State has long been famed for its historic research in economics, biochemistry, and medicine. Now extensive research investigations undertaken by private industry in electronics, machine testing and foods complement older research institutions. Public research facilities such as those in the industrial commission, the department of resource development, the University of Wisconsin and the taxation department are regarded highly and are prepared to serve industrial and commercial research needs in every manner necessary.

Community programs for industrial development

Wisconsin communities are prepared to assist in new or expanding industrial development projects immediately. We have over 200 local industrial development corporations, more than any other State, we believe, and indicative of local initiative and desire for industrial growth. Most of them are prepared to meet a good part of the financial needs of the new or relocating industralists with which they come in contact. All of them have made intensive surveys of labor supply, raw materials, sites, utility facilities, and, in many cases, markets for those industries wishing to have first-hand information. Many of our local chambers of commerce or industrial development groups have purchased and carefully laid out industrial sites completely ready for prospective industrial building.

ON, WISCONSIN

We hope it is apparent by now that living, working and playing in Wisconsin is the best there is. The job of the department of resource development is just what its name implies. We are here to assist in the maximum development of the many resources of a great State. Resources to us mean people, their jobs, their education, their welfare and their communities. Our department staff will be most happy to assist any industrialist who seeks a location where good markets abound, where labor is of the highest integrity and where community attitudes are conducive to business growth and prosperity.

An executive of Wisconsin's largest employer, American Motors Corp., said this about Wisconsin:

"And certainly we enjoy the kind of people we work with in Wisconsin. Americans are pretty good people in every part of the country but there is an attractive wholesomeness to the Wisconsin human atmosphere that is not surpassed anywhere. The education level is high, and the dash of cold in your winter tends to keep the South Sea beachcomber spirit in check."

ROY D. CHAPIN, Jr.,
Executive Vice President and General Manager, American Motors Corp., Governor's Conference on Industrial Development.

ST. LAWRENCE SEAWAY: GATEWAY TO THE WORLD

The opening of the St. Lawrence Seaway in 1959 helped move Wisconsin manufacturers and agriculture even closer to world markets.

Seaway cargo was handled by five of Wisconsin's many commercial ports and harbors on Lakes Michigan and Superior.

Some Wisconsin ports had been planning and building for the St. Lawrence Seaway long before the seaway became a reality. Foreign ship captains praised the efficient cargo handling at Wisconsin's ports resulting from careful planning and experience in handling overseas commerce over the old St. Lawrence Waterway.

In addition to its seaway ports, other Wisconsin port cities handle large tonnages of Great Lakes bulk movements such as coal and petroleum for industrial uses.

FOURTEEN KEY PORTS

Wisconsin's 14 lake ports lie at the western end of the Great Lakes waterway system which was opened to deep-draft world shipping by the seaway. Oceangoing ships, carrying cargo to and from all parts of the world, bring to Wisconsin all the advantages of water transportation, despite the State's position 2,000 miles inland from the Atlantic Ocean.

The major ports serve as convenient transfer points for a vast and rapidly developing region extending 1,000 miles to the West, a region that includes all or part of 15 States and 3 provinces of Canada.

Because the seaway makes railroad transportation doubly important, it is vital that Wisconsin have ready access to rails. Twelve railroads, operating a total of 39,000 miles of right-of-way, connect the 14 Wisconsin port cities with lines that lead to the West. All told, trunkline railroads operate about 6,200 miles of right-of-way within Wisconsin.

Linking Wisconsin ports with Michigan cities are three other railroad companies which cross Lake Michigan with their car ferries. There vessels, which carry whole trains of freight cars, connect such Wisconsin cities as Kewaunee, Manitowoc, Marinette, and Milwaukee with Michigan's lower peninsula. Many Wisconsin railroads also have developed "piggyback" services, an operation by which highway trailers are carried on railroad flatcars. The use of this new concept in transportation has proven economical in many instances, especially over a long-distance route.

To handle the increased trucking that has come with the emergence of the St. Lawrence Seaway is a 2,200-mile arterial system of most used highways, including 482 miles on the National Interstate and Defense Highway System.

Freight is carried to Wisconsin port cities by nearly 100 common carrier truck lines. In addition, many more contract carriers and local cartage companies have highway cargo equipment available at these cities.

TOP ROAD SYSTEM

To assure top conditions of these vital roads, the Wisconsin State Highway Commission spend as much as $100 million a year in State funds, raised entirely by road-user fees and taxes. As much as $65 million in Federal highway aids also goes into Wisconsin highways annually. Equally important is the system of Wisconsin county trunk highways, acknowledged as one of the best in the Nation.

Because shipment by air has become extremely important to manufacturers. Wisconsin can pride itself on excellent air service in and out of the State. Wisconsin now has 71 public airports, used by more than 200 Wisconsin businessmen who operate their own aircraft.

Five of the fourteen Wisconsin lake port cities have regularly scheduled airline passenger service, while the others are within an hour's driving time of scheduled service airports. Milwaukee is served by seven airlines which provide fast and frequent connections to points all over the world. In addition, Wisconsin is the focal point of the Nation's largest local service airline, which links the smaller communities with points throughout the United States and overseas.

Truly, with the completion of the St. Lawrence Seaway, it can be said that "the world is coming to Wisconsin."

Salary Increases for Our Postal Employees

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. WOLF. Mr. Speaker, in connection with pending legislation to provide salary increases for our postal employees, I wish to insert into the Appendix of the RECORD a series of resolutions adopted by the Iowa Chapter, National Association of Postmasters of the United States at its annual convention in Burlington, Iowa, on May 15, 16, and 17, 1960:

PARTIAL TRANSCRIPT—REPORT OF THE RESOLUTIONS COMMITTEE, ANNUAL CONVENTION, IOWA CHAPTER, NATIONAL ASSOCIATION OF POSTMASTERS OF THE UNITED STATES, MEETING IN BURLINGTON, IOWA, MAY 15, 16, AND 17, 1960

RESOLUTION 6

Resolved, That the Iowa Chapter of the National Association of Postmasters desires to express our appreciation to the Congress of the United States for their cooperation with the national officers of the National Association of Postmasters.

RESOLUTION 9

Whereas the 2½-percent increase in salary to postmasters in level 7 and above was voted as a temporary increase for a 3-year period: Be it

Resolved, That the Iowa Chapter of the National Association of Postmasters of the United States urge the enactment by Congress of a law making this temporary increase a permanent measure; be it further

Resolved, That the secretary of the Iowa Chapter be directed to mail a copy of this resolution to Postmaster General Summerfield, and to the Iowa congressional delegation.

RESOLUTION 10

Whereas the 10-percent increase in salary for all postmasters, including all levels as well as postmasters of the fourth class, as urged by President Wehking in his appearance before the various congressional committees, has the support of the Iowa Chapter of the National Association of Postmasters: Be it

Resolved, That the Iowa Chapter of the National Association of Postmasters of the United States urge the enactment by Congress of a law granting this increase in salary; be it further

Resolved, That the secretary of the Iowa Chapter be directed to mail a copy of this resolution to Postmaster General Summerfield, and to the Iowa Members of the Congress of the United States.

Following our previous precedent, we are happy to continue to support the real needs of our postal workers.

Nixon: A Promising Start

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. MICHEL. Mr. Speaker, Vice President NIXON, without campaigning at all, has made an impressive showing in the Republican presidential primaries. Indeed, the totals he has rolled up in Illinois, Pennsylvania, Indiana, Oregon and other States have done much to dispel the oft-repeated statement that he is unpopular with the rank-and-file voters—that he cannot win. Unopposed in most of these primaries, with no contest to bring out the Republican vote, Mr. NIXON, whose name was not on the ballot in Nebraska, has exceeded the primary votes given President Eisenhower in 1956 in many States as indicated in the statistics which I include in my remarks.

The complete returns from the Oregon primary have not been released as yet and therefore are not included in the primary preferential vote tabulations which follow. However, with 75 precincts to report in Oregon, NIXON's total closely approaches the 231,000 figure obtained by President Eisenhower in 1956 as compared to only 142,000 for Senator KENNEDY. Following the vote totals, I insert two editorials from the Peoria Journal to emphasize the point I made above:

The primary preferential vote

[In thousands]

		NIXON	KENNEDY
Mar. 8	New Hampshire	65	43
Apr. 5	Wisconsin	340	476
12	Illinois	783	[1] 35
26	Massachusetts	54	96
26	Pennsylvania	954	[1] 175
May 3	Indiana	402	352
10	West Virginia		219
10	Nebraska	[1] 71	78
	Total	2,669	1,474

[1] Write-in votes.

The Nixon record (Democrats) from Apr. 12 to May 10, 1960

		Humphrey	Johnson	Kennedy	Stevenson	Symington
Illinois	Apr. 12	4,283	442	[1] 34,332	8,029	5,744
Pennsylvania	Apr. 26	[1] 14,000	[1] 3,000	[1] 175,000	[1] 28,000	[1] 6,000
Massachusetts	do	[1] 946	[1] 296	[1] 95,914	[1] 4,505	[1] 414
Indiana	May 3			352,048		
Nebraska	May 10	[1] 2,140	[1] 611	78,300	687	[1] 3,196
Total		21,369	4,349	736,594	41,221	15,354

[1] Write-in votes.

The Nixon record (Republican) from Apr. 12 to May 10, 1960

		Goldwater	Rockefeller	Nixon	1956, Eisenhower
Illinois	Apr. 12		[1] 442	782,840	781,710
Pennsylvania	Apr. 26		[1] 11,005	954,205	951,932

Indiana	May 3			401,884	351,903
Nebraska	May 10	[1] 916	[1] 1,564	[1] 71,463	102,576
Total		916	13,191	2,264,553	2,188,121

[1] Write-in votes.

[From the Peoria Journal Star, May 24, 1960]

NIXON: A PROMISING START

RICHARD NIXON hit the campaign trail in earnest last week, and there were plenty of signs he knows what he's up to.

NIXON speaking for NIXON instead of for Eisenhower produced more sparks than a lot of political sages had anticipated. There were no indications that the Vice President loses his platfrom impact when he speaks for himself instead of for the President.

In general, reaction was so good it appears that the policitians—and the Nation—may have been underestimating NIXON's campaign capabilities as a candidate in his own right.

A Christian Science Monitor writer, birddogging the Vice President through New York State, went so far as to call the response there "a ground swell of approval for Mr. NIXON."

This may be a bit extreme, but there seems little doubt that NIXON made political hay in the Empire State and probably buried deeper what chances remain for Gov. Nelson Rockefeller to the the Republican presidential nominee.

Speaking before varied groups, NIXON appeared calmer, more relaxed and more assured. He gave an impression of warmth,

and obviously is working to overcome the image of coldness and gruffness which his opponents exploit in such slogans as "Tricky Dick Nixon."

The Vice President even succeeded in charming the women, an ability not many had foreseen for him. And the machinery that accompanies him showed signs of careful tuning and oiling. Mrs. Nixon played well the role of the perfect candidate's wife, and his aids were alert and efficient without being obtrusive.

It's true that events of NIXON's first week of intensive campaigning broke in a manner to benefit him. Yet to a degree he made his own breaks.

The Paris crisis insured that NIXON's platform words would be listened to carefully. But it was his own analysis of the situation, his decision of what to emphasize and how to say it, that made his words good listening. And good politics.

One week doesn't make a campaign, and it remains to be seen how the Vice President's platform-and-picnic personality stands up in the rough weeks ahead.

NIXON faces another situation this week right here in Illinois. He'll be in Melvin for "Les Arends Day", honoring the 17th district's longtime Congressman. (See below.) Let's see how the candidate fares in the Midwest.

[From the Peoria Journal Star, May 29, 1960]

NIXONS MAKE PERSONAL TOUCH PAY ON VISIT TO ILLINOIS

(By Robert J. Nelson)

MELVIN, ILL.—When Dick and Pat Nixon enter the political marketplace, they spend the coin of the realm. And they get value received.

As campaigners, they shape up as pros who have learned well the lesson that in securing votes, you can't beat the exchange rate of the personal, sincere touch.

There seems little doubt but what they made a good impression at "Les Arends Day" here Friday.

They flashed no new tricks, but those who saw them agreed they use the old ones well.

Even though bad weather hurt the turnout, the Vice President's first foray into Illinois in the new, intensified phase of his campaign can probably be called a pretty good success.

It was obviously a friendly crowd, being in the strongly Republican 17th District. People came prepared to like the Nixons. But some acted like they liked them better than they had planned.

You can't help noticing how many people came away with something more than a handshake or a hello.

Dale Moore, Woodford County school superintendent from Eureka, is an example.

He found himself walking besides Mrs. Nixon as the crowd moved from the high school to the Arends home. They talked about schools.

"She made the same remarks he did in his speech," Moore said, "She said if things go wrong this fall, she may be back teaching school. Said she'd contact me about a job."

This is the kind of conversation voters remember.

Or take David Davis, State senator from Bloomington.

"My reaction couldn't help being good," he said "LES ARENDS introduced us, and the Vice President said, "Say, didn't your grandfather sit on the Supreme Court?"

As an onlooker observed—and Davis readily admitted—the Vice President's personal intelligence is working better than the country's.

A handful of Bradley University students were among a group of "Illinois College Youth for NIXON" who got close enough to talk to the NIXONS.

"He talked about Bradley basketball," reported Phil Reed, president of the BU Republican Club. "And reminded us that he holds an honorary degree from Bradley."

And at NIXON'S press conference, when a reporter identified himself as being from Minonk, the Vice President took time to point out that he probably was one of the few people in Washington who had been in Minonk and knew where it was. He was there as a Congressman.

The overall effect of all this is impressive. Even those who look upon it purely as politics admire the Nixons for their skill at it. And they like the air of sincerity.

This is something you could hear again and again about the Nixons at Melvin—"They're so sincere" or "They're so genuline." As one man put it, "They seem to be plain folks, just like the rest of us."

This is especially interesting because just before he came to Illinois, during the time he was beginning to stump in earnest through New York State, some political analysts were saying the Vice President was working hard to create an impression of warmth and friendliness; trying to overcome an image of coldness and brusqueness which some seemed to feel was dogging him.

If he truly is working in this direction, he gave signs in Melvin of succeeding.

The Vice President seemed relaxed and jovial. He joked and kidded and looked at least part of the time as though he was really having fun. He went immediately to a first-name basis with Gov. William Stratton and other officials who were there.

He quipped that he, Stratton, and ARENDS had "all married above ourselves—at least in looks."

The only time he showed signs of being less than enthusiastic about campaigning in Melvin, Ill., was in the reception line. But anybody would find it hard to keep smiling when several hundred persons shake your hand in an hour.

Mrs. Nixon didn't try to keep smiling all the time. She looked, by turns, amused, bantering, mildly astonished, quizzical, and filled with wonder. This variety wore well.

National Chiropractic Profession Sponsors Chiropractic Day, September 18, 1960

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. FLOOD. Mr. Speaker, I would like to take this opportunity to call to the attention of my colleagues a special observance to take place in September of this year. The chiropractic profession, which is the Nation's second largest profession dedicated to healing, will observe its annual Chiropractic Day.

Because the chiropractic profession deals with one of the most important things to each of us—sound and good health—I think the value of this annual observance should not be overlooked.

On September 18 of this year, chiropractors throughout the United States, Canada, and a number of other countries will observe the 65th anniversary of the discovery of chiropractic by the late Dr. Daniel David Palmer.

As one example of the impressive impact that the value and importance of chiropractic has made in our society over the years, I call to the attention of my colleagues the services established by the Sordoni Enterprises of my congressional district that employs no fewer than 14 doctors of chiropractic to administer to the medical needs of its thousands of employees. In my judgment, Mr. Speaker, such an arrangement as this truly reflects the immense value of chiropractic in the modern-day industrial and business world and, what is more, aids greatly in the establishment of a pleasant relationship between employer and employee, upon which success is really based.

In connection with this observance, I wish to submit for the RECORD a statement by Dr. Emmett J. Murphy, director of industrial relations, National Chiropractic Association, Washington, D.C., immediately following which I include a pamphlet entitled, "Chiropractic in Industry," published by the Honorable Andrew J. Sordoni, president and founder of the Sordoni Enterprises, with main offices in Wilkes-Barre, Pa.:

STATEMENT BY DR. EMMETT J. MURPHY

Throught the Nation and world, chiropractors will hold observance of Chiropractic Day on September 18, with the fullest understanding that because of the freedoms enjoyed in the Western World, a new profession can gain public acceptance on its merits as has the profession of chiropractic in a short 65 years.

A fresh concept in the art of healing based upon the neurological, physical, and mechanical approach; was given to the world 65 years ago. For it was in 1895 that Dr. Palmer brought to the modern world the benefits of chiropractic principles.

After exhaustive research, Dr. Palmer in 1895 introduced to our world these principles which have been carried on by chiropractors who are devoted to the prevention and treatment of disease and to the promotion of public health and welfare.

The progress of chiropractic was forcefully illustrated a few years ago when the profession became the subject of an objective factfinding study conducted by the Public Affairs Institute of Washington, D.C., a nationally known nonprofit research organization.

This study has been compiled under the title of "The Present Day Doctor of Chiropractic" and it represents the latest facts of the profession as gathered by the competent institute staff under the direction of Dr. Dewey Anderson (A. B., M. A., Ph. D., Leland Stanford University).

I think that a statement from this scientific study of our profession is particularly pertinent as an explanation of our contribution to the general health and welfare of all Americans. This is the statement from The Present Day Doctor of Chiropractic:

"In these modern days of our high-speed nerve-exhausting living, chiropractic is fast becoming an indispensable element in helping people maintain good health."

Regarding the scientific study itself, Science Sidelights comments that "since every profession is built upon a body of knowledge which has developed over a period of years. Dr. Anderson correctly appraises chiropractic in the light of certain concepts which are regarded as well accepted by the public at large."

A well-known national news column, Washington Window, reports that "the fastest growing of the healing arts in the profession of chiropractic which is making a major contribution to the health of a constantly increasing number of patients and their families."

This rapid growth of chiropractic—and its far-reaching effects on our national well being—is dramatized by Dr. Anderson himself. In one phase of his study of chiropractic, he said:

"From a handful of patients somewhat more than a half a century ago who came to Dr. Daniel David Palmer (chiropractic's discoverer) and got relief, those being cared for by today's chiropractors number many millions. And every year the number swells as chiropractors become more proficient and as their satisfied and healthy patients spread the word. Here is the best and final test of an emerging profession seriously serving the public."

The rapid acceptance of this science of healing in the past 65 years leads us to inquire of the standards in use today. And extremely exacting standards they are found to be.

Chiropractic colleges are required to give 4,000 academic hours in a standard 4-year course to obtain accredited ratings. A basic course of 4,400 hours is recommended. Up to 2 years of professional (college) education is required by 26 State chiropractic laws of licensure.

The following salient facts concerning public acceptance of chiropractic need to be considered:

1. Chiropractic is the second largest healing profession in America. It is classified as one of the four major healing professions, along with medicine, dentistry, and osteopathy, by the Executive Office of the President of the United States, Bureau of the Budget, Washington, D.C.

2. Five hundred and twenty-five insurance companies recognize claims for services rendered by the chiropractors.

3. The U.S. Civil Service Commission recognizes certificates of illness for leave purposes signed by doctors of chiropractic, which means that all Federal agencies are directed to recognize such certificates.

4. Chiropractic care for veterans has been endorsed by the American Legion, Veterans of Foreign Wars, Disabled American Veterans.

5. Major unions of Federal employees have endorsed legislation to widen the use of chiropractic in Federal compensation work.

6. Scores of employers provide regular chiropractic treatment for their employees.

7. The Railroad Retirement Board accepts statements of sickness signed by chiropractors.

Chiropractic Day—on September 18, 1960—will bring to national attention the present record and the future plans of our profession. In conclusion, a word from the Present Day Doctor of Chiropractic should be mentioned here:

"The profession itself is so ardent about its future that nothing can stop doctors of chiropractic from being devoted public servants and becoming better ones with the passage of time."

The remarkable effectiveness of chiropractic methods in health care has won for chiropractic a permanent place in the family of health sciences, and in the hearts and homes of suffering humanity.

CHIROPRACTIC IN INDUSTRY

Each year, many inquiries reach me concerning my personal experience with chiropractic therapy as I have employed its practice within the 14 organizations comprising the Sordoni Enterprises. To answer some of the questions most frequently asked, I have prepared this pamphlet.

Twenty-six years ago I was introduced to the effectiveness of chiropractic when I became desperately ill—so seriously, in fact, that few held any hope for my recovery. Only two doctors refused to despair, one, a medical doctor, the other, a chiropractor. Through their combined efforts, my recovery was effected. Such was my introduction to chiropractic, and no lesson could have been more dramatically presented.

Since then, my study of chiropractic's benefits has been most thorough. Not only have I been able to retain my good health and that of my immediate family through chiropractic treatments but also, in introducing chiropractic to my employees, have given them good health, the primary component of happiness and productivity. I saw how regular chiropractic treatments made corrective adjustments before effects of mal-positioned vertebrae could grow to serious proportions.

Enlightened industry generally attempts to see that its employees are given good medical services. Indeed, our organizations take very good care to see that our employees get the best medical care available. But, I feel that I would be very remiss in my duty to my employees—to those for whom I hold so grave a responsibility—if, knowing what I do about chiropractic, I failed to provide its benefits for them so far as possible and practicable.

Accordingly, in the same manner as preventive maintenance is employed on the thousands of pieces of our organizations' equipment, so too was Chiropractic made a form of "preventive maintenance" among our personnel. Certainly a piece of equipment may be replaced but not a man's loyalty, friendship, skill, health, or his life.

With the introduction of chiropractic in our industries, treating rooms and facilities were installed in most of our enterprises and our employees were encouraged to avail themselves of treatments provided by 14 practitioners, twice weekly, during working hours. These 14 doctors are, of course, established in the various areas where we operate. If necessary, additional treatments are provided at the doctors' offices after working hours. No charge is made to the employee for this service.

The Sordoni Enterprises are aggressive, busy organizations. Our construction company has dozens of contracting jobs throughout the East; our Sterling Hotels System comprises six hotels; the others include a telephone company, an electric light company, a manufacturing plant, a grassland dairy farm, a tree surgeon company, and a charitable foundation. We employ teamsters, linemen, laborers, steel workers, concrete workers, dairymen, managers, secretaries, waitresses, chefs, bakers, dishwashers, and many other skilled and unskilled workers.

Our payroll reaches as much as $50,000 per day and from $10 to $20 million per year. You can readily appreciate that, with so many employees, we have our share of industrial accidents and sickness. Because of the number and diversity of our employees we feel well qualified to form a fair appraisal of the value of chiropractic in industry.

The cost of chiropractic treatments in our Sordoni Enterprises has been paid for time and again simply through increased employee efficiency, mental and physical. We had achieved a form of preventive maintenance; absenteeism due to illness was considerably lowered and efficiency was greatly increased. Employees who formerly were easy cold victims found that the common cold could be pretty well prevented by availing themselves of regular chiropractic adjustments. With business competition as keen as it is, man-hours lost in unproductive sickness are a most important factor in our equation of business production.

Chiropractic overcame many instances of serious illnesses. For example, an employee suffered severe migraine headaches for several years. After a series of chiropractic adjustments, the recurring headaches were a thing of the past. Again, its marvelous cures were presented in the case of one of our shovel operators who developed severe pains in his arms which very shortly resulted in a complete paralysis of both arms. Adjustments over a time effected his complete recovery and use of his arms. Today, he is back on the job as good as ever, grateful to chiropractic and to the company for making the treatments available to him. Everyone else had given his case up as hopeless.

The schedule of fees is generally a negotiated percentage of the chiropractors' customary charge based on the volume of adjustments involved at specified and periodic times. The chiropractors are able to widen their acquaintances and gain thereby a broadened practice.

Based on my experience, I firmly believe that chiropractic is the best method of coping with certain health and accident problems in industry. Many insurance companies are recognizing the benefits of chiropractic treatment and are paying for them. This is most significant as is the fact that State workmen's compensation acts are more and more recognizing the need for chiropractic services. These bodies form their decisions and base their policies on statistics, not on sentiment. Through chiropractic, they've realized tremendous savings.

As thoroughly as I am sold on chiropractic, I am as deeply convinced of the value of the other healing sciences. In each area of our operations we also have on call at least two medical doctors and, in no way, do these sciences conflict, but rather, supplement each other.

Medical doctors, surgeons, and chiropractors all have their specific attributes. Each must work hand in hand with the other. Coordination and cooperation between the health sciences is an absolute necessity. Only a correlation of the various health sciences and lay understanding of the jurisdiction and limitation of each will raise the ceiling of our present-day national health standard.

For a number of years I have been president of a medical hospital in Wilkes-Barre, Pa., and take an active part in its management. As a result, I have had unusual opportunities to study all sides of questions pertaining to the healing arts and their methods. Each has its well deserved place in the sun.

Chiropractic definitely has proven its position among the healing arts. I personally have experienced its marvelous benefits and have seen the magnificent role it can play within industry. I have seen it save suffering, needless loss of time, money, and health. Chiropractic in industry will continue to win an ever widening recognition for it makes the lives of all those it touches happier, more productive, and more meaningful.

ANDREW J. SORDONI.

Does Climbing or Riding on Moving Stairs Produce Stronger People?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following stimulating article by the Chaplain of the Senate, Dr. Frederick Brown Harris, from his column, Spires of the Spirit, appearing weekly in the Washington Star:

SPIRES OF THE SPIRIT—MOVING STAIRS

(By Dr. Frederick Brown Harris, Chaplain of the U.S. Senate)

One of the most fascinating inventions of the modern day is what we call an escalator, or a moving stairway. It does away with all effort on the part of the one who desires to be lifted to higher levels. It takes all transit responsibility from the individual. It outdoes the elevator in eliminating all thought with regard to locomotion. Alone you step on—alone you step off. The whole contraption of continuous motion is a marvel of convenience.

But life itself is not a moving stairway. If it is thought of in those terms it will do terrible things to people by robbing them of a sturdy independence and of a personal initiative which develops latent powers and character.

It is the moving stairway idea which a keen observer of modern trends was deploring when he recently declared: "The raging passion of half our people is to build barns and bigger barns, or corporations and bigger corporations. And the raging passion of the other half of our people is to get more and more wages for less and less work." The motto of the middle 20th century, with too many people, is not "Make me," but "Give me." The process now going on where the social system is considered as but a moving stairway is one of leveling down instead of leveling up. It tends to the glorification of mediocrity. If, through the removal of incentive, fortunes cease to be made legitimately as a result of toil and ability, then the power which makes the stairway move for those who need to be carried will be drastically diminished. The goose which lays the golden egg cannot be strangled to death with the cord of taxation and the basket be filled with golden eggs.

The voice which from the famous City Temple pulpit in London—that of Dr. Leslie Weatherhead—probably reaches more people than that of any other churchman. Watching the moving stairway policies of the welfare state, he makes this significant statement: "What is so often forgotten is that if you give amenities endlessly to people who are at heart grabbing and selfish you will bring the life of the community to chaos. In this very serious hour human motives are being poisoned with a drug that is seeping away the moral grandeur and stamina of the whole land. We might label the drug thus: How can I do less and gain more?" This is the philosophy of the moving stairs.

Personal responsibility is the central theme of Christianity and it stems out of the root conception and revelation of the dignity of the individual person. Any system of politics which seeks to provide substitutes for this personal accountability is arresting instead of stimulating the spiritual growth of mankind. The acid test of all so-called welfare legislation is, What will be its final effect on individual capacity and development?

In this tragic and confused world, with so many physical needs crying out for relief, individualism seems to be breaking down and collectivism is in the ascendancy. A keen student of the trends and tendencies of our times has uttered a word which needs to be shouted from the housetops on both sides of the so-called Iron Curtain. It is this: "We are tempted to think of collectivism as new and progressive. But it is one of the oldest things in the world. That's where human society started. Primitive tribal life was absolutely collective; the individual was nothing. There was massed control by custom and taboo; no individual rights, no individual conscience, no individual religion." Yes, to be sure, that is exactly where humanity started. The crowning glory of all the centuries has been the emergence of the individual, his intellect, his conscience, his will, his freedom to choose and to create.

In regimented totalitarian regimes we see collectivism gone mad. Individuals are told to forget about their personal importance and to realize that each person is but a cog in a machine. Theirs not to reason why; theirs not to make reply, but only to obey and conform. They are told, just step on the moving stairs and you will be taken care of. But in a true democracy the individual is encouraged to be himself, to climb stairs in his own strength, to stand on his own feet, to use his own brain. That, of course, makes the individual the crucial factor in any situation.

The quality of our socialism is determined by our individualism. What a man is determines what he has to give. Our contribution grows out of our cultivation. That is why any system which takes away from a man the lure of accomplishment by the exercise of his own prowess and power is tampering with something very precious—his self-respect.

The symbol of all that has made our American democracy great, and mighty enough now, in this desperate day, to save the whole world from the horror of regimented communism, is not the moving stairs upon which people ride, but the stairway of opportunity up which people climb.

Birmingham Observes 80th Birthday of Helen Keller

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. HUDDLESTON. Mr. Speaker, on the 27th of this month, one of the greatest ladies of America and one of the most admirable persons of our times will celebrate her 80th birthday. She is Helen Keller, beloved daughter of the State of Alabama and inspiring friend of all those who have suffered unfortunate physical handicaps.

Because the story of the life of Helen Keller is so well known throughout the world and, certainly, here in the Congress, I need not recount at length biographical details about her. Suffice it to mention that when, as a tiny child in Tuscumbia, Ala., she suffered an attack of scarlet fever so serious that she lost her sight, hearing, and power of speech, it was feared that a full life had been lost to the world. But from that point where there was such little hope, there has emerged the figure of a woman so remarkable as to have earned the endearment and respect of the peoples everywhere.

Faith and perserverance, it seems to me, are the greatest forces behind Helen Keller's astounding accomplishments. These characteristics were no doubt inspired in Miss Keller as a little girl by that faith of her father who searched unceasingly for some medical indication that his child could be helped and finally received such encouragement from Dr. Alexander Graham Bell, and from that perserverance of her first teacher, Anne M. Sullivan Macy, who devoted much of her life to a task which, almost unbeliveably, was rewarded with rich success. Surely, it was faith and perservance that made it possible, for example, for Helen Keller to graduate from Radcliffe College in the usual 4 years' time.

I have taken special note of these two character traits which Helen Keller possesses to an admirable degree, because I believe that in them lies the most meaningful message of this marvelous life for all of us, whether our handicaps be serious or only small, permanent throughout our lives or only fleeting annoyances. America, and our age, are grateful for this indication of the way toward greatness.

Mr. Speaker, I think it is natural that we Alabamians are especially proud of Helen Keller. That we are indeed proud of her and love her is being demonstrated at the present time in my district of Birmingham where a celebration in her honor is being held from June 5 through June 26. Chairman of this birthday observance program is Mrs. Gordon Hardenbergh, who is also, incidentally, president of the Alabama Federation of the Blind, and cochairman is Dr. John E. Bryan, executive director of the Birmingham Chamber of Commerce.

I am delighted that citizens and officials of our community are helping to again remind the world by this celebration of the meaning of the Helen Keller story. I join with them, and with all Americans, in extending to Miss Keller, this month, an expression of warm appreciation for her inspiring deeds and example in living and in wishing her many happy birthdays to come.

A Well-Deserved Tribute for Les Arends of Illinois

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. COLLIER. Mr. Speaker, I take pride, as I am sure all of my Republican colleagues do, in the tremendous tribute that was paid to our minority whip by his fellow townsmen and GOP leaders throughout the State of Illinois recently. In the same vein of pride, I place in the RECORD the following editorial in connection with Les Arends Day which appeared in the Peoria Journal Star on Tuesday, May 24, it concisely sums up the feelings of Representative ARENDS' constituents and colleagues:

Melvin, Ill., is throwing a "day" Friday for one of its sons, LES ARENDS, and Vice President NIXON is going to be on hand.

Which goes to show how much not only the 17th Congressional District but the Nation as a whole thinks of this silver-haired, fast-walking legislator.

About all we can say is, the Congressman deserves his day.

Representative ARENDS has been a good Representative. And he's got a lot of friends. These two accomplishments are not always compatible.

Representative ARENDS has been Republican whip in the House of Representatives since 1944. The length of time itself is impressive. But even more significant is the fact that he has weathered power struggles between factions. JOE MARTIN came and went as party leader in the House, but LES ARENDS is still around as whip. They like him in Washington.

The Melvin farmer and banker serves a tremendous district. It runs from central Illinois to the Indiana line, and takes in Woodford, Livingston, McLean, Ford, Iroquois, Kankakee, and Vermillion Counties. And he's been serving it ever since the 74th Congress. He's in his 13th consecutive term.

So Representative ARENDS is certainly a veteran with experience to draw on. It's a role which balances nicely against that of another good downstate Representative, the 18th District's ROBERT MICHEL. By comparison, Representative MICHEL is a youngster in terms of service, but there's virtue in such a fresh viewpoint, too.

Together, they share—and serve—a common goal: Doing a job in Washington for the people they're elected to represent.

The Story of Chief Joseph: From Where the Sun Now Stands—Part III

EXTENSION OF REMARKS
OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I wish to present the third article of the story of Chief Joseph, one of the most famous Indian chiefs of this country.

This story was authored by Bruce A. Wilson, editor of the Omak Chronicle in Omak, Wash., located in the Fifth Congressional District of Washington which I have the honor of representing. The additional articles of this story will follow in the next few days.

The third article follows:

WEDNESDAY, JULY 11, 1877

Noon: A blistering sun bakes the parched rye grass on a bench above the Clearwater. Drenched with sweat, Howard's command like a sluggish serpent coils away from pointed ravines jutting up from the Clearwater's canyon, edging back to the crest whenever it can.

A horseman leaves the slowly moving column to approach a barren point overlooking the defile. He is Lt. R. H. Fletcher, one of Howard's aides. Dully he reins up to survey the hazy blue mountains across the canyon and the twisting green river below. Incredibly, Fletcher finds himself staring at a handful of braves racing ponies along the river bank. The lieutenant jerks his horse around and hammers back to Howard. "The Indians are down there, sir. I'm sure it's the Nez Perce. Plenty of ponies grazing."

Howard shouts orders. A howitzer and two gatling guns wheel into position and start banging into the river bottom. The Indians disappear upstream. Howard's force, snapped out of its lethargy, reverses its march. The vanguard already has passed 2 miles beyond the likely location of the Indian village.

Below, confusion sweeps through the Nez Perce camp. An immediate attack is expected. Some of the braves start driving cattle and ponies down the canyon. Two parties of about 60 each move north and south of camp. Twenty-four warriors follow one of the chiefs, Toohoolhoolzote, across the river and up the embankment. Their splendid ponies swiftly carry them to the summit. Determined to slow Howard's advance, they dismount and open fire from behind rocks.

Howard is a capable soldier. He commanded Sherman's right wing on the march to the sea. But like many men faced with the unknown, he becomes overly cautious. The troops are halted, deployed in a twisting semicircle 2 miles long. Encouraged by Howard's inaction, more Indians scrambled up the slope. However, the most amazing aspect of the battle already has occcurred: no more than 25 Nez Perces have forced 500 soldiers into a defensive position.

A cluster of mounted warriors erupts from the head of a canyon. Firing and yelling, they close in on Howard's pack train at the rear of his column. Two packers and several loaded mules go down. But a troop of cavalry arrives just in time. The Nez Perces wheel back, having come within 50 yards of 7 mules carrying most of Howard's ammunition.

The battle settles down virtually to trench warfare, the soldiers digging with trowel bayonets, the Nez Perces piling up rocks. Who were these red-skinned demons that would hold a fixed position like a Confederate regiment? Elderly Howwallits (Mean Man), his creased face bleeding from chipped rocks thrown by bullets. Hugely-built Toohoolhoolzote, the boom of his muzzle-loader splashing blood across a dismounted cavalryman's face. Yellow Wolf: "I looked for an officer. I fired. He did not get up." A warrior rides the length of the battle line, within easy range of the whites, to earn himself a brave name. Just as he turns down the slope, a bullet slams through his shoulder. He washes the wound in the river and returns to fight: Kipkip Owyeen (Wounded Breast), a brave name. The wiry Lelooskin, sharpshooting from behind a boulder less than 50 yards from Howard's line, until finally he is killed.

Swarms of bullets hum through the air, most of them harmlessly. Firing slightly uphill, the Nez Perces tend to sight too high. The soldiers have seldom been issued ammunition for practice (two rounds a month, according to one report). Their marksmanship is incredibly poor. Smoke like a forest fire drifts across the battlefield. Slipping behind rocks and scrub pines, the Indians gradually force in Howard's flanks until his line forms almost a complete circle. In the center are 300 mules and horses and a stack of saddles sheltering the general's command post.

At dusk the firing slackens. Many Nez Perces return to the village. Two or three squaws are wailing over their dead. Occasionally shrill war cries burst from exultant warriors. The dull drumming of medicine men rises and falls. These sounds are heard by the soldiers. Their mouths are caked with dust. The Indians hold the only spring.

In the gray dawn of the second day, General Howard is determined to bring the source of water within his lines. A howitzer shells the area and Rodney's company charges. Nez Perce sharpshooters attempt a stand. Overwhelmed, they break and run. Soon coffee is boiling. Spirits pick up. The firing grows more intense, but without the continual roar of yesterday. The Indian lines are much thinner. Many warriors have stayed in camp. They disapprove of attacking soldiers in entrenchments, especially when the village seems momentarily safe. Some braves sit before their tepees, smoking. This disgusts others. Arguments rattle about. For the Nez Perce strength lies in the individual abilities of their fighting men; they lack the cohesion of a disciplined army. Just as membership in a peaceful band is entirely voluntary, so in war no one can be ordered to do anything. Leaders are followed only when their plans seem good. Many Indians begin breaking camp. Directing this is Joseph. He had fought on the line yesterday, as he fought at White Bird Canyon. But his main task is to safeguard the women and children. He knows the end of resistance in this battle is near.

On the bluff above, a distant stream of dust signals the approach of a supply train from Lapwai. Captain Miller's artillerymen, used as infantry, break through the Indian encirclement to escort the train. Returning, the gunners suddenly wheel toward the scanty line on Nez Perces still besieging the troops. A few defend their positions desperately. But Rodney's company crashes into their flank. All down the line, whites spring forward. Warriors leave their rockpiles to scramble downhill. The body of Nez Perces already has abandoned the camp below to move out of sight up a flanking ravine.

Howard finds food still cooking as he occupies what is left of the village. Deciding against an immediate pursuit, he counts his losses: 13 killed, 27 wounded. The Indian casualties, despite the clouds of bullets: 4 dead, 6 wounded. The Nez Perces have fought 4-to-1 odds to a standstill until they lost their incentive.

A few days later (now with plenty of scouts left behind to keep an eye on Howard) the Nez Perce chiefs and leading warriors held a council in their camp at Weippe. With the war a month old, they still had developed no plan to bring it to a successful conclusion. Their strategy was limited to escaping capture. It seemed evident Howard was continuing his pursuit. Some course of action had to be agreed upon.

Several chiefs felt the Nez Perces should double back into the Snake River country. Joseph went further. Beyond everything else, he hoped to return to his beautiful Wallowas. He suggested it might be worthwhile talking peace with a general who had accomplished nothing during a hard, costly campaign. More aggressive leaders refused to listen. Looking Glass and others proposed crossing the Lolo trail (from Idaho to Montana) into buffalo country. The Crows would greet them as allies, it was alleged. Some speakers suggested joining Sitting Bull in Canada. Few had the slightest conception they were fighting the U.S. Government. They believed their enemy was Howard. Once they passed outside his department into Montana, they could live in peace.

This thought carried the day. Trail leadership was assumed by Looking Glass, who had spoken most loudly of joining his brothers, the Crows. Joseph was bitterly disappointed. The decision meant abandoning his home forever.

The Battle of the Clearwater had lightened Howard's burdens. He had occupied the Indian camp and in his reports easily painted the indecisive struggle as a substantial victory. This interpretation quieted rumors he was about to be relieved of his command. Moreover, it seemed to him the Nez Perces had no choice but to head for Montana. So the long-suffering Idaho settlements now could relax. Howard left his field base at Kamiah to head off the Indian retreat. But soon a scout reported the hostiles already had disappeared into the rocky wilderness of the Bitterroots.

Maj. Edwin L. Mason was dispatched with a small force to follow the Indians for two marches, to make sure they were taking the Lolo trail. Mason accomplished his mission in one march by stumbling into an ambush sprung by the Nez Perce rearguard. Howard

returned to Kamiah to await reinforcements. They were preceded by stinging reprimands concerning the delay in his pursuit.

But the engrossed commander at least had pressed into service the single weapon his enemies knew nothing about, and one which eventually would contribute much to their downfall. Singing telegraph wires, strung across the vast western plains, carried a message to Chicago for relay to Col. John Gibbon at Helena, Mont.: "All reports seem to indicate the hostile Indians have escaped by the Lolo trail. * * * If you simply keep them back until I can close in, their destruction or surrender will be sure."

While Howard reluctantly prepared to follow them, about 700 Nez Perces with more than a thousand head of loose ponies were struggling across a mountain trail which was not a trail at all, but merely a route Indians had used occasionally because it was a little less rigorous than any other way across the Bitteroots. Thickets of lodgepole were choked with jumbled windfalls. Ponies were dragged over boulders, whipped through stinging underbrush, forced up staggering grades, and left behind with broken legs. Squaws kept the refugees alive by digging bitteroots and camas. They found a shoulder-high shrubbery growing in marshland which boiled into excellent tea. Braves hunted deer and elk when they could. Some nights rain fell in torrents. Next morning the ponies slithered in glistening mud.

After 12 days of this painful toil the Nez Perces reached the mouth of a canyon opening into Montana to find a crude log barricade thrown across their way. Uneasily occupying the "fort" were 35 regulars and about 100 volunteers under Capt. Charles C. Rawn. Stationed at Missoula, he had been ordered to impede the hostiles' progress until Howard caught up from behind or Gibbon could arrive from Helena. (But Howard was 3 days from even starting over the Lolo trail while Gibbon was just leaving for Fort Missoula.)

The Nez Perces were surprised; the only army they knew of was Howard's, far behind. They decided to parley. Rawn said the great white father wanted them to lay down their arms. Looking Glass replied nonsense, but if the garrison would refrain from attacking, the Nez Perces would harm no settlers as they passed through the Bitterroot valley. This sounded excellent to the volunteers, who began deserting in droves. Reduced to a handful of troops, Rawns was left wondering what kind of report he might write as the hostiles, with a few flankers whooping and shooting, nonchalantly bypassed the barricade.

Most of the Nez Perces were convinced that, with Howard left behind and peace made with the settlers, their fighting days were ended. In fact, they were now joined by six tepees of Bitterroot Valley Nez Perces under Lean Elk (known as Poker Joe for his devotion to cardplaying) entirely on the assumption that the war was over. So another council was held. White Bird, Toohoolhoolzote, and others proposed turning north through Flathead country to get closer to Canada—just in case. Looking Glass insisted on a southeasterly route toward Wyoming and the Crows. His oratory won again. Joseph took no part in the debate. He was unfamiliar with the country in either direction, and still wanted to return to Idaho.

So the colorful procession of Nez Perces turned away from Canada instead of toward it and moved leisurely up the Bitterroot Valley, buying supplies and trading stock with the relieved settlers. Early in August the Indians crossed the Continental Divide and camped in the Big Hole Basin for a few days to replenish their inventory of tepee poles before striking into treeless plains to visit the Crows. Increasingly nervous, some of the warriors were criticizing Looking Glass for his slow pace, 10 or 11 miles a day, and the lack of scouting. "Death may now be following on our trail," orated Lone Bird. But he may as well have talked to the winds.

Colonel Gibbon, the hero of South Mountain in the Civil War, was wasting no time. He had assembled 150 troopers, including Rawn's frustrated detachment, and 30 or 35 volunteers who were promised whatever Indian horses they could capture. With his infantry riding in supply wagons when the roads permitted, Gibbon swirled down the Bitterroot and into the mountains at twice the Nez Perce pace.

A small advance party located the unsuspecting Big Hole camp in a grassy clearing fringed by jackpine. The electrifying word was rushed back to Gibbon, already past the summit. He left his wagons and howitzer, issued 1 day's rations and 90 rounds of ammunition, and hurried forward over a bad trail. At sundown the men stopped for a few hours' rest. About 10 p.m., under a star-filled sky, they started down again.

Another pause, very close to the camp. The troops could hear baying dogs and the cry of a fretful child. A cold dawn revealed the silent silhouettes of nearly a hundred tepees. Occasionally a squaw would emerge briefly to throw fuel on a fire. Grazing nearby were four or five hundred ponies, untended. Gibbon sensed a quick, crushing victory over the vaunted Nez Perces.

Within 500 feet of the camp, just across the meandering Big Hole river, he deployed his forces to sweep through the entire length of the village, driving the hostiles away from their ponies and into the plain beyond. Behind scattered pines and clumps of willows bordering the river, the white men crouched, their rifles ready, waiting for just a little more light.

Legion Auxiliary Awards Prizes on Freedom Essays by Students

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. ANDERSEN of Minnesota. Mr. Speaker, the American Legion Auxiliary is one of our great patriotic organizations which contributes daily to the appreciation of Americanism and does as much as any group to my knowledge to advance good citizenship.

The auxiliary unit in Redwood Falls, Minn., does a magnificent job with the young people of that area and I was happy to receive from Mrs. S. F. Ceplecha, chairman of the Americanism Commission, copies of the winning essays written by two local students.

"Our Growing Field of Freedom" was the theme this year, and under leave to extend my remarks in the Appendix I am including a clipping from the Redwood Gazette which printed in their entirety the prize-winning essays of Marian Wohnoutka of North Redwood, Minn., and Mark TerSteeg of Redwood Falls, Minn.

LEGION AUXILIARY AWARDS PRIZES ON FREEDOM ESSAYS BY STUDENTS

Winners in an essay contest sponsored by Redwood Falls American Legion auxiliary were announced today.

Writing about "Our Growing Field of Freedom," Mark TerSteeg, son of Mr. and Mrs. Paul TerSteeg, was first place winner, and Marion Wohnoutka, daughter of Mr. and Mrs. Edward Wohnoutka of North Redwood, was runnerup.

Their papers, published below, will be entered in district competition. They will receive cash awards of $10 and $5, and a book, "The Key To Peace" by Dean Manion, from the auxiliary.

The contest involved 103 junior students in English classes taught by Roy Dobie and Mrs. Gordon Valle.

(By Marion Wohnoutka)

We of America are so used to our freedoms that we take them for granted, like the air we breath. It is difficult for us to realize that these freedoms are the result of many centuries of trial and endeavor. The political and personal freedoms we cherish today were never won easily and often only after long bitter struggles.

Under the earliest form of government the people had no freedom because they were under absolute rule. Slowly, however, leaders in the fight for freedom appeared and devised documents which gave the people a little more freedom. People in many countries revolted against their rulers and set up their own government because they wanted to possess more liberty. In the United States this was accomplished by the Revolutionary War and the people received "life, liberty, and the pursuit of happiness," under the Declaration of Independence. This declaration is perhaps one of the greatest documents in history.

Although we are correct in saying that we have freedom, we do not possess absolute freedom—we do not have complete freedom of the press, full freedom of speech, or invariable rights of assembly. In order for a country to enjoy freedom, there must be a certain amount of restraint on each person's part. If every person practiced complete freedom and did anything he wanted there soon would be little freedom and no one would enjoy this. One thing that we must remember is that freedom involves other people. In order for each person to receive his share of freedom, he must also give his share.

Freedom of religion is perhaps one of our most important freedoms. It was in order to obtain this freedom that many people emigrated from Europe to the United States. This freedom gives the right to each person to worship according to his own belief. This means that a person could worship God or any gods or no god, in whatever way he considered to be right. However, to a degree, we cannot have complete freedom of religion. For example some religions may lead people to do things which the state considers undesirable and dangerous. In these cases, the state probably will take action to see that these things are not done.

Freedom of speech is another important freedom. It is the right of each person to say what he thinks. But, like the other freedoms, it is not an absolute right. It is limited in a number of ways. For example, no one can use language that offends the public sense of decency, or words that would be a danger to the country. Another restriction would be that a person could not say anything harmful about another person, just because he sincerely believes it to be true. The person would have to have proof to back up his accusation.

Freedom of the press is one freedom which brings forth many problems. The press has a great effect on the public mind. If misused it can mislead and confuse the people. But if the press were under control of the Government, they would probably only want things to be printed which would be suitable to their policies. So at the present time there is no method that would fully protect the right of the people to clear, accurate information.

These freedoms of religion, speech, and the press are perhaps the most important to

us. However, there are also many more freedoms that greatly affect our lives. Some of these are: the right to vote, the right to have a trial by jury, the right to choose our own vocation, the right to own property, and the right to belong to unions.

We should be proud to be Americans because we have more rights and liberties than most other people in the world. But we must use them wisely and unselfishly. For unless they are used properly, they cease to be freedoms. The responsibility rests on the shoulders of every citizen of a free country to see that they are honored and protected.

Today one of the worst enemies of freedom is communism, which must be combated in order to defend our liberties. The struggle to attain freedom is hard but it is even harder to retain it. Every citizen now and for generations to come has the responsibility to see that the ideal of freedom works more fully, more completely, and more consistently from generation to generation.

(By Mark TerSteeg)

In this world of growing freedom, America has served as the prime example of the freedom that is the desire of every man. Our example has been a searchlight showing the path away from the yokes of oppression that hold so many people in bondage. It is the job of America and its people to lead all the world's people to complete freedom and democracy. Freedom is America's trademark. From the days of America's first settlement to the present time America's traditions have been based on freedom and democracy, a unique, and wonderful heritage, one that we must protect with the fiber of our souls if we are to stay a really free people.

However, it has become a subject of increasing fear that after all these years of liberty our freedom is in grave danger of its very existence. These fears have been based on a number of very different problems. The military forces of the communistic bloc are constantly aimed at the United States with a variety of superweapons such as thermonuclear bombs and the aircraft and rockets to carry them to the heart of America. Russia is also attacking America from within with spies and saboteurs and propagandists and agent provacateurs. There is also the danger of criminals and corrupt politicians from within. But the greatest danger to American freedom is from the American people themselves.

The easiest way for a nation like ours to lose its freedom is from the developing attitude of American people to censure people who harbor opinions different from the majority's. To compound this problem is the growing conformity of Americans; a trend which can be stopped with sound philosophy. The convictions of Americans has been based on freedom and competition, but now attitudes toward these have been frozen into one mold. The belief is growing that in a democracy everyone should be equal in everything; in intelligence, wealth, and ability—an obvious falsehood. This belief is an emotional one and no amount of logic can disperse it. It is based on the natural desire to be accepted by other people and is only an overdevelopment of it.

It is my fervent belief, however, that this condition, like so many aberrations before it, must fall to determined men. The very fact that this problem of "hyperdemocracy" has been noticed is a sign that many people have not fallen into this trap of unthinking conformity. In such a culture of conformity, a few men will be driven to use their inherent freedom of thought, the only freedom that all men have and the only inalienable right. These men will form a breakdown in the pattern of conformity just as now conformity is breaking down individualism. We shall have, I hope soon, a renaissance of the competitive spirit and individualism that so characterized colonial times, and even beyond these to the greatest heights in all history.

In the future I foresee the greatest freedom of all, the real freedom of thought. A rebellion from conformity would clear away the cobwebs of the mind that have developed from the beginning, and give man a real view and understanding of the people he lives with and the universe he lives in. While this renaissance will not be a panacea or a Utopia, it should bring a new era that would surpass all the ages of the past.

It is the duty of every American, in fact, every man in the world to fight off this onslaught of conformity, to become the thinkers of a new age, the Socrates, Platos, Newtons, and Eisteins that will free the world. We must make real freedom the wave of the future.

What Is the Leadership Role of the Personnel Officer?

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1960

Mr. REES of Kansas. Mr. Speaker, under unanimous-consent agreement, I am including herewith an interesting and important address delivered by the Honorable Roger W. Jones, Chairman of the U.S. Civil Service Commission, at the annual conference of the Society for Personnel Administration on June 3, 1960.

I am sure Members of the House will want to read Mr. Jones' statement:

WHAT IS THE LEADERSHIP ROLE OF THE PERSONNEL OFFICER?

(Address by Chairman Roger W. Jones, U.S. Civil Service Commission, at the annual conference of the Society for Personnel Administration, Statler-Hilton Hotel, Washington, D.C., on June 3, 1960)

One sultry morning in the summer of 1940 I was sitting in the office of William H. McReynolds. You will remember that he was the first formally designated adviser on personnel management to the President. It was unusual for Mr. McReynolds to be out of sorts, but this day he was—in his own gentle, almost sad way. He summed up his complaint this way. "I guess," he said, "that Noah was the first personnel officer. He had to choose two of every kind for a limited number of vacancies. Everyone except the Lord and the chosen were dissatisfied, and things haven't changed one bit since." I am sure that all of you have felt a similar discouragement at times.

Today, I am going out on a limb and suggest that things aren't really so bad, and that the personnel officer in Government has a continuing opportunity to play a useful leadership role. He is not limited to selecting appointees from civil service registers. Mr. McReynolds to the contrary notwithstanding, how many of you remember just how recent an arrival on the scene the modern personnel office to the Federal Government really is? On June 4, 1938, President Franklin D. Roosevelt issued Executive Order 7916, which required each department and agency to establish a division of personnel supervision and management, headed by a director of personnel. Of course, for years there had been personnel offices of sorts and personnel officers with a variety of duties, but not in the mold of those which rapidly developed after the Executive order was issued.

Unfortunately, the momentum of the early days was somewhat lost when World War II broke around our heads. All of its frantic necessities for cutting corners, delaying long-term improvements, and "making do," involved personnel programs and offices as well as the rest of the Federal structure. Once the war was over, however, it became possible to settle down into the development of working relationships between personnel officers and the central personnel agencies (the President's Adviser on Personnel Management and the Civil Service Commission) on the one hand, and between the personnel staff and line program managers on the other hand. There were organizational shifts and developments of greater or lesser moment, but the direction of the effort was clear. It had become national policy to foster and encourage more latitude, more discretion, and more power of decision in personnel matters, first in the agency itself and secondly in the personnel officer and his staff.

The personnel system was increasingly decentralized as time went on. There was hesitation and handwringing, but the agencies did accept the challenge. The personnel officer emerged with status and stature, which was increased as the agency heads redelegated appropriate authority to their personnel officers and, at the same time, strengthened their directives and their expectation that personnel officers would serve as respected staff advisers to program executives up and down the line. The final step in firm establishment of the relationship role of the personnel officer as we now see it came with the substitution of inspection of personnel activities after the fact. This was in lieu of the old, aggravatingly rigid and cumbersome system of requiring prior approval of the Civil Service Commission for personnel actions even of the most trivial kind.

It is important for the personnel officer to understand how much authority in personnel matters the agency has, as well as what his own responsibilities are. Without this understanding it is doubtful whether he or his agency can make maximum use of the flexibility which now exists in our personnel management system. Recognition of responsibility often opens the door to bolder and more imaginative action. That is what I ask on the part of all personnel officers who are concerned with our Federal merit system.

I could make a long and detailed description of all kinds of things which I think the personnel officers should do to advance their leadership role. That, however, would be an imposition on your good nature and on time reserved for other matters. I shall limit myself to a partial catalog consisting of seven suggestions for demonstration of as much leadership by personnel people as their individual capabilities permit them to exercise. It makes little difference in what order these seven points are mentioned. I advocate no priorities among them. Move in whenever opportunity offers or you can make it.

1. Personnel officers should take an active and personal role in recruitment. More than this, they should also do everything in their power to convince both political officers and senior career officers to participate in the recruiting process. I find it anomalous to see on every side increasing evidence of the importance which senoir officers of our industrial and business firms attach to their personal participation in recruiting, particularly in our colleges, but to see little evidence of a similar feeling on the part of policy officers of Federal organizations. True, they are glad to participate in interviews of candidates brought to them, and they make

occasional visits to some of our educational institutions. But there is not built into their sense of job responsibility regular, recurring, enthusiastic salesmanship of Federal careers to college men and women. The personnel officer more than anyone else can move to correct this situation.

2. Advance forecasts of our manpower needs in the Federal Government can take on nothing more than a rags-and-tatters appearance unless the personnel officer cuts the cloth and performs the tailoring on a new suit. The Civil Service Commission can view with alarm, and the agency heads can respond with intelligent vigor to the President's directive to undertake programs of executive development, but it remains for the personnel officer to do a realistic job of forward planning of personnel requirements and the time schedule under which they must be met. Only in recent months have we in the Civil Service Commission found agencies showing ongoing concern about such things as the average age of their program and staff leaders; the probable dates of retirement of key staff employees; the lack of strength in depth; the effect, if any, World War II and the Korean war have had on their structure; and the kinds of changing aptitudes, experience, and training required in personnel to be recruited over the next 10 years. In performing his leadership role in such activities, the personnel officer must show sophistication, no small amount of forecasting ability, and above all, an articulate faith in the destiny of his agency. In the past personnel people have usually tried to hide such notable characteristics. How much do you really know about where your activity ought to be personnelwise next year, the year after, or 5 or 10 years from now? In the personnel business of Government today we cannot afford to accept the Biblical injunction that "Sufficient unto the day is the evil thereof."

3. There is a leadership role for the personnel officer in improving the whole area of executive communications and executive development through better communications. I have talked about this to personnel audiences before, but I want to repeat it today.

Personnel officers of my acquaintance seldom admit that communications in any sense of that word are their responsibility. Once a few mechanics of office routine or legal requirements have been fulfilled, the personnel officer tends to think he is through. I disagree. Where the executive communications and executive development are concerned, the personnel officer can be an important mentor, and his operations can be an equally important communications tool. Aldous Huxley in "Brave New World Revisited" refers to man's "almost infinite appetite for distraction." In this thought lies the key to the job of personnel people in trying to produce good communications up, down, and sideways, to and from the executive. It is their job to prevent many stultifying distractions.

The personnel officer can remove much temptation to take bad communications for granted, and to turn his bosses and his coworkers aside from distraction in four areas where good communications do most for effective personnel administration at the executive level. First, he can and should be constantly on the alert to see to it that both the personnel system and the management chain of command produce what the executive needs to know about the people through whom statutory policies and his decisions must be carried out. The mechanistic device of periodic evaluation of staff is not enough, and it never yet assured that the backflow of reaction from the boss was translated first into communication and then into concrete results.

Second, I suggest that the personnel officer should make it his business to know what the attainable dreams and aspirations of the executive are. And in a quiet way he should help to bring about the personal equations which will forward those dreams and aspirations. Don't tell me this is impossible. It can be worked at in the same way that the personnel people now work in a negative way to protect the executive from the consequences of his own prejudices and shortcomings. Here, we in government differ widely from the business world. We have a great and enduring obligation to do all we can to prevent our top executives from failure through their own shortcomings. In the administrative jungle of our institutionalized Government, some small success on this front of communications will do as much as anything I can think of to give the political executive confidence in his organization (as well as in himself).

Third, I believe that one of the most rewarding goals to be won in personnel administration at the executive level is promotion of greater job satisfaction and success among the middle-level executives—helping them to live up to their potential, and seeing that they get the breaks they deserve. Here again the institutionalism of the Federal Government is choked by a failure to communicate—overgrown with distractions and a special kind of bureaucratic chickweed that should be hoed out. Obviously, the personnel officer cannot assume sole responsibility for executive development. But in concert with his colleagues, with the support of his superiors, and with some degree of candor and boldness of his own he can provide better opportunities to advance and more executive personnel exchanges with other organizations.

We in government have come to believe, almost to the exclusion of common sense, the folktales that men must make their own breaks and that availability for transfer grows out of only two conditions, lack of ability or dissatisfaction with salary or program leadership. Generally, we have tended for far too long a time to favor the former as the prime reason when a man seeks other work or his agency tries to outplace him. These are old and silly beliefs, and they should be cast aside forever, as any good personnel man can testify. I urge you to combine to find out what new ways of life, what new satisfactions of career, what new curiosities about personal development exists among our middle-level executives. Then, do something about your findings. This is a matter of communications again, and highly privileged communications at that. But, discreetly handled, the information gained can do much to keep alive the greatest of all stimulants to executive development: the incentive to try the new and the challenging. I do not suggest that this be limited to interagency transfers. Time and time again in the last 25 years I have sat in on discussions of proposed internal transfers. Rarely, very rarely, have I heard either executive or personnel officer say, "What about John Smith? He would like to try this kind of job, and here are his reasons."

The last of my communications points is to state my belief that much of the bureaucratic ineffectiveness of endless and highly distracting concern with procedural matters should be removed from the jobs of the Federal executive at all levels of responsibility. This can be peculiarly a job of personnel officers. As our laws, procedures, and administrative customs have become more complex and far reaching, they have become more susceptible of permitting overlaps in personal responsibilities and agency programs to be created. Personnel administration, as well as management, has done little to prevent this growth of confusion, particularly in terms of clear job descriptions and lines of control. This is a communications failure of serious proportions. It is time, I believe, to speak out against continuing proliferation of new levels or kinds of supervision. It is also time to reject new procedures and incentives designed primarily to assure that "our empire will be protected" and that "our man" will not suffer from any failure of personnel people to write full job sheets.

4. The fourth major suggestion for greater leadership on the part of the personnel officer concerns the development of means for performing two simple but closely interrelated jobs. The first of these is separation of the mechanics of our personnel system from misidentification, in the minds of our political officers, with a bureaucratic straitjacket which has been created by personnel officers to thwart them in obtaining their program goals. I get downright mad when I hear of personnel people who dump the Federal Personnel Manual on their boss' desk with a triumphant: "Here's the reason you can't do it." I say no more. The second is closely related although it is an error of omission rather than commission. Don't be secretive about personnel knowledge that will help others. It is not yours exclusively, and it is not a difficult job to be sure that intermediate managerial levels understand the mechanics of the personnel system. They should know enough about them to use them for what they are—precise tools with sharp edges. Let me again ask a representative question which you may answer for yourselves. When did you last show a division or a section head how classification can be used to help him do his job better?

Personnel officers should not be either apparent detractors or passive protectors of their profession. Of course, they must not seek to transfer an improper degree of responsibility for their functions to line managers, but neither should they sit back and take the attitude that line interest in (or even curiosity about) personnel techniques should be ignored, testily dismissed, or actively resisted.

5. The fifth leadership role for the personnel officer goes far beyond the borders of his own organization. I am convinced that if we ever are to make the most effective use of the Government Employees Training Act of 1958, personnel officers have got to band together to define general training needs as well as the specialized needs of their own agencies and programs within agencies. There is a vast welter of uncoordinated, undigested information lying in neglect in almost every Government office in the country with respect to what our real training needs are. I beg you to make the most of this opportunity not only to define but to become vigorous advocates for a consistent, integrated training structure throughout the Federal Government. We have in our agencies extraordinary pools of talents for training those who come after us. We must not try to pass the buck to our colleges, universities, and specialized training institutions. As a capstone for this entire pyramid of training there should be a Federal civilian staff college. It is sufficient for the moment to urge your support and to express my faith that, with your support, such an institution will come into being and that it will have as honored and as accepted a place in the Federal structure as that of the National War College. I believe that our managers of the future will not have to learn everything in the hard school of experience with all of its attendant losses, delays, and temporary inefficiencies.

6. The personnel officer should become a leader in civilian career planning. As I look back over the more than 26 years of my own Federal career I find at least four periods in which the availability of even rudimentary career planning on the part of my agencies would have been worthwhile for them, and for me. At least it would have greatly shortened periods of indecisive wheelspinning which were ended by sheer accidents of external affairs. The civilian personnel officer has a great deal to learn from the system of

career planning and career development now used by all of our armed services with such telling success. May I give you one example of our shortcomings in this respect? I doubt whether, until very recently, any agency with oversea responsibilities has done much planning of personal careers to meet those responsibilities.

7. The seventh and final leadership role which I ask personnel officers to fulfill is to lend the weight of their personal efforts in the development of a better system of employer-employee relations in the broadest sense of that term. The main direction of my thinking involves four parts of an employer-employee relations system. The first is our merit promotion program. I hope we have not oversold its virtues or expect to find in it the solution to all promotion problems. It is a beginning and it is a good one, but there are many stumbling blocks which will not be reduced to nothingness simply by a title. Statesmanship as well as leadership will be needed in developing a sound program which does not trip itself up on such issues as proper weighting for seniority, frequency of promotion examinations, the breadth of competitive areas for promotion, problems of interagency transfers, and problems of lateral entry in lieu of promotions from within.

The second aspect has to do with incentive awards. In recognizing and in doing something about our 175-year-old official neglect of the positive values to be obtained from incentive awards, we have, perhaps, gone pretty far down the road of setting up a system in which we could choke ourselves with trivia. The personnel officer can be in the vanguard of the defenders against any such eventuality.

Third, within a new and enlightened system of employer-employee relations we must give more intensive attention to the way in which we handle disciplinary matters, grievances, and discharges. I am not satisfied with our appeals system, and I do not think that any personnel officer should be. It is overgrown with procedural gimmicks, lack of simplicity, and built-in opportunities for delay which it will take positive and constructive leadership to correct. Unfortunately, full correction will also take some statutory changes, which may be slow in coming. For example, if I may repeat what I have said many times in my 15 months at the Civil Service Commission, I see no justification, little equity, and no sense from the administrative point of view in having a different system of appeals for veterans from that which prevails for nonveterans.

Finally, we must arrive at a satisfactory long-term definition of the role of the employee organization. The personnel officer can and should be a leader in this effort. Too much of the initiative for defining that role has been left to the employee groups themselves. We know too little about the potential strengths and weaknesses of employee organizations either to turn our backs on them or to go all out by giving them statutory status and a mandatory assignment in personnel management.

I have attempted to illustrate what the leadership role of the Federal personnel officer can be, why it is important, and how adequately the stage has been set for him to fulfill that role. I have not, of course, covered the entire subject. I have no doubt that perhaps each of you in this room could say that I have overlooked something important and stressed something which is incidental. This may well be. But let me remind you again of what I said at the beginning. My purpose in presenting this catalog is to show you how far we have come from a negative personnel system of central controls and veto powers to decentralized responsibility and opportunity for positive and constructive leadership in handling the chief element of success in all Government enterprise—the management of its civilian employees.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of June 4, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District of Texas)

The search for issues, the shortage of time until Congress adjourns (or recesses—who knows?) and the impending political campaigns of all elected officials (except two-thirds of the Senators) is making a curious concoction of the daily affairs on Capitol Hill. The workaday controversial issues—medical care for the aged (Federal, that is), aid for education, housing and other business subsidies, increased minimum wage by Federal direction—are now joined by others—foreign affairs following the summit, Congressmen's traveling expenses, and home rule for Washington, D.C. The hope of objective, dispassionate reasoning in this boiling cauldron of conflicting interests and ambitions is faint indeed. Desperately campaigning Presidential aspirants from the Senate make statesmanlike legislative effort this session an improbability.

Against this background of confusion and false reasoning, there comes a commonsense, refreshing viewpoint like a fresh breath of air. BARRY GOLDWATER's "Conscience of a Conservative" is a simple statement of honest conviction that like any great truth is startling in its simplicity. In this age where false guidelines and the maze of bureaucratic regimentation and paperwork too often dominate, the principles he outlines as the role of Federal Government in our lives are as straightforward and easily understood as the force of gravity. The central, all-important focal point of GOLDWATER's thesis is the human being—who is to be served, not mastered, by Government. It is my hope that a majority of our people can be exposed to the timeless truths of this simple, traditional philosophy which originally was considered to be embodied in our Constitution.

Disarmament and nuclear test bans are additional opportunities for the Soviets to attempt to make the other nations dance to their tune. We cannot trust them, so how can we expect to contract any agreement with them in good faith, until and unless they demonstrate through overt action their willingness to cooperate and keep their promises? One of these days our people will recognize the wisdom of Senator GOLDWATER's assertion that we should withdraw recognition of Russia and conduct our foreign policy offensively, not defensively.

The abuse of expenses charged to the Government by Members of Congress exposed in various publications has raised a furor around the Capitol, as well it should. In this political year I'm certain there will be charges and countercharges flying as the indiscretions of a few are revealed, and perhaps magnified, to reflect discredit on even the most conscientious legislators. Still, full revelation to the public and public censure can force correction of any abuses. There should be such correction.

Recalling the emergency housing act when the Democrat leadership was declaring our Nation to be in a serious housing slump, revised figures show that the Government's 1959 estimate of new housing starts was roughly 175,000 too low. The correct figure should have been 1,533,100 starts—a record year. Depression? Slump? Well, the House voted $1 billion in emergency subsidy just the same.

Medical care for the aged is a part of a 166-page book of social security amendments, all designed to "sweeten the pot" for voters just before election time. We still in the Ways and Means Committee haven't troubled to get information on the largest area of medical aid—the private, local and State efforts outside the Federal programs. One of these days, people are going to wake up and crack down on this political demagoguery. At least, I'm hoping so.

Another boost in the minimum wage rate (plus a considerable extension of the jobs covered by it) was voted by a House Education and Labor Subcommittee this week. A similar bill is ready for Senate consideration so some action on raising the minimum wage during this session is fairly certain. While few would argue that for most occupations, anyway, the amount of the "minimum" presently stipulated is in any way excessive, I simply do not believe that the setting of wages or prices (and whether the stipulated rate be a minimum or ceiling doesn't matter) should be any prerogative or function of the Federal Government. That "sweatshops" may still exist in some areas is undeniable, but does the existence of every problem in our society demand enactment of a Federal law? There are many social problems which cannot be properly handled and, under our "federal" system, should not be handled by the National Government.

Jobs After 40

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 3, 1960

Mr. HOSMER. Mr. Speaker, on the general subject of what needs to be done about the problem, breaking down the employment-age barrier, the Commonwealth of Pennsylvania, in an excellent brochure entitled "Breaking Through the Age Barrier," specifies what older workers themselves, employers, unions, and communities can specifically accomplish as follows:

BY OLDER WORKERS

1. If employed, start preparing now for retirement. The local library will have much reading material that should prove helpful. Make sure to know about prospective income from old-age benefits and company pension plans. Keep in good physical condition and have periodic checkups.

2. If unemployed, take stock. List activities that interest you. List your knowledge and skills. Make a realistic appraisal of what you can do and then forget about any handicaps you might have.

3. Go to the nearest State employment service office for assistance in obtaining work. They know about job opportunities and they can advise you on how to get a job.

4. Let your friends know that you are looking for employment. Go to your union or professional association. Watch for newspaper ads. Go to former employers. Check the classified section of the phone book for the names of companies which hire workers with your experience.

5. Don't overinflate yourself. If you have formerly held big jobs, you may find it hard to adjust to jobs of lesser importance, but it is essential that you do so if you no longer can stand the pace of the top positions.

6. Don't underestimate yourself. You have experience and maturity. Employers are always eager for reliable, experienced employees. Watch your appearance. Be poised, prompt and businesslike.

7. Don't be afraid to try something new, if you have to. You are never too old to learn. Employers prize cheerful, adaptable workers.

8. If unable to work full-time, look about for part-time or casual jobs. Perhaps you can help organize a casual job agency in connection with your retired workers' club or golden age club. Committees of older workers can call on employers for part-time or casual jobs. Your employment service local office may be able to suggest possibilities and to help.

BY EMPLOYERS

1. Make sure that the company's hiring policy is the traditional American policy of hiring on the basis of ability, not some arbitrary age.

2. Make sure that top management's policy is understood and followed by those responsible for hiring and supervising personnel in every department.

3. Analyze jobs to make sure that unrealistic physical requirements are not denying the company a chance to compete for valuable older workers.

4. Eliminate compulsory retirement.

5. Provide adequate retirement plans and help employees to prepare for retirement.

6. Revise age restrictive clauses in pension plans, if these affect hiring policy.

7. Reassign older employees to most situable work.

8. Study possibility of consolidating jobs with physical demands so as to make possible new jobs without demanding physical requirements.

9. Provide for periodic physical examinations.

10. Study possibility of "part-time" retirement, casual jobs for older workers, and other methods of using older worker skills.

BY UNIONS

1. Make sure union policy on contracts does not result in discrimination against older workers.

2. Provides preretirement counseling for union members.

3. Provide counseling and other services to older union members in need of employment.

4. Join in community efforts to promote more employment for older workers.

5. Work with employers on job analysis and job engineering to provide more opportunities for older workers.

BY COMMUNITIES

1. Organize a communitywide effort to remove age barriers to employment. Either organize a new committee or establish a subcommittee under some already existing committee.

2. Provide for the following community activities in connection with an older worker program.

(a) List opportunities available for older workers.

(b) Call upon employers to explain program.

(c) Organize institutes and forums.

(d) Publicize through articles, radio and television programs, essay and poster contests, and the like.

(e) Provide counseling services for older workers, particularly group counseling for those too hesitant to seek individual help.

(f) Organize employment exchanges for part-time and casual employment for older workers.

(g) Promote demonstration projects where selected older workers are employed in certain occupations hitherto denied to them.

(h) Work with private employment agencies to make sure that older workers are not discriminated against.

(i) Provide awards and recognition to employers who cooperate in older worker program.

The basic responsibility for breaking through age barriers to employment rests with local communities. Older workers reside in local communities. It is the local communities who are responsible for their welfare when they are unable to take care of themselves. It is in the local communities where they must find employment. State and Federal agencies can provide some assistance. But older worker programs will succeed in direct proportion to the interest and support evidenced by the local community.

The age barrier to employment is not a problem for only one or two groups within a community. It concerns business; it concerns labor; it concerns civic groups, churches and synagogues and educational institutions. In fact it concerns everybody.

Do You Happen To Know This Man?

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. BOW. Mr. Speaker. I am certain many Members will enjoy and find a lesson in the following comment on modern American society:

DO YOU HAPPEN TO KNOW THIS MAN?

The Rotary Graph, a publication of the Weslaco Rotary Club, has passed along this little story, source unknown. It is almost as funny as it is tragic:

A young man lived with his parents in a public housing development. He attended public school, rode the free schoolbus, and participated in the free lunch program. He entered the Army, then upon discharge retained his national service insurance. He then enrolled in the State university, working part time in the State capitol to supplement his GI education check.

Upon graduation, he married a public health nurse and bought a farm with an FHA loan and then obtained an RFC loan to go into business. A baby was born in the county hospital. He bought a ranch with the aid of the veterans' land program and obtained emergency feed from the Government.

Later he put part of his land in the soil bank and the payments soon paid out his farm and ranch. His father and mother lived very comfortably on the ranch on their social security and old-age assistance checks. REA lines supplied electricity. The Government helped clear his land.

The county agent showed him how to terrace it; then the Government built him a fishpond and stocked it with many fish. The Government guaranteed him a sale for his farm products at highest prices.

Books from the public library were delivered to his door. He banked money which a Government agency insured. His children grew up, entered public schools, ate free lunches, rode free school buses, played in public parks, swam in public pools, and joined the FFA. The man owned an automobile so he favored the Federal highway program.

He signed a petition seeking Federal assistance in developing an industrial project to help the economy of his area. He was a leader in obtaining the new post office and Federal building, and went to Washington with a group to ask the Government to build a great dam costing millions so that the area could get "cheap electricity."

He petitioned the Government to give the local air base to the county. He was also a leader in the movement to get his specific type of farming special tax writeoffs and exemptions. Of course, he belonged to several farmers' organizations, but denied that they were pressure groups.

Then, one day, he wrote his Congressman: "I wish to protest these excessive governmental expenditures and attendant high taxes. I believe in rugged individualism. I think people shauld stand on their own two feet without expecting handouts.

I am opposed to all socialistic trends and I demand a return to the principles of our Constitution and the policies of States rights."

Patrick Henry, 1960

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the famous quotation from Patrick Henry's original speech—followed by a version modernized to suit the wishful thinking of those who think it possible for the lamb to get along safely with a wolf which periodically puts on sheep's clothing. The article is from the periodical USA for May 6, 1960:

PATRICK HENRY, 1960

(By Don Knowlton)

"It is vain, sir, to extenuate the matter. Gentlemen may cry, 'Peace, peace, peace'—but there is no peace. The war is actually begun. The next gale that sweeps from the North will bring to our ears the clash of resounding arms. Our brethren are already in the field. Why stand we here idle? What is it that gentlemen wish? What would they have? Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God. I know not what course others may take; but as for me, give me liberty, or give me death."

At a session of the International Labor Organization in Geneva, after a Soviet speech compounded of insults, threats, exaggerations, pleas for universality, and protestation of love of peace, the delegate of an Asian country said, "Coexistence is like going to bed with a woman whom you know may strangle you before morning."

It is amazing how many people in the United States and abroad have been cowed into acceptance of propaganda for coexistence. The argument goes like this: "Is it necessary that we keep on opposing the Soviet Union? Why can't our countries learn to live together, even though our systems are different? I think we ought to soften our attitude, compromise, yield, if we have to, on some points. Let's try to learn to get along with the Soviets, not argue with them all the time. If we keep on bucking them, the result will be war. If there is a war, with today's weapons, half of us may be killed. I don't want to be blown to smithereens. I don't want my children to die. Anything would be better than war—even giving in to the Soviets. After all, if we

have to, we can live under communism. That would be better than being dead."

Is not that a logical and sensible premise? Any man of true cowardice, any man who puts self-preservation above principle, any man with instincts of servility, any man who values his life above his country, and all else, would agree.

So, therefore, let us revise and modernize a bit of history, a voice from the past. Patrick Henry is speaking. This is what he says:

"It is vain, sir, to extenuate the matter. Gentlemen may cry, 'Peace, peace, peace'—but there is no peace. The next gale that sweeps from the East may bring to our ears the clash of resounding arms. Is that what the gentleman would have? God forbid. Let us risk our all, rather than fight a war.

"Besides, gentlemen, is there any reason why it should come to that? Is there any certainty that the Soviets really intend to subjugate us by force of arms? Are we sure that Premier Khrushchev will not eventually consider our petitions, if we persevere? Let us negotiate, let us parley, let us seek areas of agreement.

"We must learn to live with the Soviets, even if it should mean the extinction of our liberties.

"For the alternative is war—death and destruction. Anything is preferable to that. Is not life so dear, or peace so sweet, as to be worth purchasing even at the price of chains and slavery?

"I know not what course others may take; but as for me, give me coexistence or give me communism."

Sweden—Land of Peace and Freedom and Public Welfare

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. MULTER. Mr. Speaker, in this age of search for peace and freedom for mankind we do well to pay tribute to Sweden on her Constitution and Flag Day.

Sweden has ever been renowned among the nations of the world for her efforts to keep the peace. Also it has been justly famous for the freedom of its individuals and concern for their well-being.

The peaceful ways of the Swedish people have came from their own harmonious way of life down a path of neutrality through two world wars. Not untouched were they but uniquely apart from the frightful imbroglio of those two holocausts. The ways of peace have led Sweden to the pinnacle of the United Nations. The respected and impressive figure who currently leads that organization for the promotion of peace among nations is Dag Hammarskjold, a son of Sweden and a product of her culture.

Not only does the Swedish harmony with men at home and abroad bespeak their love of peace. It denotes also their people's freedom-loving spirit, which has produced democracy at home and a respect for the rights of freemen everywhere. The constitutional monarchy of Sweden has long been the leader of a truly and eminently democratic country. Since the 17th century, when the status of free farmers was spectacularly recreated, Sweden has moved progressively toward a society of self-governing men free from the restraints imposed by monarchy, nobility, guilds, or other factions of society.

Particularly since the early 19th century has Sweden's peaceful progress toward the betterment of her people been notable. Her rulers and the populace have joined in the promotion of the nation's material, mental, and spiritual welfare. In the fields of education, labor, and the social services Sweden's record has been outstanding. Indeed, we legislators in the United States have studied Sweden's successful methods along these lines in preparing patterns for our own society.

The bonds of sympathy and friendship between our two countries are many. It is significant that Sweden was the first country to formally recognize the United States as a nation.

We today heartily return, and in large measure, the respect and honor due Sweden on her Constitution and Flag Day.

Older Citizens

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I include House Concurrent Resolution 40, introduced in the Louisiana State Legislature by the Honorable C. M. Poston, State senator, and the Honorable Bert A. Adams, State representative. This resolution is of interest to all of us who are concerned with the problems of our elder citizens and I commend it for the careful consideration of the Members of Congress:

HOUSE CONCURRENT RESOLUTION 40

Whereas the old-age assistance grants are not sufficient for the economic well-being and happiness of our older citizenry; and

Whereas these older citizens need additional funds to meet the bare necessities of life; and

Whereas present limitations on the earning power of old age recipients are unrealistic: Therefore be it

Resolved by the House of Representatives of the Legislature of the State of Louisiana (the Senate concurring), That the U.S. Congress is hereby urged and requested to enact legislation permitting old age recipients to earn up to five hundred dollars ($500) a year without having their benefits reduced or terminated; be it further

Resolved, That copies of this resolution shall be sent to the President of the United States, the presiding officers of the two Houses of the U.S. Congress and to each member of the Louisiana delegation in the U.S. Congress.

THOMAS J. JEWELL,
Speaker of the House of Representatives.
C. C. AYCOCK,
Lieutenant Governor and President of the Senate.

Sanford H. Bolz

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1960

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include statements made at the farewell luncheon for Mr. and Mrs. Sanford H. Bolz, Tuesday, May 3, 1960, at the National Press Club, under the auspices of the Jewish Community Council of Greater Washington. This luncheon was given on the occasion of the departure of Mr. and Mrs. Bolz for Salinas, Calf., where Mr. Bolz will enter a law partnership, after having served as Washington counsel for the American Jewish Congress. The statements follow:

STATEMENT OF REPRESENTATIVE EMANUEL CELLER

Mr. Chairman, honored guests, friends of Sandy, Sandy and Joy, it is a distinct pleasure to have this opportunity to express publicly my affection and regard for Sanford Bolz, known, of course, to all of us as Sandy.

Sandy is not a "nice" guy. Sandy never agrees for the sake of being agreeable. Sandy never lets the dust lie lest he be called impolite. In short, Sandy is a fighter—a fighter for all of those causes which are an integral part of his being. I've seen Sandy light up with the flames of indignation at the knowledge of any injustice done. He has taken time out from his practice of law to represent the interests of all minority groups—the preservation and extension of the Bill of Rights is a personal passion with him. I have known Sandy, as a representative of the American Jewish Congress, since 1948, but I also have known Sandy, in his own person, as a man of the keenest integrity and untarnished ideals.

Today, Sandy is 45 years old, and it is a happy coincidence, indeed, that this luncheon, in his honor, take place on his birthday. These 45 years of his are rich with friendships, are rich with doing battle for the oppressed and needy. Few men of 45 can say as he can, that the world is a better place for his having covered that span of years.

I shall sorely miss the good counsel and judgment of Sandy Bolz—more particularly when the issue of civil rights legislation arises again as it inevitable must, and, indeed on all legislation dealing with human rights and needs.

I wish you Godspeed, much happiness, and much success in your new venture, Sandy. I am sure, however, that this is not goodby and that you will continue, if not in person, then by any other means at your disposal, to continue to give us the support and the encouragement whenever the good fight is being fought.

STATEMENT BY ISAAC FRANCK, EXECUTIVE DIRECTOR, JEWISH COMMUNITY COUNCIL OF GREATER WASHINGTON

Mr. Chairman, Sandy and Joe, Congressman CELLER, ladies and gentlemen, for whatever the reasons may be, the chairman advises me that, unlike the speakers who preceded me, I am not bound by the 2-minute rule, and it is therefore my privilege to make some more extended remarks as part of our saying farewell to Sandy and Joy. I shall not utilize this occasion to unloose upon Sandy an avalanche of encomiums, for two reasons. First, this is no time for a

eulogy. Eulogies will be in order many, many years from now, when Sandy will have been gathered to his forefathers, at a ripe old age, sated with years, and having bequeathed to posterity a lifetime of accomplishments. Secondly, I am aware of the admonition given by the 10th century Biblical commentator, Rashi, to the effect that one is supposed to tell only part of mani's praise in his presence, and full praise only in his absence.

It seems to me more appropriate, on this occasion, to reflect together upon the issues and causes which Sandy espoused, and upon which he lavished his talents and his energy. This seems to me worth doing, not so much because he was active in these areas, and on behalf of these causes, not in order to highlight what he did, but rather for the purpose of reviewing for ourselves Sandy's impact upon us, his influence on our community's thinking, the stamp he has left on our community's policies.

Sandy has been a champion of civil rights, civil rights not only for Jews, but for all human beings. He was one of the chief architects of the amicus curiae briefs in the Thompson Restaurant case, as the case progressed from the lowest court to the U.S. Supreme Court, and thus helped make a signal contribution to the desegregation of restaurants in Washington. He was also one of the architects of the amicus curiae brief submitted to the Supreme Court in the District of Columbia public school segregation case. When we recall that one of these briefs was signed by 18 community organizations of all descriptions, and the other brief had on it the names of 22 religious, civic, and community organizations, the extent of Sandy's impact on our collective thought is made abundantly clear.

Sandy has been a defender of religious freedom and of the American principle of the separation of church and state. This has meant dealing with problems of religion and the public school, and other manifestations of the threatened erosion of the separation principle. In this complex and sensitive area, Sandy's leadership has provided clarity, diplomatic persuasiveness, and steadfast courage and good judgment. I remember very clearly our appearance before one of the suburban boards of education, about 9 years ago, in opposition to a proposal that public school machinery be utilized for the distribution of Bibles to public school pupils. A Congregationalist, Methodist, and a Seventh Day Adventist leader were among those in the delegation, and Sandy Bolz was our sopkesman. The quiet dignity, the persuasiveness, and the legal scholarship displayed by Sandy on that occasion, brought honor not only upon him, but upon all of us.

Civil liberties, personal freedoms, freedom of ideas and freedom of speech, are among the ideals espoused by Sandy, and their safeguarding has been among the objectives pursued by our Jewish community council under his stimulation and guidance. And Sandy has been as concerned about the freedom of ideas repugnant to us, as he has about freedom for the ideas we hold dear. He has drummed into us the understanding that the surest way of safeguarding freedom for the ideas we are committed to is the safeguarding of freedom for the ideas which in our view are most reprehensible.

Outstanding in the council's work has been Sandy's devotion to the needs of Israel, and to the interpretation of Israel's great significance in the life Judaism. For in the rebirth of Israel Sandy sees not only the establishment of a home for the driven and persecuted of our people, not only a means of restoring freedom and dignity to human beings, but also the erection of a laboratory for Jewish ideals of social justice and cooperative living, and a citadel of Jewish spiritual and intellectual creativity which can help enrich the spiritual life of Jewish communities everywhere.

And finally, Sandy has been a champion of democracy in the Jewish community. And let me assure you that this is not an easy or unhazardous task. It is much easier to espouse democracy in and for the political organization of a state. which has the authority to govern people's lives. In a voluntary association, which is what the Jewish community is, the champion of democracy faces many dangers from the powers that be and that would be inclined to perpetuate their dominance and control.

Sandy has done these things, and pursued these goals in our midst, for three reasons. First, because he is the kind of person he is. Second, because he takes seriously his citizen responsibility, and wishes to lead others toward similar seriousness about their citizen responsibilities. However, it seems to me that there is a third reason, and this is Sandy's taking seriously the matter of his being a Jew. Sandy has been trying to work out for himself, and to help all of us think through and work out what it means to be a Jew in mid-20th century America. He echoes the question of the ancient Hebrew prophet, "What does God require of you?" What does it mean to be a Jew, not only in the sanctuary, but out in the community, in the marketplace, in the give-and-take of our daily relations with people. Of course, he has not been indifferent to the ritual requirements of Judaism, or to the Judaism of the sanctuary. I recall a minor episode some 4 or 5 years ago, when Sandy lost his father. Sandy and someone else were at my house, probably for a meeting on some Jewish community council matters. During a break in the discussion, Sandy asked us whether we would suspend the meeting for a few moments and recite with him the memorial prayer for the dead, the Kaddish. Having been raised in a home where traditional Jewish observances were the norm, and in which it was assumed that the mourner's Kaddish is recited only by the actual mourner, and only as part of the regular religious service in which at least a quorum of 10 men participate, I found this a strange experience. None the less we rose, faced the east and together with Sandy recited the mourner's Kaddish. I remember this minor episode because that moment was an experience in holiness, and my home became truly a miniature sanctuary.

In espousing these causes, and in furnishing leadership on their behalf in our midst, Sandy succeeded in teaching us an important lesson in the strategies of community relations, and of his type of social engineering generally. He taught us that most often the best strategy is adherence to principle. At least he taught me that. If we adhere to principle, then, in any negotiations which may require compromise, our compromises would be a retreat from principle, but a retreat of only a certain distance. Contrariwise, if we do not adhere to principle, but negotiate in terms of compromises, then much more compromising is bound to be forced upon us than should be the case either ideally or pragmatically.

Let me add one final comment. I think I should say, in all candor, that in working in our midst on all these issues and principles, Sandy has not always been easy to live with. Indeed, he has often been quite difficult to live with. He has often been inflexible, obstinate. And this brings to mind an interesting linguistic observation made by Bertrand Russell in one of his philosophical papers. Russell points out that the verb "to be firm" has a rather unusual conjugation. In the English language the verb "to be firm" is conjugated as follows: "I am firm. You are stubborn. He is pig-headed." Now, I would not go to the extreme of saying that Sandy has been pigheaded, but he has been obstinate, rigid, inflexible, difficult. However, I must confess, in equal candor, that there is another being, another entity, in my life that displays these same irritating qualities, and that is my conscience, my moral conscience. My conscience too is obstinate, rigid, inflexible, and often very difficult to live with. But I would find it much more difficult to live without my conscience than to live with it. Similarly, I am sure that we shall all find it much more difficult to live without Sandy than we have to live with him. For, Sandy has been part of our collective moral conscience, and in his going to California part of our conscience is being wrenched away from us.

It seems to me that the best farewell gift we can offer to Sandy and Joy is our solemn promise that, after they leave our community, we shall not settle down to a smug, comfortable, self-satisfied existence; that we shall find in our midst new resources, new forces of conscience, which will keep us restless and unhappy unless we diligently continue the pursuit of those social and religious ideals to which he so unselfishly dedicated himself in our midst.

RESPONSE OF SANFORD H. BOLZ

Mr. Chairman, distinguished guests, all my good friends, my heart is full to overflowing—much too full to let me say all that I would like to say on this occasion. But I know that you would never believe me if I told you I was at a loss for words—so I shall try to respond, but briefly, as I would not for the world want to spoil the shining image that has been drawn of me today.

First, let me thank you from the bottom of my heart for this marvelous and memorable occasion. You have done me—and my family—great honor, and we shall remember this day as long as we live. I must say it is the most wonderful antidote any man could have to becoming 45. You know, as I sat here listening to these tributes, with what I hope was becoming modesty—even if you may have noticed now and then a shameless flash of agreement steal across my face—I could not help thinking of two remarks. One is attributed to a famous British diplomat, but I first learned it from a famous Israeli diplomat, my good friend Mike Arnon, who used it on an occasion when he was introduced to an audience in very glowing terms. It goes like this: "Compliments are like perfume—pleasant to inhale but dangerous to swallow." So you may have noticed that during the speeches I was inhaling mightily, but swallowing very little.

The second remark relates to the fact that this is a most unaccustomed position for me to be in. You know, I never thought I'd ever have a testimonial—I always thought I was much too young for that. You usually get them when you are either old or rich—and I was sure I would never be either. But I have attended many of these affairs, and usually I have sat out where you are, watching some other poor devil undergo this ordeal by tribute. (But I have loved every bit of it—and I would have it no other way). And it reminded me of the fellow who was being tarred and feathered and ridden out of town on a rail, who remarked that "If it weren't for the honor of the thing, I think I'd rather walk."

So much for jest. As I stand here, I can't help reflecting on how very much I owe to Cornell. If Albany gave me birth, surely Cornell nurtured the seeds which I hope have grown to maturity here in Washington. For Cornell gave me, first of all, a friend like Al Arent, whose leadership and dedication to good causes I always admired, and in whose footsteps in those causes I have somehow managed to follow pretty well, ever

since the days when I was a lowly freshman and he was the most respected senior on the campus.

Second, it gave me during law school the friendship of Jack Abramson, whose warm and generous call to me to share his fine practice in California is one of the rare things that would ever lead us to leave this wonderful town and all the warm hearts and good heads that we number among our friends here.

Third, it gave me, first as teacher and then as friend, a very great man, who has been an ideal and an inspiration to me throughout my career—and ever will be—and who has come to be with us today to do me honor. I mean, of course, my warm good friend, Judge Henry Edgerton.

And finally, Cornell gave me the greatest treasure that any man could have—my wife—for her price is far above rubies. She has been my constant companion, support, help, and balance wheel now for almost 20 years—and I think God never made a more wonderful woman. All of you who have worked with me in community affairs I am sure must know that I could never have done whatever I have been able to do without her steady support and understanding and willingness to accept whatever adversity—as well as honor—might come to us out of my dedication to such causes. And I would be less than deserving of the tributes you have paid me today if I were not sensible of the fact that this tribute is intended as much for her as it is for me. And I think I speak for you as well as for myself when I say that this comunity will miss her sweetness, her beauty, her never-failing good nature, and her deep, true goodness. And thank God, I shall have all of them with me, because I don't know what I would ever do without them.

There is much more that I would like to say, but there are neither words nor time. We shall never forget this moment—this day. To leave Washington, as you have shown us today we do, with the respect and affection of this community is reward enough for any man. I shall ask for no greater riches. And if there is one thought that I could leave with you by which you might, perhaps, remember me, I would make this my valedictory: That it matters little what vaulting temples and structure you may build in this community. And it matters little what riches you may contribute to our fellow Jews and our fellow men. It matters only that, through dedication to the finest tradition of Judaism, you keep burning always at white heat the living fire of fortitude and the bright flame of justice. For if they go out, the rest shall be without meaning and as if it had never been.

If you will remember this of me at times when there may be temptation to fail or flag in keeping these fires constantly rekindled, then I know that I shall not be forgotten here. Thank you all again from the bottom of our hearts—come see us in California—goodby and God bless you all.

Easthampton, Mass., Celebrates 175th Anniversary and Homecoming

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. BOLAND. Mr. Speaker the beautiful town of Easthampton in Hampshire County, Mass., nestled picturesquely between the foothills of the Berkshire Mountains and the Mount Tom Range, and just to the west of the Connecticut River which washes her eastern limits, proudly celebrated her 175th anniversary over this last weekend.

The gala observance was also the occasion of a homecoming for Easthampton's sons and daughters who are now living in all sections of this great United States and American outposts throughout the world.

Mr. Speaker, geologists say that Easthampton is now located in what was once the bottom of Lake Hadley; that at another period in prehistoric eras the town was covered by the great icecap; and still in another age Easthampton was inhabited by dinosaurs whose footprints are still being found today.

Purchased from the Indians in 1653, the area was originally part of a tract of land called Nonotuck, and the first inhabitant was John Webb, who was granted a piece of land on which to build his home in 1644. In 1674, a sawmill was erected near the Manhan River, and the community began to take shape and grow until it was incorporated as a district of 400 population in 1785. Now, 175 years later, the population exceeds 12,000.

The first church was organized in 1785 with Rev. Aaron Walworth as preacher. When he declined to settle in Easthampton Rev. Payson Williston was ordained in 1789. Samuel Williston, eldest son of the first pastor, founded Williston Academy in 1841 as Williston Seminary. In 1863 a group of Methodists began holding prayer meetings in Bosworth's Hall, and in 1868 the first Roman Catholic church, dedicated to the Immaculate Conception, was built in Easthampton. In January 1871 a group of Episcopalians started as a mission, holding services in the lower townhall, while the first German Lutheran services were held in July 1890 in Knipfer's Hall on Briggs Street. In 1918 the First Church united with the Payson Church and formed the Easthampton Congregational Church. During Easthampton's 175 years of history the churches have grown in proportion to the growth of the community.

One of the earliest industries, that of buttonmaking, was established by Mr. Williston in 1827, and by 1865 this was a flourishing business, a stock company having been formed with a capital of $150,000. During 1848 and 1849 Mr. Williston had erected a building beside his button factory for the manufacture of suspender webbing. In 1852 he sold out to a joint stock company which assumed the name of the Nashawannuck Manufacturing Co., which was the direct forerunner of the present United Elastic Corp. in Easthampton. Other well-known industries located in the town are the Hampton Mills, Inc., the National Felt Co., Easthampton News industrial job printing plant, Enterprise Printing Co., Philipp Manufacturing Co., Paragon Rubber Co., Spring Action Electric Corp., Rhoades Rubber Co., Lesnow Manufacturing Co., Hampden Specialties Products Corp., Nicad Division, Gould National Batteries Inc., Easthampton Maintenance Co., Easthampton Warehouse Co., Inc., M. & L. Plastics Corp., Tubed Chemicals Corp., Stanley Home Products, Inc., Easthampton Foundry, Inc., Norma Lee Candy Co., the October Co., and the Sadlowski Manufacturing Co.

The history of public schools in Easthampton dates back to the pre-Revolutionary period. In 1739 Northampton supported a school at Pascommuck and in 1784 Northampton helped establish two schools in the village. Soon after Easthampton was incorporated in 1785, the sum of £15 was raised for schools. The district schools were built and continued to meet the educational needs of the community for nearly a century. There were 12 district schools besides the high school by 1867. The high school, now Memorial Hall, built in 1865, was the first two-story brick school building in Easthampton. As the community grew and prospered, so did its schools. However, progress of school construction is only one phase in the growth of education in Easthampton. The curriculum was developed and improved to meet the needs of the pupils in the community and education in Easthampton has kept abreast with State and National trends.

In addition to the public schools and Williston Academy, Easthampton also benefits from the Roman Catholic parochial educational system. Hundreds of the young Catholic boys and girls of the community are educated in the Sacred Heart, the Immaculate Conception, and Notre Dame Schools.

Mr. Speaker, the history of the town of Easthampton exemplifies those qualities that constitute our American heritage.

I ask at this time to have included with my remarks the names of committee members who worked so hard to make Easthampton's 175th anniversary and homecoming the success that it was, and a story from the Springfield Daily News of June 2 relating the history of the town:

Executive committee for the 175th anniversary of the town of Easthampton: Horace J. Hatch, treasurer; Mrs. Orman Curtis, cosecretary; Miss Katharine M. Root, cochairman; Mrs. William L. Robinson, cosecretary; Roy V. Bouchard, cochairman.

Chairmen of the general committees: Mrs. Godfrey Dragon, Mrs. Clarence Dougherty, cochairmen, concert; Mrs. Carl Lux, advertising in historical book; Mrs. Arnold Wild, telephone; Miss Julia Skrzyniarz, pageant; Mrs. Ellsworth Greenwood, queen; Henry F. Mitowski, ways and means; Homer Perkins, cochairman, steering; Horace J. Hatch, treasurer; Rev. Benson H. Harvey, church; George Evans, historical; Russell Ulm, regatta; Frank Janik, publicity; Simon Brin, grounds; Frank Skrzyniarz, traffic; Archie Forbes, Jr., industrial exhibit; Robert Ulm, safety; Henry Labbee, parade; Mrs. Clifton Magliola, Mrs. Arthur Thouin, cochairmen, dress revue; Bernard Fleury, Jr., public relations; Mrs. David J. Strong, historian; Mrs. Hazel Clair, art exhibit; John E. Kitson, invitations. Absent when both pictures were taken: Harold Bailey, steering cochairman; Ernest Willard, fireworks; John Bugieda, sports; Kenneth Dolloff, song contest.

EASTHAMPTON 175TH ANNIVERSARY AND HOMECOMING COMMITTEES

Executive: Katharine M. Root, cochairman; Roy V. Bouchard, cochairman; Mrs. Orman Curtis, Mrs. William L. Robinson.

Steering: Harold Bailey, cochairman; Homer G. Perkins, cochairman; John Lagowski, George Gadomski, Robert Partridge, Archie Forbes, Jr., Mrs. William N. Craven, Mrs. Herman Nichols, Mrs. Lorraine St. Martin.

Financial: Horace J. Hatch, treasurer; Mrs. Mary Brewer, Lucien LaPrade.

Telephone: Mrs. Arnold Wild, Miss Wladyslawa Zmaczynski, Leo J. Perras, Mrs. Nellie Proffitt, Mrs. Eva Healy, Mrs. Thomas McTurk, Mrs. Helen Usher.

Publicity: Frank Janik, Roy V. Bouchard, Russel Flanagan, Warren Craig, Mrs. Neil Martel, Mrs. William Vachon.

Public relations: Bernard Fleury, Jr., Edmund Czelusniak, Mrs. Philip Bond, John Craig, Mrs. Sophie Janik.

Invitations: John E. Kitson, Anthony Kendrew, Kenfred A. Root, Mrs. Kenfred Root, Arthur J. Pepin, Mrs. Frank Rabideau.

Historical: Mrs. David Strong, George Evans, Mrs. Frank Merrick, Mrs. Joseph Brown, Richard Barcomb.

Ways and Means: Henry F. Mitowski, Mrs. George F. Lapan, Mrs. Carl Lux, Walter Fedorkowicz, Thomas Scanlon, Robert Sjodahl, Frank Anderson.

Advertisements: Mrs. Carl Lux, Mrs. James H. Misner, Jr., Roy V. Bouchard, Katharine M. Root.

Queen: Mrs. Ellsworth Greenwood, Mrs. Frank Miller, Mrs. James Stone, Ellsworth Greenwood.

Churches: Rev. Benson H. Harvey, Father John Chwalek, Rev. Walter Rueger, Mrs. Samuel Micka, Mrs. Avelina Southiere.

Parade: Henry Labbee, Winfield Kelsey, Frank Skrzyniarz, Robert Ulm, John Dorman, Kenneth Dolloff, Simon Brin, Mrs. Leroy Bauer, Miss Beatrice Lyman, Wallace Bull.

Easthampton official song: Kenneth Dolloff, Miss Alice Butterfield, Henry Teller.

Dress revenue: Mrs. Arthur Thouin; Mrs. Clifton Magliola, Mrs. George Lapan, Mrs. E. E. Williams, Mrs. Francis Mutter, Mrs. Viola Bergeron, Mrs. Ernest Cooney.

Regatta: Russell Ulm, Stanley Popielarczyk, Forbes Synder, Ernest Drexel, Frederick Jayes, Joseph Acus, Robert Oborne, Albert Cartledge.

Industrial exhibit committee: Archie Forbes, chairman; Walter Szary, Donald Gauger, Clarence Dougherty.

Art exhibit: Mrs. Hazel Clare, Albert Kiesling, Mrs. F. L. C. McGowan, Mrs. Merritt Loomis III, Robert E. Frennier, Raymond Ewing, Frank Rabideau.

Hobbies committee: Mrs. John Behaylo, cochairman; Mrs. Archie Forbes, cochairman; Mrs. Ronald Pepin, Mrs. Donald Lamoureux, Mrs. Kenneth Knight.

Hole-in-one golf: Henry Mitowski, Mr. and Mrs. Carl Lux, Carl (Speed) Lux, Robert Sjodahl, Katharine M. Root.

Fireworks: Ernest Willard, Walter Marek, Oscar Gunsolus.

Historical exhibit: Richard Barcomb, Anthony Kendrew, James Campbell, Miss Irene Soja, Paul Barcomb.

Barbecue: Mr. and Mrs. A. Forbes, Jr., Katharine M. Root, Roy V. Bouchard, Fred Kaezynski, Charles McDonald, Ronald Pepin, Frank Anderson, Mrs. Charles McDonald, Donald Lamoureux, Richard Press, Mrs. Helen Wilby, Mrs. Helen Connery, Wallace Bull, Walter Marek, Miss Shirley Thouin, Mrs. Frances Brisson, Mrs. Henry Jones, Mrs. Martha Neidel, John Hardy, Robert Partridge, Albert F. Roy, Donald Slattery, Clifford Thayer, Mrs. Donald Lamoureux, Mrs. Charles Stuart, Mrs. Daniel Bolduc, Mrs. Patrick O'Connor, Mrs. Ronald Pepin, Mrs. Francis Plourd, Mrs. Anthony Pombal, Mrs. Edward Wagner, Harold Bailey, Henry Mathieu, Anthony Pombal, Bernard Fleury, Jr., Mrs. Edwin Kaeppel, Mrs. Louise Brooks, Mrs. Ethel Bartlett.

Pancake booth three-county fair: Katharine M. Moot, Mrs. Anthony Banach, Mrs. Chester Banach, Mrs. Myrtis Billieux, Mrs. Daniel Bolduc, Mrs. George Gadomski, Eli Bourgault, Mrs. Mary T. Brewer, Mrs. Orman Curtis, James Campbell, Mrs. Olive Dragon, Mrs. Henry Jones, Mrs. Evan Johnston, Mrs. William Konopka, John Lagowski, Mrs. Donald Lamoureux, Mrs. George LaPan, Mrs. Viola Bergeron, Henry Mathieu, Mrs. Frank Miller, Mrs. Stella Mitchell, Henry Mitowski, Mrs. Martha Neidel, Mrs. Patrick O'Connor, Mrs. Ronald Pepin, Mrs. Edwin Place, Mr. and Mrs. Francis Plourd, Mrs. Anthony Pombal, Lester Richardson, Mrs. Leo Small, Thomas Scanlon, Mrs. Charles Stuart, Mrs. Edward Wagner, Mrs. Blanch Welch, Donat Fournier.

Gymkana: John Dorman, Mr. and Mrs. P. Tautznik, and Edward P. Egan.

Sports: John Bogieda, Miss Irene Soja, and Thomas Carrol.

Cosponsors of soap box derby: Henry Labbee, and Flaherty.

Queen's float: Mr. and Mrs. G. Coyle, Sr., Mr. and Mrs. Warren Wilds, Mr. and Mrs. Ray Lucia, Bruce Lucia, and Mr. and Mrs. Clifford Tanner.

Soap box derby: Sigmund Wonderlich, John Lagowski, William Symancyk, Frank Skrzyniarz, Robert Ulm, Kenneth Provoncha, Roy Bouchard, and Mark Supple.

[From the Springfield (Mass.) Daily News, June 2, 1960]

Samuel Williston Founded Academy and Industries—Philanthropist Became First Citizen of Little Village That Grew to Town of 12,000

Easthampton.—As Easthampton prepares to celebrate its 175th anniversary and homecoming on Friday, Saturday, and Sunday, the early history of the town will be recalled to the minds of the residents by means of historical exhibits, a pageant, symbolic floats in the anniversary parade and by the retelling of the high lights in the town's growth and development.

Purchased from the Indians in 1653, the area was originally part of a tract of land called Nonotuck, and the first inhabitant was John Webb, who was granted a piece of land on which to build a home in 1664. In 1674, a sawmill, the first building other than a house, was erected near the Manhan River, and little by little various sections of the area were settled until, in 1785, when it was incorporated as a district, the population numbered 400. Now, 175 years later, the population exceeds 12,000.

The first church was organized in 1785 with Rev. Aaron Walworth as preacher. When he declined to settle here as pastor Rev. Payson Williston was ordained as pastor in 1789.

Industry in 1827

Samuel Williston, oldest son of the first pastor, founded Williston Academy in 1841, as Williston Seminary. One of the earliest industries, that of button making, was established by Mr. Williston in 1827, and by 1865 this was a flourishing business and a stock company was formed with a capital of $150,000. During 1848 and 1849, Mr. Williston had erected a building beside his button factory for the manufacture of suspender webbing. In 1852 he sold out to a joint stock company which assumed the name of the Nashawannuck Manufacturing Co. Through many transactions, building construction, partnerships, and acquisition of other companies, this became the forerunner of the present United Elastic Corp.

In addition to his benefactions to Williston Seminary, he made large donations to Amherst College, contributed largely to the rebuilding of Payson Church after it had twice been destroyed by fire, and built the Hampshire and Hampden Railroad, thus extending the Canal Railroad and connecting Northhampton with New Haven.

The first school of which there is any record was in the Pascommuck section, in 1739. In 1797 the town divided into four school districts with management of each school entirely in the hands of the individual districts. Town control of schools dates from 1864 when it was voted to establish a high school, now Memorial Hall. The Easthampton Library was built in 1881.

Switch to New Campus

By 1886, the old campus of Williston Academy was completed, with classrooms, dormitories, a laboratory and a gymnasium. The Mansion House, a former inn and stagecoach stop, across the street from the main campus, was acquired by Williston and known as Payson Hall. During the past two decades, however, a gradual expansion has seen the center of activity moved from its Main Street site to the new campus on Park Street, and the final abandonment and sale of the old buildings to make room for new construction. Payson Hall was also sold, and is now an apartment house. New dormitories were erected in the Park Street area, a former mill was acquired and renovated for an administration and classroom building, a library and infirmary were added, many homes in the area were acquired and converted to the use of the faculty, and the latest of new construction, a science building and auditorium have completed the integration of the campus around the old Williston homestead which now serves to house the headmaster of the academy and his family.

There are now four public elementary schools and a high school, housing nearly 1,900 pupils, in addition to three parochial schools. The eight churches include Easthampton Congregational, Providence Methodist, St. Philip's Episcopal, Trinity Lutheran, Christ Evangelical Lutheran, Immaculate Conception, Sacred Heart, and Notre Dame du Bon Conseil.

Economic Growth

Easthampton remains primarily one of manufacturing. The removal of the West Boylston Co. in the early 1930's left a large gap in the economic structure of the town, but local officials soon were able to attract other industries to the vacated buildings which now house several firms of varied interests. The coming of Stanley Home Products, Inc., in the early 1940's gave employment to many local residents, and Hampton Mills continues to be one of the largest industries, along with the United Elastic Corp. Many other smaller manufacturing companies occupy buildings, mainly in the Pleasant Street section, and turn out a variety of products of rubber, plastic, textiles, metal and chemicals.

The building of homes in the postwar years has created several new neighborhoods and the resulting increase in population has necessitated an increase in mercantile establishments. A sewage disposal plant is nearing completion, and the artesian well water system is being improved and augmented by new wells.

A 30-unit development for housing the elderly was opened last year, and 2 years ago, financed by public subscription and gifts from industry and local organizations, the community swimming pool was opened,

adding much to the already popular facilities of Nonotuck Park and Daley Field.

Within a few weeks a special town meeting will be called for the purpose of voting a new high school.

Within the past few years, the town's three banks have been forced to seek larger quarters, two of them constructing new buildings on the site of the former Williston campus, and all reporting an alltime high in prosperity during the past year.

Visitors to Easthampton on Sunday, entering through the residential sections and taking up stations along the route of the anniversary parade which will pass mainly through the industrial and business areas, will surely see 175 years of progress on every side.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided,* That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Largest Junior Chamber of Commerce Chapter Organized This Year in the United States Given Charter at Grafton, W. Va.; Maj. Joseph Tolbert and Senator Jennings Randolph Speak

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. RANDOLPH. Mr. President, Grafton, W. Va., a railroad center which has suffered economic difficulties mainly as a consequence of rapid technological change, is a city which nevertheless looks toward the future with resolution and optimism.

The citizens of Grafton have organized an economic development program aimed at attracting and developing new industries and making their community a more desirable and hopeful place in which to live.

Playing an important role in this cooperative effort will be the Grafton Junior Chamber of Commerce, which is the largest Jaycee chapter to have been organized in the United States this year. The 50 charter members who were presented their chapter's charter during a banquet ceremony in which I was privileged to participate, June 6, 1960, are: Calvin C. Smith, president; Herbert C. Ball and James C. Fawcett, vice presidents; Charles E. Walls, secretary; Maynard D. Slaven, treasurer; Nelson L. Blankenship, Manfred K. Bahmann, Glenn H. Bartlett, Earl R. Carrothers, Floyd George Cozard, William L. Dempsey, Robert L. Duckworth, Jack Edward Ellis, Frank M. Faulkner, Frederick D. Ford, Mark Freeman, Kenneth F. Fortney, Harold R. Gillespie, Don R. Harman, Teddy Lee Haddix, Bill Joe Hill, Jeremial Hines, William B. Hawkins, Charles Richard Isner, Jr., Jasper A. Kalo, Elbert G. Knotts, Darl Robert Laulis, J. N. Liller, Donal Lee Matthews, William Arthur Matthews, Otis Max Murphy, Delbert R. Moats, Charles Lowell Mason, George Perko, Derald Floyd Poling, Donald F. Poling, Cecil W. Phillips, Jr., Captaim James E. Pappas, James M. Robinson, Paul Hansen Resitrup, Wilfred L. Stead, Carman L. McKinney, Jack W. McDougal, Donald J. Tansill, James Tingler, Warren A. Turner, John J. Uveges, Tony Joe Veltri, Dorsey Wayne Weaver, and Robert M. Wyckoff.

As guest speaker for the charter banquet, we heard Maj. Joseph Tolbert of the Strategic Air Command on the importance of SAC to our national defense. His illustrated presentation was effective and highly informative.

The charter was presented by Jack Stillman of Charleston, W. Va., immediate past president of the Junior Chambers of Commerce of West Virginia, who made an excellent talk on the value of the Jaycee organization in the State and Nation.

Dr. Robert F. Gerkin was the clever master of ceremonies, Phil Lux of Fairmont, W. Va., represented the sponsoring chapter from that neighboring city.

"Building a Better West Virginia" was the theme of my brief remarks.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from my speech.

There being no objection, the excerpts from the speech by the senior Senator from West Virginia were ordered printed in the RECORD, as follows:

BUILDING A BETTER WEST VIRGINIA

(Speech by Senator JENNINGS RANDOLPH at charter banquet, Grafton Junior Chamber of Commerce, Grafton, W. Va., June 6, 1960)

You are now officially a part of one of the most distinguished State organizations of the junior chamber of commerce in our country. The record of accomplishment of the West Virginia Jaycees is a notable one—a fact which was rightfully acknowledged at the national convention in Buffalo last year. It is a proud record, and one in which an example has been set for all of us in the State in carrying out the theme of "Building a Better West Virginia."

The job of going on from here—the task of building a better West Virginia—rests with you gentlemen who are the business, industrial, and professional leaders of the coming generation.

Yours is the generation which must plow the new ground, and break down the barriers as our own Chuck Yeager, of West Virginia, broke the sound barrier.

And yours is the generation most fitted for the task. Unemcumbered by the preconceptions that often increase with the years, you are free to search for new solutions—as did Alexander Graham Bell, when he invented the telephone at the age of 28; as did Henry Ford, when he produced his first motor car at 29; as did Dr. Robert Maynard Hutchins, when he was appointed president of the University of Chicago at 30.

These men found youth a time of invention and initiative. The history of the arts, of science, of industry and of politics records the names of many others—Aeschylus, Galileo, David Hume, Francis Bacon, William Wordsworth, Alexander Hamilton—all men who completed some of their greatest work before reaching the age of 30.

This is an age in life when you are preeminently suited for searching out new solutions and penetrating established barriers. One of these barriers opposing our economic development has been our tradidition reliance in West Virginia on the basic manufacturing and extractive industries and the rail industry which serves them. These industries, with their heavy rate of capitalization per worker, are the leaders in the process of automation.

Therefore, we must search beyond the basic extraction and processing of our natural resources to the secondary stage of fabrication and manufacture of consumer goods. It is in these fields that opportunities abound for the development of locally owned, independent small businesses.

In this respect it is worth noting that 94 percent of all commercial and industrial establishments employ fewer than 20 persons, while a total of 97 percent of all concerns employ not more than 50 persons.

Firms with 50 or fewer employees provide jobs for 72 percent of all workers and account for 78 percent of the Nation's total sales dollar volume in the retail, wholesale, and service fields.

Thus, it is in the fields of the service and fabricating industries which offer opportunities for the development of small businesses that we must look for the long-range development of much of our economy.

In this respect it is gratifying to note that members of the West Virginia Junior Chamber of Commerce have been among the leaders in the development of a small business investment corporation under the provisions of the Small Business Investment Act of 1958. This is a significant step toward the realization of many of our goals.

I have little fear as to West Virginia's future while several thousand young men are guided by the Jaycees in providing creative and courageous leadership in the fields of industry and business, community development, and constructive participation in public affairs.

Religious Organizations in the Philippines

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. McCORMACK. Mr. Speaker, one of the anchors of democracy in the Pacific and in the world is the Republic of the Philippines. This small nation which understands both the East and the West, has made invaluable contributions to democracy and to understanding through such eloquent spokesmen as President Garcia and Ambassador Romulo. No nation, large or small, has a better understanding through bitter experience in the ways and the menaces of communism than do our friends in the Philippines.

We all know that many of the sources of democracy in the Republic of the Philippines were the religious organizations of all faiths through their churches, schools, hospitals, and welfare establishments.

During the last great war, many of these institutions were severely damaged as a result of the war. These institutions also provided invaluable relief to American soldiers and civilians. It is a matter of deep satisfaction and pride to

know that our country has seen fit to recompense these worthy institutions and has awarded claims which in substantial part, at least, permit the restoration of their facilities and reimburses them for services rendered to our soldiers and civilians.

These awards have been made through a series of congressional acts in which I have been proud to play a leading part, beginning with the Philippine Rehabilitation Act of 1946, Public Law 303 of the 82d Congress; Public Law 211, 83d Congress; Public Law 997, 84th Congress, and finally by Public Law 884 of the 85th Congress which provided for the transfer of $3,750,000 to the War Claims Fund to pay remaining awards by the Foreign Claims Settlement Commission.

Mr. Speaker, I placed in the CONGRESSIONAL RECORD of August 21, 1958, a list of the religious claims paid as of that time, and a list of unpaid pending claims.

I am advised that the unpaid claims were all certified to the Treasury on October 29, 1958 and have now been paid. It is a great satisfaction and pleasure to me, therefore, to include in the CONGRESSIONAL RECORD at this time a final statement with respect to the claims of the religious groups and organizations, and to these acts of justice and equity by our Government to our Philippine friends and allies of all faiths and denominations.

A breakdown of the amounts paid to the several religious groups is as follows:

Catholic	$24,629,934.70
Protestant	4,062,718.02
Jewish	113,129.58

The list of claimants to whom amounts have been paid is as follows:

CLAIMS PAID

ROMAN CATHOLIC

	Amount of award
The Roman Catholic bishop of Lingayen	$79,839.71
Institute of the Daughters of Jesus	53,129.56
The Roman Catholic bishop of Leyte	75,063.56
Immaculate Conception Anglo-Chinese Academy	30,734.37
Cong. de Religiosas Dominicas de Sta. Cat. de Sena	622,780.75
The Roman Catholic archbishop of Manila	1,245,323.30
Hospital de San Juan de Dios	931,921.12
Community of the Sisters of St. Paul de Chartres	1,250,263.23
The Roman Catholic bishop of San Fernando	6,773.32
Cong. de Religiosas Misioneras de Santo Domingo	134,423.83
Congregation of the Religious of the Virgin Mary	684,646.03
Franciscan Sisters of the Immaculate Conception	39,919.39
Instituto de Hermanas Augustinas Terciarias de Filipinas	108,880.06
Roman Catholic Prelature "Nullius" of Iba	28,322.62
Beaterio del Santisimo Rosario	137,663.15
Foreign Mission Sisters of St. Dominic, Inc	194,174.64
Foreign Mission Sisters of St. Dominic (St. Paul's Hospital)	1,315,523.15
Madres Siervas del Espiritu Santo de la Ador, Perpetua	$500.00
Corporacion de PP Augustinos	1,113,774.30
Society of St. Columban	107,551.91
Sisters of the Good Shepherd	304,789.55
Community of Benedictine Sisters	803,605.68
Servants of the Holy Ghost	161,790.33
Maison de la Salle College	304,469.02
Christian Brothers	148,998.92
Daughters of Charity of St. Vincent de Paul	1,667,507.07
Society of the Divine Word	518,798.38
Assumption Convent, Inc	554,038.61
Ateneo de Cagayan	482,559.18
Missionary Canonesses of St. Augustine	1,033,597.81
Franciscan Missionaries of Mary	204,960.83
The Belgian Catholic Missionaries	60,179.54
Ateneo de Manila	1,954,860.95
Colegio de San Jose	331,418.22
Isabelle Cultural Corporation	935,229.10
Corp. de Padres Dominicos de Fil. and Univ. of Sto. Tomas	1,292,575.12
San Beda College	73,979.60
Knights of Columbus	115,874.55
Catholic Vicar Apostolic of Mt. Province	287,667.64
El Colegio de San Juan de Letran	583,016.54
The Roman Catholic Archbishop of Cagayan	205,541.23
The Roman Catholic Bishop of Zamboanga	391,500.75
El Observatorio de Manila	365,324.98
Ateneo de Naga	73,882.07
The Roman Catholic Archbishop of Jaro	455,825.59
Corp. de Padres Dominicos de Filipinas	109,726.70
Congregation of Mission of St. Vincent de Paul	229,581.93
Oblates of Mary Immaculate	8,814.37
The Roman Catholic archbishop of Cebu	372,318.19
The Roman Catholic bishop of Lipa	556,675.59
The Roman Catholic bishop of Surigao	131,019.68
The Roman Catholic archbishop of Nueva Caceres	215,657.95
The Roman Catholic bishop of Nueva Segovia	300,485.52
La Provincia de San Nicolas de Tolentino de las Islas Filipinas de la Orden de Padres Agustinos Recoletos	153,609.17
The Roman Catholic bishop of Tuguegarao	270,891.92
The Roman Catholic bishop of Lucena	208,213.19
Catholic Women's League of the Philippines, Inc	21,450.00
Agustinian Recollect Missionaries of the Philippines	47,523.91
Colegio de Santa Rosa de Manila, Inc	530,767.31
Total	24,629,934.70

PROTESTANT

	Amount of award
Ilog Baptist Church	20,362.01
Seaside Baptist Church	3,371.00
Cosmopolitan Student Church	36,912.98
Domestic and Foreign Mission Society of Protestant Episcopalians	218,277.91
St. Luke's Hospital	20,908.32
Mary Johnston Hospital	12,482.50
Young Men's Christian Association of the Philippines	637,723.43
General Conference of Seventh Day Adventists	$384,816.98
Young Women's Christian Association of Manila	24,892.40
Bishop Mission District of Protestant Episcopalian Church in United States of America	227,926.14
Silliman University and Board of Foreign Mission of Presbyterian Church in United States of America	365,860.43

New Sources of Water Supply Through Utilization and Management—Address by Floyd E. Dominy, Commissioner, Bureau of Reclamation

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 7, 1960

Mr. KERR. Mr. President, last week Mr. Floyd E. Dominy, Commissioner of

the Bureau of Reclamation, spoke at the Fourth Congress of the International Commission on Irrigation and Drainage in Madrid, Spain, on the subject of new sources of water supply through improved utilization and management. His remarks set forth many of the ideas with respect to opportunities and needs for improving the utilization of our water resources that are emerging from the studies of the Senate Select Committee on National Water Resources which have been carried on during the past year. The statement, which I am inserting at the conclusion of my remarks, points out the future need and importance of making the most beneficial use of every drop of water in order that the requirements of expanding population and industry can be met. Among other matters, Mr. Dominy points up opportunities of reducing water losses due to evaporation, evapotranspiration, and seepage. He discusses weather modification, improved runoff management, demineralization, and reuse of water as being of importance in extending our supplies to meet future needs. The importance of improved water management on watersheds, on irrigation projects and on the farm, is stressed. I commend Mr. Dominy's talk to all who are interested in finding solutions to our problems of meeting water resources needs in the future.

Mr. President, I am informed by the Public Printer that this address will make 2½ pages of the RECORD at a cost of $202.50. I ask unanimous consent notwithstanding the cost that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEW SOURCES OF WATER SUPPLY THROUGH IMPROVED UTILIZATION AND MANAGEMENT

(By Floyd E. Dominy, Commissioner, Bureau of Reclamation, presented at the fourth congress, International Commission on Irrigation and Drainage, Madrid, Spain, May 30, 1960)

INTRODUCTION

At mid-20th century, we who are engaged in water resource development face critical decisions. Despite the staggering proportions of our present water use and demands, the estimates of future needs are even greater. In many countries of the world, the problem of providing adequate water supplies is already acute. As the demand for water increases in direct proportion to the explosive increase of population and the rapid expansion of industrialization, the problem will soon become crucial.

The vital urgency of this situation and its implications on water resource undertakings can be emphasized by a few statistics. In 1650, the world population was about 600 million. During the next 300 years, this population more than quadrupled, until, by 1950, the world population was estimated at 2,689 million. Some experts foresee another quadrupling within the next hundred years. There may well be 9 billion people in the world by the year 2050.

This demographic yardstick may be applied another way. Every 24 hours, the world population increases by more than 120,000 people. In just 4 years, its population will increase by about 175 million, the equivalent of the present population of the United States.

This unparalleled rate of increase in population places a progressively greater demand on irrigated agriculture, because irrigated lands now produce food for perhaps 10 to 15 percent of the world's population. To maintain or improve standards of living these lands must produce much more food and fiber in the future. Similarly, the extraordinary industrial growth in many countries of the world with its accompanying increase in volume, variety, and complexity of associated water problems has brought great challenge to those who must develop and maintain reliable water supplies.

To meet these tremendous and intensive needs around this shrinking world of ours, there must be continuous progress toward the ultimate goal of making the most beneficial use of every drop of water. In the field of irrigation and drainage, there is an immediate need to reexamine our present technology to assure more efficient use of water supplies already developed. There is a particular need to evaluate promising techniques of obtaining additional water supplies through improved utilization and management. The time never was more propitious for such reexamination and evaluation.

This paper summarizes the broad aspects of several areas of research and development for increasing water supplies. These include reduction of reservoir evaporation, reduction of nonbeneficial evapotranspiration, reduction of seepage losses, control of precipitation, runoff management, reuse of water supplies, demineralization of water, improvement of land management and watershed techniques, and improvement of irrigation practices. In some of these areas, we have made considerable progress. In other areas we are only at the threshold of development.

I present this summary to the administrators, engineers, and other irrigation and drainage specialists of the International Commission on Irrigation and Drainage in the sober conviction of urgency and with the hope that the countries of the world will utilize their technical skills and energies toward fuller utilization of present water supplies as well as the development of new supplies.

Reduction of losses

One opportunity to conserve water lies in possible manipulation and control of the hydrologic cycle. Three phases of the natural hydrologic cycle result in losses of water for man's use. These are evaporation, evapotranspiration, and seepage or infiltration. These losses all take place in the hydrologic cycle under natural conditions. In some cases, they can be reduced under the natural conditions to make more water available. Additional opportunities may occur for reducing water losses by imposing artificial changes in the natural hydrologic cycle.

Evaporation

Each year in the 17 western States of the United States 25 million acre-feet of water evaporate from exposed fresh water areas. Water resource development engineers have, for many years, given thought to or put into practice a number of methods for reducing evaporation loss from reservoirs. Among these are the following:

(a) Construction of reservoirs for holdover storage at the highest practicable altitude.

(b) Selection of reservoir sites to keep exposed water surface to a minimum.

(c) Operation of reservoirs, to the extent possible so they will be full during the time of year when evaporation losses are least.

(d) Use of roofs and enclosures.

(e) Diking off shallow areas.

(f) Protecting the reservoir with shelterbelt plantings and windbreaks.

(g) Where natural conditions and legal restrictions will permit, use of ground-water reservoirs for holdover storage.

To these methods we have recently added another—the use of a surface cover of the monomolecular type. This method gives great promise of effecting substantial reductions in evaporation loss from open water surfaces. Certain organic compounds have shown the ability to reduce evaporation loss when applied to a water surface as a compressed layer just one molecule thick. The Bureau of Reclamation in cooperation with other Federal and local agencies has recently completed a full-scale test of this method. The results of this study justify further intensive work in perfecting the process.

In an extensive field trial a monomolecular layer of hexadecanol was applied to 2,500-acre Lake Hefner, a municipal water supply reservoir for Oklahoma City, Okla. The hydrologic evaluation based on water budget and energy budget measurements showed that during the period of treatment from July 7 through October 1, 1958, an overall reduction in evaporation of about 9 percent was achieved. The 9-percent savings was about one-fourth of the potential reduction which would have been attained at the water temperature experienced had all other circumstances been ideal.

This field test demonstrated for the first time that it is possible to apply and maintain for extensive periods a compressed monomolecular layer over large areas of a free water surface. However, the film is rapidly disrupted if wind velocities exceed 20 miles per hour for any length of time. The equipment used to spread the hexadecanol in this test was relatively crude. A marked reduction in the cost of application can be expected with better equipment. If a large market for hexadecanol develops for this purpose, the cost of materials will also be substantially less.

Evaporation reduction by this technique can be economically justified even if the alternative cost of water is considerably less than at Lake Hefner. The technical details of this study are discussed in another communication to this Congress.

Evapotranspiration

Evapotranspiration, sometimes called consumptive use, has been defined as the sum of the volumes of water used by the vegetative growth of a given area in transpiration and building of plant tissue, and that evaporated from the adjacent soil, snow, or intercepted precipitation. The basic purpose of irrigation is to supplement precipitation in supplying these water requirements.

The water used in the growth processes of plants having no economic or esthetic value is wasted and the loss may be of considerable importance in areas with limited water supplies. It is so important, in fact, that much attention is being given to the control of uneconomic plants in irrigated areas. The principal offender is the group of plants known as phreatophytes, which obtain their water supply from the zone of saturation either directly or through the capillary fringe. It is estimated that phreatophytes consume as much as 25 million acre-feet of water annually in the 17 Western States. Phreatophytes thrive along both natural and manmade water courses, in bottom lands, and on deltas built up by sediment deposition at the upper end of reservoirs. Conditions for the growth of phreatophytes are especially favorable where conveyance channels meander through bottom lands and marshy areas. Phreatophyte growths are reduced in these areas wherever feasible by straightening and rerouting channels. The usual methods of controlling phreatophytes to reduce evapotranspiration include chemicals and mechanical equipment.

Seepage

A large percentage of the irrigation water diverted from streams and reservoirs does not actually reach the farms even though the water may not be lost to the river basin. Tens of thousands of miles of irrigation canals and laterals suffer seepage and other losses up to as much as one-half of the amount of water diverted. An added eco-

nomic loss is that percolation of seepage water often produces drainage problems which are costly to alleviate.

Ponding tests are the chief method used to measure leakage from canals. These tests are quite expensive and require taking the canal out of service during the test. The Bureau of Reclamation is experimenting with a method of estimating seepage loss by continuous electrical logging. The results of these tests are only preliminary; however, this new method has promise of being effective in indicating leaky zones in canals.

The obvious method of controlling or eliminating seepage losses is to convey the water in lined canals or in pipe systems. Although not economically feasible in most areas pipe systems are used on many projects in the United States to distribute water. In many cases, this is done in order to supply water under pressure; however, substantial water savings also result.

For many years the Bureau of Reclamation through its lower-cost canal-lining program has investigated means of providing economical linings for canals and laterals. A variety of impervious linings have been field tested in an effort to find an economical method of reducing seepage losses. Through 1958, the Bureau had placed about 42 million square yards of lining in 1,660 miles of canals and laterals. We roughly estimate that the water saved is about 1 million acre-feet annually. The cost of these linings is fully justified by the value of the water conserved.

Excessive weed growth in canals increases losses from seepage and evapotranspiration. Experiments with herbicidal oils led to development of a plant poison that is toxic to aquatic plants in canals but is not significantly toxic when it reaches crop plants. The problem is to kill weeds without killing desirable plants.

Control of precipitation

Another phase of the hydrologic cycle over which man is seeking to exert some control is precipitation. Within the last 12 years the scientific and physical means of modifying weather have been demonstrated.

Weather modification is made through a process commonly referred to as cloud seeding. The fundamental principles underlying this process have been definitely established. The discussion of the method now centers around the questions "how well does it work?" "what are the specific conditions under which it works best?" and "what is the effect, if any, on nearby areas?" Continued research and application are necessary to answer these questions correctly.

Runoff management

Control of the runoff phase of the hydrologic cycle has been practiced for centuries by extensive use, throughout the world, of reservoirs to store and conserve natural runoff. There are many opportunities, however, to make better use of these reservoirs if we know just how much runoff will occur and when it will occur.

Improved hydrologic techniques and more comprehensive hydrologic and meteorologic data will permit more effective use of our water supplies. Likewise, improved methods of forecasting runoff from rainfall and snowmelt and the installation of additional observation and recording stations, plus the accumulation of records covering longer periods, will pay off in terms of more accurate planning and more efficient operation of water-control structures. The result will be better operation of multiple-purpose projects for maximum protection from floods and greater output of hydroelectric energy and, at the same time, will conserve the maximum amount of water for beneficial consumptive uses.

The radio-reporting rain gage network recently installed by the Bureau of Reclamation on uncontrolled tributaries of the Sacramento River below Shasta Dam in California, illustrates the benefits of an expanded meteorologic network combined with new techniques. These are "on-call" stations, from which increments of precipitation can be determined at any time. During heavy storms, data from these stations are coordinated with data from radio-reporting stream gages operated by the State and with data from stations of the Weather Bureau and Corps of Engineers. The operating office uses all these coordinated results in determining what reduction should be made in outflow from Shasta Lake to hold flood flows on Sacramento River to allowable amounts and to conserve water in Shasta Lake which would otherwise flow unused to the Pacific Ocean.

Reuse of water

Reuse of return flows in irrigated agriculture has been practiced for a very long time. Water subject to reuse often requires improvement in quality. The techniques for improvement vary according to whether the water is for municipal, industrial, or agricultural use. Industry frequently uses its waste water by recirculation. Reuse of water in industry does not reduce the consumptive use but greatly reduces the withdrawal use. Ordinarily, such reuse requires little or no treatment. Many industrial water requirements, particularly those for cooling, can be adequately fulfilled by salt water, although at a higher cost for equipment to resist the chemical reaction from the water.

Demineralization of water

Demineralization of water is not a new process. The seafaring Phoenicians knew about distillation of sea water and were able in their far-reaching ocean journeys to obtain sufficient water for their personal needs. Recent developments, however, have shown that it is possible through advanced chemical, physical, and thermodynamic technology to demineralize water in volumes unthought of a few years ago.

The Office of Saline Water of the U.S. Department of the Interior, organized in 1952, has in the few years of its existence contributed extensively to the knowledge of demineralization. In the course of the extensive investigations carried out under sponsorship of the Office of Saline Water, a great many physically sound methods of demineralization have been investigated. The Congress of the United States has authorized the expenditure of $10 million for construction of pilot or demonstration plants to expand and supplement research and development in this field.

There are two general approaches to demineralization of water; one is to take the water away from the salt and the other is to take the salt away from the water. The common practice of demineralization is to take the water away from the salt. Freezing is an example of this method. It is based on the principle known to inhabitants of arctic regions that the first ice crystals to form in saline water consist of pure water. There are many variations to this basic process.

A recent series of improvements in a method known for decades separates the salt from the water by the electrodialysis process. Here semipermeable membranes assist in demineralization of saline water when the solution is subjected to the passage of a direct current. This process offers greatest promise of economic success in brackish water areas.

The present cost of sea water demineralization is not much above the amount which thirsty residential communities in the United States are willing to pay for municipal water. The cost of converting inland waters of lower salinity is proportionately less. A community of 6,000 people in California, has recently constructed a saline water demineralization plant to obviate hauling in water by tank car.

It may be many years before demineralization is economically feasible for providing irrigation water. However, use of these processes to provide municipal and industrial water supplies shows promise of increasing application.

Management of water use

As we await the fruition of research to increase our water supplies through demineralization and evaporation control, steady, and important progress is being made in other important fields of water conservation. These include improved practices on the farm and increased water yield through watershed management programs. The developments in this area of water conservation complement the overall conservation of the irrigated land resources. We can no longer tolerate the belief, unfortunately widely held, that permanent high productivity is not to be expected from irrigated land. What, then, is needed to insure sustained high productivity on lands now irrigated and to provide additional new water supplies?

Foremost in any such action is more accurate local and regional evaluation of the water resources. Planning multiple-purpose resouces projects requires establishment of a balance between the competitive needs for water. Water must be allocated to fulfill the need for the essential uses in an area; without such allocation the most efficient use of water cannot be achieved. Such allocations must foresee, and should be predicated upon, the premise of conservation use by each water-using entity. We now have within our means the techniques that must be applied.

Watershed management

Management of watersheds to increase water supply and maintain water yields holds promise of augmenting the dwindling supply. Techniques involved in obtaining increased runoff from forests are being advanced by U.S. Forest Service studies in Colorado. Other studies in California have shown that in some cases increases in runoff have exceeded an equivalent of 1 to 2 inches of depth over the entire watershed. This result has been obtained by programs of vegetation management involving the conversion of brush to desirable forage species. Programs such as these pursued in areas devoted to livestock production provide a dual benefit through improvement of ranges and increased water yields. Substitution of grasses for the more deeply rooted brush species limits water use to the upper portion of the soil profile. The removal of the brush canopy associated with such species prevents high interception. Thus, a grass cover makes more water available for runoff.

Not only should the watershed programs be aimed at increasing yield, but they must also contribute to the reduction of the sediment load. The reservoir site should be regarded as a nonrenewable resource.

Water management in the irrigation project

On the farm a measure of water conservation is provided by the farm irrigation efficiency. This efficiency, defined as the ratio of irrigation consumptive use to the total farm delivery varies from 5 to 95 percent. Reasonable efficiencies for the irrigation art as it now exists, may be in a range of 55 to 70 percent. For many areas and conditions present efficiencies are not good enough; the art must be coupled with science and engineering to raise them. Over the years many methods of irrigation have been developed, all of which fall into the categories of surface, subsurface, and sprinkler irrigation. But regardless of the method, the aim should be the same—uniform water application over the field without harm to crop or soil, with the water, labor, and other inputs balanced to provide a maximum economic gain.

Maximum economic gains can be obtained by prudent farm managers if those responsible for development of irrigation projects construct distribution systems that are integrated with the onfarm requirements for water. A prerequisite for efficient water use on the farm is a distribution system that delivers enough water so the farmer can apply the correct amount to the proper depth at required time intervals.

Management of water on the farm

As we plan new irrigation developments, water savings can be realized by a careful process of allocating water to the land. Fundamental in any such process is a careful evaluation of the land through land classification. Higher efficiencies can be attained only if the available land resource is suitable for irrigation. Efficient use of water is difficult to realize when the infiltration rate of the soil is less than 0.1 or greater than 5 inches per hour. Since water is generally the limiting resource, its use should be reserved for those lands which can return the highest net production. The Bureau of Reclamation has developed a method of land classification that defines both the economic and physical factors essential in selecting lands suitable for irrigation. Its proper application insures more efficient use of water long before the irrigation farmer picks up his shovel or turns a valve.

In the United States, it is possible that tomorrow's engineers will be more concerned with water management than with water development projects. Adequate control and accurate measurement of flows throughout the conveyance system are necessary for successful management of an irrigation project. An equitable distribution of water to the farmlands, a minimum of wastage, and general conservation of the available water supply can result only from control and measurement. Accurate measurements of flows are difficult to obtain under field conditions. For a number of years, the Bureau of Reclamation through its water measurement program has investigated and improved means of obtaining accurate measurements in the projects, particularly at the farm turnout. An education program is carried on continually to improve measurement practices.

The advent of heavy earthmoving equipment provides control over the irrigated land surface not heretofore possible. Land preparation to allow comparatively large heads of water to be applied in short time intervals makes possible high irrigation efficiencies. Examples are new land preparation techniques involving contour benches and level basins. With these techniques, applied to fields having an original slope in a range of 1 to 3 percent, a farm irrigation efficiency of 55 percent may reasonably be expected to increase to 80 percent.

While irrigation efficiency is a useful convention for engineering purposes, it does not provide the full measure of our interest. Viewed in its broadest aspect, we must ultimately consider irrigation efficiency in terms of unit yield per unit of water. If crops are being grown to provide protein, then a useful measure of irrigation efficiency would be the amount of protein produced per unit of water on a given area.

Water conservation viewed in this light presents another group of farm practices that result in water savings. The principle here is that adequate fertility is essential for the efficient use of soil moisture. An outstanding example is reported by the Missouri Agricultural Experiment Station, where corn receiving fertilizer yielded 79 bushels per acre and required 16 inches of water. Corn grown without fertilizer produced 18 bushels and required about 14 inches of water. Research at Yuma, Ariz., conducted by the agricultural research service in cooperation with the Bureau of Reclamation, also showed this relationship between water efficiency and fertility level. Here it was found that water use varied nearly 100 percent between different levels of phosphorous fertilization. When 800 pounds of P205 per acre was applied over a 3-year period a ton of alfalfa was produced from 7.08 acre-inches of water. It required 14.2 acre-inches of water to produce a ton of alfalfa when only 100 pounds of P205 per acre was applied. When practices such as this are supplemented with the giant strides being made through the chemical control of weeds and insects, more efficient use of water now available will be accomplished.

A continuous education program is necessary to attain efficient use of water on the farm. This is important in the United States, and I am sure it is no less important in other countries. The best research program and the best experimental farms will not increase a country's crop production unless the results of the research are actually applied by the farmers. As previously stated, studies have shown that, if more water is applied to crops which formerly received insufficient water, there may be little increase in production unless more fertilizer is also applied. Similarly, if maximum returns from high rates of fertilizer application are to be obtained, there must be a sufficient number of plants to utilize efficiently the fertilizer applied. The results of these studies will not increase national crop production unless the information is passed on to the farmer who actually uses it in his farming practices.

Large reservoirs, long canals, and extensive distribution systems are fine monuments to the engineer and the engineering profession. What the world needs, however, is more food, not more monuments. Therefore, I urge a balanced program. Let us continue to build well-designed and soundly constructed water facilities. But let us also instruct our farmers how to use efficiently the water made available by these facilities. The value of this educational program cannot be overemphasized.

CONCLUSION

This brief discussion of the broad aspects of several areas of research and development for increasing our water supplies points out some of the problems and opportunities ahead. The need for maximum use of our water is commanding and real teamwork is essential between chemists, geologists, engineers, economists, and agricultural specialists. Research, planning, and construction must proceed at an increasing rate to make the promise of today the actuality of tomorrow. There is much to be done, and we should set ourselves to the task of doing it promptly, cooperatively, and vigorously.

SUMMARY

At mid-20th century, those who are engaged in water resource development face critical decisions. Despite the staggering proportions of present water use and demands, the estimates of future world needs are even greater. In many countries of the world, the problem of providing adequate water supplies is already acute. As the demand for water increases in direct proportion to the explosive increase of population and the rapid expansion of industry, the problem will become crucial. To meet these tremendous and intensive needs around the world, there must be continuous progress toward the ultimate goal of making the most beneficial use of every drop of water. In the field of irrigation and drainage, there is particular need to reexamine present technology to assure more efficient use of water supplies already developed. This paper summarizes briefly the broad aspects of several areas of research and development for increasing water supplies. These areas include reduction of reservoir evaporation, reduction of nonbeneficial evapotranspiration, reduction of seepage losses, control of precipitation, runoff management, reuse of water supplies, demineralization of water, improvement of land management and watershed techniques, and improvement of irrigation practices.

Independent Bankers Elect, Honor DuBois at Convention

EXTENSION OF REMARKS

OF

HON. FRED MARSHALL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1960

Mr. MARSHALL. Mr. Speaker, the many Members of the House who are friends of Ben DuBois will want to join in congratulating him on his reelection as secretary of the Independent Bankers Association and on the celebration of his 75th birthday.

His reelection marks the 27th term he has served in the 30 years since the organization was founded. Members of the House know him as an able and vigorous spokesman for his organization and as a personal friend.

Under unanimous consent I include a story from the Sauk Centre (Minn.) Herald, published on June 2:

INDEPENDENT BANKERS ELECT, HONOR DUBOIS AT CONVENTION

Ben DuBois, Sauk Centre, was elected to his 27th term as secretary of Independent Banker's Association at the 27th annual convention of the association in Denver, Colo., last week.

Howard Bell, also of Sauk Centre, was elected assistant secretary.

The convention marked the 30th anniversary of the IBA, which was begun at Glenwood in 1930 with 28 members. Today, the organization has 5,800 members in 39 States.

Three Minnesota bankers, surviving founders of the association, were presented with diamond-studded pins at the annual banquet. They are Edward S. Olson, president of the First National Bank at Starbuck; Norman H. Tallakson, chairman of the board of the Bank of Willmar; and DuBois.

O. D. Hansen, president of the Bank of Union County, Elk Point, S. Dak., was elected president of the association for the coming year.

Special tribute was paid to DuBois and his wife, Cecile, at the banquet. The convention gave them a rising ovation for their efforts in building the association and they were presented with 30 $100 savings bonds, one for each year of the IBA's existence.

DuBois also celebrated his 75th birthday at the convention on May 22.

A wide range of speakers discussed the economic, agricultural international and political prospects for the coming decade.

Included in the speakers were Roswell Garst of Coon Rapids, Iowa.

Garst told the convention that by 1970, American farmers will be giving 215 million people in the United States a better diet even though they farm less land and use less labor to do it.

Garst is the Iowa farmer who is a seed corn producer and who was host to Soviet Premier Nikita Khrushchev last fall.

The increased farm production will be due to increasing use of nitrogen fertilizers and more mechanization, Garst said. Through

the period of expansion, farmers will call more and more upon bankers for credit, he said and he urged bankers to study the farmer's problems carefully in order to make wise allocations of credit.

Tribute to the Late Jane Addams

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. DOUGLAS. Mr. President, on March 23 of this year our former greatly respected colleague, Dr. Frank P. Graham, paid a tribute to the late Miss Jane Addams at a dinner sponsored by the Woman's International League for Peace and Freedom. I ask unanimous consent that this fine address by Dr. Graham be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TRIBUTE TO THE LATE JANE ADDAMS

(By Dr. Frank P. Graham)

Jane Addams, one of the noblest spirits of western history, was founder of Hull House and one of the founders and first president of the Women's International League for Peace and Freedom, and winner of the Nobel Prize for Peace. If alive today Jane Addams would be calling the women of the world for ending the downward drift toward universal annihilation. In a peoples-to-peoples movement she would muster the women in the upward struggle for more effective international cooperation in a more adequate United Nations for the more inclusive collective security of freedom, justice, compassion, and peace on the earth.

She would remind us that in this world of the precarious peace of deterrent terror the panicked press of a button could end the human race as the global winds would carry the hydrogen fallout to the remnants of people as they would make their last huddle on remotest islands and in farthest igloos. Without appeasement of injustice and tyranny and against fearful and haphazard drift, the call of this late hour is for nothing less than the survival of the human race.

Jane Addams was born in 1860 in Cedarville, Ill., a village in which she developed a sense of neighborhood and brotherhood which was to widen across the great city of Chicago, the spreading continent of America and the shrinking planet of the expanding family of man, inclusive of all races, colors, classes, and nationalities. The early motherless daughter and lively companion of her adoring father, John Addams, she was both daughter and son to him who was a Hicksite Quaker, a prosperous businessman, State legislator, and militant friend of Abraham Lincoln. The spiritual concerns and the executive ability of the father carried on in the daughter.

In her youth she was moved both by the moral indignation of the Hebrew prophets against injustice and by their dreams of a warless world. She became steeped in the original Greek of the Gospels and had communion with the nonviolent teachings and spirit of Jesus for carrying far and near the joy of service and the sacrificial compassion of the cross with its call to heroism in the sharing and giving of life.

As honor student and representative of Rockford College in a statewide oratorical contest she was a runner-up to none other than the youthful and eloquent William Jennings Bryan, whose centennial year is also 1960. The subject of her oration cast forward the shadows, the lights, the fights, and the substance of things to come as she championed the rights of women in our lopsided society.

Such was her rootage in the soil of Illinois from which was to grow in holiness of dedication, joy of service and valor of life one of the great humane pioneers of these hundred years, the very efflorescence of the world's womanhood.

Jane Addams, in response to her inner concerns, reminds us of the heroic spirit of Joan of Arc, who, while burning at the stake refused to renounce her inner voices; and of Florence Nightingale, who challenged vested political bureaucracy and military redtape to bring a woman's healing aid and hope to youth lying wounded and neglected on the world's battlefields. In our day their example and Jane Addams' spirit carry on in America's Eleanor Roosevelt, who has infused a later generation of youth with valorous compassion, whether down in a West Virginia coal mine or up in a plane on the way to a youthful forum in a southern community or contending in the sessions of the United Nations for the universal declaration of human rights.

Jane Addams was concerned with everything which affected the freedom, dignity, and welfare of human being, whether the garbage of the west side tenement of Chicago, the low wages and long hours of women and children in sweatshops, the plight of Negroes, unorganized workers, voiceless immigrants, playless children, and voteless women, in a society too much based on human exploitation in a world to much given to war and inhuman desolation.

One does not have to agree with all her approaches to the complex problems of war and peace to have unbounded admiration for the integrity of her spirit and the courage of her dedication to the cause of peace. Despite their deep antagonisms and fears, and the posture of their struggle, if the nations at war in 1915 could and would have surmounted their realism with her idealism and responded to the resolutions of the women gathered at The Hague, it is not too much to conjecture that there might have been no Hitler and no Stalin but a cooperation of nations through the earlier formulation and more adequate fulfillment of Wilson's 14 points for the self-determination of peoples, cultural interchange, reciprocal trade, economic development of underdeveloped areas, and international organization of justice and peace in the world.

Deeply resourced in the compassionate understanding and love of people, unmoved by the vicious attacks of vested privilege and undaunted by the storms of fear and prejudice which beat about her devoted head, Jane Addams gave a new content and direction to social work in America and a deeper and wider sense of the responsibility of women for human dignity, freedom, and peace in the world.

The life and struggles of Jane Addams in another generation moves us to say that in this generation she would stand against the wasteful extravagance and damaging pleasures of a private prosperity and the short-visioned public poverty of a falsely "affluent society" in peril for its very existence. She would stand for a bolder allocation to the national income for basic, scientific, industrial, agricultural, social, and humane research; for schools, health, hospitals, decent housing, playgrounds, and the fine arts; and the conservation of soils, forests, water, and rivers for multiple service of the people. She would stand today against racketeering and violence by any union and for the equal rights of collective bargaining in all the States.

She would stand for Federal aid to the States for schools now urgently necessary for the equal educational opportunity of all children in all the States, who, in our dynamically free and mobile national society, are to become citizens of the Nation as well as citizens of the States. She would organize the destructive youthful gangs on the city streets into youthful clubs for play and wholesomely creative activities, exemplified both by her Hull House Clubs and by the nationally promoted 4-H Clubs of rural youth with their high morale for youthful production and all-round development.

In this time of national crisis she would stand, as a matter of moral right in the Nation, and moral power in the world, for obedience to the law of the land, in the widening interpretation of the Supreme Court of the meaning of freedom in the old Bill of Rights, and the meaning of the equal protection of the laws in the new Bill of Rights, outlawing discrimination on account of race in the use of public facilities in education, transportation, recreation, and suffrage. She would stand today with the college youth, colored and white, north and south, east and west, who, with the Bible or the Constitution in their hands, prayers in their hearts, and the national anthem on their lips, petition in lawful nonviolence, that the stores, which sell to the public, provide for the same price, the same quantity, and quality of services to all people.

She would stand in Illinois and in United States for the inclusion in the American heritage and hope, the agricultural workers now excluded from the scope of much Federal legislation, and the migrant workers who wander from State to State, season to season, crop to crop, rootless, homeless, too often defenseless and sometimes hopeless in the land of the Pilgrim's hopes.

She would stand with Martin Luther King, who receives his inspiration from Jesus, his techniques from Gandhi, and his guidance from his noble and wise preceptors, Benjamin Mays of Georgia and Channing Tobias of Alabama and New York, as he preaches the gospel of love and understanding for meeting the forces of prejudice and fear. In ultimate faith, the cross, warm with the blood of human brotherhood, will triumph over all the crosses lighted with the hot oil of fear, prejudice, and power.

In this time of crisis in the world she would, I believe, stand for effective universal disarmament, a standby international peace force, long-range technical assistance and economic development programs, self-determination of people, emphasis on the moral power of recommendations made by seven members of the Security Council and two-thirds majority of the General Assembly of the United Nations in the three fields of disarmament, membership, and the peaceful settlement of disputes, and the establishment of the jurisdiction of the United Nations over the international problems of the polar regions and outer space.

As the roads of human destiny fatefully cross in the alternative between universal annihilation of people and more effective cooperation of nations through the United Nations, may this commemoration of the centennial of Jane Addams mean the rededication of us all to equal justice under law and human brotherhood under God in this time of mortal peril and immortal hope for all mankind.

Excerpts From Life Lines

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. ALLEN. Mr. Speaker, I wish to call attention to the following articles taken from a recent issue of Life Lines, a great American publication:

URBAN RENEWAL

Public housing is one of the favorite programs of the big spenders who, with deliberate intent, are changing the traditional constitutional Government of America. A new aspect of Federal housing has come to the forefront recently. This is what is called the urban renewal program.

Urban renewal, simply stated, is a federally financed program of city planning under which municipal governments are authorized to seize homes and other private property and resell them, at below cost, to other private citizens, who agree to develop the area in accordance with the plan of the municipal urban renewal commission.

The tremendous power of eminent domain is vested in a city's urban renewal commission. Eminent domain is the right of government to take private property for necessary public use after making a reasonable payment to the owner.

Eminent domain can be a very dangerous power. In extending the power to take private property for necessary public use, the meaning of "necessary public use" clearly must be limited very strictly, or no one can consider his property safe from seizure. We have to recognize that when government reaches for more power in order to do things that are said to be in the public interest, there are always special interests and individuals who stand to profit from the proposed government activity.

THE FEDERAL GIVEAWAY

The promoters of urban renewal insist that there will be no Federal control or meddling in local affairs. The propaganda line on this is that the people of any given community might just as well get their share of the Federal giveaway because they will have to help pay for it anyway. This is, as you will see at once, a mistaken line of thinking. Freedome is being destroyed in America under the fallacious idea that Government has something to give to the people. Actually, Government has nothing except what it receives from the people.

The big Government planners are set on increasing Federal controls, never lessening them. Before a city gets its so-called Federal aid for an urban renewal project, it has to submit a workable program to the Federal authorities. Naturally, the Federal powers determine what constitutes a workable program. Federal control always accompanies Federal aid.

At present the Federal Government is engaged in more than 40 different housing programs. The total sum provided in money or credit for housing subsidies since 1933 amounts to approximately $2,300 for every family now living in the United States. It is hardly surprising that the General Accounting Office has uncovered widespread irregularities in the Federal slum clearance and urban renewal programs.

In addition to its cost to the taxpayers, this forcible Government grab of private property hurts many innocent people. Poor families, who have paid for very modest, but decent and livable, homes are uprooted and told to move elsewhere. Well-established small business concerns are wrecked. One study of this problem showed that storekeepers evicted to make way for development projects face a 5-to-1 likelihood of being finished as self-sustaining businessmen. It is not easy to rebuild a business in a new location.

There is no escaping the fact that the urban renewal program, no matter what else may be said about it, represents a further encroachment by big Government on the rights of American citizens. If America is to retain any part of its freedom, somewhere a halt will have to be called to the spread of the welfare State idea.

Let us remember, and never forget, that liberty does not come from Government. The history of liberty in the world is the history of the limitation of governmental power, not the increase of it. The mistaken, enemies of freedom, put forth tremendous efforts to obscure this simple fact. But it neverthelees remains a fact and one we can ignore only at our peril.

MISTAKEN PLOTTERS

If we are to avoid complacency and all the grave dangers resulting from it, we need to be reminded from time to time that the mistaken enemies of all individual freedom are constantly at work. One public official who periodically jars us to the realization that the international plot to destroy our way of life is not imaginary is J. Edgar Hoover, Director of the Federal Bureau of Investigation.

Just recently Mr. Hoover—who is thoroughly familiar with the machinations in the U.S. Communist Party—warned that "blindness and lethargy" regarding subversive organizations have reached dangerous proportions within the last year. He noted that pro-Soviet elements have a tight grip on the U.S. party's reins and that among those in high places in the mistaken conspiracy is an ex-convict who had openly testified that he prefers a Soviet America.

In numbers there are few card-carrying American Communists. There are thousands more dupes than actual members. But whether they work wittingly or unwittingly for the conspiracy, they are an ever-present danger. And let us remember this: Though few in numbers, the domestic Communist is just as dedicated to the mistaken cause as a Russian or a Chinese Communist.

Mr. Hoover does well to warn us against "blindness and lethargy." We will do well to heed his warning.

FOR AMERICAN BUSINESS

This is a time when American businessmen must be skillful at more—much more—than business operation.

The aim of the personal enterprise system is to serve the common good by meeting basic needs and supplying the extra human satisfactions desired by man. The ability of American business to meet this standard depends in the final analysis on the climate in which business is conducted. And the business climate depends in turn, to a great extent, on the understanding and action based on understanding of people engaged in business.

This means understanding of the personal enterprise system. It means understanding of the basic economics and morals of our freedom and well-being. It means understanding of current issues affecting the usefulness of business to all the public. And it means understanding the duty of the individual as a citizen to work today and every day for the maintenance of freedom in America.

This kind of understanding needs to be gained by the American businessman. And then it needs to be disseminated by him. This is not a time when the work of spreading such understanding can be considered an extracurricular activity. For if American business does not throw its full strength into the effort to maintain freedom, then the day will surely come when there will be no personal enterprise system and no private business based on that system.

Farm Problems

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled, "Job for the Voters," published in the Arizona Republic, of April 20, 1960, concerning the present farm situation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOB FOR THE VOTERS

The farm problem isn't getting much attention in Congress, possibly because most lawmakers are frankly uncertain about public opinion on this explosive issue. For a good many years, the politically minded Congressman was safe in simply voting for bigger and better farm subsidies. But those days are gone, and the public is beginning to realize that Congress had better do something more sensible than pile one crop surplus on top of another.

The Committee for Constitutional Government has just released the following facts about existing farm programs, based on records in the Department of Agriculture:

1. Since the price support programs began in the 1930's, the loss to the taxpayers has been more than $15 billion.

2. For several years, the Commodity Credit Corporation, administering laws passed by Congress, has been losing more than $1 billion annually.

3. The Government is spending more than $1 billion a year simply to store surpluses.

4. By July 1, the Government will have more than $10 billion invested in price-supported commodities. If no wheat at all were grown next year, we could meet all domestic and export needs and have 350 million bushels left on July 1, 1961.

5. Secretary of Agriculture Benson has pointed out that farm programs are "costing the taxpayers the most money ever paid out by any government to subsidize agriculture."

On February 9, President Eisenhower sent his annual farm message to Congress. He was conciliatory in tone, saying it was up to Congress to decide whether there would be farm legislation this year. He repeated some previously suggested proposals, including junking the outmoded parity formula, reducing price supports, and eliminating wheat acreage and marketing quotas beginning in 1961.

These are faltering steps in the right direction. As The Republic pointed out in a recent series, the best way to help the farmer is to set him free of all Government controls and restrictions. It is no coincidence that the farm situation is worst in those commodities which have price supports. Secretary Benson was right when he said, "Four-fifths of our agriculture is free of controls—and doing pretty well. The commodities that are now in the most trouble, and that have been for years, are those that looked to Government supports and Government controls for their pros-

perity—cotton, corn, wheat, rice, tobacco, and peanuts."

And yet Congress, because it fears the voter reaction in the farm belt, continues to treat the farm problem as a sacred cow. The vote in November should jolt Congressmen back to their senses. The voters should overwhelmingly reject all candidates who believe that the only way to help the farmer is to increase his dependence on the Government. Price supports, subsidies, and acreage restrictions must be ended if the national farm program scandal is to be prevented from growing out of all proportions.

Sewer System for Dulles International Airport

SPEECH
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12063) to authorize the Commissioners of the District of Columbia to plan, construct, operate, and maintain a sanitary sewer to connect the Dulles International Airport with the District of Columbia system.

Mr. KEARNS. Mr. Chairman, I note with great pleasure that this body has unanimously acted favorably on the bill H.R. 12063. This bill, which was introduced by the gentleman from Virginia [Mr. BROYHILL] is entitled, "A bill to authorize the Commissioners of the District of Columbia to plan, construct, operate, and maintain a sanitary sewer to connect the Dulles International Airport with the District of Columbia system."

I am highly gratified with the thorough and expeditious manner in which the District of Columbia Committee, chaired by the distinguishted gentleman from South Carolina [Mr. MCMILLAN], acted to bring to the floor this highly important piece of legislation which not only affects Dulles Airport and the District of Columbia but also a wide area of northern Virginia and part of Maryland.

The Senate District Committee has acted just as expeditiously as the House committee in reporting an equivalent bill to the other body, which I am certain will act just as favorably on this important measure.

We are all cognizant of the ever-increasing need for Dulles International Airport due for the most part to the rapid replacement of conventional aircraft by jet-powered planes combined with the ever-increasing air traffic which the other nearby airfield will soon find impossible to handle. The jets are barred from the use of the nearby National Airport for a variety of practical reasons, the main one being limited landing area.

An important problem that came up in the construction plans for the Dulles Airport was how to get rid of sewage without polluting the District of Columbia water supply. This bill, H.R. 12063, solves this vital problem. The bill also allows for the usage of the sewage system by the ever-expanding suburban areas touching on the District.

The other day, I flew over the construction site of the marvelous Dulles Airport in a single-motored plane. To me it was a beautiful picture. On the highways, the trip to the new airport from the Nation's Capital should not take more than 20 to 30 minutes. The airport will service jets coming and going to and from all points of the globe. Needless to say, at present we must travel the distance to Baltimore's Friendship Airport for jet travel.

I think it is wonderful that we had this concept of a fine airport to effectively service the Nation's Capital and I commend Mr. BROYHILL, and the other gentleman from Virginia and Maryland, on their exhaustive efforts in behalf of this highly beneficial project.

Texans Lead at the Naval Academy and the Military Academy

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. JOHNSON of Texas. Mr. President, every Member of the Senate, each of my able and distinguished colleagues, has a rightful pride in his native State. But it is with more than normal pride that today I call attention to a signal honor that has come to Texas.

At the U.S. Naval Academy and at the U.S. Military Academy, outstanding young Texans ranked first in each of their respective graduating classes.

Cadet Charles P. Ostott will be graduated tomorrow as the No. 1 man in his class—both academically and militarily. This is an unusual distinction held by only eight other graduates since 1871.

Tomorrow, at Annapolis, another outstanding young Texan, Midshipman Alton K. Thompson, will graduate at the head of his 798-man class.

Interestingly, both of these young men are graduates of the same high school—Highland Park High School at Dallas. Their achievements give that school a clean sweep of honors at both of these great American institutions.

I ask unanimous consent that two news dispatches concerning graduation ceremonies at West Point and Annapolis—one from the Washington Star of June 5, 1960, and the other from the New York Times of the same date—be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, June 5, 1960]

TEXAN IS TOP GRADUATE OF ANNAPOLIS

ANNAPOLIS, MD., June 4.—Midshipman Alton K. Thompson, of Dallas, Tex., will be graduated at the head of the Naval Academy's 798-man class next Wednesday.

The Academy announced today that the 21-year-old midshipman, who also commands the 3,600-man brigade at the Academy, led his class scholastically with an average of 3.74 of a possible 4.0 for his 4 years.

His position as honor man gives Highland Park High School in Dallas a sweep of top honors at the Naval and Military Academies. Midshipman Thompson's former schoolmate in Dallas, Cadet Charles Paddock Otstott, will be graduated at the head of West Point's senior class.

Midshipman Tracy C. Tucker, of Sheridan, N.Y., finished second at Annapolis with an average of 3.72. Midshipman Robert M. Walters, of Madison, N.J., was third with 3.70.

[From the Washington Sunday Star, June 5, 1960]

ODDS FAVOR NO. 1 CADET MAKING GENERAL

WEST POINT, N.Y.—Cadet Charles P. Otstott has a better than average chance of rising to the rank of general—if past records mean anything.

Cadet Otstott, 23, of Dallas, Tex., will be graduated first in his class at the U.S. Military Academy next Wednesday. He is No. 1 man academically and militarily, an unusual distinction held by only eight other graduates since 1871, the Academy said today.

Of the eight, at least four won their general stars—including General of the Army Douglas MacArthur, class of 1903.

The others: Smith Leach, class of 1875; Maj. Gen. James A. Woodruff, 1899; Edward N. Johnston, 1901; Brig. Gen. Frederick S. Strong, Jr., 1910; Col. Charles J. Barrett, 1922; Brig. Gen. Kenneth E. Fields, 1933, and Lee D. Olvey, 1955.

AMA Statesmanship

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD I wish to include an editorial which appeared in the New York Times of May 22, 1960, entitled "AMA Statesmanship":

AMA STATESMANSHIP

The American Medical Association deserves credit for its statesmanship in staging its conference in Chicago on health insurance plans. Few current national issues are more important, and to more people, than protection from the economic hazards of illness, and few have been more bedeviled by bitter controversy—to which the AMA has contributed its share in the past. But at Chicago a supreme, and successful, effort was made to get all those involved in health insurance on an even keel, with mutual understanding as to the course to steer by.

By invitation of the AMA—and for the first time in history—leaders of organized medicine, labor, industry, voluntary health insurance plans, and the insurance companies spent 2 days in a remarkably amicable discussion of how protection is now being given and how those that give it could do a better job. Opposing economic theories and present political issues were, by common consent, ruled out and, except for outside speakers, with good effect. And the widely held conviction that, if privately provided protection fails to meet the public need and demand, the Government would take over, gave the meetings a sense of urgency.

The whole affair was an impressive demonstration that the medical profession has come to realize that, apart from therapy itself, doctors should not have a monopoly in the field of medical care. There was a welcome professional interest in, and tolerance of, diversity and experiment in the administration and economics of medical care—and a recognition of the part which its consumers can and should take in these new directions. There should be more such meetings and it is good news that the AMA's council on medical service will recommend a program for them to the association's convention at Miami Beach next month.

Foreign Competition

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Foreign Competition," published in the Burlington Free Press of June 2, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN COMPETITION

No one, whether he be business manager, labor leader, employee, or consumer, cain fail to be concerned these days with the future of the American economy, so far as it relates to foreign competition.

The flood of foreign goods—goods marketed at half the price we can make them for, continues to inundate U.S. ports. And if we are to face up to the matter objectively we must acknowledge that many of these are better in quality and performance than our own.

The list is not limited as it once was to a few specialized items like watches but is becoming increasingly varied and increasingly embarrassing to domestic manufacturers. Steel, wool, toys, electrical products, oil, tools, leather—the long list gets longer every day. The more we buy from Europe or the East in relation to what foreign countries buy from us, the greater the outflow of gold from own own reserves.

Douglas Dillon, Under Secretary of State, recently declared that America's prosperity, hence its security, depended upon a continued and substantial export surplus. He said that we have never been faced with such intensive competition and that we had better cut costs by increasing efficiency or we would be priced out of the world markets. Economists in predicting that the alarming outflow of gold from this country in 1959 would be checked in 1960, are keeping their fingers crossed.

The Commerce Department estimated that in March of this year our foreign purchases amounted to well over one and a third billion dollars, which was a 5-percent increase over February. While the value of exports (chiefly farm products and jetliners) was higher than that of imports during March, and higher than the same month last year by 20 percent, they were not as high as predicted.

The year-to-year trend of American exports has been down. The United States' share of the total of the world's trade in manufactured goods has been slipping, while that of Germany, France, Japan, Italy, and the Netherlands has gained dramatically. The ironic part of the picture is that our heaviest competitors are countries which we helped set up in business with Marshall plan dollars and machines after the war.

While it seems doubtful under present conditions that we can reverse the downward trend of our exports except temporarily, the level of imports obviously has not yet reached its peak. The American automobile manufacturers, for example, felt confident that when they put their compact cars on the market they could stem the tide from Europe, but such has not yet been the case. Right now imports of the two largest selling foreign cars are larger than last year.

American manufacturers, beset by high operating costs and burdensome taxes, and attracted by opportunities in Europe, are establishing plants abroad at a record pace. During the last 18 months more than 100 U.S. corporations have established oversea headquarters in Switzerland.

The export-import balance shifts from month to month, so forecasts even of the immediate future are difficult to make, depending as they do upon a variety of factors. But one thing is clear; the future is not going to be as kind to American exports as has the past, since more and more foreign countries are becoming industrialized—many with our foreign aid dollars.

There is plenty of business to go around in prosperous times, but in the event of a recession, with domestic and foreign manufacturers competing vigorously for the available business, imports might become critically burdensome. Curiously enough, labor probably stands to suffer as much or more than any other group at such a time. It is America's auto workers, for example, not the retailers of cars, who suffer from foreign competition. Filling in their own lines with products from subsidiaries abroad, American manufacturers can always supply cars to their dealers, whether foreign or domestic. But whether U.S. assembly lines and the men standing before them are idle or busy will depend to an increasingly large extent upon the burgeoning volume of cars from overseas.

Labor leaders in this country believe that the rise in wage levels in Europe will close the gap between hourly rates there and in the United States. This will not happen overnight, and may be wishful thinking if our rates continue to go up in proportion.

Meanwhile, if either labor or management gets badly caught in the squeeze of foreign competition it would not be at all surprising to hear cries for tariffs raised on every side. If tariffs were raised our allies would retaliate by raising theirs and the hard work that has been accomplished to bind the western countries into an economic and political entity would be undone.

The most obvious solution to the problem is to keep our goods competitive in price and quality with those of Europe. This would mean, first, a stable dollar, which in turn would mean a careful policing of Government expenditures. Politics and deficit budgets being what they are these days this remedy is not going to be easy to apply. Then, of course, there are the economies affected by automation, but automation, too, is having to thread its way through heavy interference.

When and if the shoe of competition really begins to pinch, the United States will, by these or other stratagems, either meet competition or fail to meet it. It is a matter of the survival of the fittest. If we do not remain competitive we must be prepared to yield our economic supremacy to other nations.—R.N.H.

Recognition of Communist China Would Be Grave Error—Dubious Benefits and Certain Losses

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. JUDD. Mr. Speaker, there is nothing so useful for dispelling illusions or doctrinaire positions as a firsthand look at facts. It is too bad that so few who are writing about American policy in Asia have visited recently the countries holding the line for freedom around Communist China. Such a study on the ground would soon make clear what the inevitable effect on those countries would be if the United States were to grant recognition to Red China. It would give vastly increased prestige and influence and power to their enemy and inevitably shake their confidence in us. Mr. Melvin Whiteleather of the Evening Bulletin of Philadelphia is one writer who is personally checking on those points in the Far East and his clear and frank appraisal of the situation follows:

[From the Evening Bulletin, May 31, 1960]

ONLY POWER OF UNITED STATES DETERS MAO'S EXPANSIONISM IN ASIA

(By Melvin K. Whiteleather)

HONG KONG.—To all believers in recognition of Communist China, greetings.

But you're on the wrong track.

In the Far East, around China's rim, our China policy looks considerably different than it does at home.

What happens to the Chinese Nationalists is of little or no concern here, but there is great concern over the mass of Chinese on the mainland.

Saving Chiang Kai-shek and Taiwan are not principal objectives. They are important only insofar as they are useful in helping to keep Peiping from breaking loose.

The issue is not Communists versus Nationalists, or Communists versus anything else.

The issue is China versus the rest of Asia. Communism as an ideology enters only as it helps to propel Chinese expansionism.

OUR CHINA POLICY

From conversations in high places, one is led to believe that there is much more of this viewpoint in the admixture of U.S. policy than the administration has been, or still is, prepared to admit.

Candor sometimes is folly. Chiang Kai-shek and his generals can't possibly believe they are going back to reclaim the mainland, but they keep up the pretense publicly.

It is perfectly clear out here that if the United States withdrew from its present positions, if it lost interest and failed to keep pressing, the Chinese Reds would devour, directly or indirectly, a large part of Asia.

POPULATION FIGURES

Is there any important segment of thinking people in our country who believe that this is none of our business?

Peiping is on the march with a highly regimented nation that has leaped beyond the 600 million population mark and is growing at the rate of 15 million a year, as much as the entire population of Poland.

Mao Tse-tung, in a combined nationalistic-ideological dictum, has scorned population control; there can't be too many Chinese to him. This adds to the nervousness of China's neighbors.

How are these people to be fed, in spite of China's great size? Can the Communists really whip China's famine problem?

Neighbors watch and expect that land for this burgeoning mass will be sought outside present boundaries. And there isn't anyone out here who doesn't think the Russians are fools if they don't keep a close watch, too. Some cognoscenti believe the Soviets do have their eyes at least partially open.

DESIRE TO EXPAND

But population demands are not the sole cause for concern. The men in Peiping are power drunk; their urge is to satisfy their tastes regardless. They have a deep sense of the East's emerging from a long period of dark humiliation and they are trying to peddle that sense to the rest of Asia. The east wind is prevailing, says Mao.

But around the rim the little people are suspicious, as they would be of Chiang Kai-shek or any other Chinese.

The Peoples' army is estimated to be 3 million strong, but it is backed up by a militia of 7,500,000. The Peoples' navy is regarded as the best in Asia and includes long-range submarines. The air force has 1,900 jets, mostly Russian Mig 15's and 19's. So far as is known, China does not yet have atomic capability, as the expression goes. But it is expected to acquire it in the not-too-distant future. They are producing heavy weapons and aiming at freeing themselves from dependence on Russia.

MILITARY IMPROVEMENTS

Defects that showed up during the Korean war and the 1958 fight over Quemoy and Matsu Islands—the so-called off-shore islands—are believed to have been corrected.

Weapons have been standardized, officer training improved and conscript requirements slanted toward the ideological. Pilot training has been stepped up since the Taiwan Straits affair where the Nationalist pilots proved their superiority.

This is a military force that could overrun any Asian country except Russia.

The only deterrent is the power of the United States.

There is wider recognition today in Asia of the this fact than ever before. The neutrals have had a shock. Tibet, the Burmese and Indian border disputes, the tough talk to Indonesia, the probing in Laos—all make up a pattern that Premier Chou En-lai's appeals for an Asian consciousness opposed to Western imperialism.

PROPAGANDA ATTACKS

Peiping's chief concern is to get rid of U.S. power on and around Asian mainland. Hence the violence of propaganda attacking us.

Every indication of weakness on our part is carefully noted in Asian capitals. The refusal to budge in the Taiwan Straits in 1958 was perhaps a turning point in Asian assessment of U.S. intentions in the Pacific.

As China grows stronger—and it is growing stronger but not at the pace its inflated figures would have the world believe—a time may eventually arrive when the regime will feel capable of challenging our strength.

Even now, in keeps probing at intervals to find out if we are faltering. But this time lies in the future and will have to take care of itself.

Today's diplomacy has to deal with the present and the near future.

VITAL DECISION

A decision of great importance was recently taken that looks to the period when the Chinese Communists might get it into their heads that they could challenge us successfully.

That is the decision to concentrate our resources on building up India, further assisting Taiwan to demonstrate what non-Communist Chinese can accomplish and encouraging Japan to think more about defending itself.

A rounded course of action is emerging that ought to put to rest discussion of U.S. recognition of Commuist China.

Two of the main arguments in favor of recognition have been that it is folly to try to stick our heads in the sand and ignore a country as powerful as China and, without recognition, there is no hope that China would agree to any disarmament terms that might be negotiated among the major powers.

MORE THAN RECOGNITION

The first argument assumes that recognition is entirely a matter of our own will. Diplomatic talks with the Chinese first in Geneva and now in Warsaw, however, have made it quite clear that they would toss recognition back into our face unless accompanied by complete withdrawal from Asia and the western Pacific.

Taiwan and the Nationalists are not the only stumbling blocks. Peiping knows that what it asks for is an impossibility. It is unwilling to negotiate anything but withdrawal.

Mainland China, moreover, has not been ignored. Quite the contrary. However inchoate our policy may have been at times, it was not the result of closing eyes to China's existence. The overall policy now emerging comes to grips with a powerful China.

DISARMAMENT TALKS

Any degree of disarmament, nuclear or otherwise, not participated in by China would be a farce, but Peiping has never said it would not go along with such an agreement if acceptable to Russia. Peiping undoubtedly would require that it participate in some phase of the negotiations.

That is not an objectionable requirement. Except for a possible nuclear test-ban accord, consideration of what China might or might not do with respect to disarmament is academic. In spite of the formal discussions and pronouncements of public officials, no one really expects anything important to come from the disarmament talks.

Even if something vital did develop in disarmament, nonrecognition of China would not be a barrier. We have talked and negotiated with Peiping in the past without formal recognition. That is not an insoluble problem.

INVITING TROUBLE

The conclusion I am obliged to draw from my contacts around the borders of China is that recognition of the Chinese Communists regime at this time would be a blunder of the first water.

It would open the flood gates. Talk of it in the United States should be allowed to die off quietly while the new policy of concentrating increased strength at definite points around the Asian periphery is tested.

Johnston Historical Museum

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 7, 1960

Mr. WILLIAMS of New Jersey. Mr. President, citizens of New Brunswick, N.J., have often expressed pride in the fact that the national headquarters of the Boy Scouts of America is within the boundaries of that municipality.

An editorial in the June 5 issue of the New Brunswick Sunday Home News has expressed additional appreciation to their neighbors, the Boy Scout administrators. The editorial discusses the opening of the Johnston Historical Museum on the grounds of the national headquarters.

Mr. President, the museum calls national attention in still another way to the purposes and principles of the Boy Scouts of America. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MUSEUM IS VALUABLE CULTURAL ACQUISITION

Yesterday's opening of the Johnston Historical Museum on the grounds of the Boy Scouts of America national headquarters in North Brunswick focused local attention once more upon the fine community asset we have in the headquarters and its staff.

The Scout headquarters brings the area continuing nationwide publicity. It furnishes substantial employment at good pay to large numbers of local people. It brings visitors from all over the Nation.

And the museum which opend yesterday is a noteworthy addition to the growing cultural accumulation of the area. Surrounding the museum is a large tract of land which will be used as a conservation area, as a nature hike area and for outdoor classes and exhibits. The entire project, when completed, will be unique in this country.

The opening of the museum is an appropriate time for us to convey to the Boy Scouts once more our appreciation of them as a good neighbor here.

Tideland Moneys

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, I present herewith a copy of Senate Concurrent Resolution No. 21, of the Louisiana Legislature, introduced by Senator Laurence Eustis, Jr. This resolution calls upon the Secretary of the Interior and the Secretary of the Treasury to take steps to have the funds now held in escrow placed in banks in the State of Louisiana. I wish to call this to the attention of the Members, and the resolution follows:

SENATE CONCURRENT RESOLUTION 21

Concurrent resolution relative to requesting those Departments of the United States having jurisdiction and authority to do so, to deposit in banks in the State of Louisiana those moneys now or which may hereafter be held and maintained or deposited in the Treasury of the United States which was or will be received for bonuses and rentals on mineral leases of lands and water bottoms in the tidelands area off of and part of the coasts of the State of Louisiana

Whereas there is presently held in escrow in the Treasury of the United States large sums of money exceeding $300 million received from bids and from adjudications for

bonuses and rentals on mineral leases of lands and water bottoms in the tideland and water bottoms off of and part of the coasts of the State of Louisiana; and

Whereas these moneys are being held pending the final disposition by the Supreme Court of the United States of the litigation fixing the boundaries of the coastlines of the State of Louisiana; and

Whereas these moneys are presently held in depositories of the Treasury Department of the United States outside of the State of Louisiana where they probably should be on deposit in banks of this State by the Treasury Department: Now, therefore, be it

Resolved by the Legislature of Louisiana (the Senate and the House of Representatives concurring), That the Secretary of the Interior and the Secretary of the Treasury of the United States, and all other officers of the United States having jurisdiction and authority in respect thereto, be requested to deposit in banks in the State of Louisiana those moneys now held in escrow or which might hereafter be received and held in escrow which have been received as bonuses and rentals on mineral leases of lands and water bottoms in the tideland area off of and a part of the coasts of the State of Louisiana pending the final disposition by the Supreme Court of the United States of the litigation fixing the boundaries of the coastlines of the State of Louisiana; be it further

Resolved, That a copy of this resolution be furnished by the secretary of the senate and the clerk of the house of representatives to the Senators and the Members of the Congress from the State of Louisiana for their information and use.

———, *Lieutenant Governor and President of the Senate.*

———, *Speaker of the House of Representatives.*

Life Begins at 50

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. McNAMARA. Mr. President, the legend that older Americans are problems and have little to contribute to their society and community still hangs on, but is rapidly vanishing in the face of the facts. The findings of the Senate Subcommittee on Problems of the Aged and Aging reveal that older Americans have the ability, the drive, and the enthusiasm to participate in the mainstream of American life and are increasingly doing so. The expected role of older persons is no longer a passive one, but active and creative. Given the economic and health conditions for dignified, self-respecting living, America's senior citizens can provide, in their retirement, a reservoir of important manpower for community efforts of many kinds.

A timely and penetrating statement of this trend was made recently by Mr. Clark Tibbitts, Chief of Program Planning of the Special Staff on Aging of the U.S. Department of Health, Education and Welfare. In a recently published interview with Mr. Robert P. Goldman, Mr. Tibbitts contends that age 50 is the midpoint in life "when as many productive adult years lie ahead as behind." He presents heartening evidence of the increasing recognition by younger age groups of the potential inherent in the great reservoir of skills and abilities to be found among our senior citizens.

The article closes with this commendable thought: "Life today does begin at 50. But it begins only for those with courage enough to take up the challenge, who refuse to write themselves off and who continue to learn and do."

The validity of this reasoning is clear. However, we should also emphasize the fact that millions of our aged citizens need help in order to be able to take up the cudgels and accept the challenge. They need an income which permits respectability, a decent place to live, equality of opportunity to maintain sound physical and mental health, and an equal chance to contribute to society. The subcommittee report contains 12 recommendations for legislative action needed to provide the social, economic, and health base which will make it possible for the aged to achieve their full potential. As a Nation, we have much to profit from such a course of action, for our senior citizens, with their wisdom, skills, and experience gained from years of living, can be a powerful and important national resource.

I ask unanimous consent to have Mr. Tibbitt's article, "Life Begins at 50," which appeared in the May 16, 1960, issue of Parade printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIFE BEGINS AT 50

(By Clark Tibbitts, as told to Robert P. Goldman)

Who are the aged? What is middle age? We puzzle over such questions today because the boundaries of age classifications have begun to break down. The chart shows how the life cycle has changed in 60 years, according to calculations by Clark Tibbitts, author of the article below. A pioneer in the mushrooming field of aging research, he is Chief of Program Planning, Special Staff on Aging, U.S. Department of Health, Education, and Welfare. Previously he was director of the Institute for Human Adjustment at the University of Michigan, Ann Arbor. He is editor or coeditor of several major books in the field: "Aging in the Modern World," "The New Frontiers of Aging," and "Growing in the Older Years."

Stages of life	1900	1960
Childhood	0-13	0-13
Adolescence	13-21	13-21
Early adulthood	21-35	21-50
Middle age	35-50	50-65
Later maturity	50-60	65-80
Old age	60+	80+

Nearly 30 years ago, author Walter B. Pitkind wrote a book called "Life Begins at 40." With sales in the millions, the book became an inspiration to a whole generation. Its title is a catch-phrase still heard today.

But in 1960 that slogan is hopelessly out of date. Today life begins at 50. And the evidence is clear that tomorrow it may begin even later.

Modern science and modern society have added new years and brought new opportunities to everyone's life. A dynamic Nation has banished many of the old fears, lifted many of the old burdens.

Look at what science and philosophy tell us about the 50-year-old in America today:

Studies at the University of Chicago show that "maximum satisfaction and gratification in life" come just before 50. The high point of maturity actually is reached around 50, according to other studies at the University of Minnesota.

Anne Morrow Lindbergh declares that middle age, much like adolescence, brings on new interests and spurs new desires to grow.

I believe that 50 now is the mid-point in life, when as many productive adult years lie ahead as lie behind. But they are vastly different years. Up to 50 is the period of establishment; after 50 is the time to capitalize on the experience, skills, and knowledge stockpiled earlier.

Thirty years ago, a man—or woman—of 50 was considered on the long, slow road of decline. He anticipated poor health, fewer job opportunities, shrinking income and continuing responsibilities. The world scorned him as "too old" and barred him from progress with the sentence, "You can't teach an old dog new tricks."

Today a 50-year-old can look ahead to longer life, better health, more jobs, steady income and fewer responsibilities. Changing industry increasingly wants his experience instead of a younger man's brawn. New scientific evidence proves that he can learn new tricks as well as a younger man.

Today a 50-year-old can do what many Americans always have longed to do. He can "start all over knowing what I know now." Free of the trivia that cluttered his youth, he can focus on his true interests and on richer, fuller living that really means something.

These are the changes that have given him that opportunity:

LONGER LIFE

In the 1930's, a man of 50 could expect to live 21 more years; his wife, 22. Today a man of 50 can expect to live 23 more years. His wife can expect to live 27.

This gift is the result of giant strides in modern medicine. Two great killers of the past, pneumonia and tuberculosis, have decreased sharply. Several others, such as infectious heart disease, have lost their sting. And medicine is closing in on some of today's menaces, such as cancer and heart disease.

BETTER HEALTH

A generation ago, a man in the middle years fell victim to periodic prolonged bouts of illness. He was not health-conscious, and he often failed to seek adequate medical care. A sizable proportion of the over-50 population was chronically ill.

Today's 50-year-old is healthy—healthier than ever before and healthier than most persons realize. Eighty-seven percent of Americans between 45 and 54 are completely free of physical ailments that cause limitation of activity, according to the National Health Survey. So are 78 percent of those between 55 and 64, and 63 percent of those between 65 and 75.

A 50-year-old loses a few more workdays due to illness and spends a trifle more on medical care ($129 against $108 a year) than a younger man, according to the Health Information Foundation. But the difference is negligible—and nowhere near so striking as it was in the past.

MORE JOBS

Because of alleged poor health and waning energy, men and women 50 yesterday were considered washed up in the working world. Heavy work required youth and physical stamina. One in 10 men was at the end of the line at 50. Four of five women did not hold jobs.

The legend that older workers are undesirable workers dies hard, but it definitely is dying. Current figures show almost every able-bodied man between 45 and 64 working. Forty-eight percent of women between 45 and 54 are employed—the highest percentage of any age group of women in the United States. Even between 55 and 64, one-third of women hold jobs.

A new value has been placed on experience and wisdom, which only older persons have. Not long ago, I asked a 34-year-old surgeon what special qualities were required for success in his profession. "The first qualification is 25 years of experience," he replied.

One reason for this gradual turnabout is that the old notion of declining intelligence with age has been debunked. Studies show now that intelligence reaches a peak at 50 and that the capacity to learn continues for years.

A researcher at Columbia University found that students past 50 made fewer mistakes in Russian language tests than students much younger. Another series of tests has shown that older persons, when properly motivated, learn equally fast and retain their knowledge better than the younger group.

We can expect the trend toward employment of older workers to continue. Employers have learned that older people are reliable and not inclined to job-jump. As automation becomes more prevalent in industry, there will be less premium on brawn and more on brains. The beneficiaries will be the 50-plus age group.

STEADIER INCOME

Coupled with the difficulty of finding jobs past 50 in the past was a sharp downturn in income.

Today, there still is a downturn between 45 and 54—but the gap is closing. Both men and women in this age bracket earn only $100 a year less than they did at their earning peak. The latest median is $5,034 for men, $3,069 for women. Even past 55, women earn only $250 less than women in their twenties; a man's income has dropped only a little over $500.

FEWER RESPONSIBILITIES

Yesterday a couple still was tied down at the age of 50. The average wife was 55 when her last child left home; the average husband 59. Half the households in America were broken by death before the last child married.

Today the average husband and wife are on their own at 50 and 48. They can look forward to many years of married life—just with each other. Most couples today live together 43 years before death interrupts.

One man wrote me, "Only after we were in our 50's did my wife and I have the opportunity to do what we wanted—alone—just as we did as newlyweds. The only difference is that as newlyweds we didn't have the money. Now we do."

Decreasing responsibility also affects the job world. One Philadelphia businessman has written that in his 50's, he felt for the first time that "if you don't like a man, you can tell him to go to blazes and never see him again. If you do like him, you can enjoy his friendship without serious question on either side of motives or possible personal gain."

Longer life, better health, more jobs, steadier income, fewer responsibilities—these are the gifts of the modern world to today's 50-year-old. All around us is evidence of persons who have seized these gifts to begin life anew in the middle years. You can have the same opportunity.

Says Dr. John E. Anderson of the University of Minnesota: "In the life pattern, there is a gradual change from breadth of interest to intensity and depth of interest." Dr. Anderson adds that in the fifties you can finally pursue the interests that were shunted aside while you were trying to find yourself.

One Portland, Oreg., couple provides a good example. After their children left home, the wife helped launch a movement to improve nursing homes. The husband became president of the local school board. Before their fifties, the couple simply had not had time for community activities.

From 50 on, you become more concerned with art, cultural and civic affairs. Studies of newspaper reading show that men and women over 50 are more avid followers of news analysis columns and editorials.

Can you seize the gift of full years from 50 on? You will need your own courage. For many plus-fifties still are numbed by fears that have little meaning in modern life. They fear that age 50 means sickness and being tossed on employment's scrap heap. Both fears become less and less meaningful day by day.

Today 31 million Americans are between ages 50 and 70. In 5 years the number will be 34 million; 5 years later, 37 million. For these vast multitudes, as Walter Pitkin said in 1932, "there is a career for each decade, determined chiefly by the energy demanded."

We recognize the wisdom of his words. Persons in middle life and beyond are more active than ever, more articulate than ever in social and political matters. They are using the tools shaped by 50 years of living to fashion new lives the way they always wanted to live them.

Life today does begin at 50. But it begins only for those with courage enough to take up the challenge, who refuse to write themselves off and who continue to learn and do.

Senator Symington Speaks on Equal Rights and Opportunities for All Americans

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1960

Mr. DIGGS. Mr. Speaker, I ask unanimous consent to insert in the RECORD an address delivered by Senator STUART SYMINGTON, Democrat, of Missouri, at the Third and Fourth Congressional District Democratic dinner, held in Kalamazoo, Mich., on April 27, 1960. Senator SYMINGTON's statement, among the daily releases by press, individuals, and organizations of numerous analyses of the civil rights issue, is one of the most penetrating into the fundamentals and scope of the subject. He forthrightly concretizes these facts: that the civil rights issue is not a Negro problem; it is an issue which, without regard to age, race, color, creed, or national origin, extends to and affects the opportunities and economic well-being of all individuals and the stature and justice accorded them as the people of the Nation. Senator SYMINGTON focuses the fact that the struggle for civil rights is man's pursuit of human dignity, the explosive worldwide issue of the 20th century.

Senator SYMINGTON's address follows:

EQUAL RIGHTS AND OPPORTUNITY FOR ALL AMERICANS

(By Senator STUART SYMINGTON)

Upon announcing my candidacy I said that I would emphasize the importance of policies and programs which guaranteed to every citizen equal rights and equal opportunity.

We in this country have great pride in our Statue of Liberty—the promises held forth in that uplifted torch.

To most of us, nurtured in the basic doctrine of our Constitution, that torch is dedicated to equal opportunity for all citizens. The Statue of Liberty is also a statue of dignity.

For over 300 years, from the time of the pilgrims to the present, millions of new citizens have come to America.

They came because they believed that here was a land where one could achieve a better life.

And in the main they found it.

Under the protection of law, operating in a virgin land where all were declared to be equal, they created for themselves and their Nation a prosperity and a position never before attained in all history.

In our country today, most men believe they can go just as far as knowledge and their skills can take them.

We must, however, be sure that we plan to develop and use all our human resources to their maximum capabilities.

This is not only essential to our position at home, but also to our position abroad.

We are faced with a determined antagonist, totalitarian communism.

This antagonist exploits our every weakness, in order to achieve the goal to which it has been dedicated for so many years—world conquest.

America is the last real power capable of standing between the Communists and world domination; and it is becoming increasingly clear that unless we decide to guarantee opportunity for all people, we may well lose it for all people.

Much is read and heard these day about growing unrest and brutality in Africa.

In that great continent, larger than the United States, China, and India combined, the people passionately desire human dignity—and they do not intend to be stopped.

Recently I visited Africa and the Middle East.

Believe me, our own failures in this regard are hurting us in these crucial countries.

In those lands the problem—centered in a citizen's unqualified right to vote—is now being pointed up for all to see.

The same is true in America. The world is asking for the views of the wealthiest and most powerful nation of the free world.

In my view, equal opportunity goes far beyond the bounds of race or creed.

A man capable of doing a particular job refused that job because he is too old, is as much a victim of discrimination as a man turned back because of the color of his skin.

The child too poor to go to college is as effectively segregated from educational opportunity as a child in a separate school.

The barriers to equal opportunity are not confined to one section of the country.

They sap the strength of all our States, and of our Nation, and of every nation.

If we could change this course, and unleash the full energies and ability of all our people, America's economic strength would break all records.

Here is one example:

If the average income of Negro workers equalled that of white workers, $14 billion per year would be added to consumer purchasing power.

And equal opportunity for able and capable workers aged 60 to 65 would add many billions more.

Surely these are worthwhile goals—and to attain them I make the following proposals in three main areas:

First: Equal opportunity for employment.

We should establish a cooperative program between the State and the Federal Governments for vocational training and retraining. That training should be available to those older workers who need new skills, as well as to people displaced by automation.

The Department of Labor should work more closely with State employment boards, so as to provide special job counseling for older workers. At the present time this service is sadly lacking in almost all States.

There should be an end to racial discrimination in Federal employment. Any project on which the citizens' tax money is expended cannot be a vehicle for perpetuating bias.

Second: There should be equal opportunity in housing.

Slums have no place in a modern America.

These slums can be abolished through an intelligent program of public housing and urban renewal. Lower interest rates on homebuilding would also help a great deal.

Then there is the great question of equal and adequate opportunity in education. Surely all of us want to see an America where every child who desires an education and is willing to work for it should have the opportunity.

The criteria for school and college educations should be brains, not money.

This principle was recognized by the National Defense Education Act, and I would hope to see this act eventually broadened into a program of competitive Federal scholarships.

The public education of our children—a principle conceived and carried out in our land before our Federal Constitution—should conform to the established law of our land.

The rights in our Constitution should belong to all Americans.

Every person in the United States should have the right to vote; the right to assert the principles of collective bargaining in practical fashion; the right to air any grievance; and, of course, the right to police protection against any and all violence.

In this testing time of history, the only real hope of the American people is to become and remain a united people.

And there is no surer road to national unity than equal rights and equal opportunity for all.

A first-class Nation should have no second-class citizens.

You and I remember the poem on the base of the Statue of Liberty.

That poem ends, "I lift my lamp beside the golden door."

But what good does it do to keep the lamp lit in the doorway if we snuff out the lights in the house?

Let us dedicate ourselves to a goal which would truly represent the power and glory of the American dream.

To that end, let ours be a land where all feel welcome, and where all share the same hospitality of laws and customs and care.

This is the way to really use our liberty.

This is the kind of house you and I believe in.

That is the house we want our children to live in.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. KEATING. Mr. President, increased international tensions have dominated the news of late and, of course, have greatly influenced the activities and objectives of the Congress. One of the most important types of legislation affected by these pressures is mutual security.

Having passed a $4.1 billion authorization, we are now entering upon the most critical stage of our annual consideration of the mutual security program. In the past, the most vigorous efforts to whittle down our oversea aid funds have been in connection with the mutual security appropriation.

Mr. President, certainly with the international situation as it is, we must be even more vigilant this year in seeing to it that our mutual security program is maintained at a level as close as possible to the $4.175 requested by the President. The reasons for this are altogether obvious. In the relatively short span of time in which this program has been in operation, it has worked wonders in strengthening the free world's defenses and in improving the economic status of less developed countries. Of course, in a program of this scope some waste and mismanagement is inevitable—and we must constantly strive to eliminate such practices. However, these shortcomings must not blind us to the importance of mutual security assistance in forging the free world's shield against communism.

I want to call attention today to an excellent editorial which appeared last Sunday in the New York Herald Tribune. This editorial, entitled "No Time To Skimp on Foreign Aid," contains a well thought out statement of the argument against making any further cuts in our mutual security program. I hope this fine editorial will be studied with care by every member of Congress. It is as succinct and penetrating an analysis of the need for the Mutual Security program as I have seen in a long time. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO TIME TO SKIMP ON FOREIGN AID

As regularly as the plowing and the reaping, as the melting of the snow and the flights of the swallow, comes the annual battle over foreign aid. Again the fight is on and the sides are drawn. Yet as our competition with the Soviets enters its newest phase, the cries of those who would still have us deny the pleas of an urgently needy world ring even more hollow.

Congress has passed a $4.1 billion foreign-aid authorization bill, only slightly less than the President asked. But a tough fight is threatened on the actual appropriations, with opponents of aid reportedly hoping to whack a billion or more dollars out of the total.

The present international climate makes this hardly an auspicious time to start chopping away at military-aid funds, which go largely to make possible the continued strength of our most exposed allies. Some $2 billion of the $4.1 billion total is earmarked for military aid, another $675 million for defense support.

Nor is it an auspicious time to slacken our development aid efforts.

The day is past when this Nation could live in economic isolation. Hoarding our wealth while millions go hungry is a luxury we cannot afford, as is pressing forward the phenomenal development of our own technology while leaving desperately striving backward nations to shift for themselves. The world is too small, the limits of neighborliness and human responsibility too broad. And the security of our own Nation is too intimately bound up with the economic progress of the underdeveloped. Building the collective strength of the free world demands a rapid buttressing of the economic strength of its economically weaker members.

There have been examples galore of waste and incompetence in the administration of the foreign-aid program. But there have been more examples of great, of immeasurable good. And though waste in the military is legendary, we don't for that reason scrap our defenses. By all means let us encourage sound administration of foreign aid. But let us also support it, generously and wholeheartedly. The world needs it, and we are part of that world.

Textile Import Problems

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. McCORMACK. Mr. Speaker, in my extention of remarks I include a memorandum sent to me by Edwin Wilkinson of the National Association of Wool Manufacturers, which memorandum was prepared by the American Cotton Manufacturers Institute, the Northern Textile Association, and the National Association of Wool Manufacturers in relation to the imminent international negotiations on the wool-cloth duties under GATT that will affect the future of the woolen and worsted industry in the United States.

The members of this association are fine Americans and outstanding businessmen. The views of these associations and members are worthy of most serious consideration.

The memorandum follows:

MEMORANDUM ON TEXTILE IMPORT PROBLEMS

(Submitted by the American Cotton Manufacturers Institute, National Association of Wool Manufacturers, Northern Textile Association, May 5, 1960)

I. WOVEN WOOL CLOTH DUTIES

A matter of urgency

Imminent international negotiations on the wool cloth duties under GATT will affect

the future of the woolen and worsted industry in the United States.

Specifically, the duties to be renegotiated are the 1947 concession rates of tariff law paragraphs 1108 and 1109(a) including the tariff rate quota authorized under the reservation attached thereto.

The Government's position for these negotiations is being developed under regular trade agreement procedures required by the Trade Agreements Act and Executive orders. Public hearings were held last December by both the U.S. Tariff Commission and the Committee for Reciprocity Information. This March the Commission filed with the President its peril point report. Announcement of negotiations is expected at any time.

Industry position

A comprehensive system of quotas should be established to prevent further injury to the domestic industry and permit orderly and stabilized marketing of imports.

An overall quota should be fixed annually on a square-yard basis at an amount not in excess of 5 percent of the average annual domestic production of apparel cloths, wholly or chiefly by weight of wool, exclusive of production for Government, for the 3 preceding years.

The quota should be divided into subquotas and applied on a country-by-country basis and on the basis of categories of fabrics.

Absolute quotas in fixed amounts would be the most effective method and should be used. If tariff rate quotas are considered, both the base rate and the higher rate should be increased to realistic levels such as would hold imports within the 5 percent principle above.

Limitations or quotas on other wool textile goods including apparel and made-up items must also be adopted.

II. COTTON TEXTILE IMPORTS AND THE SECTION 22 CASE

Section 22 of the Agricultural Adjustment Act authorizes the use of tariffs and quotas to control the importation of articles manufactured from a price-supported agricultural commodity. The National Cotton Council, supported by the American Cotton Manufacturers Institute and the Northern Textile Association, has asked for action under this section. Hearings before the Tariff Commission have been completed.

It is to be hoped that the Tariff Commission will recommend meaningful import relief for the cotton manufacturing industry, and the President should be urged to approve any such recommendation by the Commission. More cotton cloth and cotton wearing apparel was imported into the United States in 1959 than in any previous year, and so far in 1960 the rate of imports is increasing sharply.

III. NEW GATT TARIFF NEGOTIATIONS

Beginning in January 1961, there will be extensive tariff negotiations in Geneva under the General Agreement on Tariffs and Trade. Following the procedure laid down in the Trade Agreements Act, our Government will shortly issue a list of items to be considered for possible tariff reductions at that time. This list will form the basis for hearings by the Committee for Reciprocity Information and the Tariff Commission, probably in June.

The textile industry, already bearing a more than proportionate share—through rising imports—of the burden of U.S. foreign trade policy, should not be made the subject of additional tariff reductions. It is highly significant that large volumes of imports manufactured from all fibers are currently coming into this market under existing tariff rates.

This situation ought to be brought forcefully and immediately to the attention of the President and the Secretary of State with the recommendation that no textile items be included on the forthcoming GATT list.

IV. SUBSIDIZED IMPORTS

Many different subsidy devices are being used by oversea countries to circumvent our tariffs. Section 303 of the Tariff Act of 1930 directs the Secretary of the Treasury to impose countervailing duties in such circumstances. The Secretary should be urged to enforce section 303 promptly and effectively in all such instances.

New Jersey Academy of Science

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Tuesday, June 7, 1960

Mr. CASE or New Jersey. Mr. President, I have recently received some material describing the objectives and activities of the New Jersey Academy of Science. Robert K. Zuck, chairman of the Department of Botany at Drew University in Madison, N.J., is president of the Academy. The work of his organization is highly important, and its value in encouraging a widespread interest in the sciences is enormous.

I ask unanimous consent to have printed in the Appendix of the RECORD a description of the New Jersey Academy of Science and two resolutions which were adopted at its recent annual meeting.

There being no objection, the description and resolutions were ordered to be printed in the RECORD, as follows:

ABOUT THE NEW JERSEY ACADEMY OF SCIENCE AND STATE ACADEMIES OF SCIENCE

Interest in science in the New World extends back to the Colonial Period and the early days of the United States, when Benjamin Franklin founded the American Philosophical Society in 1743 and John Adams helped establish the American Academy of Arts and Science in Boston in 1780. The Maryland Academy of Science, the first of the strictly State academies, 1797, thrives to the present day; but the early academies in Kentucky, Virginia, and New Jersey failed to survive. The present New Jersey Academy of Science was founded in 1954 at a meeting held in the Town Hall at Chester. Six annual meetings have been held, with the most recent one, March 25, at the Newark College of Engineering at which 40 papers based on original research were presented. The others have been held at Drew University, Fairleigh Dickenson University, Rutgers University, and the Newark Public Library.

The State academies of science are devoted to the promotion and diffusion of scientific knowledge through meetings, publications, museums, natural preserves, and financial aid. Interestingly, shortly after the gold rush to California, the California Academy of Science was founded in 1853. This organization has had a profound influence on the course of scientific development in that State. The C.A.S. maintains a museum and public library, both of the originals of which were destroyed in the earthquake of 1906. Members of this academy were the guiding force in preserving the California Redwoods and have been active in other conservation matters.

At the sixth annual meeting of the New Jersey Academy of Science held in conjunction with the 75th anniversary celebration of the Newark College of Engineering, two resolutions were passed. One which has been under discussion for over a year, establishes the New Jersey Junior Academy of Science, the other advocates the preservation of the New Jersey Pine Barrens and the Great Swamp areas as well as active participation with other groups and individuals interested in the conservation of natural resources.

Membership in the New Jersey Academy of Science is open to all interested in science, including college students. The New Jersey Junior Academy of Science, when it is put in operation, will be for students of high schools.

RESOLUTION OF THE NEW JERSEY ACADEMY OF SCIENCE

Whereas the population of the State of New Jersey is increasing rapidly with consequent pressure on our natural resources, the New Jersey Academy of Science resolves that:

1. The New Jersey Academy of Science should encourage individuals and groups in conserving these natural resources.

2. The New Jersey Academy of Science determine areas of activity in conservation where it may best function, and study groups be organized for that purpose.

3. The preservation of the Pine Barrens and Great Swamp areas are now the most immediate concern and that these areas can best serve the people if maintained in their present natural condition.

Passed at the annual meeting of the New Jersey Academy of Science, March 25, 1960.

ROBERT K. ZUCK,
President, New Jersey Academy of Science, Professor and Chairman, Department of Botany, Drew University, Madison, N.J.

RESOLUTION OF THE NEW JERSEY ACADEMY OF SCIENCE, MARCH 25, 1960

Whereas the New Jersey Academy of Science desires to encourage and stimulate original research in the sciences and mathematics by secondary students, to whom new and wider horizons will be opened by close association with the New Jersey Academy of Science and through that body with the American Association for the Advancement of Science, be it resolved that:

1. The New Jersey Academy of Science, in cooperation with the New Jersey Science Teachers' Association, established the New Jersey Junior Academy of Science.

2. The purpose of the Junior Academy shall be to encourage and stimulate original research in the sciences and mathematics by secondary school student sand provide meetings and publications for presentation of such research.

3. The president of the New Jersey Academy of Science, with the approval of the executive committee, shall appoint a director who shall act as coordinator of all chapters of the Junior Academy. The director may appoint such persons as he may deem fit to assist him.

4. The Junior Academy shall consist of chapters established in the secondary schools of New Jersey. A chapter may comprise one or more affiliate science groups. An affiliate science group is any official school science or mathematics club.

5. Be it further resolved that copies of this resolution be sent to the following organizations:

New Jersey Science Teachers' Association.

The American Association for the Advancement of Science.

Statement of Dr. C. C. Furnas Before the Committee on Science and Astronautics

EXTENSION OF REMARKS
OF

HON. R. WALTER RIEHLMAN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1960

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD, a statement before the Committee on Science and Astronautics made by Dr. C. C. Furnas, chancellor of the University of Buffalo, on June 3, 1960.

Dr. Furnas is a member of the committee's panel on science and technology and participated in the recent round-table discussions held by the committee and the panel on June 2 and 3. The discussions centered around various scientific and technological problems of interest to the Congress and the Nation.

Dr. Furnas, in addition to being an eminent educator, is also well known in the field of chemical engineering. His paper is a learned discussion of scientific research and its application to technology which I call to the attention of my colleagues.

Dr. Furnas' statement follows:

It is an honor and a great opportunity to appear before this panel and committee to present some thoughts on the problems and progress of science and technology. To many it must seem that the body of scientifiv research and its application to technology is appalling in extent and stupefying in complexity. I think all of us must admit that there are times when this seems to be the situation. This makes it ever more important to have discussions with bodies such as this in order to arrive, if possible, at understanding and perhaps even afford some appropriate guidance.

Though I have for many years and am still quite substantially involved in military research and development, I shall not dwell on those problems and activities. They are very much before the public eye and there is a spate of discussion and debate in this area at all times. Neither shall I, glamorous though it may be, give consideration to space research or to interplanetary travel. As compared with those dramatic subjects, what I have to say will probably seem rather dull and perhaps uninteresting.

One of the stark facts of life at the present time is that the world population is growing at an explosive rate. Tomorrow morning there will be over one hundred thousand more mouths to be fed and bodies to be clothed and housed than there were this morning. Total world population at the present time is approaching 3 billion. One might say that these persons are divided into three camps. About 1 billion are in the more-or-less democratic world, about one billion under Communist influence and about one billion are the so-called uncommitted peoples. Everyone recognizes the importance of convincing the uncommitted billion people that the democratic way of life as exemplified by Western Civilization is the better course. So far, America's attempts to bring about such conviction have not been covered with glory.

At least one-half of the persons of the world exist in the most miserable imaginable circumstances. This is due to the lack of the rudimentary goods and services necessary to provide a decent standard of living. It is extremely important that science and technology provide the means for remedying this sad situation. It is not merely a matter of humanitarianism; it is a matter of political stability for the democratic way of life. America should be in a position to contribute most significantly, particularly by suplying new research knowledge.

If the situation as far as human existence for at least half the world is already sad and miserable, the prospects are that it may become much worse. Because of the rate of population increase, it is inevitable that by the end of this century there will be approximately 5 billion people on the earth. Valid predictions are that by the year 2050 the number will be 10 billion. Eventually, of course, there will be a leveling off in this population density but the beginning of that trend is not yet in sight and probably will not occur for another generation or two. It is evident then that if we are short of material goods and services at the present time, the world as a whole will be in a truly desperate situation when the population is doubled, unless something new is brought into the picture. I wish to discuss the type of research and development which will be necessary to take care of this critical problem.

Providing the requisite goods and services will depend not only upon scientific and technological knowledge, but also upon the supply of natural resources. Outside of agricultural land, our principal natural resources are: energy, minerals and water. I will discuss each of them in turn.

Industrial productivity in terms of goods and services is almost directly proportional to the amount of energy which is readily available. It is utterly impossible to provide the wherewithal for the lives of many billions of people by the old pattern of subsistence agriculture alone. We must depend upon industry, which means that we must have ever-increasing amounts of energy available. As is well known, our principal energy supply at the present time is in the form of the fossil fuels: coal, oil and gas. Despite the fact that new oil and gas fields are being discovered in various parts of the world, we are depleting this tremendous natural resource with extreme rapidity. As far as petroleum is concerned, in America we are already over the peak. The wells have to be drilled deeper and deeper and the output per day becomes less and less. Hence, our increasing reliance upon foreign sources with occasional international political complications. No one can predict with exactness when the shortage of petroleum supplies throughout the world will become serious but everyone recognizes that the supply is finite and the day of serious depletion probably lies within the foreseeable future.

The history of civilization will probably show that it was fortunate that the atomic bomb was devised and used at about the middle of the 20th century. Although military use came first, it did open up the door for the peaceful application of nuclear energy, that is, supplying controllable energy through the fission of uranium or thorium atoms. Uranium nuclear powerplants, as you know, are under development and a few are in use in this country, as well as in Western Europe and in Russia. I anticipate that in certain parts of this country the use of nuclear power will become economically feasible in competition with coal and petroleum within the next 5 to 10 years. This will have a very important and beneficial impact for the supply of energy in certain forms (electrical energy and sensible heat at the source) in all parts of the world for a long time to come, but it is only a partial remedy.

If the intriguing and significant research on the controlled fusion (hydrogen bomb) reaction which is going on in many laboratories in this country as well as abroad, is successful a great new source of energy will be opened up. It is too early to make predictions but this may come about within the next generation.

It is not yet time to become complacent about the matter of energy supply. With our present devices and economies, we will apparently always need liquid fuels. We are also faced with the fact that conventional agricultural methods will probably not be able to supply all the necessary food energy for the population of the world in years to come. This means that we need to find out more about that great natural process known as photosynthesis, whereby plants take the energy of the sun and a few simple chemical compounds and build up the substance of plant materials, which is the basis for all plant and animal life on the face of the earth. It can also be the source of liquid fuels such as the gasoline which we use in our cars. Despite the extreme importance of this knowledge, we do not yet know how nature carries out the photosynthetic process. In other words, we do not yet know the answer to that important, much-booted-about question, "What makes the grass green?" When we do find out this secret of nature, we will, in all probability, be able to improve upon the processes and carry out, on a feasible and economical scale, artificial photosynthesis which will assure us of an adequate supply of liquid fuels, as well as certain basic synthetic foods, for all time to come. The energy which falls on the earth from sunlight is thousands of times greater than the human race utilizes and the sun will certainly be shining as long as there is a human race. Important fundamental research is going in various laboratories upon the minute molecular reactions which form the process of photosynthesis but in the national scheme, this type of research is still of minor importance. I feel that it should be greatly enlarged and emphasized.

The next natural resource which is essential to human industrial existence is made up of those materials classed as minerals. In this country and many others we have already skimmed the cream off our supply of metals and other natural minerals but the demand for them is growing even faster than the population. This is also true of the other industrial countries of the world. After we have depleted the mineral deposits which are economically workable with our present technology, where will we find these raw materials for civilization? We must learn to get more and more from less and less. Undoubtedly we can make small-step improvements in our technology for winning the minerals from the natural ores, but we need to make a major advance. There will be no single solution so we need to explore all possibilities.

There is one source of mineral substances which is practically infinite in extent even though the desirable materials are there in only very small proportions. I speak of the oceans of the world. If we could devise practical means for mining the oceans for the some 20 valuable minerals those waters contain, it would be of direct benefit to almost every nation. The answer, usually when you pose this question, is that such an approach is impossible because the minerals are there in such dilute concentration. However, there are certain low forms of life that do not know this and they go ahead and concentrate and use these minerals for their own benefit. I summarize this problem by posing the question, "How does the oyster get its copper?" Although the oyster is obviously a very stupid fellow, he is smarter than we are in the sense that he can take copper from the very dilute concentrations in sea water where it is present to less than one part per million and concentrate it by a thousandfold in its own body fluid. The slimy sea cucumber concentrates the element vanadium by a millionfold in its respiratory

tract. Almost every form of plant and animal life has the ability to select and concentrate particular chemical elements, as a part of the living process.

How do they do it? Our knowledge is very fragmentary but it is obvious that highly selective reactions are involved—which I call pickpocket chemistry—and about which we should know a great deal more. If we understood the real fundamentals of these selective reactions, we could undoubtedly improve on nature and would probably be able to carry out the processes, using nonbiological materials, on a large and economical scale. One can visualize such an industrial process where the input material would be sea water and the output would be several concentrated and well-separated minerals such as copper, zinc, phosphorus, boron, vanadium, columbium, and even gold. This would by no means solve all the mineral problems, but it could help substantially.

Parenthetically, it should be pointed out that two elements, bromine and magnesium, are presently being recovered from sea water on an economical basis. These two, however, are present in relatively large concentrations and are being recovered by conventional and well-known chemical processes. They represent about the limit of practical application of present knowledge.

Even though the sea might become important as a source of minerals if we understood nature's tricks of selective chemistry, the knowledge gained might be even more important in developing new methods of winning the minerals from very low-grade ores. Simple leaching processes might be devised which would be economical and feasible. One example will indicate the possibilities.

Average granite, which makes up a large proportion of the earth's surface, contains small traces of uranium and thorium, about 4 parts per million and 12 parts per million, respectively. If this uranium and this thorium could be effectively extracted and used in a nuclear power reactor, then that uranium and that thorium from a single ton of granite could produce energy equivalent to burning 50 tons of coal. The crust of the earth will always serve civilization well when we learn how to use it.

I treated the problems and possibilities of this new type of chemistry in more detail in an address entitled "One Molecule in a Million"[1] before the American Iron and Steel Institute 2 years ago. I am submitting a reprint of this address for the RECORD.

In my opinion, the third great question in the natural resources problem is, "What makes it rain?" Many of the wilder and bloodier stories of the early West centered around the battle of the old waterhole. Particularly in our own Southwest, this situation still holds and is getting even worse, although we ordinarily do not any more carry on the battle with guns. By means of dams, wells, irrigation ditches, and even feeble attempts at rainmaking, we try to solve our water problem. We are losing ground steadily as more and more people move into that region, bringing increased industrial and agricultural demands. The situation in other parts of the world where millions and millions of destitute and hungry people live is even worse. Yet while we are continually starving for water in many important parts of the world, the shores of almost every nation are lapped by the infinite supply of the ocean. Unfortunately, the ocean contains salt and such water does not fulfill the needs of most modern industrial civilization. How can we get fresh water from salt water?

[1] Yearbook, American Iron and Steel Institute, 1958, p. 19.

Our Department of the Interior has a multifaceted development program to devise processes for getting fresh water from salt or brackish water but it is based upon old knowledge and old technology. One can say that the program is proceeding satisfactorily but results indicate that the processes are not now and will not be economical in the true sense of the word unless some new factors are added. At the present time, the cost of fresh water produced by these methods will be 5 to 10 times of that which can be practical, except under the most unusual economic circumstances.

Parallel with this, there have been several empirical approaches to rainmaking by seeding clouds with dry ice or by using silver iodide generators on the ground. Success with these experiments has been quite indifferent and there is no prospect of very much improvement as long as we confine ourselves to this purely empirical approach.

While we are struggling with these empirical methods based upon past knowledge, we still do not have the answer to the question, "What makes it rain?" Stated another way, we do not yet understand the minute physical forces that are involved when two fog droplets coalesce and then coalesce with some other droplets, finally to form a drop of rain. We know the overall conditions for the formation of rain droplets under severe temperature gradients such as occur in a thunder cloud, but this is only one of the special cases of the rainmaking process. If we did know exactly how nature causes the fog droplets to coalesce, I feel certain it would help tremendously in developing new and economical industrial processes for recovering fresh water from the sea and brackish waters. It might also point the way to really effective local control of weather. Yet there is almost no research going on in this important field of the physics of surfaces involved in droplet formation.

In summary then, because of the absolute necessity for us, as well as the other nations of the world, to solve the problems of maintaining an adequate supply of the natural resources: energy, minerals, and water, I feel we should have increased emphasis in our national research program upon the search for the answers to those three questions: What makes the grass green? How does the oyster get its copper? What makes it rain? The problems themselves, of course, would be phrased in much more erudite titles but I do feel that those questions point up the problem. Perhaps there are other questions that are even more important, but those are typical of our area of ignorance.

I have a suggestion to make and it involves The National Science Foundation. That Foundation, as you know, has over the past several years been carrying on magnificent work in encouraging and supporting basic scientific research in the physical sciences as well as in scientific education. In the research area, as a matter of policy, it lays great stress on the fact that it does not dictate or guide research programs or areas of research. The Foundation gives objective consideration to proposals which scientists submit for support of particular research projects which they want to undertake. In the field of the physical sciences, there are not many limitations of subject matter. The theory back of this policy is that you cannot direct basic research. You can only give the research man the opportunity, through support, to follow his own individual interests and propensities. Of course, nearly all of our scientific knowledge of the past was developed from this random approach. It is virtuous but is it sufficient?

Without attempting to direct individual projects, and certainly without attempting to dictate the individual research man's program, I feel that a small shift in the policy of the National Science Foundation might aid very materially in arriving at early answers to those three important questions. If a certain proportion of the funds available to the National Science Foundation were earmarked for the support of research in those or similar carefully selected areas, and if it were made known that money would be available for those but that those particular dollars would not be available for other projects, I think we would find a number of scientists who would be willing to come forth with some really potent ideas which might quite rapidly lead to worthwhile results. Indirectly, of course, this would be lending direction to the lines of research but it would not be direction in detail and it certainly would not be dictation. (I call it "vectoring" rather than "directing" research.) It would not be necessary to set up any new organization to handle that sort of problem, and I doubt if it would take very much more money, in proportion to the national expenditures. But I feel that the problem is serious and worthy of whatever effort and expenditure may be called for. I greatly fear that the random approach, as contrasted to such a lightly directed approach as I suggest, will not provide the answers to our basic natural resources problems in time to avoid serious international mishaps.

There are those who contend that such problems should be dealt with only by industry because, obviously, successful results will lead to production, which in turn will lead to profits. However, our basic knowledge is so sparse that immediate application cannot be guaranteed and industry, quite rightly, in my opinion, is not justified in spending any large number of dollars on this type of research at this early stage. I feel that it is a national problem which calls for a national approach at this time. Industry should pick up the applied research and development at a somewhat later date.

In order to point up the importance of solving these problems as rapidly as we can, I would like to quote from Dr. Harrison Brown of the California Institute of Technology in a paper of his, "Resources of the World," in 1956:

"As our dependence shifts to such resources as low-grade ores, rock, sea water, and the sun, the conversion of energy into useful work will require ever more intricate technical activity, which would be impossible in the absence of a variety of complex machines and their products—all of which is the result of our intricate industrial civilization and which would be impossible without it. Thus, if a machine civilization were to stop functioning as the result of some future catastrophe, it is difficult to see how man would again be able to start along the path to industrialization with the resources that would then be available to him. We are rapidly approaching such a 'point of no return.'"

The Uses of Conservation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 7, 1960

Mr. WILEY. Mr. President, across the country, our conservationists continue to wage a courageous battle against the destruction of our natural, out-of-door heritage.

In the face of a fast expanding population, as well as an expanding indus-

trial-urban complex, overflowing into the countrysides, the fight is a difficult one.

Fundamentally, the conservation programs are aimed at preserving our soil, water, forest, and other natural resources. Other endeavors are directed at preserving fish and wildlife, as well as areas of unspoiled scenic, out-of-door wilderness and landscapes.

In addition to preservation of natural resources, these natural lands are providing opportunities for recreation and health and spiritual revitalization for our people. In 1960, for example, about 60 million citizens are expected to visit the areas administered by the National Park Service.

Recently, the New York Times published an informative article entitled "The Uses of Conservation." The article was written by John B. Oakes and reflects the creative way in which our out-of-door areas are being utilized, as well as the need for constructive programs to preserve these significant lands. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE USES OF CONSERVATION—HOLIDAYERS TODAY REAP BENEFITS OF EARLIER PROGRAMS

(By John B. Oakes)

Henry David Thoreau, whose Walden is pictured on this page and whose legacy to the world is the Walden ideal, wrote more than a century ago: "Why should we not * * * have our national preserves, in which the bear and the panther * * * may still exist, and not be civilized off the face of the earth—our forests * * * for inspiration and our own true recreation? Or shall we, like villains, grub them all up, poaching on our own national domains?"

In the century since Thoreau's "Maine Woods" appeared, we Americans have been grubbing up and poaching upon our own national domains with a carelessness born of prodigious wealth, but suddenly we have found that we are no longer so wealthy as we had thought in unspoiled natural resources, and we are beginning to take seriously the need for their conservation. Even Walden Pond itself was grubbed up and poached upon, until some outraged citizens of Massachusetts finally took up the arms of the law. Only a few weeks ago they won a ruling from the Supreme Judicial Court of the Commonwealth requiring that Walden not only be protected from further despoliation but also be restored by the officials entrusted with its preservation to the "natural aspect and character" that the original donors of the property to the county had expected would be maintained forever.

CONSERVATION CAN WIN

This decision of the Massachusetts court, though affecting only a few acres of land, does illustrate the principle that conservationists can succeed in their objectives if they are willing to fight hard enough to achieve them. But the history of American conservation is the history of rearguard actions, of desperate measures to save a little scenery, a little forest, a little land in its original state before it has been entirely "improved," developed or bulldozed away by the march of urban, industrial, or agricultural civilization.

As millions of Americans rush out of their cities this summer looking for a breath of "nature," let them remember that conservation is a very practical thing; it is the force that if successful will insure preservation of a minute fraction of the natural heritage of our country unspoiled for future generations. If unsuccessful, and no one can doubt that the economic and political pressures against conservation are formidable, there will literally be within a very few decades, no worthwhile natural preserve left for the public to enjoy.

The 60 million people who are expected to visit the areas administered by the National Park Service this summer, not to mention the uncounted millions more who will be visiting State and local preserves, might well pause for a moment in their enjoyment of the unclutered scenery, the naturalness of their surroundings, the proximity of wildlife, the space and (for those who get away from the road) the silence, to think how all this happens to be there awaiting their pleasure. It was the conservationists of the past whose foresight insured the protection of this much of their country's beauty for today.

The more than 3 million people who visited the Great Smoky Mountains National Park last year had the privilege of experiencing, if they wished, a unique tract of half a million acres of primitive forested America, most of it looking very much the way it did three centuries ago, when the first settlers, some of whose descendants are still there, hacked their way into that wilderness. This great park, the most popular in the country, owes its origin to the generosity of one man, the late John D. Rockefeller, Jr. He also was responsible for the protection of other national parks, including Grand Teton in Wyoming and Acadia in Maine.

If he had not acted, and if the people through Congress and their legislatures had not responded, sometimes after terrific struggles, these great areas would have been given over to the usual run of lumbermen, grazers, or other exploiters, and their unique quality would have been destroyed forever.

The story has been the same since conservationists first began to work for the creation of the national park system.

Every time an effort is made to set aside, on behalf of the public, an area of unique natural beauty, some vested interests are sure to be adversely affected. They may be lumber interests, or grazing interests, or mining interests, or bureaucratic interests, or simply shortsighted, if well-meaning citizens who think that no interest is superior to that of the Federal Treasury.

When the bill to create Glacier National Park was introduced 50 years ago by Representative Charles Nelson Pray, he was told by his colleagues that there was no need for another park in Montana because Yellowstone already existed on the State's southern borders, and if this bill were enacted it would create a perpetual drain on the Federal Treasury for which they did not care to become responsible. Last year the nearly three-quarters of a million visitors to Glacier are estimated to have spent some $18 million in the State of Montana.

BASIC VALUES

The real value of the national park and wilderness system has nothing to do with cost or returns. The real value consists in the inherent worth of permanently preserving the best remnants of our country's natural scenic beauty for the spiritual, aesthetic and physical enjoyment of the American people for all time to come. Until a few years ago, it was possible, although it was never desirable, to approach this objective in leisurely fashion. But spectacularly rapid urbanization, industrialization and mechanization have created an immediate emergency in the long slow process of enlarging the protected domain that is to be handed over intact to succeeding generations.

The case of the shorelines is a good example. Just a quarter-century ago, in 1935, the National Park Service made a survey of potential seashore areas suitable for public acquisition. It recommended purchase of 12 major areas, totaling 437 miles of superb beach, leaving plenty of others, only a little less desirable, suitable for State and other reserves.

What has happened to these beaches? Only 1 of the 12 was acquired at the time as a national seashore. Ten of the remaining eleven have, to quote a National Park Service survey, "long since gone into private and commercial developments." One such area, 30 miles long, could have been purchased in 1935 at the rate of $9,000 a mile. Today, only 9 of its original 30 miles are undeveloped, and they would cost $110,000 a mile if the funds could be found to purchase them.

As a result of the lack of foresight on the part of the American public—park officials knew all about the needs even then, but the money was lacking—there is an acute shortage today of shoreline areas suitable for permanent preservation for public use and enjoyment. The vacationists who will go this summer to the Oregon Dunes on the Pacific, or to Padre Island on the Texas coast, or to Cape Cod on the North Atlantic, will be visiting three of the best remaining sites for potential national shoreline parks. If they are not soon acquired, they will without the slightest doubt be spoiled within a very few years beyond all recognition.

TIME RUNNING OUT

Time is rapidly running out on these and the relatively few other first-class coastal areas that are still available—areas such as Cumberland Island, Ga.; Point Reyes, Calif.; and a number of ideal sites on our Fourth Shore along the Great Lakes, including the Indiana Dunes, which are imminently threatened by industial development, and Huron Mountains, Pictured Rocks and Sleeping Bear Dunes in Michigan. Conservationists throughout the country are fighting to save these and similar areas. If they are not supported by an insistent demand from the wide public that will enjoy these places once they become parks, Congress is not likely to rise to the occasion.

Even some of the Government agencies that were established to protect our national resources have in one guise or another joined the exploitative procession. For example, the United States Forest Service, with a brilliant record of intelligent timber management behind it, is now fighting with all the bureaucratic skill it can command against ceding to the National Park System even one square foot of the most scenic lands. So long as these lands remain within the Forest Service, they are always subject to commercial exploitation by mere administrative fiat. Similarly, the Park Service itself occasionally has been tempted away from the business of preservation and protection, for which it was set up, into the conflicting field of mass recreation. This process has fortunately not gone far, but borderline evidence of it has aroused some concern.

With the increase of population, of leisure time, of transport facilities and of disposable income, the pressures from tourists and travelers on America's remaining natural areas are going to go steadily upward, while the supply of such areas is going rapidly downward.

LEGISLATIVE GOAL

What can be done about it? The most immediate goal is passage of legislation that would give permanent, statutory protection to existing wild areas already in the Federal Government's possession. The instrument with which to do this is the pending wilderness bill, now blocked in the Senate by spokesmen for some of the special interests already mentioned. The next, or concurrent, action is to acquire more of such lands before their prime scenic assets disappear.

In addition to the coastal areas, which deserve first priority, there are many important inland tracts such as the Northern Cas-

cades wilderness area in the State of Washington, the Great Basin area in Nevada, the Ozark Rivers strip in Missouri, the Chesapeake and Ohio Canal along the Potomac, and the Allagash woods-and-water wilderness in Maine. Each of these is worthy of permanent preservation under Federal auspices. There are considerable areas of perhaps lesser significance or smaller size that require State action of the type Governor Rockefeller has recently set in motion in New York with his proposal for a $75 million bond issue to enlarge the State and local park systems.

Travelers to many of the best-known scenic spots in America this summer have the conservationists of the past to thank for the fact that what they see is still relatively unspoiled. But, as Secretary of the Interior Seaton recently wrote, "The next 5 or 10 years constitute critical years if we are to add what we need to our heritage of scenic, historic and cultural treasures for the use and enjoyment of the greater, and largely urbanized, population of the future."

Timely Articles From Life Lines

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks I am pleased to include three articles taken from a recent issue of Life Lines, a great American publication. These articles should make us stop, look, and listen. They are all filled with commonsense.

The articles follow:

OUR DOLLARS FLY AWAY

How would you like to have $218 lopped off your income tax this year? Of course that is not going to happen—but it could happen if we had some way of getting back money that Congress has appropriated for foreign aid but which has not yet been spent.

Yes, it is true that even as we are being bombarded with propaganda in favor of still more and still larger appropriations for foreign aid, the amount of appropriated but as yet unspent money for this purpose is the equivalent of $218 for every American family. We are indebted for this information to the Joint Congressional Committee on Reduction of Non-Essential Federal Expenditures. This committee is headed by Senator BYRD of Virginia, who is a thoughtful and persistent critic of governmental extravagance. The committee points out that foreign aid funds appropriated by Congress and not yet spent amounts to about 2 years of heavy appropriations for this giant giveaway program.

But even with this huge amount of unspent money on hand, the drums are being beaten now, as they have been beaten every year since the end of the war, to drown out the anguished cries of American taxpayers against sending more billions overseas. And if the United States eventually goes bankrupt as a result—well, that is the last thing the big spenders worry about.

Of one thing we may be quite certain: We are not going to get back that $218 per family that has not yet been spent. We might as well kiss it goodbye, for it will be spent.

Spent for what purpose? The only way we can judge the future is to study the past—and the past history of foreign aid spending does not make a pleasant or reassuring picture.

ELEPHANTIASIS

Elephantiasis, according to the dictionary, is a disease in which the affected part becomes enormously enlarged. So it is fair to say that the United States today is suffering from governmental elephantiasis.

Consider this informed statement by the late Rowland Hughes, who, at the time he made it, was Director of the Bureau of the Budget:

"The Federal Government is, among other things, the largest electric power producer in the country, the largest insurer, the largest lender and the largest borrower, the largest landlord and the largest holder of grazing land, the largest holder of timberland and the largest owner of grain, the largest shipowner, and the largest truck fleet operator. For a nation which is the citadel and the world's principal exponent of private enterprise and the individual initiative, this is an amazing list."

There are other amazing facts about the size of the Federal Government. Many of them were brought to light in the reports of the Hoover Commission. These, for instance:

In 1910 the Central Government cost the average American family $38 per year. This year the cost per family totals approximately $2,000. During this same period the national debt increased from the equivalent of less than $50 per family to more than $7,000 per family. The number of civilian employees of the Federal Government grew sevenfold. The Federal budget was multiplied 127 times.

This is what happens when government becomes afflicted with elephantiasis. The question is, Can anything be done to halt the spread of the disease and bring about a cure?

The answer has to be "Yes" if we hope to continue to live as a free nation. The mistaken do not, of course, want the disease to be cured. They see unbridled governmental growth and unchecked governmental spending as ways to hurl the United States into bankruptcy and to create a condition of chaos that would bring them closer to their antifreedom goals.

THERE IS A CURE

The first step toward curing governmental elephantiasis is an informed public. We need to learn—and we need then to tell others—how the size and cost of government can be reduced.

There are plenty of places to cut down. If we stopped the great giveaway known as foreign aid, the saving this year would amount to at least $100 for every family in the United States. If we made just a reasonable reduction of 10 percent in the civilian payroll of the Federal Government, that alone would amount to a saving of over $30 for every family.

NO COMMON MEN

When someone does a lot of talking about the virtues of the "common man"—look out. He wants something from you and hopes to get it by proving his own humility. The fewer common men we have in America, the better off we are. The men who have shaped our Nation, politically and economically, have been uncommon men. They may have been humble in origin, but that was not the source of their greatness. No one who knows of their accomplishments would accuse such men as George Washington, Benjamin Franklin, Abraham Lincoln or Thomas Edison of being common men.

America's need is for the leadership of the uncommon men and women—patriotic Americans who cannot be intimidated and who are not afraid of being controversial.

Resolution Adopted by Long Island Zionist Region

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. KEATING. Mr. President, recently, in Spring Valley, N.Y., the Long Island Zionist Region held its 26th annual convention. Chairman David Oppenheim has been kind enough to send me a copy of the concise and well-thought-out resolution adopted by the convention.

Because of the importance of this organization and its comments, I ask unanimous consent that this resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION TO THE GOVERNMENT OF THE UNITED STATES

Whereas Israel was established as a result of a number of emerging and converging factors, including the ancient and historic attachment of a people to their land, and the recognition by the world powers of their responsibilities toward this people, particularly after the decimation of its numbers as a result of the Hitler madness; and

Whereas despite all efforts made in good faith by the leaders of Israel for it to live in peace and harmony with its Arab neighbors, tensions still exist; and

Whereas our Government has time and again reiterated its readiness to assist in the establishment of peace in the Middle East: Therefore be it

Resolved by the Long Island Zionist Region, assembled at its 26th annual convention in Spring Valley, N.Y., May 27–30, 1960, That it:

1. Thanks our Government for its continued and most valuable assistance to the State of Israel.

2. Expresses its deep appreciation for the good will toward Israel indicated in our Government's statements.

3. Urges continued U.S. economic assistance to Israel and also to the Arab peoples conditioned upon its use for internal improvement rather than for external adventures.

4. Suggests that serious consideration be given to the idea of complete disarmament of the Middle East, or failing that, to the preservation of an arms balance in that region.

5. Assumes adherence by our Government to its oft expressed policy to preserve the independence and integrity of the nations of the Middle East.

6. Trusts that there will be no compromise with, or silent acceptance of, boycotts, blockades, and other act of economic warfare against nations who are members of the United Nations on the part of other nations.

7. Urges settlement of the problem of the Arab refugees by their integration in their Arab host countries, with compensation from Israel for the abandoned property agreed upon through direct negotiation: Be it further

Resolved, That copies of this resolution be sent to all our Representatives in the House and Senate, and to the Secretary of State and to the President of the United States.

LONG ISLAND ZIONIST REGION.
SPRING VALLEY, N.Y., *May 29, 1960.*

Gigantic Shelter Under Boston Common

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a very interesting article written by Ronald A. Wysocki in relation to civilian defense, appearing in the Boston Globe of May 30, 1960. The article sets forth the constructive views and opinions of Mr. George Lewis Brady, chairman of the Massachusetts Parking Authority, Boston, Mass., which authority is in the process of constructing a large public garage, and the views of Mr. Brady as to how this garage could be used for civilian defense purposes in Boston. I have always felt that the Federal Government should interest itself in construction throughout our country and the use of such construction as could be utilized for civilian defense and, in the case of nuclear attack, to protect and save lives of human beings. I have felt for years that the Federal Government should contribute the extra cost that is necessary for this purpose. The opinion of Mr. Brady is not only constructive but far seeing:

GIGANTIC SHELTER UNDER BOSTON COMMON—ROOM FOR 22,000 PERSONS IF A-BLAST SHOULD HIT

(By Ronald A. Wysocki)

A giant nuclear bomb shelter—first of its kind in the Nation—will be built beneath the Boston Common within 2 years.

The unique structure will provide protection for 22,000 persons from atomic radiation.

Absence of water beneath the Common, discovered in excavation for the Boston Common underground garage, made plans for such a shelter possible.

The shelter and second half of the 3,000-car garage—construction of which is scheduled to start next July—will be one and the same.

"In these days, such protection from atomic fallout is necessary," said George L. Brady, chairman of the Massachusetts Parking Authority which controls the garage.

Several architects' plans for the unique garage-bomb shelter are currently being studied by the authority.

The 6-acre, 3-level parking facility, housing 1,500 cars, can be converted into a shelter at a moment's notice in case of attack, Brady said.

Its features include:

A special arched roof, 10 times stronger than a level top.

A cellar, separated from the rest of the structure by a 3-foot cement floor, for storage and equipment use.

Canned and dehydrated foods to feed 22,000 persons for 2 weeks.

An artesian well drilled into the Common floor.

Dormitories and an infirmary.

Medical supplies.

Independent oxygen and ventilating systems to prevent air contamination.

Its own electrical plant and generators.

Airtight lead doors, operated automatically, to prevent seepage of harmful radiation.

No additional cost to the $15 million garage project is anticipated by Brady as a result of the incorporation of the shelter.

"The garage is being constructed in two parts, each costing an estimated $7½ million," Brady said.

Work on the shelter-garage is expected to start before or immediately upon completion of the first half, scheduled July 1961.

Its site is on the Boylston Street side of Charles Street, just below the Common Burying Ground, and adjacent to its complementing half.

A Common entrance and exit off Charles Street will serve both sides.

Bids on construction of the new facility will be advertised in January, Brady said.

An unusual method of construction will probably be employed for the shelter, Brady said, with a vaulted roof, comprising a series of arches, being laid first.

In a plan proposed by Maccabee, Campbell & Associates of Chicago, pioneer consulting engineers in the design of bomb shelters, a shallow excavation would be dug and a form made of earth upon which the roof would be set.

Work would then continue beneath the prepared roof, with supports added as progress was made. Paper, plastic, or wood would be placed against the earthen walls until cement supports were installed.

According to Brady, the shelter will extend 48 feet into the ground as opposed to 42 feet for the original half.

A 3- to 6-foot layer of dirt will cover the extra strong vaulted roof, Brady said.

He considered the conventional part of the underground structure enough protection for a blast 15 miles away but inadequate to the radiation danger.

"Those inside have to drink and eat," said Brady. "It has been proven that the radiation is responsible for more injury and death than the explosion."

In the opinion of Brady, this country is unprotected from the effects of nuclear explosions. He cited the fact that Sweden has built shelters to shield 65 percent of its population and Switzerland 70 percent.

"Most European countries have nuclear shelters," he said. "The Boston Common shelter will serve as a model for similar means of protection in this country."

The authority has proposed legislation enabling it to construct similar installations in other municipalities in the Commonwealth, subject to approval by local officials.

Brady expects enactment of the proposals momentarily. Once passed, the authority would undertake building of such shelter-garages in other cities and towns.

"We would have to have the approval of local officials before we moved into any municipality," he said. "Federal help from a fund already provided would be forthcoming to help finance such projects."

It was estimated that inclusion of a fallout shelter in a garage plan would amount to 30 percent of the cost. He suggested the Federal Government contribute that amount.

The rest could be amortized as a parking facility with its revenue going to pay the rest of the expenditure, he said.

The consulting firm of Ford, Bacon & Davis has been employed by the authority to conduct a survey of the State as to areas especially in need of bomb shelters.

Brady revealed that Worcester Common, three places in Somerville and Harvard Square were being considered for sites.

He pinpointed Worcester as being a critical area in terms of needed bomb protection. "It is surrounded by hills which would act as bouncing boards for radiation blast waves," he said, "causing a doubly violent effect of an atomic blast on the city."

Boston was named by Brady as a primary target of any aggressor because of the heavy concentration of strategic military, scientific, and industrial installations located here.

"The underground shelter will not have all the comforts of home," Brady said. "The people will eat C-rations, live in cramped quarters and discomfort.

"What we are interested in is survival. It is impossible to provide safety for everyone, but every life saved is important."

Dr. DeBakey, Famed Heart Surgeon, Named to Health Plan Advisory Job

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Tuesday, June 7, 1960

Mr. YARBOROUGH. Mr. President, one of the Nation's foremost heart surgeons, Dr. Michael E. DeBakey of Houston, has accepted appointment as chairman of the Democratic advisory council's newly formed committee on health policy.

Appointment of Dr. DeBakey and other members of his committee, and their willingness to take the time and effort to help formulate a "decent medical care program for all," is a significant step. It is particularly important when a surgeon of such brilliant record and outstanding ability heads the committee.

I ask unanimous consent to have printed in the Appendix of the RECORD a story concerning Dr. DeBakey's appointment that was published in the Houston Chronicle of May 29, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. DEBAKEY, FAMED LOCAL HEART SURGEON, NAMED TO DEMOCRATIC COUNCIL

Dr. Michael E. DeBakey, famed Houston heart surgeon, is in politics.

His job is to carve out and sew up a health policy for the Democratic Party.

DeBakey's appointment as chairman of the Democratic advisory council's new advisory committee on health policy was announced Saturday by Paul M. Butler, Democratic national chairman.

Butler said DeBakey's group also will be asked to prepare planks to be recommended to the party platform committee at the July Democratic National Convention in Los Angeles.

DeBakey told the Chronicle:

"CARE FOR ALL

"The formation (of the committee) is tremendously heartening to all of us in the field of medicine. As the party of the people, the Democratic Party is responding to the increased demands of our people for decent medical care for all.

"Good medical care is today beyond the reach of millions of American families. It is our job, through expanded health insurance, through increasing the supply of medical personnel and through acceleration of our medical research efforts, to bring the benefits of modern medical care to every American family."

HEADS SURGERY UNIT

DeBakey is chairman of the department of surgery at Baylor University College of Medicine.

In 1959 DeBakey received the American Medical Association's Distinguished Service Medal for a brilliant 6-year project which demonstrated conclusively that many kinds of strokes can be treated surgically.

DeBakey has demonstrated in countries throughout the world a surgical technique for treating stroke victims.

A native of Lake Charles, La., he received his medical degree from Tulane University in 1932.

CONSULTANT TO MANY

DeBakey has been a consultant to numerous medical and research study organizations. After 4 years of wartime service he was a member of the Medical Adivsory Committee to the Secretary of Defense from 1948 to 1950, chairman of the Committee on Surgery of the National Research Council in 1953 and a member of the Committee on Medical Services of the first Hoover Commission.

He is a member of the Advisory Council to the National Heart Institute and was most recently a consultant on medical research to the Senate Appropriations Committee.

DeBakey was awarded the Legion of Merit in 1946, the Rudolph Matas Award in 1954, and the International Society for Surgery Distinguished Service Award in 1957, and others.

The Old Guard

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1960

Mr. SIKES. Mr. Speaker, it was my proud privilege on Sunday afternoon, the 29th of May, to participate in a ceremony at Fort Myer that was inspiring to me—and to the other participants and spectators as well. The occasion was a retreat review in which the Active Army honored the National Guard Association and the Reserve Officers' Association—and through them, one could feel, the Active Army was honoring the hundreds of thousands of citizen soldiers who have sprung to the defense of their country in time of peril.

Those of us privileged to attend saw lined up before us the troops of the 1st Battle Group, 3d Infantry—The Old Guard—resplendent in their dress blue uniforms, and a composite platoon on the 3d Battle Group, 3d Infantry, United States Army Reserve. This platoon, representing seven infantry companies and six towns in southern Minnesota, had journeyed hundred of miles to participate in the ceremony.

The 3d Infantry has a long and proud history which mirrors the growth of the United States as a Nation. Its regimental colors have flown valiantly in virtually every war the Nation has waged. Its 32 well-earned Battle Streamers attest to its magnificent record of bravery in action. Older than the Constitution, the 3d Infantry has borne on its roll the names of men who fought with Washington at Valley Forge and Yorktown. It is our oldest Active Army Infantry unit.

Today, the Old Guard as it has been known and honored throughout the Army since the War with Mexico, has the vital and sensitive role of guarding the heart of our land, the Nation's Capital. At the same time, the 1st Battle Group, 3d Infantry, is the Army's official ceremonial unit in the Washington area. It has the coveted honor of acting as personal escort to Presidents of the United States in inaugural parades. Its honor guard company is entrusted with the singular honor of providing a detail of sentinels to maintain an eternal vigil at the Tomb of the Unknown Soldier in Arlington National Cemetery.

At the review, the colors of both battle groups were in the center of the formation. There were the distinctive uniforms of the Colonial Color Guard of the 1st Battle Group, the original uniforms of the 3d Infantry. Their blue and white uniforms are the exact copies of those worn by the enlisted men of the 3d Infantry Regiment when it was organized in 1784. And there was the color guard of the 3d Battle Group, 3d Infantry, USAR, all the way from Minnesota, wearing the Army sun tan duty uniform.

It seemed particularly appropriate that these two battle groups should join together for the ceremony. Fort Snelling, the present headquarters of the Reserve's 3d Battle Group, 3d Infantry, was for many years the home station of the Regular Army's 3d Infantry, whose present-day standard bearer is the 1st Battle Group, 3d Infantry—The Old Guard.

There is a high resolve and a common determination to achieve a new spirit of unity throughout the components of the Army. Regulars and Reserves, civilian and military, infantry and engineers, active and retired—all have closed ranks in their common objective of unity of effort, of purpose, and of spirit to weld the Army team into the most effective fighting force for America's defense.

As I listened to the inspiring message of the Honorable Dewey Short, a former Member of Congress and now the Assistant Secretary of the Army, I could truly appreciate the "oneness" of the Army. Later as I talked to the men of the Army Reserve's 3d Battle Group, 3d Infantry, from Minnesota, I could feel they, too, shared this spirit. It was thrilling and satisfying. I felt honored and humble to be a part of this public expression of unity.

The Army is to be commended for its continuing efforts to unify and weld its components into an ever increasingly effective force and under leave to extend my remarks, I am pleased to present to my colleagues the text of the speech made by the Honorable Mr. Short at this memorable ceremony:

REMARKS BY THE HONORABLE DEWEY SHORT, ASSISTANT SECRETARY OF THE ARMY (M.P. & R.F.), RETREAT CEREMONY, HONORING RESERVE OFFICERS ASSOCIATION AND NATIONAL GUARD ASSOCIATION, WASHINGTON NATIONAL MONUMENT, WASHINGTON, D.C., MAY 29, 1960

Ladies and gentlemen, distinguished guests and fellow Americans, it is a distinct privilege to have the opportunity of participating in this ceremony honoring two great patriotic and dedicated organizations—the Reserve Officers Association and the National Guard Association.

At the outset, I would also like to mention especially the members of the Army Congressional Command and Operations Group who are here today. Col. ROBERT L. F. SIKES, organizer and founder of this group, shares the reviewing stand with us this afternoon. The Congressional Command and Operations Group, composed of Members of Congress and congressional staff assistants who are in the Army National Guard and the Army Reserve are men devoted to the service of our country. Despite their busy congressional calendar, they still find time to participate actively in Reserve activities and we are indeed honored to have them with us today.

Over the past few years in my official capacity, I have dealt with matters directly and indirectly concerning the National Guard and the Reserves, and I realize—and I say this with all humility—perhaps better than most how tirelessly and unselfishly the officers and men of the National Guard and the Reserves throughout the Nation contribute of their time and effort to the common cause of our Nation's defense.

Although our security demands that we be thoroughly prepared to deal effectively with any attack that might be made upon us, the maintenance of a standing armed force of sufficient size to offset the power of the millions who bear Communist arms would place a dangerous if not an insupportable burden upon our economy. The only solution is to maintain strong, well trained, and fully equipped forces in reserve, ready for instant action in the event of another emergency. Such forces are an essential part, not only of our indispensable power to win any war that might be thrust upon us, but equally if not more important, of our power to prevent war, our primary purpose. Thus do the National Guard and Reserves constitute a power for peace the Communists well understand. Such splendid organizations as the Reserve Officers and the National Guard Associations, through their strong support of our defense effort, are helping to insure that our military posture is prepared to meet instantly any challenge of aggression thrust upon us.

Today's National Guard and Reserve Forces are based on a concept of American citizenship that goes back to our colonial beginnings. The idea itself is so logical that we often forget how truly revolutionary it was for the world of that day.

George Washington expressed it best in a letter to Congress in 1783: "It may be laid down as a primary position and the basis of our system, that every citizen who enjoys the protection of a free government owes not only a proportion of his property but even his personal services to the defense of it." The Father of our County strongly recommended that "* * * the citizens of America * * * from 15 to 60 years of age should be borne on the militia rolls, provided with uniform arms, and so far accustomed to the use of them that the total strength of the country might be called forth at short notice." It is easy now to recognize the great wisdom of Washington's advice.

American citizens, whether as members of the Armed Forces or as civilians, stand shoulder to shoulder for world peace. In this effort, each American has a role, more dynamic, more vital, and more challenging than any other. It is the responsibility of every citizen to help assure that in the United States is found a Nation economically and spiritually strong, a Nation which with confidence reaffirms the values of democracy and freedom. If in our own lives we exemplify the highest level of devotion to moral law, our country may show to all the peoples of the world the freedom and human dignity which characterize life in a democratic country. Our great tradition is that

of the rule of law rather than the rule of men. Let us show to all the world how strong and vigorous a nation can be which lives under the rule of freedom, justice, and mercy.

David M. Hall

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. ERVIN. Mr. President, I ask unanimous consent that the following items concerning David M. Hall, late a Representative from the 12th North Carolina District, be printed in the Appendix of the RECORD.

First. A poem entitled "And Peace at Last," written by the Reverend Robert G. Tuttle.

Second. A resolution adopted by the Western North Carolina Associated Communities.

Third. An article concerning a memorial service, which appeared in the Asheville Citizen for May 24, 1960.

There being no objections, the items were ordered to be printed in the RECORD, as follows:

AND PEACE AT LAST—DAVID HALL
(By Robert G. Tuttle)

Washington, the affairs of state, the lure of space
Had claimed his mind and strength—
Disease and pain had plagued
But never crushed his will to be and do.

His spirit stood
When limbs could not—
His mind was firm,
His vision clear.

He served his people,
Then his nation and the world—
But body could not stand
The pace his spirit set.

A hundred battles fought and won
Invisible toll had taken—
The last was waged
Beyond the strength of man.

Now home to rest—
His earthly form is laid in quiet
Amidst his mountains keeping watch
O'er home and family in the vale.

When heads were bowed
By plot of beauty on the hill—
Through silence a cow in reverence lowed
And distant dogs echoed the music of the hills.

But, 'spite of death, his life renewed—
His restless quest with God rejoined—
He paused and smiled, well pleased to see
His earthbound loved ones gathered near.

RESOLUTION—WESTERN NORTH CAROLINA ASSOCIATED COMMUNITIES

Whereas members of Western North Carolina Associated Communities heard with profound sorrow the announcement of the death of the Honorable David McKee Hall of Sylva, N.C., on Friday, January 29, 1960; and

Whereas the late Honorable David M. Hall was known as a man of indomitable courage, who, despite physical impairment necessitating confinement to a wheelchair since childhood, had distinguished himself as a successful practicing attorney and a useful citizen dedicated to the welfare of the people, especially interested in the physically handicapped, both the young and the aged; and

Whereas at the time of his departure from this life, he was serving as the duly elected Representative of the 12th Congressional District of North Carolina, and was rendering outstanding service as a Member of the 86th Congress of the United States; and, for many years prior thereto, he had contributed valuable service to the upbuilding of the community as well as to the development of human and natural resources within the mountain countries; and, by virtue of appointive and elective offices held in regional organizations and State government, he had advocated and participated in progressive improvements which resulted in economic, educational, and other benefits to the people, the region of the State of North Carolina as a whole: Now, therefore, be it

Resolved, That members of Western North Carolina Associated Communities, in regular meeting assembled, on February 23, 1960, at Western Carolina College, Cullowhee, N.C., express sincere sympathy to the family of the late Honorable David M. Hall; and, further express, in devoted tribute to his memory, deep appreciation of his courageous efforts and valuable service contributed throughout the years to the people of Western North Carolina.

H. BUECK,
President, Franklin, N.C.
M. B. MORRILL,
Secretary, Cullowhee, N.C.

[From the Asheville Citizen, May 24, 1960]

MEMORIAL SERVICE HELD FOR LATE DAVID M. HALL

(By Dorothy Parris)

SYLVA.—In a courtroom crowded to overflowing with family, friends, and neighbors, a memorial service was held here Monday for the late U.S. Representative David M. Hall, of Sylva.

At the service, marking the opening of the Jackson County Superior Court term, Marcellus Buchanan, a Sylva attorney, presented a framed photograph of the Congressman, given by members of the courthouse staff, which was hung in the courtroom.

In his tribute, Buchanan spoke of Hall's career as county attorney, State senator, a member of the State water commission and the first Member of Congress west of Balsam Mountain.

LAW LICENSE

"I would like to think," Buchanan said, "that the greatest source of pride to Dave was the receipt of his law license, the right to pursue the career he loved so well and to which he was so dedicated.

"He was one of the great attorneys, learned in the law, fearless in his devotion to his client, fearsome as an adversary, firm in his conviction, yet the epitomy of fairness and trust.

"Dave Hall carried these attributes into every endeavor of his life.

"As a Member of Congress," Buchanan continued, "the 12th Congressional District was secure in the realization that it would be well and ably represented. To this task Dave bent his mind and strength.

"DEVOTION

"His utter devotion to his district, and to the State and to the Nation proved too great for his physical endurance. If ever it could be said that a man sacrificed himself for his neighbors, it could be said in the case of our late friend and comrade, Dave Hall."

Jennings A. Bryson, county commissioner of finance, accepted the portrait on behalf of the county with a tribute to Hall as "the most courageous man I have ever known."

Mrs. Hall, the Congressman's widow, said "I can think of no more fitting place for this portrait to hang, than in this place he loved so well, among the people whom he loved."

Judge J. Will Pless, Jr., of Marion, presiding over the court term, also praised Hall's courage and ability. Other attorneys who spoke were District Solicitor Glenn W. Brown, of Waynesville, and Kent Coward, of Sylva. Coward read a tribute from his brother, Orville Coward, whose illness made it impossible for him to attend.

Lacy Thornburg, Hall's law partner, and Henry Fisher, an Asheville attorney and a longtime personal friend of Hall, also paid tribute to the Congressman. Mrs. Margaret Hensen, clerk of superior court, presided at the ceremony, and the invocation and benediction were given by the Reverend A. L. Maxwell.

Among the members of Hall's family who attended, in addition to his widow, were his mother, Mrs. David M. Hall, Sr.; daughters, Anne, Allison, and Hannah; his brother, Robert C. Hall, of Asheville; and his sister, Mrs. C. N. Dowdle, of Asheville.

Many Mourn the Sad Passing of Rowell A. Billups, One of the Outstanding Business Leaders and Philanthropists in the Nation

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. MORRISON. Mr. Speaker, in the sad passing of Rowell A. Billups, the South lost one of its most distinguished and outstanding businessmen, beloved and respected by people in all walks of life.

His accomplishments were many. In being able to start off from the bottom and by sheer determination and ability develop and bring about one of the biggest businesses in the Nation, which operates in over 14 States, and yet lived a life of an honorable, kind, and lovable man. He did so many acts of kindness and his generosity seemed unending.

People in all walks of life, leading businessmen, bankers, Governors, Congressmen, Lieutenant Governors, sheriffs, and notables from many States, were among his mourners at his funeral. And yet, with all of these important men and women, there were people in most modest circumstances who bowed their heads and shed tears for a man whom they had known, loved, and respected.

Mr. Billups, 61, was the founder of Billups Eastern Petroleum Co. and Billups Western Petroleum Co., which own and operate a chain of service stations in 14 States along the eastern seaboard and throughout the South.

He was a native of Carroll County and was the son of William A. Billups and the late Lillie McKenzie Billups of Carroll County. He was an alumnus of the University of Mississippi and served in the U.S. Marine Corp during World War I.

Mr. Billups moved to Greenwood 30 years ago and opened his first service station here around 1932. Since that time the company has grown until today it is recognized as one of the largest

chains in the southern half of the country.

He was known throughout Mississippi and Louisiana for his active civic undertakings and his philanthropic activities. A keen businessman and a widely read student of economics he never lost touch with the economic pulse of the business world.

He was a member of the Elks Club and was recently elected president of the Mississippi Society of the Sons of the American Revolution. He was elevated to this position at the State meeting here in March from his former office as vice president of the State society. He was serving his second consecutive year as chairman of the Salvation Army advisory board.

He was the organizer and a past president of the Leflore County Heart Association and was a member of the board of directors of the Mississippi Heart Association.

Mr. Billups was also very active in the Delta Area Council of the Boy Scouts. He headed a drive to rehabilitate and expand the facilities of Camp Tally-Ha in 1956 and has been a member of the executive board for a number of years. He was also a member of the advisory board for Mississippi Vocational College for a number of years and was recently elected to board of directors of the Greenwood Chamber of Commerce.

A generous contributor to civic and charitable causes, he endowed a heart research laboratory at Tulane University known as Billups Foundation. He also contributed equipment to the eye research division of Tulane University.

Mr. Billups had extensive farming interest in Leflore, Carroll, and Sunflower counties. At the time of his death he had announced plans to expand his business activities and erect a large bowling establishment here.

He was an avid sports fan and very active in the University of Mississippi Alumni Association.

He is survived by his widow, Mrs. Grace Ricketts Billups, one daughter, Mrs. Charles D. Saunders; two brothers, Guy C. Billups, all of Greenwood, and W. L. "Buddy" Billups of Hammond, La.; one sister, Miss Irene Billups, also of Greenwood, and his father, W. A. Billups of Carrollton and two grandchildren, Charlot, and Rowell Billups Saunders.

Few men in our time ever achieved what Rowell A. Billups achieved. He did not live for next week, next month, next year, for life was every day and he made it a point in his daily life to make this a better world for all as a place to live.

Seldom did a day pass that he did not go far afield in trying to help and assist some person in unfortunate circumstances. With all his achievements in the business world, he had a deep love and affection for his relatives and his friends, and he made it a point to be with them every possible moment. He was loved, respected, and he will be missed by thousands of people in all walks of life.

May his soul rest in peace.

West Virginia Is a Colorful and Appealing Vacationland

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. RANDOLPH. Mr. President, the May-June issue of the attractive magazine published for employees of eastern Trailways bus companies contains a delightful story on West Virginia, which is appropriately described as "one of the most colorful, paradoxical, wondrous—and misunderstood States in the Union."

After reading this article, I am sure many of my colleagues as well as the residents of the Capital City will want to escape the Washington heat this summer and absorb some of the breathtaking scenery in neighboring West Virginia. The Trailways magazine writer correctly points out that "West Virginia is a colorful and thoroughly appealing vacationland."

This informative material will provide you with a thumbnail sketch of our great State, which I think will help make your visit a more pleasant and meaningful one.

I ask unanimous consent to have printed in the Appendix of the RECORD this article, entitled "What About West Virginia?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The political primary is over now, but the acrid smoke of battle still hangs heavy over West Virginia's hills. The focus of national attention—and criticism—has shifted to other States and most West Virginians are glad to be out of the spotlight, feeling as they do that Americans have been given once again a distorted picture of what is one of the most colorful, paradoxical, wondrous—and misunderstood States in the Union.

Surprisingly little has been written about this American Switzerland. What has appeared has been generally unfavorable. Even today some Americans associate the State with drabness and consider it a blighted offshoot of Virginia peopled by scrawny mountaineers who never shave, carry pitchforks, and live in some weird comic-book world.

The truth of the matter is that West Virginia is a riotously colorful place with breathtaking scenery (Jefferson once described the view from Harpers Ferry as "worth crossing the Atlantic to see"), thriving industry (particularly in the northern section of the State), hospitable people and a network of parks and forests that offer excellent fishing, hunting, and camping. The State ranks first in the Union as a producer of soft coal, second as a producer of glass and fourth in total natural resources.

But West Virginia does have its liabilities. A prisoner to some of the most irregular boundaries ever devised by man, it looks on a map something like a defenseless pork chop with one end gone astray. Perhaps it's because of these boundaries that few people think of the State as a geographic entity. After all, its northernmost city of Chester is further north than Pittsburgh; its southernmost city of Bluefield is further south than Richmond; its easternmost village of Harpers Ferry is further east than Tampa and its westernmost city of Kenova is further west than Port Huron, Mich. All this in a State encompassing only 24,000 square miles.

It would't be so bad if the land were flat between these points. But it's not—and the roller-coaster roads that crisscross the State like an angry cat chasing her tail twist around, through and between 115 mountain peaks higher than 4,000 feet and 381 others that top 2,000 feet.

A BOON—AND A BURDEN

These hills are both a boon and a burden to residents who jokingly suggest that the only flat surfaces you're likely to find are along the barrels of mountaineer shotguns. Says one West Virginian: "this State is a wonderful place to work;. if you ever get tired all you have to do is lean up against it for a while and rest."

Sandwiched in between the mountains are such modern and progressive cities as Bluefield, Charleston, Fairmont, Huntington, Logan, and Wheeling. But these are not the towns the average traveler hears about, human nature being what it is, for what other State could direct you to villages with the improbable names of "Crum," "War," "Shock," and "Hurricane"? And where else would a chamber of commerce set up shop in Pax, Ethel, Gip, or Big Isaac?

The names of these towns are symbolic of West Virginian independence. It won't take you long to discover that mountaineers are a strongwilled bunch. If they think a town should be named Hurricane, then, by golly, that's just what they'll name it—and anyone who doesn't like it can live elsewhere.

Independence, though, has always been a West Virginia characteristic—ever since that muggy day in June of 1863 when the people decided to break away from Confederate Virginia and cast their lot with the divided Union. The decision wasn't popular in all sections. Ironically, but then perhaps typically, southern sentiment was strongest in the eastern panhandle, a narrow strip of land that rolls in a gentle arc toward Washington. Union support was heaviest in the coal-mining region of southern West Virginia (an area served extensively today by Trailways through-liners), only a hoot and a holler from Roanoke. That division of attitude still exists.

History has not always been kind to West Virginia. Famous events have happened here, but they've somehow been tragic in nature and almost always a little violent. It was at Harpers Ferry in 1859 that John Brown staged his ill-advised raid to free the slaves (he was soon captured by then Col. Robert E. Lee and later hanged at Charles Town) and it was at Phillipi that one of the first major land battles of the Civil War was fought. Both Harpers Ferry and Charleston were deeply scarred by the conflict and the little town of Romney changed hands 56 times before it was all over.

ANOTHER KIND OF BATTLE

Twenty years later another kind of battle was fought in West Virginia. Today, at Logan, at the southwestern part of the State, you can see a lonely memorial to that battle—a statue of Capt. Anderson Hatfield, the "Devil Anse" of the famed Hatfield-McCoy feuds that scarred the State for several years and later gave rise to countless cartoons. Old "Devil Anse" passed away more peacefully than John Brown—from pneumonia at the age of 82—but it was a while after that before any McCoy from Kentucky would venture across the streets of Logan by himself.

Feuding, fighting, and fussing have long since passed their heyday as West Virginia hobbies, and the fiercest opposition today's vacationer will find is apt to come from the finny creatures that lurk in great numbers along the State's well-stocked rivers and streams.

For a State with some of the greenest, most plentiful, and breathtaking scenery, together with some of the best fishing, hunting, and camping potential in America, West Virginia has not always done everything it could to attract visitors. Up until a few years ago, tourist accommodations were rare and vacation facilities hard to find.

All this has changed, however, and visitors today can take their pick of 29 State-operated parks and forests—ranging in size and location from Blackwater Falls, near the town of Davis, to the smaller Droop Mountain Battlefield State Park, near Marlington. At Cacapon Park, near Berkeley Springs, visitors can picnic, swim, fish, and even ride horseback along well-marked trails with scenic vistas. Watoga State Park, near Huntersville, has its own swimming pool and is the location for the Brooks Memorial Arboretum, a place of study for those interested in trees, shrubs, mosses, and wild flowers.

Possibly the most famous resort in all of West Virginia is the Greenbrier Hotel at White Sulphur Springs. A meeting place for the captains of business and industry, it sports famous fairways, Sam Snead, a healthy climate—and high prices.

All in all, West Virginia is a colorful and thoroughly appealing vacationland that somehow attracts too much negative attention to its economic problems (automation has caused some unemployment) and not enough positive attention to its obvious merits.

"We've got our troubles," says one mountaineer, "but I guess you'd have to say the State's doing all right—for the shape it's in."

Who Will Remember?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by James A. Sheehan which appeared in the National Tribune-The Stars and Stripes on May 26, 1960:

WHO WILL REMEMBER?

Next Monday, May 30, is Memorial Day. To some it is a day of solemn remembrance of the dead of all our wars. To some, particularly, this year, it promises only a 3-day holiday when the cares of the day will be laid aside and the vast majority of our people will take themselves off to the seaside, the mountains or just laze around in the late spring sunshine, taking life easy.

Quite naturally there are those who do not forget the reason for which Memorial Day was instituted. These are the folks who have lost sons, husbands, and daughters in the service of their country in time of war.

These will remember and pay silent tribute to their own loved ones while including all the rest who now lie in National, State, and local cemeteries where they have found their final resting place, having proven, in time of need, their willingness to serve their country.

Others, too, will remember. These are the patriotic organizations which have emerged from all our wars. Members of these organizations will make their quiet way to the gravesides of their fallen comrades and there pay tribute to our war dead.

We might expect those who have lost loved ones who served their country and those who served with them to remember Memorial Day. Those who have suffered loss and those who served with the men and women who have now passed to their final reward can never forget what Memorial Day means.

Yes, we shall see processions, small and large, wending their way slowly to the graves of our veterans, there to lay flowers or place small American flags to show that some of us have not forgotten. It may well be, that in that last bivouac of the dead those who are so remembered and so honored will smile wanly at each other, nodding in approval of this gesture of recognition.

But what of the rest of us? What will they be doing? There are now approximately 180 million people living in the United States and we venture to say that except for the families of the departed and the patriotic groups who know what Memorial Day really means, the vast majority of our citizens will be pursuing their own pleasures, taking advantage of the 3-day lull in the ordinary affairs of life. That this should be true is a pity, indeed.

Despite the example of our patriotic organizations, the great majority of our citizens will go about the business of the holiday without ever a thought of why this respite from the toil of the day is given them. They have other things to do.

Those who do remember do so because they are ever mindful of the reason why these men and women died. In our preoccupation with the struggle for position and financial security, far too many of us have forgotten—no, not forgotten but are unmindful of the sacrifices these gallant dead have made for them.

Somewhere, in the minds of this unthinking group there must exist at this time a great uncertainty as to the future insofar as the preservation of our country and the ideals upon which it was founded is concerned. If only these thoughtless citizens could keep enshrined in their minds and their hearts the real reason for Memorial Day, then the sacrifices would not have been made in vain.

If Memorial Day is to be observed fittingly it should be done so by all Americans who should find in this day a renewed recollection of why it is celebrated and a remembrance of the fact that were it not for those honored on May 30 they who are now alive might not be enjoying all the privileges and rights which the dead have struggled to preserve.

This should be a day for all our citizens—not just a few—to reaffirm their beliefs in the country they are so proud to call their own and in the realization that those who are honored were responsible for the continuance of the United States of America as a Nation.

It should be a day on which all Americans should renew our pledge of allegiance to our country's principles and an acknowledgment that were it not for those honored dead these principles would long since have been lost.

If the renewal of such a pledge of this kind on Memorial Day could bring to the hearts of all of us the principles of loyalty and courage our dead have bequeathed to us, then Memorial Day would not only be a day of recollection of past wars but also a day of inspiration so that everything which all true Americans hold dear might continue because each and every one of us would remember the past and find in it the spiritual will to follow in the footsteps of those who have gone before.

It has been written: "it is a holy and wholesome thought to pray for the dead." This is indeed true, and in giving a silent thought to our war dead we should gather strength for the days to come, fortified by the example of the fallen who now rest in honored peace.

And while we are exhorting all our citizens to recall our war dead may we also put forth the thought that these same citizens—of high or low degree—also remember the living who served them in time of war and see to it that these survivors are properly cared for—particularly the older veterans—so that before the time comes to strew flowers over their graves, they may be provided for adequately and thus permitted to enjoy their last days in decency.

Parish Priest of the Year

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Tuesday, June 7, 1960

Mr. CASE of New Jersey. Mr. President, it has come to my attention that the Right Reverend Monsignor LeRoy E. McWilliams of Jersey City, N.J., has been named "Parish Priest of the Year" by the New Jersey League of Weekly Newspapers, Inc. Monsignor McWilliams has served as the beloved pastor of St. Michael's Roman Catholic Church in Jersey City for 42 years. More than 1,000 families in his parish are members of St. Michael's. I ask unanimous consent to have printed in the Appendix of the RECORD the text of a resolution congratulating Monsignor McWilliams which was adopted by the General Assembly of the State of New Jersey earlier this year.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Right Reverend Monsignor LeRoy E. McWilliams, pastor of St. Michael's Roman Catholic Church of 252 Ninth Street, Jersey City, N.J., has been proclaimed "parish priest of the year" by the New Jersey League of Weekly Newspapers, Inc., of which M. Martin Turpanjian is president and Mrs. Conrad Lyons, editor of Spotlight, is chairman of the board of directors; and

Whereas Monsignor McWilliams has proven to be an energetic, magnetic, civic-conscious spiritual leader; and

Whereas Monsignor McWilliams in his religious ideals and social contacts, has maintained a policy of rigid tolerance and a sense of civic understanding that is truly commendable and inspiring; and

Whereas Monsignor McWilliams has served as OPA administrator on a most effective and equitable basis; he has been head of the United Fund for years; has been active in Red Cross and cancer fund-raising drives: Now, therefore, be it

Resolved, That the General Assembly of the State of New Jersey hereby extend to Monsignor McWilliams, its sincere congratulations upon this occasion and hope that he will enjoy many years of health and happiness; and be it further

Resolved, That a copy of this resolution, signed by the speaker and attested by the clerk, be sent to Monsignor McWilliams.

MAURICE V. BRADY,
Speaker of the General Assembly.

Attest:

MAURICE KAIP,
Clerk of the General Assembly.

A Long Step Forward

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. IRWIN. Mr. Speaker, the House has passed legislation ratifying the interstate transit regulatory compact which is aimed at unification of metropolitan Washington, D.C., mass transit service and in doing so has taken a long step forward toward solving our mass transportation problems. Simultaneously, the action, in my opinion, may be construed as an indication that the Congress is at long last giving serious recognition to what is one of our Nation's most swiftly mounting problems, and that it is willing to do something about them. For months I have been studying the problem of mass transportation in Fairfield County, Conn., which is confronted with faltering rail commuter service on one hand but a lack of alternative means of mass transportation on the other. I have introduced legislation designed to help remedy this situation and similar problems in other areas. Passage of the compact ratification measure, you may be sure, brought me enormous relief and satisfaction. Indeed, I may now feel that we are getting somewhere. The task before us is monumental and will take time but I am confident that we are progressing already. Pursuant to permission previously granted I include an editorial from the Washington Post of yesterday which makes notable comments on what has been done:

PROGRESS ON TRANSIT

Congress is acting with commendable dispatch and with unusual insight in dealing with the complex but vital proposals to improve the transportation facilities of Metropolitan Washington. Representative EDWIN E. WILLIS, of Louisiana, and his colleagues on the House Judiciary Committee performed skillfully in obtaining House passage of the measure to ratify an interstate transit regulatory compact, designed to put the region's transit service under a unified supervision. Senate approval seems likely to follow swiftly, and the way would thus be paved for steps to coordinate and improve bus service throughout the area.

The Joint House-Senate Committee on Metropolitan Washington Problems, meanwhile, has agreed on another measure aimed primarily at providing the Washington region with genuine rapid transit. Under this measure, a new National Capital Transportation Agency would make detailed plans for subway and surface rail lines and other transit facilities, reconsider streetcar abandonment, and report to Congress before starting any actual land buying or construction. It would also seek to foster the creation of an interstate compact agency to carry out the plans and operate rapid transit. The proposal would not insure the Federal financial support recommended by the administration pending a further congressional look at detailed plans—but the more limited approach is perhaps all that it would be realistic to expect from Congress at this early stage of the venture.

It is difficult to appraise the special restriction which the joint committee proposes to ban construction of the Wisconsin Avenue corridor extension of Interstate Route 70–S pending development of detailed transit plans. The ban also would extend to the proposed Glover-Archbold Parkway. There was little prospect that any extension of 70–S into the city would have been started in the next 2 or 3 years in any case, so no actual delay need result.

It is worth remembering that the mass transportation survey recommended both rapid transit and a major freeway for the northwest Washington sector. It would be surprising if a new study showed that transit alone would suffice. But if the study is carried out free of the local interest pressures which have been generated against the Wisconsin corridor and with regard for the metropolitan area's total transportation needs, there can be little valid objection to another review.

The prospects for final congressional and White House approval of these two major steps toward improved transit service for Washington are excellent. All citizens of the area may rejoice that Congress and the administration have faced up to the seriousness of the problem.

Canadian-United States Friendship

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Canadian-United States Friendship Enduring as Geography," published in the New York Herald Tribune of June 6.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CANADIAN-UNITED STATES FRIENDSHIP ENDURING AS GEOGRAPHY

(By Max Freedman)

(Mr. Freedman, a native of Canada, is Washington correspondent for the Manchester Guardian. The following was written by Mr. Freedman for the Herald Tribune's series on Canadian-United States relations.)

WASHINGTON.—I have just returned from Canada where I have found a mood of anxiety tempered by responsibility as the Canadian people survey the sad wreckage of the summit conference. But no contagion of fear has blown from Paris across Canada. There is instead a new commitment to Canada's partnership with the United States and a new loyalty to our covenant with NATO.

No friendly neighbor's fence stands in the Arctic, and we can always forgive the mistakes of Washington as we remember the arrogance of Moscow. In the past few weeks there has been much to forgive; an inglorious sequence of blunder and mischance has blemished the record of American diplomacy; and these errors have invited and received their just portion of criticism and indignation. But this fretful interlude has lasted long enough, and the time has come to concentrate on the shared tasks of an inscrutable future rather than to prolong the humiliating inventory of a friend's mistakes. This mixture of compassion and resolution certainly is visible in the thinking of Canadian leaders in Ottawa. It is equally present in the comment of responsible Canadian opinion throughout the country.

Prime Minister Diefenbaker's visit with President Eisenhower, just concluded, should not be judged as a mere exercise in courtesy or as an heroic effort to resolve disputes that have resisted solution by the more patient methods of diplomacy. The Canadian Embassy in Washington, under the thoughtful and experienced leadership of Ambassador Arnold Heeney, has privileged access to the State Department and indeed to all branches of the government in a way which is not surpassed by even the British and French representatives.

Nor do Canada's relations with the United States depend very much on changes in Ottawa or Washington. The meaning of this relationship cannot be found in the fever chart of political controversy. It is as enduring as geography, as noble as the history of the two countries, and as spacious and indestructible as their valiant hopes. Out of this communion of memory and faith has come this unique and invulnerable partnership; and it is this association which has enabled Mr. Eisenhower to speak to Mr. Diefenbaker with an intimacy and mutual trust not possible in discussions with the leader of any other country.

The problems which trouble the two countries have their origins in the changes produced by the Second World War. By 1945 it was evident to many Canadians that the old easy relationship could no longer be expected to continue. England, with her gallant wounds, needed a merciful interlude to regain her strength, spent with such unhesitating courage in the service of freedom. Her role of leadership had to be filled by the United States moving in an unexampled transition from the status of a hermit to the position of the keeper of the world's hopes for peace. This abrupt transfer of power from London to Washington was enough in itself to provoke a sense of strain in Ottawa.

Economic problems soon added their weight of injury to the disturbed scales of political interest. Canada was under imperious necessity of basing most of her trade on the American market. Thus, when Canada was vibrant with a surging sense of national pride, when our voice ranged with new power in world affairs, when we seemed at last to have discovered the vocation for greatness that had for so long eluded our grasp, we learned in an unexpected and uncomfortable paradox that we had drifted into a closer and perhaps more perilous dependence on the United States. It is this fundamental fact, rather than the capricious decision of politics or economics, that explains the enduring anxiety.

Some of the problems that receive such fatiguing emphasis and iteration are essentially Canadian rather than American. It is always open to Canada, for example, to restrain the amount of American investment if it is also willing at the same time, to accept smaller opportunities for employment and a more sedate pace of economic growth. In logic, Canadians cannot be grateful for expansion while they complain of encroachment; but national sentiment and national grievance never honor the precise axioms of cautious prudence. At all events, this particular problem can always be solved by Canadians, whenever they consent to pay the price of slower national development.

It is vastly different, however, with the problem of defense. The controversy over the Bomarc is an irritating detail which points to a larger difficulty. The Canadian people have always shunned the ignominious role of a hitchhiker on the road to security. Their records in two world wars, in Korea, and in NATO entitles them to no ignoble status as sentinels on the world's endangered frontiers. But what can Canada do today to carry her appropriate burden when

the ultimate contribution must of necessity come from the United States?

The process of consultation between Canadian and American officials must surely be described as methodical and detailed beyond all precedent; but consultation is no substitute for overwhelming power. Many Canadians are disturbed by the uneasy surmise that the existing system of continental defense, built with ingenuity and great cost, no longer meets the challenge of the age of missiles and rockets. What is the real security of North America? The deterrent, and the deterrent is primarily a weapon in resolute American hands. Canadians see no escape from this dilemma. They resent a situation in which they are dependent for their security to such a large degree upon the United States; and they know in their own hearts that under the rough conditions of world affairs no early change in this relationship can be anticipated.

But you have very few allies like Canada. We want to do more, not less, in defending our joint heritage of peace with justice. How many of your other allies can pass this exacting test? Even in a world of power Canada often has the power of ideas. Its advice on the commanding themes of diplomacy is worth some attention. It is always unwise for the United States to force Canada to make painful decisions which a more supple and patient policy could avoid; courtesy sometimes is more important than speed. Has the hour not yet arrived for greater defense production in Canada for the United States and for the agreed and cooperative development of Canada's economic resources, as they are directly related to defense, for the common enrichment of our mutual security? These tasks already gather on the horizon with their glint of promise and their shadow of controversy.

Canadians believe, with Emerson, that our civilization still stands at the cock-crow and the morning star. It is the supreme tragedy of our time that the world has narrowed into a neighborhood before it has broadened into a brotherhood. Across the darkening years, in the journey toward peace, the American people will always have Canadians at their side while freedom remains the inspiration of the United States and justice its splendid sanction.

Easthampton Ends 175th Anniversary Celebration With Gala Parade

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. BOLAND. Mr. Speaker, the town of Easthampton in Hampshire County, Mass., wound up its 3-day celebration of its 175th anniversary and homecoming with a gala parade on Sunday. This historical event was related in a news story in the Springfield Union on Monday, and under unanimous consent I include the story in the Appendix so it will be a permanent part of the record of Easthampton's great anniversary:

PARADE CLOSES EASTHAMPTON CELEBRATION—ESTIMATED 50,000 WATCH EVENT NOTING 175TH ANNIVERSARY

EASTHAMPTON.—This town was saluted on its 175th anniversary Sunday with a 3½-hour-long parade which culminated a weekend program of events and was viewed by an estimated 50,000 persons.

Cochairmen for the celebration were Miss Katharine M. Root and Rev. V. Bouchard. Edward M. O'Brien, representing Gov. Foster Furcolo, bestowed the greetings of the Commonwealth from the reviewing stand in a preparade address.

FLOATS SELECTED

Parade judges Stephen G. Mainiatty of Deerfield, Herbert R. Pitts, of Pelham and Edwin M. Podolak, county commissioner of Hadley, selected the float that carried the queen and her court from St. Anthony's Society of Sacred Heart Church as the most beautifully decorated. The second choice was a large float bearing the expression, "Comfort Through Prayer," bearing a shrine and a cross and decorated in blue with orange and white trimming, entered by Immaculate Conception Church. Third place was the Notre Dame float which bore a nun and an altar boy in mediation.

Prize for the most original float went to Westhampton which depicted a colonial setting complete with costumed citizens and an oldtime organ being played along the parade route. The Pulaski Club of Easthampton took second place with its float portraying "Heroes in American History." Third place went to the James M. Lincoln Marine Corps League for a float that carried several fighting Marines entrenched in a simulated battleground setting.

NOT MUCH DOUBT

There was not much doubt in anyone's mind about the top float in the most humorous category, with Lucchesi's moonshiners drawing gales of laughter all along the parade route with their antics. The float carried a lopsided log cabin, complete with a backhouse, inhabited by bearded mountaineers firing old shotguns as they scrambled on and off the float. The second funniest award went to the radio station WHMP circus wagon complete with clowns, and the third award in the humorous field went to Eddy Wallin who brought up the rear of the parade with his donkey-pulled sleigh saying, "To Siberia." Wallin wore a typical Russian outfit even to the fur coat and hat, and carried two reindeer in his sleigh.

The float entered by the Holy Rosary of Hadley which bore the emblem "Pray to Our Lady for Peace," was judged the best in the historical category. The Easthampton Junior Chamber of Commerce and the Jaycee-ettes combined talents to produce the second best float in this category, one that depicted a little red schoolhouse and a proposed modern high school, still in the planning stage by this town. The float carried the saying, "Past and Future Schools." The South Hadley Polish American Citizens Club float that bore three smartly attributed West Point cadets was third place.

In addition to the floats mentioned there were 50 other beautifully decorated floats entered from each of the surrounding communities and twice as many bands and marching units. Visiting dignitaries from Ware, Belchertown, Chesterfield, Granby, Southampton, Hadley, and the city of Springfield were on hand to greet townspeople who lined the parade route. There were entries from numerous oganizations as well as several snappy fife and drum corps units.

FIREFIGHTING APPARATUS

Firemen from the area combined to represent firefighting apparatus from the year 1785 (the bucket brigade) through the 1810 hose brigade, 1825, horsedrawn water pumper from Williamsburg, 1845 hand pumper from South Hadley, 1860 Amherst pump, 1885 horse wagon, 1873 Lenox steamer, 1909 Lenox chain-driven pumper, 1925 fire engine from Whately, and a modern fire engine carrying Smokey, the fire prevention bear.

In addition to the many vehicles, floats, and tractors entered, there were several groups on horseback.

A tremendous ovation was given Miss Easthampton, Arlene Dion, and her court as they rode atop a beautifully decorated purple and pink jewelbox float. The queen was seated within the opened jewelbox surrounded by her court.

The parade moved along at a steady pace, without any delay, due in part to the efforts of the Easthampton Police Department, auxiliary police and patrolmen from surrounding areas, who patroled the route, keeping the roads clear for paraders.

Inquiry in the Public Interest

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. BARTLETT. Mr. President, there is a continuing need on the part of the Congress and individual Members of the Congress to exercise in the public interest inquiries into the responsibilities of the regulatory bodies of the Federal Government to determine how well those responsibilities are functioning. Because of that belief I was gratified to note that two Indiana papers have recognized the useful role played by Senator VANCE HARTKE in his inquiry into the unfortunate circumstances of the crashes of the Electra aircraft earlier this year.

Mr. President, in that connection, I ask unanimous consent that editorials from the Evansville Press of April 27 and the Elkhart Truth of May 16 be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Elkhart (Ind.) Truth, May 16, 1960]

HARTKE'S CONCERN WAS JUSTIFIED

Tracing of the two Lockheed Electra plane crashes to violent wing flutter largely vindicates Indiana Senator VANCE HARTKE'S concern as expressed last month.

At that time, HARTKE had criticized E. R. Quesada, Federal Aviation Administrator, for rejecting a recommendation by the Civil Aeronautics Board (CAB) that all uninspected Electras be grounded.

HARTKE had said that both he himself and investigators were convinced that a structural defect was the apparent cause of the crash.

At that time, the Lockheed board chairman was quoted as saying that "in our considered opinion, the Electra is fully safe and airworthy."

But now following exhaustive study by the company itself, the company attributes the crashes to a combination of damage which apparently occurred in the engine area of the wings, plus the wing flutter.

The company says that tests show that the lower speed at which Electras are flying today prevents a repetition.

Nevertheless, the firm said it will submit design changes to the Federal aviation agency within a few weeks. The modifications are expected to cost about $25 million.

So whether or not the company rates the trouble as resulting at least in part from a "defect," it is apparent that the company

sees a way whereby the structure can be improved.

As told elsewhere on this page today, American's air safety record in general is better than perhaps some may believe as the result of some spectacular and tragic crashes.

Nevertheless, it is a good thing to have not only companies but Government officials straining every effort to make sure that planes are made as safe as possible.

HARTKE rates a a salute for pushing the inquiry.

[From the Evansville Press, Apr. 27, 1960]

HARTKE AND THE ELECTRAS

After 11 days of official silence it is welcome news that all the Electra turboprop airliners in service have been inspected and are considered safe under present speed restrictions.

Thus ends a period of uneasiness on the part of the public. It also ends what we consider some unnecessary secrecy on the part of Washington officialdom, starting when Gen. Elwood R. Quesada of the Federal Aviation Agency refused to go along with a Civil Aeronautics Board recommendation to ground the planes until they had been inspected.

It is well at this time, we believe, to say something about the part in all this of our junior U.S. Senator from Indiana, VANCE HARTKE. Senator HARTKE has been insisting that General Quesada give the reasons for his action and make public the details of the CAB recommendation. In doing so he has drawn severe criticism from some of his colleagues in the Senate, and others.

We believe that the Senator was correct. He did not challenge the authority or judgment of General Quesada. What he did insist on was the public's right to know the facts.

In this he was within his rights and rendering a service to the people who fly in airplanes, and their families.

We have confidence in General Quesada. We believe he knows his job and is doing it well. We are glad that he was able to make the announcement that he did.

But in matters involving their Government and their safety the public always has the right to know what is going on and shouldn't have to wait for a Member of Congress to smoke the information out. The sooner everybody in Washington learns this, the better.

The Changing Face of American Cities—No. 4

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1960

Mr. IRWIN. Mr. Speaker, I have been endeavoring to bring to the attention of Congress the facts about the changing face of our American cities.

I have been doing this by entering in the RECORD excerpts from a two-part series from Forum magazine entitled "The New Urbanites."

Today's excerpt follows:

NEEDED: ORDER AND PURPOSE

"The genuine problems of social disorder in which Negroes and Puerto Ricans are involved," says Oscar Handlin, historian and author of "The Newcomers," "can best be solved through the development of communal institutions under responsible leadership, that will give order and purpose to their lives." The development of such "communal institutions" and "responsible leadership" has been painfully slow. For one thing, the exodus of middle-income families to the suburbs has sapped many cities of their vitality and deprived political leadership of the background of a well-educated, fairly prosperous electorate that breeds responsibility.

A tragically small number of large northern cities have made dramatic efforts to strike to the heart of the total problem. One of these is Philadelphia, where housing standards for Negroes have been rising rapidly, a comparatively free housing market has developed within the city (Negro homeownership has risen 90 percent in 6 years), and job opportunities have been increasing for all, regardless of color. Industry has been moving back toward the city, particularly in search of skilled labor. This not only is providing opportunities for many skilled nonwhites, but is reducing the attraction of unskilled newcomers to the city. Much of the credit for this salutary turn of events goes to a progressive city administration, which has battled strongly against residential segregation and has taken many actions to equalize job and housing opportunities. The city's Human Relations Commission recently urged Negroes to buy homes in all-white neighborhoods, with inevitable criticism from the Board of Realtors. Commission Chairman John R. Carroll replied simply that the advice "is based on our conviction that racial segregation is a major threat to the economic stability and health and welfare of our city."

Many observers blame Negroes themselves for a lack of support in city efforts toward equalization, and there appears to be a Negro power vacuum in most cities. In New York, which has more Negroes than any other city, no Negro political leader has yet appeared who has worked independently of Tammany Hall, with the exception of Congressman ADAM CLAYTON POWELL, who has done almost nothing to ease directly the problems of urban life for his district's citizens. And the recent court troubles of POWELL (for income tax evasion) and Manhattan Borough President Hulan Jack (on conspiracy charges) have done great damage to future leadership, according to several Negro intellectuals. As Edward Holmgren of Chicago's Urban League says: "Negro politicians get their patronage and influence in the ward and keep quiet about civil rights, housing, and employment, and do not press for integration."

The lack of political leadership hits the new urbanites particularly hard, for they are by and large the most oppressed of an oppressed minority. Yet in most northern cities middle-class Negroes themselves shun the newcomers. Edward Holmgren maintains that "middle-class Negroes have an absolute abhorrence for lower class Negroes. They feel that the lower classes bring them into disrepute and opprobrium." This schism not only creates tension among Negroes, but makes it more difficult for the new urbanites to assimilate socially and culturally within their own communities.

NOT YET A FULL RESPONSE

So far, no political device has been concocted that insures a completely free housing market. This failure includes such city laws as New York's, which forbids discrimination in the sale or rental of private housing. Urban renewal was largely devised to end the growing imbalance of urban populations, which was much less apparent in 1949 than it is today. Yet that program has intensified residential segregation and speeded more white families to the suburbs than it has attracted back to the city. Morton Grodzins, of the University of Chicago, contends that the renewal program is too small, and cannot do the whole job. "Anything less than a massive program may have admirable local effects for particular population factions, but does not attack the basic problem of bifurcation of races on urban-suburban lines." And Robert Weaver believes that "in the wake of new slums and blight created by the relocation incident to urban renewal, more pressure has been placed upon middle-income white families to leave the city."

The new urbanities will some day become as valuable citizens as the migrants who flooded into New York, Boston, Chicago, Philadelphia, and other great cities in the late 19th century. Neither the cities themselves, nor their private citizens, have fully responded as yet to the latest challenge, nor have they met the problem of basic injustice which overshadows it. Says Oscar Handlin: "The experience of the past offers a solid foundation for the belief that the newest immigrants will come to play as useful a role as any of their predecessors. They themselves need only show the will and energy and their neighbors the tolerance to make it possible."

Seventy-fifth Anniversary of Brillion, Wis.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 7, 1960

Mr. WILEY. Mr. President, on July 22 and 23, the fine community of Brillion, Wis., celebrates its 75th anniversary.

For the event, Brillion's Chamber of Commerce is planning special promotion activities.

Historically, this splendid community—small in size, though of great importance, particularly to its own citizens—has represented the kind of community spirit and environment which have formed a foundation upon which to build a great country. Upon the 75th anniversary of Brillion, I welcome the opportunity to extend heartiest congratulations to the city upon its progress, as well as upon the strong, civic-minded efforts of its residents to continue to make it an ever-better place in which to live.

At this time, I ask unanimous consent to have an article, entitled "Chamber of Commerce Planning Sales Promotion in Honor of City's 75th Anniversary," which was published in the Brillion News, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHAMBER OF COMMERCE PLANNING SALES PROMOTION IN HONOR OF CITY'S 75TH ANNIVERSARY

BRILLION.—While no plans at the moment are in progress for celebration of Brillion's 75th anniversary, the Brillion Chamber of Commerce is making plans to recognize the event with a superduper retail promotion on July 22-23.

The special committee composed of Otto G. Arndt, chairman of the retail trade committee, Walter Kielgas, Harwood Hendricks, Louis Propp, Mel Koch, Percy Lindner, Robert Ambrosius, and Earl Behnke, ex-official

member as president of the chamber of commerce, met last week for initial conversations on the project.

Tentatively, the project has developed a special sales event throughout community stores for both days, Friday and Saturday. In keeping with the occasion, the committee is proposing the presentation of a diamond ring to some lucky person. The 2-day event is proposed as "Krazy Daze."

The committee is meeting again this week to delve further into details of the 2-day event.

Watch the columns of the News for further details.

Brillion's anniversary date actually is March 3, 1885, when a circuit court order signed by Judge George W. Burnell at Oshkosh made the village's incorporation an actual fact.

A referendum submitted to the residents of the proposed village was held March 28, when by the predominant vote of 120 to 130 the incorporation was approved.

On April 20, the village's first election was held resulting as follows: President, Matt Thomsen 82; trustees, Peter Werner 82; George M. Beach 82, Charles Behnke 82, Chas. Tesch 82, I. N. McComb 82, Seth Sumner 63; clerk, Peter Reuther 81; treasurer, Chas. Petty; supervisor, P. C. Enders 44; police justice, Peter Reuther 80; justice of the peace, W. V. McMullen 82; marshal, Fred Richter 82; constable, Wm. Schneidewendt, 81.

The population count of the time of incorporation is recorded at 520.

Congressman Bowles Sees U.S. Lethargy Ending; Hails Student Involvement in Issues in 82d Smith College Commencement Address

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1960

Mr. BOLAND. Mr. Speaker, last Sunday, our distinguished colleague from Connecticut, the Honorable CHESTER BOWLES, delivered the 82d commencement address at Smith College in Northampton, Mass. His daughter, Miss Sarah Bowles, was one of the graduates. I am sure that Members of the House will be interested in the address of the former Governor of Connecticut and Ambassador to India and Nepal, and, under unanimous consent, I include it in the Appendix of the RECORD:

ADDRESS BY HON. CHESTER BOWLES

President Mendenhall, members of the board of trustees, honored guests, alumnae, parents, and, most especially, members of the graduating class, it is a very real pleasure to join you here in Northampton for this last official occasion of your college careers.

Since your first assembly here in the fall of 1956, I have come to know many of you and to feel personally involved with interest, affection, and pride in much that you have done.

When President Mendenhall asked me to speak to you today, I was well aware of the traditional requirements of commencement speakers: To view current affairs with proper concern; to worry modestly about the inheritance you are being handed by our own generation (so powerfully represented on commencement occasions by trustees, parents, and alumnae); to stress that this particular class is at a crossroads in history, that old habits have become quite obsolete, and that new and imaginative ways of doing things must be developed; and, finally, to call upon the graduating seniors, whose thoughts are properly concerned with new jobs, summer trips, and husbands, to step up to save the world before it is too late.

This year speakers from the University of Maine to the University of Southern California can be expected to sound an additional note. They will be saying from hundreds of platforms such as this that our moral values are not what they should be, and if anything, that they are slightly worse than they were last year.

I wish I could promise something dramatically different from all of this in what I am about to say. But, in fact, the commonplace outline I have given you represents some profound truths along with the cliches.

It is undeniably true that in most walks of our national life we have not been doing nearly as well as we should. It is also true that our complex and explosive world is in urgent need of your fresh energy and vision.

If some of what I have to say appears disturbing, let me also stress my deep convictions that in future years our potential for good far outweighs the formidable dangers we face, that you are very fortunate indeed to be starting your adult lives in this period, that the problems we face, although vast, and unfamiliar, can be mastered, and that the process of accomplishment can be one of the most exciting and worthwhile tasks any generation has ever tackled.

I

Although pessimism has always been distinctly un-American, and I think properly so, everyone knows that we are facing profound changes and that the course of events has never been less clear. Views, assumptions, hopes, and expectations which succeeding generations of Americans have taken for granted are being jolted abruptly.

This situation is not unique in American history. Indeed, my generation faced something similar in the early thirties when the sudden collapse of our economy shocked us out of our easy assumptions that money, at least for the fortunate few, grew on trees.

But the present challenge involves far more than jobs, pay increases, and material comforts. Now for the first time in our history, our destiny is tied to that of hundreds of millions of other human beings whose objectives, hopes, and fears appear different from our own, but who, like ourselves, are contending with new forces of massive strength and uncertain direction.

The situation we face is new and formidable. But what gives me the cautious conviction that we will learn to deal with it effectively are precisely those qualities in the American character which have enabled us to cope with lesser challenges in the past.

Throughout America a major reexamination is now underway in earnest. I have felt it not only in college campuses like this one, but in the crossroads and byways around the Nation, in buses, and in supermarkets, in grocery stores as well as at Capital cocktail parties.

This reexamination strikes me as particularly hopeful, because this time more and more thoughtful Americans are digging deeper into the true nature of the challenges which we face. The vastly over simplified views of the world struggle which most of us had accepted without serious question are now giving way to a much more sophisticated and realistic consideration of what we are up against.

II

Let us review briefly the stages of American thinking about world affairs which succeeded one another in the 1950's.

Ten years ago this month the North Korean army, armed and directed by the Kremlin, struck without warning across the southern border. Suddenly we found ourselves face to face with the hard, aggressive nature of world communism.

Before the Korean invasion, we had comfortably assumed that Soviet military power, although great, was not likely to be used. As a result, our military forces had been reduced below the danger point.

In our hurry to redress this error, we adopted a narrowly militaristic interpretation of the challenge which confronted us. Constructive, creative programs such as the Marshall plan and point 4 were downgraded. The new emphasis was on military force, military alliances, and military thinking. This in itself set the national mood.

By definition, military problems, being highly specialized and shrouded in secrecy, largely belong to generals, admirals, and heads of government. Since the challenge of world communism was accepted as a military challenge, there was very little that the ordinary citizen could do except pay his taxes cheerfully and hope that the military experts really knew their jobs.
